THE ILLUSTRATED LONDON NEWS

No. 662.—VOL. XXIV.] SATURDAY, JANUARY 7, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE THREATENED IRRUPTION OF THE BARBARIANS.

"IF," says Gibbon, "a line of separation were drawn between the civilised and the savage climates of the globe; between the inhabitants of cities, who cultivated the earth, and the hunters and shepherds, who dwelt in tents, Attila might have aspired to the title of supreme and sole monarch of the barbarians." The Emperor Nicholas, who is the Attila of the present era, is every inch as much a "monarch of the barbarians" as his great predecessor. St. Petersburg may vie in splendour with London and Paris, and its rich nobility may have as much taste for diamonds and the Opera, and all other costly luxuries, as the West of Europe, and Moscow may shine with a light reflected from the newer capital; but a state of barbarism, or, at best, of semi-civilisation, is characteristic of every other part of the immense Russian Empire. The King of the Muscovite barbarians resembles the famous King of the Huns in more respects than one. Though he does not bear so much of the Calmuc upon his face as the ancient hero so vividly portrayed by Gibbon, he has the Calmuc blood and the Calmuc mind of Attila, and evinces a determination to possess himself of Constantinople, which, if departed spirits take any interest in the affairs of this world, must rejoice the shade of the grim King from whom Nicholas has borrowed so much of his policy. Already the barbarians under his command are prepared for a descent upon the South and West. The ferocious swarms menace not only Europe but Civilisation. To the imagination of the timid, they seem about to issue from their boundless steppes and interminable forests, like the Huns and Vandals of old, to destroy Liberty and the Arts, to overthrow ancient kingdoms, and to spread themselves like a torrent of mire and blood over the fairest climates of Europe. Happily for the world, it is not so easy at the present time for a colossal barbarian to have his own way, as it was in the days of Attila and Alaric. Though, by the operation of a law of nature, the hardy tribes of the North make periodical inroads upon the South, this great result is obtained at present by other and better means than warfare. The swarms of the Northern Hive emigrate beyond the seas, and do not possess themselves of the close-lying lands of their neighbours. The condition of the world has altered. The ancient Attila had nothing to resist his desperate legions but an effete and moribund civilisation. The modern Attila, if such a man be indeed fated to arise, will have very different enemies to deal with. Even if the Turks had been the sole opponents of the Czar, he might have found it difficult to re-enact the part which is most to his mind. The fate of Xerxes, and not the successes of Attila, might have awaited him. A nation, goaded by his insults, and lashed into fury, as well as into patriotism, by his unjust and pertinacious attacks, might, in the fulness of time, have found means to defeat great armies, by heroic resistance, equal to that of Thermopylæ; might have destroyed fleets as well as armies; and forced the invader to return to his own dominions a wiser man and a smaller Potentate than when he left them.

It would be useless to disguise the fact that a struggle with such a man must be a severe, and may be a protracted, one; but it would be equally useless to exaggerate the difficulties to be overcome. Whenever there is a giant in the way, it is wise policy to know his exact height and strength. Russia is a big giant, no doubt—especially in the imagination of those who shut their eyes against its actual proportion, and form vague ideas of its immensity. Those who calmly measure what Russia is, and of what the Czar is capable, need be under no great apprehension for the results of the pending struggle. The sanguinary drama of past ages will not be renewed in the nineteenth century. Russia is large upon the map, and, from her climate and geographical position, unassailable with success by any single opponent; but before her barbarous hordes can play the part of the Huns and Vandals of the olden time, there must be no such nations in Europe, as Great Britain, France, Germany, Hungary, Italy, and Poland, to unite against her. Were these non-existent, the similarity of circumstances might produce a similarity of result, and the Calmuc King might be the lord paramount of Europe. But no such result is possible in our day. When Russia is quiet she is invulnerable. When another state attacks her wrongfully, Russia is as firm as a rock against the assault of an army of caterpillars; but when Russia begins to move, she is as vulnerable as the rest of the world, and all her defects and weaknesses become apparent. There is only one line of her immense frontier that is not inhabited by an enemy, and that is the line in close proximity to the North Pole. She is there secure, both from foes from without and within. All her other frontier lines are formed of stolen property, and are inhabited by races who have not forgotten the spoliation of which their country was the victim, nor the oppression which they endure under the alien sovereignty to which they are bound by force, not united by affection. From the northernmost cape of Sweden to the southernmost point of the Crimea, the enemies of Russia exist, both within and without the boundary line which marks her dominion on the map. From the Crimea to Kamschatka we know of no friend that she possesses, unless it be that miserable kingdom of Persia, which she has just bought for roubles; and which, if fortune declared against the Czar, would, in despite of those roubles, desert him in his extremity, and take the stronger side. If once fairly committed to a war with the Great Powers of Europe, Russia would find that she had accounts to settle with more than one warlike nation within, as well as on, her own boundaries. The spiritual character of the Emperor as head of the Greek Church would avail him nothing in recalling to their allegiance the subjugated tribes that would then revolt against him. The ancient Muscovites may see no blasphemies in the use which the Czar makes of the name of the Almighty, in the "Te Deums" which he

BUCHAREST, IN WALLACHIA.—(SEE NEXT PAGE)

sings for his shameful victories, or in his bold assertions that the "God of the Russians" approves all the doings of the Emperor Nicholas; but the subjugated Fins on the north, the long-suffering but vengeance-awaiting Poles on the west, and the Mahometans of the Crimea, Bessarabia, Georgia, and Circassia, and other conquered provinces in the south and east, look upon such utterances with disgust. In preaching a religious war against Turkey, the Czar forgot these things, but they will assuredly be all remembered against him on the day that he declares war against Great Britain and France.

For these and many other reasons, the anti-Russian war is not likely to cost so much blood and treasure as has been hastily anticipated. Even should Austria prove false to the alliance, the cause of justice and liberty will not suffer to any extent by the defection. The treachery of that power would but make Lombardy and Hungary the stronger and the readier auxiliaries. Neither is it to be expected that the commerce of the world will greatly suffer. Russia is but a small trader. The provinces of Moldavia and Wallachia have been ar better customers to the manufacturers of England and France, than the subjects of the Czar, in all their wide-spread territories; and if the Russians never consumed another penny-worth of our productions, Great Britain would be quite as rich and flourishing as before. Australia and America would continue to give profitable employment to our looms and factories, were the Russian Empire sunk to the bottom of the sea; and Australia alone is an an infinitely richer market than any of which Russian ambition or malevolence can deprive us. The war, if it come, will have been forced upon us, and there is no reason to be afraid of it. The day of the Barbarians has not yet dawned, and the Goth or the Calmuc that is to destroy Civilisation in Europe is yet unborn.

So countless are the reasons why the Emperor of Russia should make peace rather than war, that the world might even now calculate upon his withdrawal from the false position into which he has thrust himself, if his actions were swayed by the ordinary motives of men; but the tendency of irresponsible power is to inflame the passions, to harden the heart, and to deaden the intellect. None but a despot could wage such a war as the Emperor threatens, and despots, unfortunately, act upon pride and passion. But such despots inevitably pay the penalty of their miscalculation. When war is fairly declared, it will be no difficult achievement to annihilate his naval power. As a military potentate, he may be formidable to attack upon his own territory; but, if he step beyond it, the strength of Europe will be far more than a match for him. We would not value at many roubles the loyalty of the Russian people, or the fidelity of his own household, the day after his defeat.

BUCHAREST.

BUCHAREST, the capital of Wallachia, is agreeably situated in a rich and spacious plain, diversified by hills, on the eastern bank of the Dumbovitza. Though the residence of the Prince Hospodar, and the seat of Government, as well as of a Greek Archbishopric, and covering a considerable space, measuring four miles from north to south, and three from east to west, it is, in appearance, little better than an overgrown and straggling village. The dwellings, with few exceptions, are mud and brick cabins, of the most barbarous construction; and the streets are unpaved, but many of them rudely crossed by trunks of trees. The Princes' palaces, and many of the residences of the Boyards, or nobles, are handsome structures of stone, which contrast strangely with the wretched hovels by which they are surrounded. The metropolitan church is situated in a large square in the centre of the town; there are, besides, some three hundred churches built in various styles of architecture, some very uncouth, but, most of them with spires, which, being covered with tin, glitter in the sun. There are no less than twenty monasteries, or convents, which are all protected by high walls; some few of the churches are also protected in a similar manner. Coffee-houses, billiard-rooms, and gambling-houses everywhere abound; gaming being a vice to which the Wallachians are most ardently addicted. The population is about 60,000; and the principal business carried on is that of dealing in grain, wool, tallow, and cattle, which form the staple of the wealth of the province. The corn market is always abundantly supplied here, at prices which, if the navigation of the Danube were not impeded as it is by Russian interference, would materially affect the prices in Western Europe. At the present moment Bucharest is the head-quarters of the Russian invading force, the Prince Hospodar having fled, and his authority having been superseded by that of a Governor appointed by Russia. The poor Boyards have many of them been turned out of their houses, to make room for the invaders; and some of them have been exiled for want of zeal in the cause of the enemies of their country, falsely assuming to be their friends and protectors. How long in state of things may last it is impossible to say—the inclemency of the season having put a stop to military movements. The last account, under date Decemb r 20th, state—"Everything is perfectly quiet. The vast quantity of snow renders operations impossible." Our Artist's Sketch is taken under these circumstances. The snow-covered houses have a dismal but picturesque effect; and pickets of troops still occupy the deserted streets.

THE CALORIC STEAMER.—The problem as to the success of the Ericsson approaches a solution. The engine is now so nearly completed that a trial trip will probably be made next Tuesday or Wednesday, and Mr. Ericsson is in the best spirits, such as confidence of success inspires. We learn from one of her principal owners that experiments already made show that the desired amount of pressure can be easily obtained, and a full reliance is entertained that the ship will attain a speed of at least ten miles an hour, which will be a rate entirely satisfactory.—*New York Journal of Commerce.*

THE GRAND NATIONAL CURLING MATCH.—The preparations for this event are now, we hear, in a forward and promising state; and the middle of next week, weather permitting, will be the time. The muster promises to be considerably more numerous than on any former occasion. The number of rinks in the grand match is 166, and in the vice-president's match, 37; in all, 193 rinks, or 1544 players. The North, flushed by its last year's victory, musters stronger than the South by 27 rinks; and it is northern players entirely that compose the vice-president's match.—*Scotsman of Saturday.*

SLAVE MOTHERS AND THEIR CHILDREN.—A bill, in relation to the sale and division of slave mothers from their children, is now before the Legislature of Georgia, which proposes to enact that the children not exceeding five years of age of any woman slave, and such woman slave shall not be separately sold, or exposed to sale under execution or other legal process, but shall be placed together, in one of the parts into which the estate to which they belong is to be divided, unless such division cannot in anywise be effected without such separation. Another section enacts, that by consent of the ordinary, slaves living in a different county from a deceased owner may be sold in the county in which they reside, upon application being made for such purpose.

METROPOLITAN WINTER POULTRY SHOW.—His Royal Highness Prince Albert has entered several specimens, and will be an extensive contributor at the ensuing Great Metropolitan Winter Poultry Show, appointed to take place at the Baker-street Bazaar, on the 10th, 11th, 12th, and 13th instant. Amongst the other contributors are Lord Robert Grosvenor, M.P.; Lord Berwick, Lord North, Lieut.-Colonel Goulburn, Lady Gilbert East, Hon. Mrs. Astley, L. C. Marjoribanks, Esq., M.P., &c. The show will be the largest ever attempted, consisting of 1100 pens of poultry, 400 pens of pigeons, pens, comprising some of the finest specimens of rare and beautiful birds. So extensive will be the show that the entire area usually appropriated to the Smithfield Cattle Show will be occupied by the specimens.

THE LEMAN ESTATE FUND.—The indictment against Williams and others, for a conspiracy to defraud, in connection with the Leman Estate Fund, in the Court of Chancery, has been removed by *certiorari* to the Court of Queen's Bench.

FOREIGN AND COLONIAL NEWS.

FRANCE.

Louis Napoleon and the Empress received, in their apartments, the felicitations and compliments of New-year's-day, from the Princes Jerome and Napoleon, and the other members of the Imperial family, as well as from the officers of the Emperor's household, and the Ministers, Marshals, and Admirals. Their Majesties afterwards proceeded to the Throne-room, where the diplomatic corps were presented by the Grand Master of the Ceremonies, and expressed their congratulations.

The rumour runs that M. Fould is retiring, in order to make way for a minister whose name should be taken as indicative of more warlike policy than he is inclined to countenance.

The Emperor of Russia is not without his partisans in France. He is represented by two Parisian journals, the *Débats* and *Assemblée Nationale*, both of which are under the inspiration of M. Guizot, M. Duchatel, and the other leaders of the old Conservative party. This party spares no means to frighten those who would oppose the Russian aggression. At one moment they endeavour to alarm France by hinting at the proverbial perfidy of England; at another they try to frighten the English, by declaring that Russia can at any time gain over France by giving her Belgium. There is no doubt that this party is not without a certain influence in the councils of Louis Napoleon. Even the ex-Ministers of Louis Philippe, who meet in council at the Princess Lieven's, have an indirect influence, which they do not hesitate to use in the interests of the Czar.

The Emperor of the French some time back gave directions to the Minister of War to prepare a report for him, giving an exact detail of the present situation of the French army, to be accompanied with a statement of the number of men that France could, if necessary, place without delay on a war footing. This paper, it is said, has been lately sent in, and the number of men which could be employed as just stated is set down in it at 1,250,000 men.

The *Corsaire* arrived on Monday night at Marseilles. She left Constantinople on the 25th ult., and no doubt must bring intelligence of importance, since Lord Stratford de Redcliffe thought fit to despatch her, for some reason, before the Porte made known its resolutions respecting the propositions of the ambassadors.

The *Sentinelle* of Toulon, of Dec. 30, says:—"It is reported that the *Caton* will leave to-morrow for the Levant, and that it will carry out the new instructions to our squadron and Ambassador.

The *Siècle* has published a telegraphic despatch, stating that Prussia and Austria have withdrawn from the Conference of Vienna, in consequence of the order for the fleets to enter the Black Sea. This statement requires confirmation.

At a dinner given last week, at Paris, by Prince Louis Napoleon to a party of friends, the host, in answer to some doubts expressed by one of his guests, declared that there was not the slightest doubt as to the gravity of the situation, and that within ten days news would be made public which would open the eyes of all.

According to the commercial reports, the state of trade in Paris and in the departments is as bad as might be expected in presence of a threatened war. Orders have been withdrawn and purchases suspended, especially for Russian articles. On the other hand, it is expected that the corn markets must soon turn, as it is now said that the whole amount of the harvest deficiency has been made good, or very nearly so, by importations from other countries.

The wound received by the Marquis de Turgot, in his duel with Mr. Soulé, the American Minister at Madrid, is now said to cause great anxiety to the friends of the Marquis. Serious symptoms have shown themselves in the leg, and threaten the knee joint, and a telegraphic message has been received at Paris, requesting the attendance of French surgeons.

TURKEY.

The following is an official report of the threatened insurrection of the Softies at Constantinople, on the 21st ult.:—

PERA, Dec. 22.—The General Assembly having authorised the Minister to negotiate, the students of the seminaries, excited by some Ulemas, met yesterday to petition against that resolution. Disturbances were at one moment feared, but the measures taken by the Cabinet assembled in the Palace prevented any disorder. Only three to four hundred students have been arrested. Every thing is tranquil. A proclamation just issued makes known the true object of the deliberation of the General Assembly, and announces that measures will be taken against the perturbators, if necessary.

The proclamation alluded to, as explaining the real object of the Grand Council in granting its authority to the Government to enter into negotiations for peace, is simply nothing more—particularly after the Protocol, the collective Note, and the conferences going on at the ambassadors—than the permission to send to the conference an Envoy, charged with explaining the last conditions on which the Sultan will

3000 mels loaded with ammunition, and that they were last seen passing Fahreez; that the Shah had sent an envoy to Dost Mahomed; and that the Russian army, having captured Ahmetzee, was marching on Herat. On the other hand, it is stated that Dost Mahomed, who is well known to be no friend to Russia, has sent two Ambassadors to the Shah of Persia, in the persons of Mirdat Khan and Cohendehil Khan, to declare that the 16,000 men, the Persian garrison at Herat, be withdrawn; that the Sheik Heidar, Governor of Herat, and son of the Persian Sirdar of Resehet, be dismissed, and the Government given back to Yesein, son of the late Viceroy of Herat, Yar Mahomed, who died ruling two years ago.

The Stockholm *Aftonbladet* announces, on authority, that the Secret Committee of the Swedish Diet has decided on strict neutrality in case of war. A treaty has been concluded with Denmark for a common course of operations by sea. It is difficult to say what this decision actually indicates; but there is too much reason to fear that Russia has more influence both at Copenhagen and Stockholm, than is good for Europe.

A letter from Athens (16th Dec.) states that Ismail Pacha has forbidden the entrance into Smyrna of the Athens *Siècle*, on account of its having published an article exciting the Greeks to revolt against the Sultan, and to co-operate in the destruction of the Ottoman Empire.

ITALY.

The Cabinets of the North are greatly alarmed about the anti-Russian feeling gradually displaying itself in the Austrian army. It is asserted that whole corps would go over to the enemy, if placed in the vicinity of an army opposed to Russian aggression. In the Roman States it is found necessary to concentrate the Austrian forces, and change some of the regiments. This is creating much fear at the Vatican, as the places thus abandoned must be occupied by French troops, which the Government of the Pope by no means desires, as the spread of Frenchmen over the Papal States is looked upon as an evil. From the frontiers of Piedmont to Sicily the police are hard at work daily imprisoning suspected persons. In Rome nearly a hundred have been shut up within the last three weeks; in Naples arrests are taking place daily in the army as well as amongst the townspeople. Travelling, for an Italian, is almost impossible in Southern Italy.

The somewhat novel ceremony of consecrating an English abbot was performed at Rome, on the 21st ult., by Cardinal Wiseman, at the church of St Gregory. Dr. Burder, the abbot elect, abandoned the Church of England about eight years ago, and entered the new Trappist monastery of St. Bernard, in Leicestershire, where he rendered himself so acceptable to his brethren, that at the end of three years they elected him their superior. The provincial-general of the order, however, would not ratify the election, on account of the short time the Doctor had served in the monkish ranks, and he was therefore obliged to content himself for four years more with the secondary dignity of Prior. On the day named, Cardinal Wiseman installed him in his full rank, and Dr. Burder, as Abbot of St. Bernard's, with shaven crown and Carmelite gown, paraded up and down the church between two Italian Bishops, all with their crosiers before them, whilst a full choir thundered out an impressive "Te Deum." Another English Trappist monk took part in the ceremony, acting as the Cardinal's deacon, his powerful frame and thoroughly Anglo Saxon features, in combination with the monkish garb, reminding English spectators irresistibly of the Friar Tuck class of anchorites who figure in our early ballads and traditions.

PIEDMONT.

In its sitting of the 28th ult., the Piedmontese Senate voted the answer to the speech from the Throne without a dissentient voice, and without a discussion. It is but an echo of the speech, interspersed with warm expressions of loyalty and confidence in the King's Government. The answer, unanimously voted by the Chamber of Deputies on the same day, is in a similar strain. The latter afterwards passed the bill for authorising the provisional execution of the budget of 1854, by a majority of 86 to 12.

UNITED STATES.

By the steamer *Niagara*, which left Boston on the 20th ult., and Halifax on the 23rd, we have intelligence from New York to the 22nd. The latest advices from Washington state that the Naval Committee of the Senate had reported favourably on the proposition for the immediate construction of six steam-frigates. An exciting debate on slavery had taken place in the House of Representatives. The subject was introduced by Gerrit Smith, the abolitionist representative for New York, while the House was considering a resolution voting a sword and thanks to Captain Ingraham, for his conduct at Smyrna in the Costa affair.

A complimentary dinner had been given at New York to John Mitchel, at which he spoke strongly against the American Secretary of State, for having warned all "seditious propagandists" that the Government will not protect them "if they engage in fraudulent machinations for disturbing the tranquility of other nations." The "Exile of Erin" thinks that such a warning shows the cloven hoof; that it indicates too much sympathy with those whom he styles the "accepted conspirators of Europe" than is befitting in an American Minister. The dinner party was a large one; but it appears to have been attended principally by Irish residents in New York.

The United States Government had despatched an officer to the Pacific to take measures to capture the Sonora invaders. The latest accounts from New Orleans deny positively that any Cuban expedition is fitting out.

There had been a dreadful riot among the workmen on the Illinois Central Railroad, near Lasalle. An altercation occurred about wages between a contractor named Story and a party of Irishmen, which was terminated by shooting one of the disaffected. Mr. Story was afterwards captured and brutally murdered, and his wife was fired at, but escaped. The foreman of the deceased has since shot nine of the labourers, and the sheriff has killed two more, and captured thirty. The ringleader of the rioters escaped.

The river steamer *Zachary Taylor* had exploded her boilers, by which three persons were killed and ten severely scalded. A still more fatal steamer explosion had occurred at Charlestown. The victims in this latter case amounted to thirteen.

From St. Domingo we learn that a difficulty had sprung up between that Government and France. The war steamer *Julia* had assumed a threatening attitude, and a demand had been made to Santa Anna to dismiss his Cabinet and appoint another more favourable to France. Great excitement, in consequence, prevailed in St. Domingo city.

CAPE OF GOOD HOPE.

By the *Bosphorus*, which arrived at Plymouth, on Monday, we have news from the Cape to Nov. 21, at which time all was peaceable and progressive. The only thing of an adverse nature was a fatal disease among horned cattle, said to have been imported from Holland. In Cape Town, Port Elizabeth, Graham's Town, and several other places, a general spirit of co-operation in favour of universal education had manifested itself, and was expected to lead to a vast extension of the educational institutions of the colony. General Sir G. Cathcart continues to speak hopefully of the future state of the border. The new arrangements and general administration of affairs in Kaffirland seem to be peaceably sequescened in by the Kaffirs. Some uneasiness, however, is naturally felt by the colonists at the early withdrawal of the troops, after so fierce and protracted a struggle with a daring race like the Kaffirs. In the Orange River sovereignty, Sir G. Clerk proceeds steadily in maturing arrangements for the withdrawal of British authority from the north side of the river. Numerous petitions and remonstrances against this line of policy have been signed and forwarded to her Majesty. It is also proposed to despatch two delegates to England to represent the wishes and opinions of the inhabitants on this subject. A proclamation has been issued by the Governor, announcing that the lists of persons qualified to vote in the several electoral divisions being completed, it is fitting to proceed with the elections of the members of the Legislative Council. His Excellency therefore proceeds to appoint the several returning officers, and fix the polling places in the several divisions. The elections are to commence on the 9th January, and will have been completed throughout the colony on the 28th.

THE BERLIN CONSPIRACY.—Fresh arrests, effected at Berlin last week, have proved that the conspiracy of last March was more extensive than had been supposed. Sentence on the prisoners of that period is still deferred; one of them has been confined for nine months; another of them, Dr. Lindersdorff, is suffering under mental alienation.

PROGRESS OF THE ELECTRIC TELEGRAPH IN INDIA.—In the simultaneous arrival at Calcutta of Dr. O'Shaughnessy and Mr. R. M. Stephenson, we have a good augury for electric telegraphs and railways in India. Dr. O'Shaughnessy, who leaves Calcutta immediately for the north-west, will find the work far advanced already. Poles for the electric telegraph have sprung up as if by magic along the greater length of the Grand Trunk road, and we hear that very great progress has been made on the Bombay line, so that the end of the cold season will see at least two sides of Dr. O'Shaughnessy's great triangle very nearly completed.

THE DISASTER AT SINOPE.

We have engraved upon the next page, from accredited sources, the scene of the destruction of the Turkish squadron, under Admiral Osman Pacha, at Sinope, by a squadron of the Russian fleet, under Vice-Admiral Nachimoff, commanding the 5th naval division, on the 18 (30) November, 1853.

The moment depicted by the Artist is the commencement of the attack made by the Russians on the Turks. We have already fully detailed the disaster.

The following is a list of the Turkish squadron under Osman Pacha, in which, however, the number of guns differs from that in the Russian account:—

Names of Ships.	Guns.	Men.	Fate of Ships.
Nguamia (flag) ..	60	600	Fired by the enemy, blew up after action
Navik	62	600	Blew up half an hour after action began
Nessim	62	600	Burnt the next day by enemy
Kaid	60	600	Burnt the next day by enemy
Damiat (Egyptian)	54	500	Burnt, and blew up during action
Avimilah (flag) ..	36	400	Burnt the next day, after enemy trying to tow her out
Fazeh Hah	40	400	Burnt the next day by enemy
Fauz Murbout ..	26	440	Burnt the next day by enemy
Gul Sefit	24	200	Burnt, fouling the English brig Howard, and destroying her
Nedjez Jesan ..	24	200	On shore, riddled and dismasted
E Kegli	4	160	Burnt the next day by enemy
Laf	16	200	
Total	432	4440	

The opposing force of the Russians, under Admiral Nachimoff, consisted of three three-deckers, three two-deckers, two frigates, and four steamers

The English steamer *Retribution* and French *Mogador* brought down 219 wounded and about 400 men and officers who had escaped unhurt to the shore.

The Turks estimate their loss at 3000 killed.

We have been favoured with the annexed plan of the attack as given by the Russian authorities.

PROROGATION OF PARLIAMENT.

Tuesday being the day to which Parliament was prorogued on the 29th of November last, for the purpose of further proroguing it, the doors of the House of Lords were thrown open, and a great concourse of persons assembled to witness the ceremony, notwithstanding the severity of the weather.

The Lords Commissioners (the Lord Chancellor, Lord Granville, and the Duke of Argyll) attended at the unusual hour of one o'clock, instead of two or half-past two, which, for many years, has been the hour at which their Lordships were in the habit of assembling. On their Lordships taking their seats on the bench—placed, according to usual custom in front of the throne—and the throne having been uncovered,

The Lord Chancellor commanded the Yeoman Usher of the Black Rod to summon the attendance of the Commons to hear her Most Gracious Majesty's commission for the further prorogation of Parliament read.

Mr. Pulman accordingly proceeded to the House of Commons to summon the representatives of the people to the House of Lords, and in a few minutes returned, accompanied by Mr. Ley, one of the Clerks of Parliament, Capt Gossett, Assistant-Deputy Sergeant-at-Arms, and several officials connected with the Lower House.

Her Majesty's Commission was then read, commanding the Lords Commissioners to further prorogue Parliament until the 31st of January instant, then and there to meet for the despatch of business.

The Commissioners then rose and bowed to the Commons, who withdrew, and the Commissioners having bowed to each other, withdrew also.

The proceedings did not occupy more than a few minutes. The body of the house, with the exception of the front seats, was occupied by ladies anxious to witness the ceremony.

HONOUR TO THE FRENCH EMPRESS.—By a decree of the Prefet de la Seine, placarded in all directions, an inquiry is to be held at the second Mairie of Paris into the project of immediately dispossessing (at a compensation) the proprietors of some forty houses in the Rues St. Honore, Richelieu, du Rempart, and Jeannisen, for the purpose of forming a grand opening in front of the Theâtre Francaise, to be called "Place de l'Imperatrice Eugenie."

LONDON MECHANICS' INSTITUTION.—The thirtieth anniversary of this institution was celebrated with much spirit by a *soirée and conversazione*, at Southampton-buildings, Chancery-lane, on Wednesday evening. The friends and supporters of the society mustered in unusual numbers, and a short time after the opening of the doors the various classrooms of the institution were completely crowded with ladies and gentlemen, who amused themselves till the commencement of the concert by inspecting the different scientific or artistic works which were displayed round the rooms. The concert, which took place in the theatre of the Institution, was the principal feature of the evening. It was diversified by a selection of pieces, which were delivered with much spirit by the pupils of the elocution class. A ball in aid of the funds of the *conversazione* committee will be given at Willis's Rooms on Wednesday evening next.

A HARD CASE.—In consequence of the inclement state of the weather, and the high price of provisions, the London omnibus proprietors memorialised the Inland Revenue Commissioners for time to pay their mileage duties, and offered to prove to the Commissioners that the sums amounted to a tax of 18 per cent on the returns, when the railways only pay 5 per cent. The board, without giving time for inquiry, refused the application; though it is well known that similar applications for longer credit have been granted when the hop-growers have had a bad season. The result, it is said, will be a great sacrifice of property. The owners of omnibuses unanimously affirm that, had they to rely upon the returns of that trade as their sole means of livelihood, two-thirds of the London omnibuses would have been discontinued during the last four months, from having failed to pay their working expenses.

Temperance refreshment-rooms are being established at Wick, in connection with the "statute," or fairs; and the Duke of Sutherland has signified his readiness to contribute £100 towards the object.

THE TURKISH QUESTION.—At the meeting of the St. Pancras vestry, on Wednesday, a numerously-signed requisition was presented, calling upon the authorities to convene a public meeting "To take into consideration the present unsatisfactory conduct of her Majesty's Cabinet in reference to Turkish affairs, and to humbly pray her Majesty to take to her council such statesmen as will maintain the honour of England and the integrity of the Sultan's dominions against the atrocious aggression of the Autocrat of Russia." After some discussion, it was resolved that the use of the vestry hall be granted gratuitously.

GIURGEVO.

GIURGEVO is the principal port of Wallachia on the Danube, and the point of landing and embarkation for Bucharest. On the right bank of the river, about a mile higher up, is the Turkish fort of Rustchuk. Giurgevo has the remains of some old fortifications fronting the river, which were destroyed by the Russians in 1829: but otherwise the place appears to be undefended, and its aspect is very unpretending; being chiefly remarkable for the wide-spread mud banks on which it is imbedded. Between the Turkish and Wallachian shores stands the little island of Moksanu, which has been the scene of so much hard fighting in the course of the late military operations; and which, in spite of repeated attacks, is still in the hands of the Turkish forces. Lower down is a Cossack station. On the heights near Rustchuk is seen part of the Turkish camp. It was a few miles below Giurgevo that the Russian army crossed the Danube in 1829. The movement was silently effected at night, by means of pontoons, which were swung across by the force of the current; and, before the day had well dawned, the troops of the Czar were on their way into the interior of Bulgaria.

There is a considerable trade in corn and other agricultural produce carried on at Giurgevo; there is also a port between it and Rustchuk, and thence ever land to Constantinople. This is the route generally taken by the couriers of the foreign agents established at Bucharest.

A gentleman who has recently made a tour in the Danubian Princi-

PLAN OF THE DESTRUCTION OF THE TURKISH SQUADRON, AT SINOPE.

THE BATTLE OF SINOPE.

palities, gives some interesting particulars of what he observed on his journey from Giurgevo to Bucharest—a distance of about forty miles:—

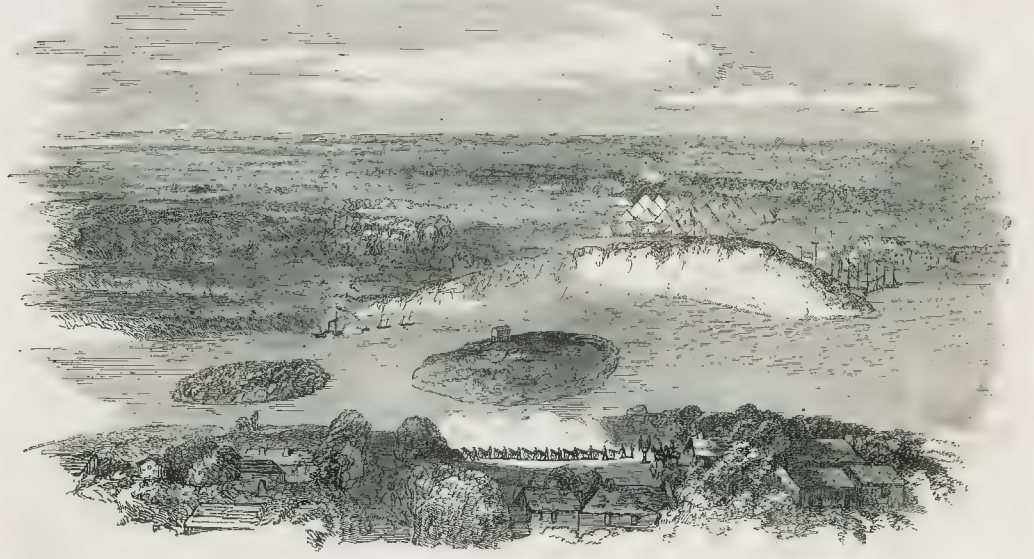
There were eight wild looking horses attached to the diligence driven by our postilion, who rode on the near wheeler. We went along at a very good pace, considering the nature of the ground. There are no roads, properly speaking, in Wallachia. There are merely broad tracks, covered with a deep lair of dark-coloured dust in the summer, and which, in rainy weather, or after a thaw, change into rivers of mud, through which the coach labours, sunk in slush to the axle-tree. When the road is too much cut up, a new track on either side of it is chosen, which is soon reduced to the same state. But in the winter, when the snow on the ground is frozen over, travelling is performed very rapidly in sledges. It was only four o'clock in the morning when we started, and at seven o'clock we reached the Khan, which is situated half-way between Giurgevo and Bucharest, and there we breakfasted.

There were about 800 Russians quartered in the neighbourhood of the Khan. They had that staid, soldierly look, which is the effect of severe discipline. This I observed to be the characteristic of nearly all the Russian soldiers that I have seen in the Principalities. The exceptions are the young recruits, who, of course are not yet properly formed. I have never observed any appearance of light-heartedness amongst the Russian soldiers, even when off duty. It is true that at times, in marching, whole battalions sing in chorus, either the National Anthem, which is a fine, solemn air, or some wild melody, generally of a warlike character, interspersed with sharp cries and an occasional shrill whistle. The latter songs are particularly animated and spirit-stirring; and the quick rattle of the drum, which is the sole instrumental accompaniment, increases their exciting character. To the listener there is something sublime in thus hearing thousands of manly voices blended together in chorus, uttering sentiments of devotion to God and the Emperor, or of fierce defiance to the enemies of the Czar. But even in these exhibitions the sternness of military rule is seen. Upon the faces of the men thus engaged no trace of emotion is visible; their tread is measured; their forms are erect; they are obeying a command, and not an impulse. The emotions of the heart seem to have been drilled into order, and expressions of love or anger, devotion or revenge, are only awakened by the voice of their commander.

The country in this part is remarkably rich and beautiful. It had rained for a couple of hours during the night, and everything looked fresh and sparkling in the morning light. The habitations of the small farmers and peasants in Wallachia bear a near resemblance to those belonging to the same class in Ireland. The cabins of the labourers are built of mud, or half-dried bricks, and covered with thatch; whilst the house of the small farmer is in the same style, but upon a larger scale. There is very generally some attempt at ornament about these dwellings. They are all nicely whitewashed, and there is often some vine or creeping plant trained round the door or window. The spot, too, where a village stands is almost always sheltered by trees, and where there is not a running stream, there are generally five or six wells, from which the water is drawn by a sort of wooden crane. To the end of the transverse pole the bucket is attached by a rope, whilst at the opposite end is fastened a heavy stone. With a lever thus constructed, the water is raised from the deepest wells with very little effort. Taken altogether, the villages have an air of picturesqueness, and almost of comfort.

As we proceeded along the road to Bucharest we saw small parties of Russian soldiers encamped on either side of the way; and in one place we passed a battery of heavy guns, drawn up in line, and pointed menacingly down the road towards Giurgevo. At about six miles from Bucharest we saw a large encampment upon our right; and at every few minutes we met a mounted Cossack, hurrying along as if he were the bearer of despatches. The lance which the Cossack carries is not longer than the English one, and has no flag; besides this, his other weapons are a heavy carabine slung at his back, a pistol stuck in his belt, and a long sword. His uniform is a blue frock-coat, buttoned up to the throat, and wide trousers of the same colour. He wears a high, conical-shaped shako, of black oilskin, without a peak, which is kept on his head by a strap fastened under his chin. The Cossack's horse is generally a wiry animal, of about 14½ hands high. His bridle is a plain snaffle, without side-bars; and his saddle is of a very rude construction. When the Cossack trots or gallops he leans forward in his saddle, with the upper part of his body quite straight—an attitude, one would suppose, the least suited for comfort, but he nevertheless sits his horse with extraordinary closeness.

It was about two o'clock in the afternoon when we came in sight of Bucharest, which, seen at a little distance appears a very handsome city.



GIURGEVO.

SECTIONAL VIEW OF THE INTERIOR OF A GREEK TOMB, AT CANOSA.

CARVED IVORY ORNAMENT OF THE BRONZE BED FOUND AT CANOSA.

INTERESTING DISCOVERY OF GREEK TOMBS AT CANOSA.

(From a Correspondent at Naples.)

THE year 1853 will be remembered as a remarkable one in the annals of archæological history, for having been singularly productive. Whilst the Cumæan excavations are daily increasing in interest, M. Bonucci, director of Herculaneum, invites attention to the Necropolis of Canusium, a City of the Dead,* erected during the best period of Greek art, and containing an amount of antiquarian treasure far surpassing anything yet discovered in the Magna Græcia. In 1847 M. Bonucci first visited Canosa by order of the Government; but, owing to political events, no official report of his labours was made at the time; and it is only within the last few weeks that he has presented his drawings, with observations thereon, and received orders to continue the excavations. To the portfolio of this gentleman I am indebted for the accompanying drawings, which show the complete furniture of one of the most important Greek Tombs yet discovered.

The shores of the Italian peninsula have ever attracted the peoples of all nations, from the Pelasgians to the Normans. The country, therefore, is crowded with monuments of every age—

> The intelligible forms of ancient faith,
> The fair humanities of old religion.

The resting-places of the dead, ever more or less respected, afford the largest amount of antiquarian treasure, and assist us in forming an idea of the manners, customs, and art of a people to whose inspirations we still turn for instruction. Canusium was in its glory about 400 years before Christ, a period remarkable in Greek history for its arts-excellence; and the objects found in the funeral mansions of this city fully bear out the fame of their age.

I have before me a ground-plan of the large tomb at Canosa. You enter a vestibule, which opens into nine surrounding apartments, intended to receive the members of a Royal family. The building is of tufa rock, and the chambers are all painted with red, black, and yellow fresco decorations of a panel character, simple, and subservient to architectural demands. In each of these chambers were found vases, glass vessels, carved ivory, terra cottas, &c.; and in one (the subject of illustration) the complete furniture of a Greek tomb. Before, however, proceeding to describe this chamber, it is necessary to observe that the building has evidently been entered by the Romans, and one chamber even used by a Roman lady; for we find written on the wall—MEDELLA. DASM. F. SUA. AN. D. III. KAL. JAN. . . C. PISONE. M. AOILIO. . . cos. The Romans entered the building by subterranean passages, and then broke into one room from the other; which accounts for some of the chambers containing so few objects, and showing evident signs of a rude intrusion. The exterior of this tomb is not yet excavated.

I must now explain the interior subject of illustration. All the objects were found just as they are placed, excepting the lamp, which had fallen.

*For an account of the ancient Canusium, see Antonini's "La Lucania," and Mastriani's "Dizionario Storico-Geografico."

INTERIOR OF A TOMB DISCOVERED AT CANOSA.

TERRA-COTTA VASE, FROM THE TOMBS OF CANOSA.

The body on the bed M. Benucci has thought proper to restore, together with the cushions, as the remains of drapery and some fragments of gold ornaments afforded material for so doing. The side walls of the chamber are illuminated with painted paneling, in red, black, and yellow, intersected by Ionic columns. The end wall is decorated with floral offerings, designed on a yellow ground. The roof is painted to represent beams. On the floor were found fragments of fine gold thread, probably from the robe of the Royal body which reposed in so much state magnificence. In the centre of the chamber is seen a *lectisternium* of bronze, with ivory decorations. At the four corners of the bed were represented the seasons, or hours, exquisitely carved in ivory. (See Drawing of one with the reverse; a curious conceit; which will be easily understood by the

antiquary.) On the right is an important painted vase, elegant in form, but not enriched with figures. At the foot of the head are two terra-cotta objects, remarkably interesting. They are only found at Canosa. I send you a drawing of one still more important, but not from this tomb, as an illustration of their beautiful contents and forms.* In the foreground is a cornucopia, and an elegant bronze cup. Near is a dwarf bronze table, on which was found a glass dish of wonderful workmanship, being a mosaic of colored glass and pieces of gold. Here, also, were some small cups, and scattered about were discovered fruits and flowers of painted terra cotta. Some of the objects here named are in the Royal Museum of Naples, but many of the treasures found at Canosa have been bought by private individuals, whilst others are hid away, the Government at the time of their discovery having almost neglected owning, as I said before, to political events) the most important monument of Greek art yet known. Such, however, I am assured, will not take place in future, and the authorities are now employed in hunting out the lost and hidden treasures of this tomb.

The lower Illustration represents the façade of one of the Canosa tombs, not yet opened. They are built, and in some measure cut out, of the tufa or sand-stone which surrounds them. Such material being faced with a stucco, which was painted, as was the buildings of Pompeii. But here we have colour used to magnify and contrast the parts of a building, and not simply to decorate.

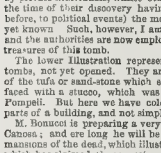
M. Bonucci is preparing a very elaborate report of the Necropolis of Canosa; and ere long he will be again employed in uncovering those mansions of the dead, which illustrate the civilisation and art of a period which has claimed the respect and excited admiration in every succeeding age.

* M. Bonucci believes they are portraits, and the small heads and figures ning therefrom are, in the first instance, the children; and, secondly, th cent, which are to accompany the soul to the Happy Islands. These terra cottas are peculiar to Canosa, and present an endless variety of concepts.

OBITUARY OF EMINENT PERSONS.

SIR THOMAS THEOPHILUS METCALFE, BART.

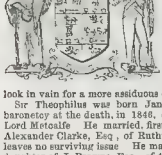
INFORMATION has been received from India of the decease of another distinguished Civil Servant, Sir Thomas Theophilus Metcalfe, Bart. For more than forty years he had served in India, and never once during the long interval from his first arrival had revisited England. Nearly the whole of this period was spent at Delhi; there he passed through the successive grades of his profession, and there he died, Agent to the Governor General and Commissioner of the District. The natives of all ranks deeply deplore his loss, and the Government will look in vain for a more assiduous or conscientious officer.



Sir Theophilus was born January 2, 1795, and succeeded to the baronetcy at the death, in 1846, of his distinguished brother, the late Lord Metcalfe. He married first, in 1818, Grace, eldest daughter of Alexander Clarke, Esq., of Ruthven; but by her (who died in 1824) leaves no surviving issue. He married, secondly, Felicité Anne, eldest daughter of J. Browne, Esq., of the Bengal Medical Board; and by her (who died in September, 1842) had four daughters and two sons—the elder of whom, Sir Theophilus John Metcalfe, Bart., born November 28, 1828, is now 5th Baronet. The title was first conferred, in 1802, on Sir Thomas Metcalfe, the deceased's father, who served in a military capacity in the East Indies, and became a director of the East India Company.

SIR RICHARD JENKINS, G.C.B., D.C.L., F.R.A.S.

THE death of this gentleman occurred on the 30th ult., at Blackheath-park, in the sixty-ninth year of his age.



Sir Richard, for many years in the civil service of the East India Company, was elected a Director in 1832, and filled the office of Chairman in 1839. The insignia of a Knight Grand Cross of the Bath were conferred on him in 1838, in requital of diplomatic services in India, especially during the Mahratta war. He sat in Parliament for Shrewsbury for 1830 to 1841.

Sir Richard was the eldest son of the late Richard Jenkins, Esq., of Bicton, county Salop, by Harriet-Constantia, his wife, daughter of George Ravenscroft, Esq., of Wrexham. He married, March, 1824, Elizabeth-Helen, daughter of Hugh Spottiswoode, Esq., F.L.C.C.S., and had several children.

SIR WILLIAM LOWTHROP, OF ALGA HOUSE, SCARBOROUGH.

SIR WILLIAM died at Nice on the 19th ult. He was born in 1794, the second son of the late James Lowthrop, Esq., of Welton Hall, East Riding of Yorkshire. He married, in 1818, the fourth daughter of the late Thomas Riddell, Esq., of Kingston-upon-Hull. Of that borough he was an active magistrate, and served as Mayor in 1840, when he received the honour of knighthood.

WILLS.—The Will of the Right Hon. Mary, Dowager Baroness Arundell, has just been proved, bequeathing to her son, the Hon. Henry Arundell, a pecuniary legacy, and the residue to her son, the Hon. Robert Arthur Arundell, appointing him sole executor, having settled £8000 on her daughter, the Hon. Mary Neave, at her marriage; and has directed all rate, taxes, and portraits, to be held and descend as heir-looms in the family to whom they are respectively bequeathed.—The Will of Sir George Ralph Fetherston, Bart., was first proved in Ireland, and now in London. He has devised his reversionary interest to estates in Brenagh, Lisdimagh, and Cooleaw, in the county Longford, to his brother Thomas, subject to annuities of £200 by him bequeathed; and has devised his fee simple estate in the county to his widow, Lady Frances Elizabeth, and, at her decease, to his great-nephew, George Fetherston. There are also a few other annuities; but the residue is left to Lady Fetherston, who is also sole executrix, and has administered to the will in both courts.

ISLINGTON EXTRAMURAL CEMETERY.—The poll demanded on Thursday week, and adjourned for adoption or non-adoption of the report of the directors, was taken on the purchase from St. Pancras of [illegible] and near Copenhagen-fields, including a [illegible] of the New River Company, for the sum of £21,000. The meeting was opened at 10 o'clock, and continued open until Tuesday evening, when it was finally closed. The adoption of the report of the Parliamentary Committee, sanctioning the purchase, was carried by a majority of 607.

NATIONAL FREEHOLD LAND SOCIETY.—The fourth annual report of this society has just been issued, from which it appears that the receipts during the year were £91,197 per cent. on shares, £1223 2s. 2d. from forfeited shares, and £1,260 from entrance fees; the total receipts for the previous three years were £1,260 for the members during the same period was 165 per cent. more than in the year [illegible], and exceed by £1,000 the amount of all that had been previously sold from the formation of the society. The shares issued in the 17 months ending October 31, 1853, were 5,154, in the year ending October 31, 1852, 2,201, and in the year ending October 31, 1853, they were 10,742. The sums received in the same four periods of time amount in the following order to £91,197, £39,667, £21,257, £260,157, £192,071, and £295,154. The society has issued in all 41 classes, and received 40,630 of its 103,630 sold at par, in one to [illegible] the balance available for the purpose of [illegible] is sufficient to [illegible] more than sufficient to pay the usual rate of profit; and, [illegible], for the past year a dividend of £5 8s. 6d. per cent per annum has been carried to the account of all uncompleted shares not advanced. The balance of profit real and from estates, and which forms the guarantee fund, now amounts to £14,443.

THE FISH MARKET.—In consequence of the intense frost which has now prevailed for several days, the fish-market at Billingsgate has been supplied in a very limited manner. On Tuesday almost all the fish which arrived in the market was by rail, and that supply was limited in the extreme, and the prices were exorbitant—cod-fish being charged from 15s. to 25s. The only fish-vessel which took a berth at the market-pier on Tuesday was an oyster-vessel, all the other vessels, including the Dutch eel-boats, being obliged to keep in the Pool, and most of them compelled to dry and cook their fish, in order to make it saleable, for, by keeping it, the fish would become worthless. The regular fish-dealers, as well as the itinerant ones, were, in consequence, much disappointed.

LITERARY MISCELLANIES.—No. IX.

THE NEW YEAR'S DAY OF THE MODERNS; OR, AN OUTRAGE AGAINST THE SUN.

By M. MERY.

THE sun is always right—"Solem quis dicere falsum," says Virgil; and the children of the Nile, after four thousand years of sustained hostilities against "L'astre eclatant de l'univers," have ended by acknowledging their secular errors, and—under the protection of the Viceroy and English capitalists—by reconstructing Heliopolis, the City of the Sun. We, also, without becoming Persians or Incas, ought to open the year with a hymn of thanks to the sun, the brilliant destroyer of winter. Strange to say, in those very countries where the sun, by excessive heat, bred mortal plagues and fevers of all colours, he was gratefully worshipped, and the year was commenced with a splendid fête in his celebration, of which it is dazzling to read the official programme.

Les verrons nous encore à des tems révolus
Ces tableaux des Incas que notre enfance a lus
Aspect miraculeux! quand la lumière éclose
Argentait les vallons où coule le Potose,
Sous les palmiers sacrés tout un peuple béant,
Attendait à genoux le céleste Géant
Qui, prêt de s'élancer dans les brulantes zônes
Brisait ses lames d'or dans l'eau des Amazônes!

Those happy Incas, they had a warm New-year's-day! They were wise, like the Egyptians, and began the year under the auspices of Janus—the King who created the month of January, and invented doors and locks. And thus proprietors, capitalists, bankers, Publicans, Scribes, and Pharisees—and, in fact, all law-makers—have maintained Janus in his ancient prerogatives, and given him the preference over all the saints of the Calendar. Be a saint who will, after that—to be elbowed out of his place by a sort of Pagan King of Yvetot! How encouraging, to be sure!

The fête of the King was the opening of the year: friends felicitated, embraced, and gave presents and *étrennes*; and, out of respect for this royal inventor of doors and locks, rich legislators have founded a custom which forces all the people of France to descend into the streets on this day, to present to each other their cheeks and their bonbons. The stupidity of the originators of custom, and the "rage" of their imitators, have never shone with more éclat. Not that we would reproach them for the bonbons they have caused to be given, and the cheeks they have caused to be moistened, on New-year's-day. Heaven forbid such a calumny! But we consider them to be eternally responsible for the colds, the pleurisies, the bent backs, the colics, the deaths, and all the tortures of this frightful day—day chosen in the dead of winter, in order not to displease Janus.

But this good King was not short-sighted, like Pharamond or Peter the Great. Janus reigned in Latium, where the 1st of January was a 1st of May, people could very well descend into the streets of Janopolis on that day, and moisten each other's cheeks with their sugary lips. The National Guard of the land of Saturn had no fear of being struck with cold or rheumatism for having done homage to King Janus on New-year's-day. Our silly founders of custom, our ignorant imitators of the antique, have made no allowances for differences of latitude and longitude. They compel us to celebrate upon the snow what the ancients celebrated beneath the sun, and that, too, in direct opposition to all the laws of common astronomy. What sort of year is it that opens on the 1st of January? One might be entirely ignorant of the very existence of the sun, and yet form a calendar not a whit more absurd. The year begins with the spring at the equinox of Mars; the year begins with the return of verdure and of the sun, when the earth decks herself with all her graces, embalms herself with perfumes and adorns herself with smiles. It is then that we ought to exchange New-year felicitations, and make vows for the future, when nature herself displays the green colours of Hope, and sets us the example.

Ah! it is custom! Who shall gainsay what custom decrees? Attempt to dethrone routine in France, with the best of reasons, and you shall fail. Routine lodges at the Hospital of Incurables, where she finds neither death nor cure. Silence to the paradox!

How Janus would laugh with his double face, if he witnessed the celebration of our first of January! The people of the south can form no idea of it. Paris is a lake of black mud, with numberless carriages floating about in it. Five hundred thousand sons or nephews grope amidst this Cocytus, on their way to embrace their fathers or uncles. An army of officers of the National Guard rolls like a wave in the eternal Rue St. Honoré—a wave of white epaulettes and blue faces! The slates of the roofs distil melted snow upon all these worshippers of Janus, and a million feet mingle it with the mud of the streets. The supply of all sorts of carriages is deficient; foot-passengers may be seen at every corner stretching out their arms to fugitive coachmen, like the shadows of Styx hailing a fleet of Charons. What idea would resuscitated Janus form of our civilisation?

We may even go further; we may even regard the institution of our New-year's-day as a revolt of the Christian Calendar against the sacred Scripture. The Bible is remarkably clear on this point, but the song has been sung to deaf people. What says the text. "In that time, God said to Moses and to Aaron in the land of Egypt: let this month be the first of your months and the first of the months of your year. Let the fourteenth of this month be your Passover, that is to say the 'passage' of the Lord."

The command is as clear as a ray of the sun of Heliopolis or the borealis of Thabor; and the makers of the Christian Calendar have no excuse; their date of inauguration is a sacrilege in figures. We begin our year by testifying our disdain or our forgetfulness of the word of God. After absurdity comes impiety. Let us no longer be astonished that we have so many years of storm and bloodshed, when we begin them all in denying the Bible and insulting the sun—the two eternal stars—the sacred lights of our eyes and of our hearts. And see to what extremities a bad example leads. The Israelites—that great and noble people—the chosen of the Lord—the Israelites, who received the law at Sinai, who were visited by the angels of heaven under the palm-trees of their tents in the desert, and were, in the earliest times, in direct communication with God—the Israelites, too, have forgotten what God said to Moses and Aaron in the land of Egypt. They celebrate their New-year's-day on the equinox of September. For a Hygiene fête, this month is no doubt preferable to the month of January; and they have, in this particular, an advantage over us; but the disdain and the forgetfulness of precepts are the same with Jews as with Christians. See, too to what errors blindness leads us when we once depart from the sacred word! The makers of our absurd calendar were forced, on account of its disorderly nomenclature, to designate the last month of the year as if it were the tenth: December! Thus the number twelve is called ten. Two and two make five, according to the mathematics of the Calendar. Who can wonder, then, at the confusion of the affairs of this world?—that the Emperor of Russia has recommenced the part of Theodoric in 1853, amidst the full splendour of civilisation? We have it from the highest authority that, when the Lord knocks down the edifice, those that reconstruct it labour in vain.

However, be it well or ill begun, another year is behind us, and upon all our *cartes de visite* we might inscribe the following philosophical stanza, and sign it with the signature of "Eternity"—

Encore un an qui s'envole
Vers le gouffre du trepas,
Un an que le tems nous vole
Et qu'il ne nous rendra pas!

FINE ARTS.

THE DEPARTMENT OF PRACTICAL ART.

An Exhibition of the Works of the Schools of Design, in connection with the new Department of Practical Art, has been within the last few days opened to public inspection at Gore House. The display is confined, however, to the performances of the London and various provincial schools (thirty-five in number), in the department of drawing and water-colour painting; the examples in the more important branches of modeling and applied design, being reserved for an Exhibition to be held later in the season. The exhibits, nevertheless, present many points worthy the consideration of those who take interest in the progress of the arts. Consisting chiefly of studies in perspective, and in wall decoration and flower painting, and a goodly array of ordinary school copies of ordinary school examples (the Laocoon, the Discobolus, &c.) they indicate that the heads of the Department perceive the necessity of directing a great part of their attention, at the outset of their labours, to instruction in the purely elementary parts of their subject—in writing, as it were, before even entering upon grammar. A circular, recently addressed by the Secretary of the Department to the masters of the schools in connection with it, on the importance of instruction in drawing, as a necessary branch of education, instead of as an accomplishment and as to the best means of affording such instruction, confirms and gives importance to this view of the question. With respect to the productions themselves—doubtless, picked specimens of the scholars of the various schools throughout the country—we must confess that they do not rise above the average efforts of boarding-school tyros; whilst many of them are so crude as to afford little hope of considerable amendment, more particularly in the case of pupils somewhat advanced in years—that is to say, verging upon thirty—whom it would be but just and charitable in the master to warn of the futility of their attempts in a newly-adopted field. Another point upon which we entertain something stronger than a doubt, is as to the expediency of awarding medals at all in this stage of art-progress. The selection of prize subjects from amongst a mass of pretty even mediocrity, must always be a difficult and thankless task; and, in the present instance, appears to have been done capriciously. We could point out many of these copy-sheets to which medals have been awarded, which, in our humble opinion, cannot so good as very many other the same originals, which have not been similarly rewarded, nor even "highly commended;" or even two notably of the Discobolus, which are completely out of drawing. Indeed, we are not quite sure but that the unhappy efforts consigned to a side-room, as "not eligible for competition for medals," might have competed very successfully with the rest, if their cases were thrown open to general suffrage. We may add that it would give additional interest to the examination of Exhibitions of this kind, if the heads of the Department were to issue a report upon the specimens collected in it, accompanied by a catalogue; or, at least a reference to the principal subjects.

We make no apology for these remarks, as all that concerns the management of this new and experimental "Department" becomes daily of increasing importance; more particularly since the Treasury minutes issued in April last, by which it seems probable that it is to be extended in its sphere of operation, by including within its province the so-called "kindred and analogous institutions" of the Government School of Music and Science, the Museum of Practical Geology, the Geological Survey, the Museum of Irish Industry, and the Royal Dublin Society—the official denomination being again to be changed to "The Board of Trade Department of Science and Art." In this great country, if we are to have a department of this kind, it should be comprehensive in it scope, and efficient and authoritative in action, to the fullest extent possible in such matters.

THE PHOTOGRAPHIC SOCIETY.

The Annual Exhibition of this Society was opened on Tuesday evening, at the Suffolk-street Gallery, by a soirée, which was numerously attended by the admirers of the interesting art to the promotion of which it is devoted. The walls were hung with numerous specimens of most successful achievement in every class of subject—portrait, landscape, architectural, and *genre*. In the portrait class, we particularly remarked some admirable miniatures, daguerreotyped by Beard, and finished afterwards by artists in oil and water-colours—a manifest and important improvement upon the mere sun process; giving character and feeling where artistic taste could alone supply it, and softening asperities which the accidents of nature can never be entirely free from.

Her Majesty and Prince Albert honoured the exhibition with a private visit in the morning. The latter, and suite, consisting of Lady Jocelyn, Colonel Bouverie, and Lieutenant-Colonel F. Seymour, were received by Professor Wheatstone, Mr. Robert Hunt, and other members of the Council of the Society, who conducted them through the rooms. Her Majesty appeared to take a deep interest in the superb specimens of the several classes of the photographic art which the collection contains, and remained in the Gallery upwards of an hour.

We take this opportunity of correcting a verbal error into which we fell last week when noticing a similar exhibition in New Bond-street. That exhibition is of the Photographic Institution, not Society, as we described it.

CONSCIENCE MONEY.

—The following is the account of the advertised amount, during each month of the last year, of the sums received by the Chancellor of the Exchequer from anonymous correspondents, with unpaid taxes:—January, £1223 2s. 2d.; February, £115; March, £60; April, £69 17s. 9d.; May, £2313 9s. 8d.; June, £1661 18s. 8d.; July, £164 16s.; August, £65 13s. 6d.; September, £15; October, £58 10s. 10d.; November, £60; December, £220 11s. 6d. Total £4758 14s. 6d.

ANOTHER MEGATHERIUM.—A discovery of great interest to the science of paleontology has lately been made at the gates of Constantina (Algeria), while making a cutting for the improvement of the approaches to that city, where a great part of the skeleton of some gigantic animal was found. The thigh and leg bones, the vertebræ, the ribs, the upper part of the head, and several teeth, were in a very good state of preservation. The head is not less than 25 centimetres from the neck to the nape, and 48 across the bone of the forehead. The front part of the upper jaw has long teeth, and also tusks, similar to a wild boar. The legs of the animal are about the size of those of a horse; from the bend of the ribs, it is supposed that its size must have been about four times that of an ordinary ox. Its head is somewhat similar to that of the hippopotamus, and its mouth must have been of enormous power. No name can be assigned to this animal; but it is considered probable that it may belong to the numerous family of antediluvian pachydermes. (the ground wherein it was found is composed of a red sandstone of tertiary formation. It is expected that the Government will order some further excavations to be made on the same spot, which may lead to other discoveries interesting to science.

IMPROVEMENTS IN BROMPTON.—A number of improvements are about to be made in Brompton and its neighbourhood. The Royal Commissioners promise several new and extensive public roads. Mr. Purday, superintendent of a great part of Bromptonpark, has also given notice to make a new road from the end of the square into the road leading to Prince's-gate, Knightsbridge, and so on to the Kensington-road. A great improvement has been made at the end of Brompton crescent, next to Fulham-road, by the removal of the iron bars which stood there.

THE IRVINGITE CHURCH IN GORDON-SQUARE.—The followers of the late Rev. Edward Irving, who lately assembled at Newman-street, having adjourned to the magnificent Gothic church erected for them in Gordon-square, that building was solemnly opened on Sunday morning at ten o'clock. At that hour precisely, "the Angel," as he is termed, entered, magnificently attired in purple robes, and took his seat in a chair of authority. Then followed the "Prophets," wearing blue stoles, typical of the skies, whence they draw their inspiration. After these came "Evangelists," clothed in red, denoting the blood which flowed at Calvary; and, last of all, followed pastors, elders, and other officers. A Liturgy was used very similar to that of the Church of England, from which there appears to be very little doctrinal deviation. A sermon was preached by one of the elders, who inculcated various moral duties. The "Gloria in Excelsis," composed by Miss Mills, was given with great power on a very splendid organ, which has been erected on each side of the centre aisle; and in the "Te Deum," Master Wild (son of Mr. Wild, the engraver), executed various portions of it with wonderful precision. Amongst the office bearers of the church in London may be mentioned Admiral Gambier; Mr. H Drummond, M.P.; the Hon. Henry Parnell; Mr. J. F. Knight, R.A. Mr. Cooke, the barrister; Major Macdonald, &c.; while Lady Dawson Lady Bateman, Lady Anderson, and other ladies of rank and fortune, are amongst its members. Those who join this church offer a tenth of their annual income towards its support and extension, and this promise, it is believed, is, year after year, rigidly and faithfully kept.

POSTAL COMMUNICATIONS WITH THE ORKNEY ISLANDS.—Mr. James Wilson, M.P., Secretary to the Treasury, in reply to a memorial from Newcastle upon this subject, states that their Lordships are prepared to make an experiment for two years of a steam postal communication from Scrabster-pier to Stromness; the service to be daily during the six months of summer, and every other day during the six months of winter, Sundays excepted; and to be commenced on the 1st of April next.

THE attraction of the Dublin Winter Garden (late the Exhibition building) continues as great as ever: on Tuesday last the numbers that entered were 2000 in excess of those present at the opening.

THE SNOW STORM.—THE WEATHER.

The specimen we have already had of 1854 shows that it is destined to be a remarkable year, so far as regards the weather. Towards the close of last week the signs of an early and severe winter had begun to manifest themselves in a very unequivocal manner, but it was not till Monday that it assumed its most rigorous form. On Saturday night a great quantity of snow fell, which had the effect of rendering the streets exceedingly slippery, and thereby causing a number of accidents. Its effect on the ice in Regent's-park, Hyde-park, Kensington-gardens, and St. James's-park, was to make it as smooth as any skater could desire, as was evident by the crowds who were practising on the Serpentine and every other available spot. Throughout the greater part of Sunday, the Parks were crowded with well-dressed visitors, especially on the north bank of the river Serpentine, and along most of the drives and promenades in Hyde-park and Kensington-gardens.

The coldest night experienced in this country for many years was on Monday. Such was its severity, that two constables attached to the metropolitan police force were found frozen to death on Tuesday morning in the neighbourhood of Hounslow. The thermometer fell to 12°, being 14° lower than on Thursday night, when the mercury indicated 16° Fahrenheit. On Tuesday morning the glass was quite as low as on the preceding night; but during the middle of the day, the influence of the sun was high as 30°; and in the evening, at five o'clock, it stood at 31°, but shortly after that hour it again fell to 29°. The barometer at the same time stood at 29·18°. The wind blew tremendously in the early part of the day from the east to north-east; but between seven and eight o'clock in the evening it veered towards the south-west, from which it was inferred that a thaw was about to take place; but, instead of that, we were visited on the night of the severest snow-storm which has been witnessed in London for the last quarter of a century. Such was its force by half-past ten o'clock that the Strand and other principal thoroughfares were almost impassable. Many of the omnibuses ceased running before their usual hour, and even those which did persist crawled along at a very slow pace.

The snow continued to fall during the greater part of the night, and on Wednesday morning it was from nine to twelve inches in depth, even in places where no drifting had taken place. In exposed situations, the wreaths of snow were from three to four feet in depth. Throughout the whole day the streets had a most singular appearance. In the morning, especially, London seemed almost like a deserted city. Along the Strand and Fleet-street very few vehicles were to be seen, and those which did make their appearance passed along silently, the snow being so deep as to drown the customary rattle of the wheels. Very few of the omnibuses risked the journey in the early part of the day; indeed, the long distance ones did not attempt to run at all, with the exception of those to Richmond, which, by means of three horses to each, managed to get along at a reasonable pace. Some of the Paddington ones, with due regard to the frightful ascent of Holborn-hill, ran with four horses; and a few started on that route with one of the foremost. Single-horse cabs were unable to pass through, many of the streets, and, therefore, some of the enterprising Jehus harnessed an additional animal in front, and drove fashion. As might naturally be expected under these circumstances, an ad ition to the ordinary fares was out of the question. The long stage omnibuses, instead of 6d., charged 1s. and 1s. 6d., and the hopping omnibuses along Holborn and Oxford-street raised their fares to 6d. Cabs were difficult to procure at any price, the ranks being almost entirely deserted, "Cosby" arguing, and in this instance with justice, that "once upon the rank he would be nailed for the s pence, which wouldn't pay each weather' Those vehicles, therefore, which were out, were generally hired direct from the yards, or picked up while loitering about so as to make their own terms with the hirer. The railway stations were as deserted as the street stands, and passengers arriving from the country were frequently compelled to leave their luggage at the stations, and proceed on foot to their various destinations, in some instances as much as 5s was given for cabs for a distance barely exceeding a mile.

Throughout the whole of Wednesday the narrow streets in the city, where so much carriage is usually employed, were rendered utterly impassable for almost any vehicle, there being so little room for the mass of snow shovelled on the pavements. Even along the Strand and Fleet-street the thoroughfares the heaps of snow at each side of the street rendered driving very hazardous in the evening. In Lombard-street, a number of men were employed in carrying off the snow in carts. In Regent's-park, the skaters were not numerous, a few very zealous members of the Skaters' Club, having had the snow cleared away, made an attempt, but their performances were not such as to excite admiration.

As evening drew on the omnibuses gradually decreased in number, until at nine o'clock they had entirely ceased running, and the streets relapsed into a state of silence, alike unwonted and monotonous at such an hour, the silence being the more marked from the fact that the heavy waggons employed in the heavy goods traffic of the railways were for the most part absent, those only being required where six horses to do work for which three or four would have been sufficient under ordinary circumstances, and for one or two waggons which ascended Holborn-hill eight horses were found to be necessary.

The various theatres and other places of amusement suffered to a great extent on Wednesday night on account of the weather. Most of the houses presented little more than empty buildings. The Wednesday Evening Concert at Exeter-hall was entirely discontinued in the early evening, it being found impracticable for the carriages conveying the company to approach the building.

The most serious injury which the public are likely to suffer from a continuance of such inclement weather would arise from the dearth of coals. The coal trade on the river below London-bridge is now such that the colliers at the Pool cannot discharge their cargoes, the barges being in in almost every instance frozen in, or so jammed up as to render it impossible to carry on the ordinary operations. The directors of several of the leading coal companies met on Wednesday for the purpose of determining what was best to be done under the circumstances. No decision was arrived at; and the only hope was that the severity of the weather might moderate. Many of the small coal dealers in the poor neighbourhoods at once took advantage of the state of the weather, and put an extra 2d., and in some places 3d., per cwt. upon the price of coals, which must have been severely felt by their poor customers. The Rev. W. M'Call, Incumbent of St. Mary, St. George's-in-the-East, while calling attention to the state of the poor generally—in his own parish there are 2000 persons in a state of the deepest distress—says that coals are selling at 34s. 6d. per cwt., or 55s. per ton.

On nearly all the principal railways, the excessive depth of snow which drifted into the cuttings during the storm caused a serious interruption to the traffic. The London and South-Western railway was almost the only line on which the trains arrived on Wednesday any way near their time; and, even on it, the mail-train was four hours late.

LONDON AND NORTH-WESTERN RAILWAY.—Early on Wednesday morning a telegraphic message from Tring announced that the up line was blocked in the cutting, and the down line in a very bad state, a luggage train, followed by the mail train, being almost embedded in the snow. Several hundred men were at once set to work to clear the line, but, after several hours' arduous labour, only partially succeeded. The first train from Northampton was considerably behind time. The snow had drifted three feet high in the Northampton station, and at Roade, Wolverton, due at nine, arrived at twelve. At half-past twelve came in the train from Liverpool and Manchester, eight hours behind its time. At the Tring cutting, the train came to a dead block, and was soon embedded in the snow five hours. Ultimately, it was found necessary to go back to the next station, and shift the train to the down rails, along which it finished its journey. The other trains continued to arrive during Wednesday, from one to two hours behind their times.

GREAT NORTHERN RAILWAY.—A message by electric telegraph on Wednesday morning announced that the line on both sides of Grantham was completely blocked, and all traffic impossible between Peterborough and Newark. The first train arriving was from Peterborough, at seven o'clock, due at 5.15 a.m. At ten o'clock two other short distance trains arrived, one of them about an hour and a half late. A train from Peterborough, due at eleven, arrived at 12.45. At three o'clock in the afternoon a second telegraphic message was received, stating that the line between Newark and Peterborough was still completely blocked, and that the snow, which had continued throughout the day, was then falling faster than ever. The down trains started at the usual times, but the company declined to book passengers further than Peterborough. A telegraphic message at eight o'clock stated that traffic between Peterborough and Newark was still impossible—the loop line not being open, and the main line remaining closed; nothing standing the exertions made to clear it; the snow in the cuttings having accumulated to an almost uniform depth of six feet.

SOUTH-EASTERN RAILWAY.—The great obstruction along this line commenced at Ashford, the line from whence to Dover was blocked so early on Tuesday night, that the mail-train, which left London at eight p.m., and ought to have arrived at Dover about eleven p.m., was delayed until half-past nine on Wednesday morning. [illegible] its time. The mail [illegible] [illegible] [illegible]

THE POST-BOY.

THE MAIL-COACH.

THE MAIL-TRAIN.

THE POST IN THE SNOW.

THE incidents of the last few days—the severe frost, the heavy snow-storms, filling up ditches, burying hedges in white round ramparts, and piling up deep snow-drifts in the exposed entrances of narrow valleys—have come upon us almost by surprise. Years have passed since we experienced anything like it. In some districts coach and horse travelling has been altogether brought to a stand-still; in others, the rarely seen four-in-hand, or four horses with a burly groom as postilion, has been called into activity to drag coaches and omnibuses through the deep roads. The posts are all behind-hand—we wait impatiently for an hour or two past the time when we are accustomed to settle the business of the day by our letters. In Wales, in Devonshire, in Cornwall—where railways have not yet penetrated—the mails have been stopped in more than one district. Even on railroads it has required the expansive power of the express engine to force a way through deep drifts; and, in some instances, a clear road could not be made for heavily loaded trains until ploughs, helped by a gang of labourers, had been set to work. Fortunately, we enjoy, this winter, one great advantage of the railway system, in the facility for concentrating labour on the spots where it is most needed. Our Illustration shows the mail-train at a stand-still, blowing off its steam in the face of a heavy drift; the passengers, no doubt, impatient at the delay; yet how comfortable their condition in contrast with that of passengers by the old mail coaches!

Our two Pictures of the Post-Boy and the Mail-Coach illustrate incidents in the life of a friend, who looks, with no small satisfaction, on the present post system, as compared with that of the days of his youth.

The village where I was born—I ask pardon of the present respectable inhabitants (it is now a town with a Health of Towns' Act, and a set of remarkably quarrelsome commissioners)—in its rise and progress to its present stage of prosperous grininess, affords a complete history of travelling changes. We used to be five miles from the high road, over a way that was partly bridle road and partly a cart track by a moor, long since portioned off, fenced, and turned into fields of turnips, oats, and barley. Our village consisted of a church and rectory house, a water corn-mill, an inn (the Fisherman's Rest), a shop, a blacksmith's smithy; a pound, with walls of loose stones and sods, which we used to pull down when we wanted a donkey ride; half a dozen houses, and twice as many cottages, all scattered over the valley, alongside the brook, "Alder Brook." Our village was called Alder Vale. We have a stone bridge now, and the streets stretch over the two hills on each side.

It was a proud day for Alder Vale, when our first post-office was opened; and, by favour of the Rector's cousin, a powerful M.P., we were chosen from all the other villages on the stream, because we had the ancient corn-mill. My mother's once favourite maid, Barbara, widow Bugler, was chosen for post-mistress, because her husband, wild Jack Bugler, had been killed under Lord Exmouth, fighting as a jolly marine at Algiers; for, as the poor Widow Barbara remarked when the news came, "he never could keep himself out of mischief, and always was the very dooce for fighting and drinking, and——" There she stopped: she might have said more, but put her apron to her eyes and began to cry. So poor Barbara was left with a little Jack—a curly-headed laughing, mischievous imp—her savings all spent, to take in sewing, and do odd jobs, and make a living anyhow; and that was not very well until she was put into the post-office. Little Jack Bugler turned out the very "moral of his father," as Barbara observed ten times a day. At four years old he had no respect for the high-capped dame who kept the village school: at six played old gooseberry with the two cats of Miss Selina and Miss Clarinda Brown, the maiden aunts of the Rector. At nine he had successively passed through the hands of the village tailor and shoemaker, and been by both rejected as an unruly apprentice. The old folk were beginning to shake their heads very ominously, when his mother's establishment in the post-office opened a new career suitable to his genius, long practised on all the donkeys and ponies of the moor. With many threats, and cautions, and promises, and a general contribution of garments, he was made post-boy, and the happiest of boys at the same time. Bilberry, wickedest, wiliest, and most surefooted of our moor ponies, was selected as his four-footed assistant in carrying the letter-bag to and from the Cross-road Inn, where the mail-coach daily left and took up our letters.

The second winter after Jack's installation in office, there came on just such a frost, and then successive hard snow storms, as we have had lately. All over the country the mails were stopped, and, in some places, buried for days, and ploughed out. Nevertheless, Jack, varying his route, making short new cuts with the help of Bilberry's craftiness, managed to do his work, if not keep his time; and we ceased to have any anxiety on his account, although it was often midnight before his clanging horn disturbed the silence of the village, and brought us to our frost-covered panes to see him trot through, "cold yet cheerful." But one night, just after Christmas, we slept through without hearing any echoes of Jack Bugler's horn; and, early after daybreak, were awakened by the lamentation of his mother. Neither Jack nor Bilberry had come home. There had been a terrible fall of snow, with a gale of wind in the night; so we were all more frightened than we liked to say. There was a general turn-out of the village: all the able-bodied men, with the Rector and the Doctor, the blacksmith and the miller at their head. Of course I went with my brother John and our terrier, Spot, to look on. We divided into three parties, and took three roads, and searched nearly all day, until something dark on the waste of snow, which turned out to be Jack's cap on a bush, set us to search, and in the leeward side of the hollow trunk of a huge branchless oak, almost buried in snow, we found Bilberry lying, with poor Jack close under him, and quite insensible. We wrapped him in blankets, the old shepherds rubbed him with snow, and he soon came round—the shaggy coat of the pony had saved him.

It seems he had dismounted to lead Bilberry through the deep snow; had lost his way in the storm, taken shelter in the Robber's Oak, and fallen asleep under Bilberry. He knew no more until he came to himself in bed at the Rectory, where he was first carried. He used to say, smacking his lips at the recollection, that he should like to be lost in the snow again, to have another week of nursing, nice clothes, and posnets of ale and cider-wine. Jack Bugler, a few years afterwards, left the Royal post service to whip in a pack of fox-hounds, in Yorkshire, where he is now huntsman.

Times changed: a coalpit was opened, and a bunch of factories established, a few miles beyond Alder Vale; then came a new short cut of the high road, intersecting us; and we began to grow into importance.

My next adventure was in the first winter journey of the mail coach, on my return from a continental tour, fifteen years ago, when most anxious to reach home by Christmas-day. We were thirty hours in performing 190 miles of the way; and when ten miles from Alder Town, were waked up from a cramped slumber (having been up walking by the side of the mail most of the night, helping the horses and easing the load up hill), by a heavy lurch, and loud cries of the guard. Out we jumped, and found ourselves half in a ditch on the wrong side of the hedge. Whipping, pulling, pushing, made progress at the rate of about one mile an hour, when a crack, and another lurch to the near side, announced the axle-tree snapped. There was no help for it. The guard and my friend Jack Splinterbar, of Brasenhead College, set off with the leaders and the mail-bags on a steeplechase, leaving me with a pipe and a small bar of Cavendish, to keep company with the coachman for four hours, until a team arrived, and dragged us through.

This winter snow and ice affect us as little as floods. The Great Universal Junction has given Alder Town a loop line; a vast viaduct spans the scene where little Jack Bugler was lost in the Robber's Oak, and the hills down which Bilberry "*skidded*" We may be detained at times, but we cannot wander over the fences without knowing it. The moor has lost all its romance, and post-boys and post-horns will soon be as rare elements in fireside stories as Sleeping Beauties and giants and dwarfs. Without the slightest anxiety, I accepted an invitation to dinner at Alder Town on New Years'day, and entered the express train, 200 miles off, on the morning of the 31st December, with perfect confidence that in about six hours I should be deposited within an omnibus distance of the main street. Looking back for five-and-twenty years I see many changes: moor lands to fertile fields; the site of woods and coverts to populous towns; bridle roads to highways; fishing creeks to prosperous ports; post-boys, with mail-bag and pony, superseded by mail-coaches; and mail-coaches by mail railway trains. But the seasons remain the same.

One duty we must not forget. We are able to take advantage of the modern luxuries of travelling, of which the express train, first-class, when well clad and warmed, is one of the greatest. We must not forget to help, when we can, those poor people who are compelled to endure, by day and night, the inclement seasons from which we are shielded.

S. S.

SKATING IN THE REGENT'S PARK.

ON THE ICE.

THE snow has left its card for us this season without doubt. London has resembled a sheet of white paper in the past week, on which was written the footprints and activity of its myriad population. The metropolis has put on its winter robe, and taken it off with coquettish frequency. There have been fifty pretty little amateur snow-storms from ten to a hundred minutes in duration—intermittent in their calls, coming and going with unsatisfactory celerity. The ornamental waters of the Parks are ice-bound; and much obliged to the weather are the thousands of pleasure-seekers who extract amusement from ice, and manage to cut out as much pleasure on a pair of skates as less enterprising folks would languidly enjoy on a day of brilliant summer sunshine.

In the northern sections of Europe and America, where ice and snow are constant occurrences of the cold quarter of the year, water may freeze as hard as it likes, and nature put on as gorgeous a mantle as the element can form, and little attention is created in consequence; but, in London, where snow is coy of its visits, and water slow to lose its state of liquescence—where the Thames prides itself on its flowing freedom, bidding defiance to the severity of the seasons—where the *trottoir* glories in its ever-present pave-stones—in London, then, snow and ice assume a different moral aspect, and become matters of greater importance than in colder climes. The season of snow in the United States has a specific character of its own—suggesting at once moonlight, festivity, buffalo-robes, pretty girls, and music. The three weeks' sleighing of New York is a great event, involving as many happy associations as any other important period of the year. To part with this episode of merriment would be cutting away a slice from the winter that many would regret. It is the white oasis (a singular term as applied here) in the desert of the season's dreariness.

Our metropolis, not boasting of its season of sleighing, must fly to the ice in order to turn the effects of the cold weather to account. Accordingly, we find thousands trooping to the Parks, for the purpose of enjoying the artificial surface nature has prepared for their reception. Some content themselves with merely sliding; others dash about on skates. The timidly-cautious venture only to the edge, and endeavour to convince themselves that they enjoy the scene, and chill themselves very much during the mental operation. Just now the ice is in good order, and there is great amusement on it. Young gentlemen who affect skates, and execute all sorts of gliding impossibilities, are in high feather; and lads, and "children of a larger growth," who convert the polished surface into a slide, and go slipping along in a procession are in quite as good humour with the sport.

Let us take a walk to the Serpentine. It is about two o'clock, and the sheet of ice is covered with people. Hundreds are skating. We single

ROUGHING HORSES FOR FROSTY WEATHER.—(SEE NEXT PAGE.)

out that tall young man with the whiskers, who moves with graceful action, performing flourishes that astonish the spectators. Now he whirls rapidly about, one leg before the other, shaping a device on the ice with facility. Now he turns, altering the position of his feet by directing them in the tracery of lines, which he achieves by a succession of movements that seem like floating. The device grows into a grotesque series of circles, set in what resembles a curious frame of fanciful lacework; and, this done, away glides the accomplished artist in ice, leaving an admiring group to express their pleasure for its feat—or rather that which his feet have been the means of producing. There is a class of clumsy skaters who do nothing but tumble, and try the ice fearfully; these persons may excel on *terra firma*, but ice is beyond their power their action might be elegant on a gravel walk, but the frozen carpet of the Serpentine lake demands more skill than they possess.

The clumsy portions of the visitors are not without their uses. They produce their share of the general fun, for what they lack in grace and management, they abundantly compensate for in feat—or rather that which his feet have been the means of producing. There is a class of clumsy skaters who do nothing but tumble, and try the ice fearfully; these persons may excel on *terra firma*, but ice is beyond their power their action might be elegant on a gravel walk, but the frozen carpet of the Serpentine lake demands more skill than they possess.

The Ornamental Water of the Regent's Park is, perhaps, after the Serpentine, the most popular resort of the skaters. The aristocratic edges of the Park contribute a vast number of amateurs and proficients, who, attired in heavy furs and shawls, come about with an air of gay comfort. The ladies make their appearance here in great numbers, and brave the weather for an hour's amusement. How daintily they step over the crested snow, and with what piquant timidity they venture on the frozen waters. Should the ice playfully indulge in that wondrous cracking sound, which it sometimes does, without absolutely breaking, how they scream and scamper, half terrified, half elated, at the novel danger of their position.

There are two places where a *débutant* cannot hope to escape bewilderment—in the water when learning to swim, and on top of the water when learning to skate. We give the preference to the latter, on the ground that there is a certain amount of comfort in the knowledge of a full possession of the use of the legs, which, as everybody knows, are invaluable in cases of loss of equilibrium. But a pair of skates try the legs sadly, and upset the strongest-minded confidence that can be brought to bear in their behalf. There is a comic desolation in putting on skates for the first time, that belongs peculiarly to the situation. If the novice be a young man of the "rapid" species, he is fascinated by the gliding troops on every side, moving with easy confidence. At first he wonders whether he can do the same, and, after a mental struggle or so, he at length summons courage and half-a-dozen—the latter as a deposit to be left with the attendant for the use of the skates, and the former to be used after his feet are equipped. "How funny I feel," utters the *débutant* very cold, and very fearful that he will not be able to put in execution his desires. One goes one foot, and the other flies about as if it were on a pivot. "Don't leave me for a moment," he says to the attendant, in a faltering voice, clutching him by the coat. "I think they are not strapped firmly;" and he saves himself from an ignominious tumble by clasping him tightly about the waists, and then sinking into a chair. The man, perceiving at once that his customer is a "raw 'un," affects to change the position of the straps, and once more the brave youth is erect. He is less nervous now, and seems re-assured. He puts his best leg forward this time, and does it very well bringing up the other in qu te a dashing style.

"Go it, Mr. Cheever!" "Now, then, Mister, catch me if you can!" shriek a pair of audacious youths who have been wrestling the whole affair.

The throws him off his guard in glancing at the same time to dare utter such impudence, his right foot gets into trouble, the left wickedly follows the example, and he feels himself going—gets very red or pale, as the case may be; and in the effort to spare himself the mortification of a fall, he seizes by the arm a passing skater, who, gliding swiftly by; and the latter, unable to recover from the suddenness with which he has been checked, also reels, and they measure their mutual lengths side by side on the ice, to the boisterous approval of a crowd of delighted lookers-on.

The *débutant* crawls back to the chair after mildly apologising to his fellow sufferer, and thinks he will not try skating any more, just at present. Perhaps he descends to the less ambitious operation of sliding; and, though he feel that skates may come other time to be a source of pride to his acquaintance, he is content to take out his fun on the ice that day in a manner more adapted to his ideas of entertainment unblent with peril.

ROUGHING HORSES FOR FROST.

THE blacksmith is busy—busy with work he has not had to do for many a long day. One must look back through a series of Annual Registers to find the last short, sharp, and decisive frost, that turned plushes of the country lanes into sheets of ice, and gave to—to the immense satisfaction of the plough-lads, as they slithered along, and the discomfiture of Dobbin and Bald-face, and Long-tail, the colt. We almost thought that Jack Frost had forgotten us. Why, it's not two days since Job Bellows was as busy and more interested than when our artist caught him with "Clydesdale's" fore-foot in his hand, on quite a different job. Old Jem Harkforard killed his fox within half a mile of Job's smithy, after an hour and forty-five minutes, at a rattling pace, over and down some fine sticky fallows, through willow beds, and clay pit coverts where every stride was at least up to the hocks, and a good many up to the belly: and those who did not stick fast were glad to get away, leaving a collection of "lucky horseshoes"—some at the bottom of the mud-made air-pumps, others flung high up, in last violent efforts at extrication, into bushes, there to hang until the spring season, and then be carried home as great prizes, to be nailed over cottage doors or sold, by some unbelieving National School urchins, to the blacksmith.

Until a case of "kill," or "blown and beat," no fox-hunter ever finds out that he has cast a shoe. In this last instance the gentleman who had outridden and lost their second horses, a green-coated farmer, with a four-year-old, that he wanted to sell, and a steeple-chaser who had gone rather harder and faster than was consistent with "qualification thoroughbred," were clamorous round Job's smithy for first turn. It is not often that a blacksmith earns money so quick y and easily as when, with four nails and a second-hand shoe, he satisfies an impatient sportsman. Men don't wait for charges on such occasions, if there is to be another covert drawn for a second fox.

Not so in "roughing." Deliberation is the order of the day; and there is no crowding, now coaching is a bygone institution. One set of horse-owners don't foot with another. Some think that the roads are not so very slippery—that they can do without such extra caution—and would sooner run all risks, and walk instead of ride, rather than pay an extra sixpence beyond the annual shoeing contract to the blacksmith. Now this is very foolish. Abstractedly, the less a horse's feet are knocked about with hammers and planted before it practically, more harm may be done in going 500 yards in smooth shoes over slippery ground than in a dozen shuffings. As to gentlemen's horses where according to common custom, the groom is lazy and has his own way, there are ten nags spoiled by over-feed and staying in the stable for one by over work. In slippery weather, especially in driving or riding fast through icy lanes, where there is little traffic, and the ground is an even, there is as much chance of the shoes of the fore-feet of the leaders and rick- of the back, as by absolute falls. A strain is worse to cure than a cut. So, if there is the least chance of the frost holding until horses must be used, it is sooner they are roughed the better. For riding hacks and light harness work, where there are steep hills to be descended with a heavy carriage, horses can be roughed very effectively without shifting the shoes at all. Four sound large-headed nails will give hold enough to trot over a frozen pond. Wheelers and carters, like our blacksmith's "Clydesdale" require a calk at the heel and toe, according to the work they have to do. All three examples are given in the Illustration. The country postman is taking a play with the dog, while his quiet, saddle-bridle roadster, with the wallet, is eating his turn, after the smart, well-bred nag that, no doubt, does the distance between his master's house and the railway station at the rate of ten miles an hour daily. "Clydesdale" is wanted to fetch a load of draining tile, that could not be put on the land until the rain ceased.

A heavy fall of snow is more of an impediment than the most slippery, ice-covered road. Deep soft snow is very exhausting to, and soon wears out, the best horse; and, when there is a hard frost, the snow "balls" in it horse's feet until he is mounted upon a pair of round clogs; and, at night tapping over, falls on his head. The rider has nothing for it but to gather himself up, clear out his steed's feet with a knife or whip-handle, and either continue the journey on foot, or re-mount and repeat the feat. We remember, some twenty years ago, when two stone lighter than we ride at present, awakening one winter morning in Wales, to find a deep fall of snow, a sharp frost, and twenty-five miles to ride. At that time we valued our bones little, and our hack's (an Irish thorough-bred) still less. After two or three falls on very soft ground, in which we amicably rolled over in the snow together, we found that the best way to avoid "balling" was to push on at a hand-gallop. By this expedient, although every now and then there was "a coming down with a run," it was not nearly so frequent as at a slow pace. It is said that filling the hoofs with soft-soap will prevent snow "balling;" but of the efficiency of this expedient we have no evidence.

MUSIC.

During the Christmas holidays there are, in general, few musical performances in London; it being the custom of our most popular vocal and instrumental performers to betake themselves to the provinces, to figure as "stars" at the many oratorios and concerts which are given at this season at most of our principal towns. For the last two or three years, consequently, the metropolitan musical intelligence has been little more than a blank.

THE REUNION DES ARTS terminated its season of 1853 on Wednesday, the 28th of December. This society—notwithstanding its affected French name—is judiciously managed, and flourishes accordingly. The cultivation of Music, though its most prominent, is by no means its sole object. Its purpose is to bring together and into a state of social intercourse, the votaries of all the fine arts, whether artists or amateurs, and to afford them pleasure and instruction by musical performances, by exhibiting paintings, sculpture, and other objects of art; by lectures on literary and artistical subjects, and by *conversazioni*. The society's spacious rooms in Harley-street are adorned with many masterly and valuable works of art; and there is a news-room for the use of the subscribers, which is liberally supplied with newspapers and periodicals of every kind, and gives the members all the advantages of a club-room. The long and increasing list of subscribers includes the many distinguished artists and lovers of the fine arts. The concert of the 28th of December may be taken as a specimen of these entertainments of the Reunion. It consisted vocal pieces, Miss Arabella Goddard, with M. Ries on the violin, and M. Paque on the violoncello, played Beethoven's Grand Trio in B flat—his *chef d'œuvre* in this class of composition. Miss Goddard played as a solo, Chopin's grand March recently composed for the Sultan, arranged by Benedict for the piano, in which form its effect is admirable. A new Trio, by M. Praeger, for the piano, violin, and violoncello, was played by the author and the two performers already named, and gained every suffrage as a masterly and beautiful work. The principal vocalist was Madame Amedie, who delighted the audience by her splendid performance at the fine aria, "In si barbara sciagura," from Rossini's "Semiramide," and in Mercadante's Duet, "E mi puoi credere," the tenor part of which was finely sung by Signor Cubatta. Other vocal pieces were sung by Miss Iernan and Miss Hunt; and M. Paque obtained great applause for his execution of a Violoncello Solo composed by himself. The rooms were crowded to the door with distinguished company.

THE SOCIETY OF BRITISH MUSICIANS had their Third Chamber Concert of the season on Monday evening last, at their usual place of meeting, Erat's harp saloon, in Berners-street. Several compositions, by members of the society, were performed with much applause. Among the instrumental pieces, special notice is due to a MS. quartet in C minor, for two violins, tenor, and violoncello, by Dr. Steggal; to a sonatina in F, for piano and violin, by Mr. Henry Graves; and to a quartet, for piano and stringed instruments, by Mr. Charles E. Stephens. All these works, which were carefully and well executed, did much honour to their composers—Mr. Stephens's quartet, especially, which evinced a boldness and novelty of style rarely acquired by so young a composer. Among the vocal pieces, a part-song, for four voices, "Dream the dream though long deceived," composed by Mr. Lake, bore away the palm. It is a piece of pure and beautiful vocal harmony, worthy of companionship with the finest works of our old English masters. A "Benedictus," for four voices, by Mr. Lovell Phillips, was worthy of this young musician. Altogether the Chamber Concerts of the society are exceedingly interesting and deserving of attention, as they bring before the public a great amount of talent on the part of the younger members of the musical profession.

MISS RANSFORD GAVE one of her series of soirées at her residence, in Welbeck-street, the last of which took place on Tuesday last. They have been very well-conducted, elegant, and successful entertainments; possessing, moreover, a peculiar feature rarely met with at the present day. They have consisted entirely of English music; and our ears have been refreshed by many of the finest glees, part-songs, duets, and ballads, of our own national school, now generally laid aside to make room for foreign compositions of the day, often very inferior, but preferred simply because they are foreign. The concert of last evening, for instance, we had the pleasure of hearing Attwood's beautiful but now almost forgotten glee, "The Curfew." Sir Henry Bishop's splendid five-part glee, "Now by day's retiring lamp," a charming ballad, "Still my spirit yearns for thee," by Mr. Lindsay Sloper; Hatton's "Sun and Battersea," a ballad worthy of Dibdin; and Mr. Brinley Richards's beautiful serenade "Up, quit thy bower," from Joanna Baillie's drama "The Beacon." They were all admirably performed; the singers being Miss Ransford, Miss Messent, Madame Weiss, Messrs. Ransford, senior and junior, and Mr. Weiss.

Edinburgh possesses at present, and for the first time, a regular Opera, which is quite the rage in the fashionable circles of the Scotch metropolis. The *impresario* consists of the most popular Italian and German opera, performed in their respective languages. "Norma," the "Barbiere di Siviglia," "Lucrezia Borgia," "Fidello," and the "Freischütz" have been given to crowded houses, and with immense success. The company would be considered strong even in London. It includes Mdme. Carsdori, Mdme. Zimmermann, Reichardi, Formisi, Bettini, and other performers of merit. The orchestra, under the direction of Herr Anschues, is very good, and every piece has been brought out in a complete and effective manner.

The appearance of a new and successful composer in Italy—where, for so many years, nothing has been heard but the weak and worn-out operas of Verdi—is an occurrence of much interest. A Correspondent at Milan writes to us as follows:—

The opening of the CARNIVAL season at LA SCALA has been one of the most successful known for many years. The opera was a new one, "Il Convito di Baldassare" (Belshazzar's Feast), by Buzzi. The music is quite of the sterling (*vecchi*) school, and pleases extremely. It has the true rich voice and peculiar excellence of the first singer, Cara Novello, who is received with enthusiasm by the Milanese as a most accomplished musician. The veteran Basini came to Milan on this occasion from the country house, expressly to hear the début here of the vocalist whom he had advised, as a young artist, when he heard her in England, to prosecute the opera career. His delight was expressed in no mistakable terms, and was further proved by his dropping a hint of returning shortly to Milan, to sing for and with her. There is a decided reaction just now in Italy, in favour of the pure vocal style, against the shouting school which lately prevailed; as an evidence of which, Rossini's operas of "Mosè in Egitto," "Semiramide," and "Cenerentola," are talked of for speedy production. The new opera of Buzzi has been superbly put upon the stage. The grand scene and tableau of the "Feast" is as admirable copy of Martin's celebrated picture; while the scenes and ... have been taken from the Nineveh sculptures in the British Museum.

MUSICAL PUBLICATIONS.

The sixteenth volume of the "Musical Bouquet" is calculated to be an interesting New-year's Present. The principal portion of its contents is a selection from the vocal compositions of Henry Russell, including the most favourite songs from the "Emigrant's Progress:"—"Cheer, boys, cheer," "Far, far upon the sea," "Land, land, land!" and "Long parted have we been," all written by Dr. Dibdin Pratt; "Slave Sale," the "African Village," written by Mr. Angus B. Reach; and the "Lament for Wellington," written by Bruce Cook. There are likewise several elegant quadrilles, polkas, and other pieces of dance-music; the whole forming a very handsome volume.

"A set of Songs," by Edward Francis Fitzwilliam, does honour to the genius of this young and rising composer. They are twelve in number; the words are selected from the works of the greatest English poets, and united to appropriate and characteristic music. Mr. Fitzwilliam's melodies are graceful and expressive, and the accompaniments are rich, ingenious, and masterly.

"One hundred and one progressive Exercises for the Violin," by W. Wand of the Royal Italian Opera, will be found very useful to the student of that instrument, especially in the earlier stages of his progress. They are well calculated to lay a good foundation, by giving a sound method of fingering in all the different keys, and also in imparting freedom and variety in the use of the bow. The book has the further recommendation of cheapness.

Mr. Chesney's "New Instructions for the Concertina" will, likewise, be found a useful guide in learning this pleasant instrument, which, as its powers are developed, is daily coming into greater and greater repute. The instructions are plain and concise, and the exercises afford excellent practice to the young performer.

THE THEATRES.

DRURY-LANE.

On Saturday, a new piece in three acts, called "The Begging Letter," was produced. It is of the transpontine melo-dramatic school of horror and is so full of that element that the audience properly rebelled against the infliction. When we said that Mr. Smith considered all as fish that came to his net, we had no conception that he would have caught such a fish as this; we gave him credit for more judgment. But it is more than probable that he did not consult his own taste on the occasion—perhaps, has none of his own in relation to the choice of dramas, and knows it; contenting himself, therefore, perforce, with the dictates of others, and taking counsel of more experienced persons. Of these, ninety-nine out of a hundred are the worst possible advisers in such cases. "The Begging Letter" is a sanguinary tale of bigamy, in which *Mad Bess* (Mrs. Vickery), the wife of a poacher, impersonates the principal character, and endeavours to destroy the offspring of the first union, in revenge for the death of her own husband, by the same. The last scene is a haunted glen, where the first wife dies, leaving the field clear for the second, and *Mad Bess* perishes from a fall over a precipice. Another underplot exhibits Miss Featherstone with some effect as a gay young milliner, and somewhat relieves the sombre character of the principal action. The world has had quite enough of such dramas already.

MARYLEBONE.

"Broken Toys" and "Katherine and Petruchio" have been the dramas which have preceded the pantomime at this theatre since Boxing-night. In the latter, Mr. H. Vandenhoff and Miss Gordon have exerted themselves very effectively. Both, by the practice of legitimate parts, have been experiencing the most beneficial and gaining in the artistic recognition of the true principles of histrionic suggestion. In our notice of the pantomime we should have mentioned that the very beautiful scenery by which it is illustrated, is from the pencil of Mr. Childers, the actor. It is worthy of his multiple credit. The transformation scene is especially splendid, with its moulding flowers, disclosing the groups of beauty and interest, and its falling rivers of phosphoric waters, and "the light of more than common day" shed over the scene according to the most vibrant prospect, and fantastically clouded horizon. The houses have been fully attended, though it will be observed that Mr. and Mrs. Wallack are not now acting. These truly great performers are, we understand, reserving themselves for the study of new parts in an original tragedy which they are about to produce on a magnificent scale, and in which it is understood there are tragic effects and situations of extraordinary power. The character to be assumed by Mrs. Wallack in particular, is described as one requiring the highest genius for its adequate embodiment; but this lady has a Siddonian force of style, capable of sternly sustaining the loftiest dramatic ideal.

BOARD OF TRADE RETURNS.

The returns for the month and eleven months ending the 5th December were issued on Wednesday. The total declared value of the exports of British and Irish produce and manufactures from the United Kingdom during the month and eleven months is shown below:—

1853	£	5,625,760	£
1852	"	5,602,000	"
1851	"	5,188,216	"

Compared with 1852, the increase on the month is £21,592,760, or at the rate of 20½ per cent; and on the eleven months, £19,604,381, or equal to 23½ per cent. It will thus be seen that the increase in the month's figures is actually in excess of the large average increase of the eleven months. The considerable increase of one fourth in our aggregate export trade is certainly a feature calculated to excite considerable alarm after making allowance for the higher prices now current. Should the profits from this large trade vary in proportion to its extent, the returns cannot fail to add greatly to the prosperity of the country. The increased demand for nearly every important item of our export trade, including cottons, woollens, linens, silks, metals (especially iron), machinery, haberdashery and millinery, hardwares and cutlery, other manufactures, beer and ale, &c. All these items exhibit a material increase, both on the month and eleven months; and, in this respect, the present issue of the Board of Trade tables is similar to its predecessors.

In the table of imports and consumption, the chief feature is a great increase in the former, owing to our deficient harvest. The total imports of wheat for the eleven months are stated at 8,402,814 cwts., against 9,820,190 in the corresponding eleven months of 1852, and 3,652,260 in the eleven months of 1851; and of flour, 4,207,518 cwts., against 3,651,961 in 1852, and 4,936,728 in 1851. In the consumption of foreign articles, there is a decreased consumption; but on the whole it does not appear that the high price of provisions has yet had the effect of causing the bulk of the population to dispense with many of the comforts and luxuries to which their prosperous condition has lately enabled them to indulge. The consumption of sugar, wines, tea, sugar, and cocoa—all important articles—show a considerable increase over those of last year both on the month's and eleven months' comparison. In coffee there is a falling off on the month, but a considerable increase on the eleven months. One of the minor articles, the consumption of which has been unfavourably affected by the rise in price, is that of currants. The quantity of this article entered for home consumption in the eleven months, is only 172,827 cwts. against 342,373 in the eleven months of 1852, and 4,3,210 in 1851.

THE LONDON COAL TRADE.—A correspondent of the *Newcastle Chronicle*—a paper exceedingly well-informed in all matters relating to the coal trade—puts the public in possession of the following curious piece of information, which will be useful to the writer for the benefit of the readers. He says:—"It is pretty well known that the London coal-merchant computes his profits upon the principle of charging a certain fixed sum above the Pool price, to cover cargo hire, landing, waste, and profit; this sum varies from 5s. to 7s. a ton, giving a medium charge of 6s. The same household coal is sold for 28s. in the coal-market, the coal-merchant supplies his customers at 33s., and as we all know, the Railway Company perform the same services—that is, they take the coals from the waggon to the consumer—for 2s. 6d. a ton; the difference being 3s. 6d. This profit can be had by any company desirous; I merely quote it to illustrate what follows:—On the 9th and 10th of December a large fleet of nearly 600 sail of colliers arrived in London. This fleet had been collected, by means of the telegraphic wires of three weeks; and when it arrived it was well known that London was literally on the starving point for coals. At the previous market 35s. had been given for house, and 28s. for steam coals; and the railway and gas companies had not twelve hours' stock among them; and the house trade was equally close run. Now the theory of the London coal-market is, that the coal-factor is the agent of the consumer, and pays him an excessive commission for a very easy and unimportant service. As agent, if the theory were correct, he is bound to sell the property of his principal at the best possible price—in fact, to take advantage of every accidental circumstance which might enhance the value of the article entrusted to his care. Let us see how this was carried out in practice on the 9th and 10th ult. I have already said that the sail arrived in all the large fleet was sold on the 9th, for best coals. As soon as the wharfingers of the coal factors ran up the prices of house coals to 35s. and 36s., for half a dozen straggling cargoes. The coal-merchants, advancing their pens, with the last price on the market, charged to the public the bulk of the coals bought at 28s. and under, as if they had been bought at 35s. and 36s., putting the difference between these prices and 28s. into their own pockets, in addition to the fee to which they consider themselves entitled. As a condition of things nearly analogous is imminent, it may not be without use to call the attention of the parties interested in it to the subject."

CONSUMPTION OF COAL IN LONDON.—The imports of coal into the port of London during the past year were 12,111 voyages, bringing 3,373,256 tons. The importation by sea, rail, and canal into the London districts amounted during 1853 to upwards of 4,000,000 tons, and the trade has doubled itself in twenty years. The quantity of coal brought within twenty miles of London by rail and canal during 1853, amounts to 658,726 tons, an increase of nearly cent per cent as compared with the imports of 1853 notwithstanding the high price of coal.

TERCENTENARY FESTIVAL OF THE BATH GRAMMAR-SCHOOL.—THE PROCESSION IN BATH ABBEY CHURCH

TERCENTENARY FESTIVAL IN COMMEMORATION OF THE FOUNDATION OF KING EDWARD THE SIXTH'S SCHOOLS.

A VERY interesting Festival was held in Bath on the 28th of last month in honour of King Edward VI., whose death took place in the year 1553, and whose benefactions to the cause of education were the immediate objects of the commemoration. Not less than thirty free grammar schools were founded by this King in different parts of England during the last three years of his short life. One of these Schools was founded at Bath, and endowed with a considerable part of the property belonging to the Abbey, and surrendered to Henry VIII. in 1539.

The exact extent and nature of this property, from the miscon-duct of former corporations, has become so involved in obscurity, that the resources of the School are at present only partially known; but it is pretty certain that a considerable part of the beautiful town which within the last century has been added to the old city, stands upon ground left by King Edward for the maintenance of this foundation. A late decree in Chancery has restored some of the property; which, however, is so hampered with long leases granted for nominal considerations, or considerations by which the School has never benefited, that the full value of that decree will not be realised for several years. Meanwhile, however, something has been gained—a new master has been appointed, and there seems to be, as we are informed, a determination to do all that can be done to raise the importance of the school, and extend its usefulness. The Festival of the 28th ult. had reference to this foundation, but more to the general cause; and was celebrated by the masters of the principal schools of Edward VI.—six of whom attended from various parts of the country. The proceedings of the day began with a pro cession from the School-house to the Abbey, which was joined by the Mayor and Corporation at the Guildhall, and which entered the Abbey at the west door, in the following order

The Mayor of Bath, the Members of the Corporation, the Stewards of the Festival, the Trustees of the School, the Head-Master of Bath, the Head Master of Wells, the Head-Master of Bury St. Edmunds, the Head Master of Christ's Hospital, the Head-Master of Shrewsbury, the Clergy in their robes, the Second and Assistant Masters, and the Pupils.

Our Illustration represents the procession passing up the nave. The ven. Archdeacon Moore, Head-Master of Bath, preached from Matthew xxv. 27, "Thou oughtest therefore to have put my money to the exchangers, and then at my coming I should have received mine own with usury." In the afternoon the Guildhall, at Bath, was crowded, and Mr. Macdonald made a speech, in which he reviewed the history of the Festival, and gave an account of King Edward's foundation, the state of education when he came to the throne, the property he endowed, and the objects for which they were founded. Mr. Macdonald gave an account of some few of the distinguished pupils of the School—the names of Sir Walter Raleigh and Ben Jonson, and at Bath, particularly among whom were the ever memorable John Hales, William Prynne, in former days; Sir Sidney Smith, Sir Edward Parry, and the distinguished "opium eater," Thomas de Quincey, in modern times; and, having given a narrative of the misdoings of its former guardians, the reverend gentleman commended these schools to the company, for the sake of their principles out of which they were born; and concluded, from the sobriety of their constitution, to uphold, in the present dangerous times. The meeting, which was addressed by the Mayor and several gentlemen, passed resolutions expressive of their veneration for the memory of King Edward, its sympathy with the schools founded by him and with the principles of education, as well as a sense of the duty of the Corporation and Council of Bath to support the School, and to extend the benefits of education to the poor.

In the evening there was a dinner at the York House, which was attended by between seventy and eighty gentlemen; Mr. Norman, an old pupil of the Bath School, presiding. Many speeches were made, bearing upon the objects of the Festival; and among the speakers were the head-masters mentioned above: several others having been prevented from attending.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

LORD LANSDOWNE, it appears, is answerable, in the first instance, for the purchase of the Holbein for the National Gallery, about which there has been within the last three years so great a disturbance in artistic circles. This fact is plainly stated by Sir Charles Eastlake, in his manly evidence before the Commons Committee. We confess we are somewhat surprised that his Lordship should be mistaken in the works of so well-known a master. It is true that Holbein has only attracted due and *correct* attention of very late years; and that his Lordship, from what we remember of his two collections at Bowood and Lansdowne House has not been curious about this famous master; nor do we remember that either of the trustees has exhibited any appreciation of his works while Sir Charles Eastlake himself restricts his own knowledge of art to the Italian school. Sir Charles, indeed, assures us that he undertook the office of Keeper on the full understanding that his opinion was only to be asked in matters connected with Italian art; and that, in the alleged Holbein acquisition, he at least is not to blame.

Our able writers on Art are acquiring reputations for eccentricities. No one now-a-days, it is said, can achieve greatness without being an original. Mr. Ruskin is an original: he is

> Above all Greek, above all Roman fame;

he condemns Bramante and Wren; thinks all good architecture contained in Venice; and that he has the skill to give Tintoretto a name in art above that of Titian. We know into what eccentricities he ran (and in print, too) in admiration of Turner; but his converts have been very few, and those few not long faithful to his preaching. He has done nothing for Mr. Coningham, who objects, in his evidence, clamorously and frequently, to the displacing of the Claudes, in order to make room for "extremely inferior works by Turner;" nay, he would go further, and would discountenance the purchase by the nation of even a fine work by Mr. Turner. "If you were to ask me (he says emphatically) whether I should recommend the purchase of the Turner pictures for the National Gallery, I should say, decidedly not." How we should like to get Mr. Ruskin and Mr. Coningham into a hot encounter about Turner; and, when they were well by the ears, to escape from the room to other subjects less noisy and of more importance.

Scotland has been extremely barren of sculptors: indeed, we cannot call to mind any sculptor of great eminence born north of the Tweed, who ... with Flaxman or Chantrey, with Banks or Bacon. We have had, however, in London, during the present week a Scotch sculptor at work, who works with care and skill in the school of Chantrey. We allude to Mr. Steel, the sculptor of the Edinburgh equestrian Wellington. Mr. Steel has been in London to superintend the erection in the Painted-hall at Greenwich, of his marble standing statue of Admiral Saumarez. The statue is erected; and Mr. Steel has returned to the north to complete his sitting figure of Lord Jeffrey for the Parliament-house. We shall, no doubt, have something critical to say next week about the Greenwich statue.

Sir Robert Peel has a right to be heard on subjects connected with literature and art: his opinions, if th[ey] ... deserve attention. Sir Robert, it appears, differed from Prin[ce] ... and others, in the enlarged notion of a National Gallery, embracing specimens of every school and scholar of note: he saw that, with our present narrowness of spirit, it was impossible to construct a National Gallery on so wide a basis; and, therefore, in a letter to Sir Charles Eastlake he expresses his views on the subject in his own clear and unmistakeable manner. "It seems to me," he says, "that we should give a preference to works of sterling merit, that may serve as examples to the artists of this country, rather than purchase curiosities in painting, valuable as illustrating the progress of art, or the distinctions in the styles of different masters, but surely less valuable than works approaching to perfection." This is a text engaging conversation in artistic circles.

Messrs. Christie and Manson have commenced the new year with a goodly list of auctions, at their rooms, long previous to the approach of spring. There is not much promise, it is true, of pictures possessing a name and a genealogy—those essential requisites for securing critical bidders and large prices; still, the list looks well, and some of the sales will obtain attention. And here, the mention of this leading firm in Europe for the disposal of works of art, enables us to make public a little bit of useful information communicated by Mr. Christie to the Commons Committee; but buried in the enormous Blue-book to which we have called attention so frequently. Mr. Christie says (and his experience is indeed great) that "people prefer pictures that have not been cleaned just before they come to be sold;" that "people prefer having them as they are;" and that there is "something" in the common impression, that a well-known amateur of good pictures, possessing a long purse and bidding for himself, is likely to be run up "It is a very common impression," he says, "but I do not think there is much in it; I think there may be something in it."

We observe a statement in the *Morning Post* to the effect that the Bishop of London has consented to a plan laid before him by the Rev C. Hume, the incumbent of St. Michael's, Wood-street, for the removal of some thirty of the City churches into suburban and rural districts. The churches to be removed are named in a classified list, and the selection appears to have been made with great good judgment. There is, however, one serious blunder; for surely it would be a blunder, and something worse, to destroy the interesting church of St. Helen's, Bishopsgate—one of the few London churches that escaped the Great Fire, and possessing an interest to many from the tomb it contains of Sir Thomas Gresham, the founder of the Royal Exchange; to say nothing of the noble sixteenth century monument to Sir John Crosby and the interesting tomb of Sir Julius Cæsar. Mr. Hume has placed his own church in the moveable list: Weybridge or Wimbledon are pleasanter places than Wood-street, Cheapside. In this great change are the churches to be built as before, stone for stone? And are they, above all, to retain their names? St. Swithin's, London-stone, is to go (what are the antiquaries about?); St. James's Garlick-hill, is to be moved—no one knows whither; and St. Margaret Pattens is to be carried, not on pattens, but in Mr. Cubitt's waggons, to some wild heath as yet wholly unprovided with a church.

Our two classic architects—Mr. Hardwick and Mr. Tite—have met in the fine old Norman church of St. Cross, near Winchester; and the rude masonry which the Conqueror engrafted on a ruder Saxon of the Confessor, is not to be covered, we are glad to think, with buckets of white-wash, eked out here and there with pailfuls of yellow. The church is [in] safe[r] ... perfectly safe if entrusted to Mr. Tite.

A Correspondent, who gives his name, and on whose information we can rely, directs our attention to an error in our last week's column. We stated, it will be remembered, that the average auction price of the remainder of Roberts's "Holy Land, Egypt, and Nubia," varied from ten to eleven guineas. It appears, however, that we were misinformed the average auction price maintained throughout, "was not less than thirteen pounds." On the second evening, as our Correspondent admits, a few copies "sunk as low as eleven pound."

We have been gossiping entirely on art; but on this tack conversation during the past week has almost wholly run—not unvaried, however by cheap books, works in hand, and the prospects of the approaching season.

OPENING OF THE SOUTH-WALES RAILWAY.—THE NARBERTH ROAD STATION, HAVERFORDWEST.

HAVERFORDWEST RAILWAY—IMPOSING DEMONSTRATION.

The extension of the South Wales Railway, which has hitherto terminated at Carmarthen, into the ancient county of Pembroke, thus forming another link in that great chain of railway communication which has already done so much for the Principality, was inaugurated on Wednesday week, in a manner worthy the occasion. For this purpose, Mr. W. Walters, Mayor of Haverfordwest, provided a magnificent banquet; to which were invited the directors of the South Wales, Great Western, and Vale of Neath Railways; the Eastern Steam Company, the Australian Direct, viâ Panama, Steam Screw Navigation Company; the Corporations of Haverfordwest, Swansea, Carmarthen, Cardigan, Pembroke, and Tenby; the Mayors of Cardiff, Neath, Newport, and Waterford; and the Lords-Lieutenant and members for the town and the adjoining counties. Following the example of the Mayor, the leading inhabitants resolved to make the celebration as general as possible. They not only decorated their houses and establishments in the gayest manner, but subscribed liberally for a plentiful dinner to 2000 persons of the poorer classes in the town and district.

A special excursion-train started from Swansea at 8.45, with the Mayor and a number of officials. At Landore and Carmarthen other parties joined, so that the train became a monster one before it reached Haverfordwest. On its arrival there the procession formed in regular order, and proceeded to the Shire Hall; on entering which, the Town Clerk read a congratulatory address to the Chairman and Directors of the South Wales Railway from the Mayor and Corporation of the town. An address from the Odd Fellows was next presented, soon after which the company separated.

At the Banquet—which was on a most extensive scale, ranking amongst the most elegant entertainments ever witnessed in Wales—there were about 800 ladies and gentlemen. The sides and ceiling of the station, in which it was given, were festooned with yellow, crimson, and white drapery, in a tasteful manner. The chair was filled by the Mayor, who was supported by C. R. M. Talbot, Esq., M.P.; Viscount Emlyn, M.P.; J. H. Phillips, Esq., M.P.; David Jones, Esq., M.P.; Hon. W. H. Yelverton; Dr. Llewellyn; Dean of St. David's, and other gentlemen. After the usual toasts had been given, and loyally responded to, the Mayor proposed "The healths of the Bishop and Clergy of the Diocese, including Dissenting Ministers." In reply to which, the Dean of St. David's said that no person rejoiced more in the event they had met to celebrate than the Bishop whose health had been proposed. "Instead of trundling slowly along on his way from Abergwilly to that part of his diocese, he could now take his breakfast at his palace at Abergwilly, and be amongst his friends at Haverfordwest in a short time." Lord Emlyn, in proposing "Prosperity to Milford Haven, and a speedy re-establishment of direct communication with Ireland," said he did not believe that half of them knew the vast amount of trade and commerce which would be brought to that port should this communication be re-established. The subject was again referred to by W. S. Parker, Esq., of the Waterford and Kilkenny Railway Company, who said he had great pleasure in being able to state that arrangements were already on the *tapis* to establish a line of packets between Milford and Kilkenny, which would not only do credit to the projectors, but would also prove a formidable rival to the Holyhead route.

A Ball was given in the evening, which was attended by the principal inhabitants of the town and district. The arrangements were excellent; indeed, altogether, it was pronounced one of the most agreeable *réunions* that ever took place in the county. A brilliant display of fireworks was given by the directors of the South Wales Railway, to the great delight of a numerous crowd.

HAVERFORDWEST.

THE SEINE FROZEN, AT PARIS.

LOUTH CORN-EXCHANGE.

IT is only a few months since the project was conceived of erecting an Exchange in the important agricultural town of Louth, in Lincolnshire; and, it is mainly by the exertions of a few spirited individuals, that this object has been speedily accomplished. The capital for the purpose was raised in shares of £10 each, the greater portion being held by the Directors —of whom Charles North, Esq., an eminent agriculturist, residing at South Thoresby, near Louth, is the Chairman; and Robert Norfolk, Esq., of Louth, one of the most influential merchants in the county, is Vice-Chairman. The foundation-stone of the edifice was laid by the respected Mayor of the borough of Louth (Mr. Samuel Trought), on the first day of July last, in the presence of the chairman, vice-chairman, the directors, the town-clerk of the borough, and secretary of the company (Mr. C. Ingoldby), and a numerous and influential

NEW CORN EXCHANGE, LOUTH.

body of the inhabitants of the town and district, who celebrated the event by suitable rejoicings. Wednesday, the 4th instant, being the market-day at Louth, and the New Year's market, was selected as an appropriate time for opening the building for the transaction of business.

The Façade, of which we give a view, is executed in Caen stone, of the modern Italian style of architecture, consisting of three stories, divided into three bays: the lower story by rusticated pilasters, the middle story by three-quarter Doric columns; the centre compartment of this story over the arched entrance is a niche containing a figure of Ceres. The upper story is divided by deeply-paneled pilasters, surmounted by an enriched bold cantaliver cornice, over which is a balustrade, with emblematical vases thereon. The basement story consists of extensive wine and porter vaults, and other requisite offices, occupied by Messrs Lucas and Co. On each side of the principal entrance are offices for merchants from whi h, rising by a broad flight of stone steps, the level of the Exchange-room is attained; which is entered from a spacious landing. The room is 75 by 35 feet, and proportionately high. The whole area of the Exchange is covered with Hartley's patent rough plate-glass, arranged in the ridge-and-furrow form; supported by enriched beams, upon beautiful large carved corbels, modeled by Mr. T. W. Wallis, of Louth.

Over the front offices is a large dining-room, thirty-five feet by twenty-four feet, with bed-rooms in the attic story for the accommodation of the adjoining inn.

The most essential points (light, ventilation, &c.) appear to have been well considered—the former is extraordinarily good. The design throughout is chaste and original, and reflects credit on the designer, Mr. Pearson Bellamy, of the firm of Bellamy and Hardy, architects, Lincoln and Louth.

The amount of the contract for the building is £2510, including £400 for the old Town-hall building, which originally stood on this site. The works have been executed by the contractor, Mr. John Levitt, of Louth, in a very efficient manner.

THE FROST AT PARIS.

THE French capital has been visited with frost equalling in severity that experienced in our own metropolis. On Saturday morning last the thermometer of M. Chevallier marked, at six o'clock 4 deg. 6-10ths centigrade below zero (23½ deg. Fah.); at mid-day 5-10ths deg. (31 deg. Fah.). During the night of Saturday there was a heavy fall of snow, and the thermometer rose. At seven o'clock on Sunday morning, it stood at 1 deg. centigrade above zero (33 deg. 8-10ths Fah.), and at mid-day 2 deg. 3-10ths centigrade above zero (36 deg. 1-10th Fah.).

On Saturday the Seine was frozen, and several persons passed over the ice. Of this extraordinary scene our Artist has enabled us to present the accompanying picture.

Notwithstanding the severe weather which prevailed in Paris during the whole of last week, the streets were never more crowded with pedestrians visiting the shops and booths where New-year's presents were laid out to tempt purchasers. Nothing is more curious to a stranger than to see the magnificent Boulevard des Italiens transformed into a fair, and lined with wooden huts, in which fancy articles are displayed. A great number of poor persons, who are permitted to occupy these huts, gratuitously, brave the snow during the day, and they occupy the huts during the night, notwithstanding the intensity of the frost.

CHRISTMAS FESTIVAL AT THE ST. JAMES'S DISTRICT SCHOOLS, HAMPSTEAD-ROAD.

AMONG the most interesting celebrations of Christmas are the festivals given to the poor children of certain of our metropolitan schools. We have illustrated one of these pleasing little treats, which was given to the children of the St. James's District Schools for girls and infants, at their School-room, in Henry-street, Hampstead-road, on the 24th ult. These schools were opened on the 17th of last January, under the management of a committee of gentlemen, presided over by the Rev. Dr. Stebbing, the indefatigable minister of the district. On the first day, 110 children were entered, and this number has since increased to 220. An Infant School-room has been added and a second mistress engaged for the infants, who have thus been separated from the elder children. Each child pays one penny per week; and the additional expenses of the schools are defrayed by voluntary subscriptions, which, like all the other charities of that poor district, mainly come from without. The schools owe much of their efficiency to the exertions of the lady visitors, to whose kindness and liberality, aided by the good taste of Mrs. Stebbing, the children are indebted for the above festival. The children met in the Infant School-room at four o'clock, and partook of bread-and-butter, cake, and milk. They then proceeded to the upper room, represented in the Illustration; the Christmas-tree at the end of the room was lighted by twenty-two jets of gas, and hung with toys, and little silk bags, containing sugar-plums. After an address from Dr. Stebbing, and some singing by the children, a bag of sweetmeats and a toy were given to each child.

An equally pleasing sight was witnessed in the same room on the following evening, when twenty-six poor old women were assembled to tea; and afterwards, through the seasonable liberality of a lady of the congregation, the women were presented with flannel petticoats and packets of tea and sugar.

CHRISTMAS ENTERTAINMENT TO THE CHILDREN OF THE ST. JAMES'S DISTRICT SCHOOLS, HAMPSTEAD-ROAD.

PLATE PRESENTED TO MR. KEAST, LATE CHURCHWARDEN OF ST. LUKE'S.

TESTIMONIAL TO MR. KEAST.

THIS handsome service of Plate was, on the 14th ult., presented to Mr. John Keast, late Churchwardea and Chairman of the Board of Guardians for the parish of St. Luke. The principal piece bears the following inscription :—

This Salver, with a Cup, Snuff-box, Tea and Coffee Service, was presented to Mr. John Keast, of the Star Tavern, City-road, by his fellow parishioners and other friends, in testimony of their esteem, and in acknowledgment of the efficient services rendered by him to the parish of St. Luke, Middlesex, while filling the office of Churchwarden and Chairman of the Board of Guardians, 14th December, 1853. John Brown, William Christie, George Sandelin, and George Whittle, Honorary Secretaries ; Charles Allberry, Acting Secretary ; Richard Hooper, Churchwarden, Chairman ; James Lowes, Vice-Chairman ; James Tilfer, Treasurer.

The Service, weighing 223 ounces, and costing £150, was made by Mr. Wright, of Coppice row, and is a highly creditable piece of workmanship. The presentation of the Testimonial took place, at a dinner given to Mr. Keast, on the 17th ult., as recorded in the ILLUSTRATED LONDON NEWS for Dec. 17.

NAVAL AND MILITARY INTELLIGENCE.

THE ARMY IN INDIA.

The Commander-in-Chief in India, Sir William Gomm, has notified in general orders the following :—

"With deep sorrow—a sorrow sacred to the memory of rare private worth and recorded public merit the Commander-in-Chief in India makes known to the army the death, at Simla, after brief but severe illness, of Major-General Godwin, C.B., commanding the Sirhind division, and recently holding chief command of the combined force which achieved the conquest of Pegu. Sir William Gomm feels assured that the army at large will regret with him the sudden departure from amid its ranks of a distinguished soldier, a gallant leader, and an ardent promoter of its interests ; while some, perhaps, will mourn with his Excellency over the loss of a long-tried and justly-valued friend, faithful and true from youth upward to the close of an useful and honoured life."

The Commander-in-Chief has also passed some high encomiums in a general order, dated Oct. 24th, 1853, on the three distinguished regiments (the 18th, 51st, and 80th) now on their march for Calcutta, where they are to embark for England :—

"Her Majesty's 18th (Royal Irish) and 80th Regiments of Foot are on the point of returning home, after each completing a term of nearly seventeen years' foreign service. Her Majesty's 18th contributed essentially to the success of our arms in China. Her Majesty's 80th assisted actively throughout the first Sikh war, and conspicuously at the battles of Moodkee, Ferozeshah, and Sobraon. Neither can his Excellency forego the opportunity thus afforded him of expressing his sense of the recent services of her Majesty's 51st Light Infantry, also about to proceed home —services repeatedly brought to his notice by the Major-General commanding the field force in Burmah, and of offering to this regiment the same earnest good wishes as to its brethren in arms of the 18th and 80th."

A NORTH SEA SQUADRON.

Energetic efforts are being put forth by our dockyards to create and fit out a powerful North Sea squadron, to be ready for service as soon as the ice breaks up. The push will be for steamers, so many having been commissioned in 1853. Leaving Admiral Corry's force at Lisbon, or sending it to Malta or to Constantinople, to strengthen Admiral Dundas, we have a goodly force, now, at the home ports. Enumerating them we find the following :—

PADDLES.		SCREWS.	
Magicienne	16, Capt. Fisher.	Royal George	120, Capt. Codrington, C.B.
Basilisk ..	6, Commander Hon. F. Egerton.	Princess Royal	91, Captain Lord C. Paget.
Medea ..	6, Comm Phillimore.	Cressy	81, Captain Warren.
Cyclops ..	6, Mast. Com. Roberts.	Blenheim ..	60, Captain Hon. F. Pelham.
SAILING SHIPS.		Hogue	60, Capt. W. Hamby.
Water-oo ..	120 Sheerness.	Edinburgh ..	58, Capt. Hewlett.
St George ..	120 Devonport.	Ajax	58, Captain Warden.
Neptune ..	120 Portsmouth.	Euryalus ..	51, Capt. J. Ramsay.
Monarch ..	84 Sheerness.	Dauntless ..	33, Captain Ryder.
Boscawen ..	70 Wes. idies.	Horatio ..	29, Com. Jenner.
Pique	36 Fitting, Devonport.	With some smaller steamers and sailing-vessels.	

This would make a large force ; but there is not half a dozen of them fully manned, and few of the others have more than their complement of marines on board. Well fitted and manned, this force would be quite strong enough for any emergency.

It is rumoured that the *Neptune*, 120, will fit out for the Mediterranean, and the *Nelson*, 120, take her place as guard-ship at Portsmouth.

THE *Cressy*, 80 guns, new screw steam-ship, Captain Warren, has been placed under the masting shears in the fitting-basin, Sheerness, for the purpose of being masted. She is to be masted and rigged as a second-class line-of-battle ship.

THE *Majestic*, 80 guns, new screw steam-ship, has received all her engine machinery on board ; and, immediately the *Cressy* is masted, the boilers of the *Majestic* will be put into their places, and she will be got ready for sea.

COMBINED FLEETS IN THE BOSPHORUS.—The strength of the combined English and French fleets now in the Bosphorus amounts to 44 sail, including line-of-battle ships, frigates, and steamers. Of these the French and English have each three three deckers ; we have seven two-deckers (including the *Agamemnon*) to five French two-deckers, the French 90-gun screw-ship *Napoleon* having, unfortunately, been sent back to Toulon for repairs. Each flag has, or will soon have, 11 paddle-wheel steamers. The *Sanspareil* (English) and the *Charlemagne* (French) two deckers have auxiliary steam power. In addition to this powerful fleet, there are in the Bosphorus at least seven Turkish and Egyptian line-of-battle ships, besides frigates and steamers ; so that the combined force may be taken at about 80 sail. From the large amount of steam power, the weight of guns, the size of these ships in proportion to their rating, and the perfection to which naval gunnery has now been carried both in the English and French navies, this is, beyond doubt, the finest naval armament ever sent to sea, though it might, if necessary, be powerfully augmented by the first class steam-ships and frigates which form Admiral Corry's squadron now at Lisbon. Those vessels are, however, probably reserved as the nucleus of the North Sea fleet in the spring. The best understanding prevails between the English and French officers, and the signal-books of the two squadrons have been exchanged, with an arrangement that, in sailing order, the French squadron will form the weather and the English the port line.

THE ENGLISH FLEET IN THE TAGUS.—The British squadron was still at anchor in that river on the 29th, and not likely to go to sea for some days. Admiral Corry intended to sail on the 24th ultimo ; but, after the *Duke of Wellington* and *Impregnable* had gone down below Belem in good style, they were recalled in consequence of a collision between the *St. Jean d'Acre*, Captain Reppe., and the *Desperate*, Captain Chambers, which, in the crush, dismasted the latter, and brought her mainmast down upon the *St. Jean d'Acre's* forecastle. It appears to have been providential that no lives were lost in what might have been so serious an affair. A court of inquiry is said to have found no one to blame, attributing the occurrence to the fresh water current in the river and a sudden gust of adverse wind. It appears that both vessels were driving towards the south bank of the Tagus, and that the *St. Jean d'Acre* had no option but either to go on shore or run foul of the *Desperate*. The *St. Jean d'Acre* left the Tagus on the 28th, for a cruise to the Western Islands.

ABSTRACT OF WRECKS IN 1852.—The wrecks on the coasts and in the seas of the United Kingdom in the year 1852, were 1115 which may be thus classed :—

Total wrecked	500
Vessels run in collision	43
Damaged seriously and had to discharge	550
Damaged seriously in collision	24

The number of casualties in each month were :—

January	128	May	91	September	85
February	72	June	75	October	164
March	74	July	98	November	169
April	84	August	101	December	139
		Total, 1115			

Of these 464 occurred on the east coast of Great Britain ; 168 on the south coast, and 235 on the west coast ; 128 wrecks strewed the coasts of Ireland ; 5 were cast on shore at Scilly ; 9 at the Channel Islands ; 18 at Orkney and Shetland, and 18 at the Isle of Man ; the remainder, 81, occurred in the surrounding seas. The gales of January caused 126 casualties ; they prevailed during the whole month and the early part of February. The succeeding months passed over unattended with gales of more than ordinary force ; and a very moderate amount of casualties is recorded until the latter part of September, when they again began to increase —not, however, unusually so—till later in October, on the 26th of which an easterly gale begun that in six days strewed the coasts with 102 wrecks. Strong breezes, and a short lull of moderate winds until the 23rd of November were followed by gales of ordinary force at this period of the year ; but on the 24th December a heavy storm from the south-west burst over the country, and continued to the end of the year with such violence, that, by the 29th there was scarcely a vessel in the neighbourhood of the British Islands left at sea. Some had found safety by running into port ; while, of others, the returns show a list of 183 casualties ; of these, 109 were totally wrecked, making an average of 30 wrecks a day during this awful and destructive gale.

LOSS OF THE "HUMBOLDT" STEAMER.—In our last Number we gave an Illustration of the wreck of this fine steamer, near Halifax, North America. We now learn, from the *Halifax Chronicle*, that the cost of this ship is to be attributed to the ignorance of the person who attempted to pilot her into the harbour ; and it also intimates that he was not an authorised pilot. The paper says, "There never was a more flagrant case. A fisherman appears on the deck of a steam-ship, which, with her cargo, is valued at 800,000 dollars. He represents himself to be a pilot, and, on being asked for his certificate, states that he has left it in his boat, or at home. Confiding in his statement, and naturally anxious to secure for their passengers rest and refreshment after a friendly port, the officers give him charge of the ship. He alters her course, contrary to their judgment. They remonstrate ; he perseveres in his stupid ignorance ; and in a few moments she strikes upon the 'Sisters,' and the sea rushes into her with such rapidity that there is no chance of rescuing human life but by a frightful squandering and waste of an enormous amount of capital. To punish that pilot, then, ought to be the first wish of people of every man interested in the character and prosperity of this fine seaport."

A FARCE OF "HONOUR."—A duel was arranged to come off near Eltham on Tuesday last, between a military officer and a naval officer from Woolwich, who were said to have quarrelled about a young woman. The seconds, however, having more common sense and discretion than the principals, brought the affair to an arrangement by proposing that each of the belligerents should present his self before the young woman for her to make choice between them. It is whispered that she was so prudent as to reject them both, as they deserved.—*South Eastern Gazette.*

PROVINCIAL INTELLIGENCE.

EMIGRATION FROM LIVERPOOL IN 1853.—The emigration from Liverpool during the last quarter of the year was, as might be expected, much less than that of any of the previous quarters. During the first three months of 1853, 106 emigrant vessels left Liverpool with 40,461 passengers ; in the second quarter, 147 ships, with 70,385 passengers ; in the third quarter, 148 ships, and in the three months ending last December, 77 ships, with 36,221 passengers. If we add to these 21,067 passengers to Australia, who are not included in the foregoing list, the total number of emigrants from Liverpool, under Government inspection, during the whole of last year, is 224,787. Out of 20,318 steerage passengers for Australia last year, 10,624 were English, 386 Scotch, 4084 Irish, and 1870 natives of foreign countries.

MANCHESTER : BIBLE LIBRARY. The British and Foreign Bible Society has, at the request of the Bishop of Manchester, presented to the Manchester Free Library twenty-one volumes of its publications, comprising the whole or portions of the Scriptures in twenty different languages, as follow :—English, Danish, Fegeean, French, German Greek (modern), Italian, New Zealand, Polish, Portuguese, Russ, Samoan, Spanish, Swedish, Tahitian, Lengan, Armenian, Hungarian, Chinese, and Turkish.

SOUTH STAFFORDSHIRE ELECTION.—Lord Ingestre, accompanied by Lord Lucan, M.P., arrived at Liverpool on Tuesday morning, on board the *Niagara*, from America, and reached Stafford about five o'clock in the afternoon. The two noble Lords have been absent from England about three months, having been travelling together in the United States and in North America. Lord Ingestre was to pay a visit to Wolverhampton on Wednesday. His friends have been engaged during the past week in an active canvass on his behalf.

TRADE OF THE PORT OF BRISTOL.—The following are the foreign importations into Bristol for the last four years, as taken from the Bristol presentments : 1850, 742 vessels, 142,603 tons register, 1851, 659 vessels, 137,835 tons ; 1852, 627 vessels, 134,779 tons ; 1853, 775 vessels, 171,341 tons. Of the imports of 1853, 159 were timber ships, measuring 66,923 tons. Many large ships are kept out by the easterly winds ; otherwise the number and tonnage for 1853 would have been considerably greater.

MONEY ORDERS.—GENERAL POST-OFFICE, DECEMBER, 1853. —On the 1st inst. the undermentioned minor money-order offices were raised to major money-order offices. Postmasters must, therefore, in future, give orders issued at those offices on receipt of the corresponding advices direct therefrom : Abergele, Denbigh ; Bingley, York ; Crook, Durham ; Hawkhurst, Kent ; Heywood, Lancaster, Newcastle Emlyn, Carmarthen ; Northfleet, Kent ; Patrington, York ; Ramsey (Isle of Man) ; Rawtenstall, Lancaster ; Sandgate, Kent ; Southend, Essex ; Sowerby-bridge, York ; Walton-on-Thames, Surrey ; York Town, Surrey. Minor money-order offices have also been opened at the undermentioned places : Buckden, Huntingdon ; Holme-upon-Spalding-Moor, York ; Newmills, Derby (head office, Stockport) ; and Schull, Cork (head office, Skibbereen).

WHO WILL CUT THE TIGER'S NAILS?—Mr. Vallance appeared at the Police-court, Hull, on Friday, and called the attention of the sitting magistrates to the miserable condition of the tiger at the Hull Zoological Gardens. He stated that it had for some time suffered much in consequence of its nails growing and cutting its flesh, the poor animal being almost unable to put its feet to the ground. He understood it was considered dangerous to do anything to the nails, but he, nevertheless, thought it a proper case for investigation by the magistrates, and he wished to know whom he could summon ? Mr M'Manus suggested that chloroform should be administered to the animal, under the influence of which he thought its nails could be cut without danger. The magistrates said they had no power to interfere in the matter.—*Hull paper.*

SOME gigantic shears, erected on the eastern side of the Southampton docks, for the purpose of lifting the steam machinery, such as boilers and engines, in and out of the mail packets, fell with a terrific crash, on Tuesday, the noise being heard half a mile off. No less than 140 feet of masonry fell at the same time. It is supposed that the water behind the dock wall had frozen, and, acting like a wedge, forced out the wall, and the shears, losing their support, fell in consequence. To replace the dock and erect other shears, so as to restore what has been destroyed, just as it was before the accident, would cost about £15,000.

FOG IN THE MERSEY.—On Thursday week this town, and particularly the river, was visited by another of those dense fogs which have also been so prevalent in the locality. At half-past eight o'clock the fog became suddenly very thick ; the fog-bells of the various vessels on the river were kept in constant motion to prevent accidents ; but, notwithstanding every caution, several collisions took place. Shortly before nine, the steamer *Wervoll* left the landing stage for Woodside and when she got into the middle of the stream, notwithstanding the greatest precaution on the part of the crew, she came in contact with the steam-tug *British Queen*, lying at anchor, and sustained considerable damage. The *Queen* steam-tug and a flat about the same time came into collision with the *Derbyshire*, from Quebec, which was being towed up the river. The steamer was proceeding from the Cheshire side towards Liverpool, and, not observing the ship, she ran athwart the bows of the latter, the jibboom of which caught her funnel ; the steamer's funnel, and carried it overboard. Besides losing her funnel, the bulwarks and plating of the steamer were damaged to a considerable extent. Fortunately, the crew escaped unhurt. About the same time, the steamer *Prince*, having on board nearly 700 persons, left the Woodside slip, and proceeded very slowly towards Liverpool. The density of the fog at this time had apparently increased, and, upon getting into the middle of the river, the persons on board of the *Prince* heard the ringing of a bell at a very short distance, but supposing the sound to proceed from a ship at anchor, the steamer was not stopped. In the meantime, the Birkenhead steamer *Cato*, belonging to Messrs. Willoughby, was discerned in the mist, and the engines of both vessels were promptly reversed ; not, however, in time to prevent a collision. The *Cato* was struck near one of her paddle-boxes, and had a portion of her bulwarks damaged. Some alarm was felt by the passengers on board the *Prince* ; but, on the extent of the injury being ascertained, it quickly subsided. The steamer *Wellesley* ran into the American ship *Henry Grinnell*, which was lying at anchor, and damaged one of her paddle-boxes. The fog on the Liverpool side of the river cleared off shortly after seven o'clock ; but it remained very dense on the Cheshire side for upwards of an hour after that time. *Liverpool Mercury.*

THE CHOLERA IN SCOTLAND.—No further cases of cholera have been reported in Edinburgh since our last ; though two are stated to have occurred in Leith. In Glasgow, we are glad to say, it seems on the decrease. There were, on Tuesday, Wednesday, and Thursday, 12 cases, and 22 deaths ; and, in addition, 61 cases of diarrhœa are reported. Dundee is now almost entirely rid of the disease ; but it has carried off 513 victims. In Kilwinning and Dalry the malady has also made its appearance—in the former county with great malignity, carrying off its victims after a few hours' indisposition. In Cambridge there have been some eight or ten cases of the disease.—*Scotsman.*

DEATH FROM BURNING CHARCOAL IN A BEDROOM.—At Chudleigh, Devonshire, a lace-curer, named Richard Bickford, employed by Mr. Oldham, was requested, in the absence of that gentleman's family, to sleep in a room over the coach house, in order to be near at hand in case any assistance should be required. A fire-basket, used for burning charcoal, was on the premises, and before going to bed the gardener cautioned the deceased as to the danger of burning charcoal in the room in which he was to sleep. Notwithstanding this warning, however, he appears to have taken the basket into his room, and killed himself thereby. Two medical gentlemen were immediately called in, but it was of no avail, life having been extinct for several hours.

THE RAILWAY ACCIDENT AT NEWTON-HEATH.—The inquest touching the death of Miss Jane Sykes was held on Saturday last, when the following verdict was returned :—" That the death of Jane Sykes was caused by the collision of the express train to Oldham with the Yorkshire train, and that the death was accidental, and the jury take the opportunity of expressing their regret at the apparent carelessness of the Lancashire and Yorkshire Railway Company, in allowing the express train to start so short a time after the above-named train, and would suggest that, in future, more care be exercised, especially in foggy weather." Mrs. Lord, grandmother of the young lady who was killed, is in a fair way towards recovery.

HOW DID IT COME THERE ?—A few days since, a gentleman at Birkenhead was presented with a cow's tongue, which appeared to be perfect in every respect. After being boiled, he discovered a piece of metal imbedded in the muscle about three quarters of an inch in length, half an inch in width, and a quarter of an inch in thickness.—*Liverpool Standard.*

RELIGIOUS WORSHIP IN ENGLAND AND WALES.—The important census tables of religious worship in England and Wales have just been issued, by which it appears that there are 85 different religious communities and sects, of which 27 are native and indigenous, and 9 foreign ; in which latter are included various isolated congregations of religious worshippers, which are not organised to be called a "sect." The population of England and Wales, by the last census, was 17,927,609 ; and on Sunday, the 30th March, 1851, there were present at the most numerously-attended services 7,261,358 members of the Church of England, 4,110,782 Protestant Dissenters, 249,339 Roman Catholics, and 24,270 other bodies. Of all denominations the number returned as present on the occasion was 6,356,252.

THE CHINESE INSURRECTION.

THE events which are now taking place in China possess so world-wide an interest, and are so pregnant with stupendous changes affecting every people upon the face of the earth, that neither the distance of the theatre nor the nearer pressure of the great Eastern question, can divert the public mind from intense curiosity as to the origin, the progress, the present position, and the future prospects of this extraordinary struggle. The news received from time to time from the seat of war possesses us, though in an uncertain manner, of such intelligence as can be derived from the irregular and casual intercourse with the interior of the country, and seems to point at the probable overthrow of the reigning Tartar dynasty; but whether this should or should not become the catastrophe, a comprehensive glance at the Celestial Empire, and a retrospect at the growth of the rebellion, which fills it with discord and threatens its dissolution, can hardly fail to be accept ble to general readers.

An empire occupying nearly five and a half millions of square miles, and hitherto hedged in by a jealous policy unparalleled in the history of nations—a table land extending over a third of the Asian continent, containing a population of about an eighth of mankind, appears at last, after the endurance of many centuries, to be breaking up—letting the light of external day into its dark and guarded concealments, and resolving into other forms and elements of incalculable importance, not only to their own relations, but to the relations of the whole human race.

Their vast rivers, "sons of the ocean," heretofore hermetically sealed against foreign intrusion, must speedily be opened to the enterprise of commerce; and the wonderful fertility and wealth of this immense region—twelve times the extent of Great Britain—be no longer confined to the superfluous luxuries of a sensual slavery, but participated among the free, energetic, and progressive natives of many another clime. The great wall, sixty miles from Pekin, may be tumbled down, unless the expulsion of the Tartar dynasty may lead to wars between the Tartars and Chinese, as before the conquest and union; but on all other sides the barriers are broken, and every point of the seaboard exposed to speculations, which cannot and will not be denied entrance.

Of the history of China, all that is needful for us to notice here is that the ancient Tsin dynasty was succeeded by that of Soong (about 950), which, after a time, called in the aid of the Monguls to enable them to resist the Tartars; the said Monguls changing the character of allies for conquerors: and, under the famous Kubla-Khan, establishing the Government at Pekin, where his successors reigned and degenerated during nine successions, till 1366, when the Chinese dynasty of Ming was again obtained the ascendancy, and ruled in comparative peace till 1618. At this epoch the native sway was again terminated; and, after a struggle of nearly thirty years, the present family of a race sprung from the expelled Monguls and East Tartars, mounted the throne. They are denominated Ta-Thsing, and are often spoken of in the Chinese accounts as the Shing-Khing, from the place of their birth.

From this period is dated the formation of secret societies, which, under various appellations, have pursued various courses, but generally merging in conspiracy to oust the Mantchoo usurpers. Except by overt acts, there has always been a difficulty in ascertaining exactly what was the condition and schemes of those associations whose mysteries were so studiously concealed, and also so cunningly varnished and misrepresented for the sake of diverting suspicion and misleading inquiry. Yet ever and anon the wrath of Government was excited, and hundreds of individuals were seized and decapitated *pour encourager les autres*. Yet, in spite of these raids, every province, especially in the west and south, was infected with unions, or *kongsis* of this kind, and, on the whole, deemed so dangerous, that the jealous laws pronounced the penalty of death for five persons associating together under any pretence. This only made secrecy more imperative, and multiplied the combinations, occasionally assuming the ostensibles of charity, philanthropy, or the encouragement of manufactures. Thus there were, among many more, the Great Ascending Society, the Society of Glory and Splendour, the White Jackets, the Red-Beards, the Short Swords, the White Water-Lily, the Sea and Land, the Righteous Rising, the Queen of Heaven—worshipping this divinity as the nurse of productiveness, and including housebreaking in its sacred duties—and the Union of the Three Great Powers of Heaven, Earth, and Man, spread far and wide throughout China, and prevalent and flourishing in Canton, the Straits of Malacca, and the whole Indian Archipelago. It is asserted, however, that this last Association can be traced to the third century of the Christian era, the time of a usurper named Tsan-Tsau. It is evident that the country was never tranquil under Mongul or Tartar, as it was under the succession of the thirteen intervening Chinese monarchs who formed the golden epoch of nearly three centuries between these usurping forces; and, in one semblance or another, secret plans for re-establishing a native authority have been cherished (when needed) for six or eight hundred years. So long have these aspirations been in existence; and their lasting is the less wonderful when we consider the character of the people. Precedent, tradition, custom, and habit, are as inexorably their rule, as the law of the Medes and Persians, which never altered. Generation after generation go in as animals do. From the head to the foot, the governing and the governed, the same immutability overrules all else. The Emperor reigns and dies; the Mandarins in all their nine ranks are buttoned and degraded; the officials are raised from the learned who pass their examinations successfully, or doomed to inferiority; the military have peacock's feathers, or are ordered to rip themselves up—in short, all must submit to immemorial practices; and it is no surprising that opinions and feelings should be as faithfully preserved by so stationary a people.

A good deal of our difficulty in reading or understanding either ancient or modern information about China is found in the intricacies of the language and the confusion of titles, their interpretation, and translation. On consulting a learned Chinese scholar we learn that the last-described society, the Secret Triad, is the Society of the Tien-ti-hnih); and the next writer to whom we apply ourselves speaks of the Sanhohwuy, or Society of the Three United, or of *jheen*, heaven; *te*, earth; and *jin*, man; the three great powers in nature, according to the Chinese doctrine of the universe.

These slighter discrepancies being made intelligible, all the accounts agree that the initiation of the members into the sacred bond of brotherhood are very solemn and appalling: the oaths are tremendous and damnatory. The candidate must be manly and neutral; and his firmness is tried by passing through or under swords, amid awful imprecations if he fail in his obligations. A wild tradition of three brothers connects this ceremony directly with the descriptions we have recently received of the three commanders of the insurgent forces. A black cow and a white horse were sacrificed to Heaven and Earth, in the garden, on the original compact. The three men burnt incense, reverently worshipped, and took the oath, saying, "Liu Pi, Kwan I, and Chang Fei, although of different surnames, are now united as *brethren*, joined hand and heart, &c., &c. "May the supreme heaven and the deep earth behold and establish our hearts; he that proves treacherous and ungrateful, may heaven and men join in his destruction!" The oath being ended, they honoured Hinen Teh as elder Brother, Kwan I as second Brother, and Chang Fei as younger Brother—the very same distinction now held by the commanders of the rebel army at Nanking. The adventures of the first model trio might class with those of the heroes of Persian or Greek anthology, the legends of Scandinavia, or the exploits of knights who encountered magicians and giants in yet more stirring tales. Azure-coloured dragons, and, moon-ornamented scimitars, and well-tempered spears, eighteen feet long, were fearful weapons in their hands, and they slay fifty thousand enemies faster than *Bobadil* with his "twenty more, kill them too." But their history will not throw more light on the present; and, curious and amusing as it is, we put it aside to state that a regularly-descended branch of the fraternity was proscribed in the *Pekin Gazette* so recently as 1817, and several executions followed of criminals who made paper effigies of the Emperor, which the novices, on entering the society, cut in pieces. It was proved by a MS. discovered at Macao that they were conspiring for the destruction of the reigning Monarchy; and a number of their rules and customs were brought to light. There were no fewer than thirty-six oaths, all inculcating fidelity to the order, and perfect subordination. The finger was cut, and three drops of blood let fall into a chalice of spirits, and drunk—a dreadful corroboration of a Chinese oath, human blood being reckoned far more terrible for this purpose than the cutting off a cock's head—a sacrifice of great solemnity on such occasions.

Resemblances to the rites of Freemasonry, and the system of Secret Tribunals in Germany, are obvious in many parts of these Chinese communities.

At Hong-Kong, Mr. Gutzlaff found many papers belonging to the Triad Society, which gave a somewhat different version of its origination; but still resting in a hate of the Mantchoos, and a resolve to re-instate the Ming Chinese Sovereigns. In these the Society set forth the following religious principles:—"We consider Heaven as our father, the Earth as our mother, the Sun as our elder brother, the Moon as our elder sister; we pay respect to the true Son of Heaven, worship our five ancestors, (five bonzes or priests, whom they declare to be their founders, and not the three brothers before stated), treat with deference our brethren, and devote ourselves to a life of pleasure." They had a symbolical language, and hymns or songs by which to recognise each other; besides the signs in pouring out tea into cups, lighting their pipes, smoking opium, and other devices by which every kind of meaning was clandestinely communicated. These papers prove that they considered themselves a powerful body, and certain of the final result of their endeavouring to place a Chinese Monarch on the Throne.

Gradually increasing in numbers, strength, and organisation, the Triads continued to induce other patriotic societies to fraternise with them; and thus at length to make the head now seen against the Tartar oppressor of the peculiar Chinese race. One remarkable element consists of the Scholars, who have studied all the sages, and wish the world to be ruled by Confucius. Whether this body plays a subordinate or paramount part in the drama now acting, is one of the most interesting problems connected with its *dénouement*. A distinguished public officer, just returned from China, observed to us, in answer to an inquiry, that as far as he could ascertain, and his opportunities had been of the foremost order, the insurgents possessed all the elements of Destruction but none of Construction—they might overthrow a Government, but to recompose one would be out of their power. From our own investigations, agreeing entirely with this dictum, we would say, that though strictly applicable to the Triad leaders now in the field, we should not consider the task of reconstruction so unlikely were the Scholar section to acquire authority after the battle was won.

Of the elder society we may mention, that in the time of the last Emperor it flourished under the name of Thee-ho-hwuy—the Celesto-Terrestrial Society, or the Society that unites Heaven and Earth. It then nearly succeeded in overturning the Government, and was only suppressed fifty years ago, when a number of chiefs were taken and cruelly put to death; and it was proclaimed, with the usual bombast of these vermilion documents, that "there was but one of that rebellious fraternity left under the wide extent of the Heavens!" The result was greater secrecy and an accumulation of adherents; the assumption of the title of Triad—adding MAN to the preceding two great powers; and also adopting another distinction (not preserved throughout), viz., that of Hung-Kea, or the Flood family; but whether having reference to the Deluge, or being allegorical, to signify their overflowing all resistance, we cannot distinctly ascertain. Dr. Morrison gave a very unfavourable opinion of their objects—"theft, robbery, the overthrow of regular government, and an aim at political power;" and the plunder divided in shares according to the rank the members held in the society." They levied black-mail and protection-money where they were strong enough; and their Government consisted of three persons, denominated "Ko" (Elder Brothers); thus distinguished: Yih-Ho, Urh-Ho, and San-Ho; i.e., Brother-First, Brother-Second, and Brother-Third—as we find them now on their march towards Pekin, at the head of the Heung-té, or body of the "Brethren."

From these particulars we see that the threatened dissolution of the Tartar dynasty, and with it a great, probably a total, change in the condition of the Chinese empire, both as regards itself and its foreign relations, is but the consummation of the work of centuries; the peculiarities of which have depended on the peculiarities of this strange people.

The engrafting of several tenets on the preceding religious code (if it may be so called), which bear some analogy to the Protestant faith, is one of the most remarkable features in the case. As far as they can yet be made out, they are much more nearly allied to the Jewish dispensations, as related in the Old Testament, than to the Humanising morality inculcated in the New. But whatever they are, they appear to be recently derived from missionary tracts, in which portions of the Bible were translated into Chinese, and scattered over the country. The destruction of idols and temples, and the massacres of men, women, and children have a striking resemblance to the historical wars of the children of Israel. At Nanking, above 20,000 Tartars were massacred on second branch; and accredited report states that, on other occasions, the Roman Catholics—as worshippers of idols—have, in like manner, been sacrificed to the creed of *T'hien* or *Jin*.

Through their strange mingled yarn of doctrine and superstition, there are, without doubt, principles of Protestantism—however perverted or defiled. The Ten Commandments, the nature and observances of prayer, and a glimmering of the Christian Trinity, and the salvation of the world by the Second Person, are observable in their books and official documents. Tai Ping Wang, their chief leader, though reverenced as a god, or "the Mighty Pacificator," is said to have been taught by an American missionary; and either this fact, or the fact of other missionary intercourse, would account for some of the anomalies to which we are alluding. The astute Chinese could not fail to learn the schism between Protestant and Roman Catholic Christians, and the greater difference of the former from the Tartar idolatrous rites and ceremonials, which it is his object to destroy. Thus, what the Jesuits permitted, and to a certain extent conformed to, with the view of converting proselytes, has, in the issue, turned to the disadvantage of their creed; and the more distinct shape of Calvanism has been assumed, either from principle or policy, as likely to neutralise the hostility or excite the sympathy of Great Britain and America in their cause. This is far sighted, and yet precisely what was to be expected from the acute character of the insurgent leaders, "the Celestial King," and his four fellow generals, the Kings of the East, North, West, and South. Their puritanical demeanour and fanaticism may be genuine or put on for this great purpose, and the importance of the adopted line is demonstrated in the neutrality of the (now no longer) "outside barbarians," and the voice of the countries most intimately connected with China, in their favour.

The result is now imminent. The young Emperor, who on his ascension in 1850 took the palpable misnomer of "Complete Abundance," is reduced to his last defences, after degrading and executing Mandarins and military commanders without number, who have failed in "exterminating the rebellious monsters." The chances are against him. The English war led to much disaffection and anarchy; and, what was still more dangerous, allowed multitudes of the people to get arms, previously so rigidly proscribed. The learned, on whom, by the constitution and practice of the Empire all offices of trust were conferred, were disgusted by the sale of preferments to the merely wealthy classes, in order to raise money for the payment of subsidies imposed by the victorious English. Mantchou Tartary is too thinly populated to supply reinforcements sufficient to withstand the insurgents, who have now been three years in the field, and continually advancing. Famine, above all, menaces the overthrow of the reigning dynasty; for, owing to the patriarchal form of the Government—always looked up to for food, as the father of a family is by his children—scarcity has never failed to stimulate revolt; and there are not now, as usual, vast stores and granaries to meet the exigencies of the case. On the contrary, all has been consumed; and the last edicts of the Emperor are appeals *ad misericordiam*—apparently the last sighs and groans of a departing empire. The insurgents were, according to the latest advices, about to march, in two great divisions, upon Peking; and it is not improbable that we shall soon hear of the fall of the northern or Tartar capital; and that its Sardanapalus has followed the example of his dignified mandarins, and swallowed that suicidal ounce of gold leaf in pills, with which they put an end to their forlorn existence.

Judging from the past, the Imperialists cannot avert this inevitable destiny; and the present generation will live to see such changes in the whole world's business, through the emancipation of China, with its 350 millions of inhabitants, as the wildest dreamer of what Free-trade might effect could never imagine within ten thousand degrees.

CHINESE MILITARY PICTURE DESPATCH.

WE annex a fac-simile of a Despatch sent by the Imperial officers to Pekin, announcing the re-capture of Chin-kiang, or Tching-kiang, from the insurgents. The Despatch in question is a woodcut, of which the tone is chiefly a dull red, a few parts, together with the writing, being black. The insurgents may generally be distinguished by having merely coarse wrappers round their heads, instead of a sort of helmet, or by wearing long hair. The Mandarins, with their attendants, are in the upper right-hand corner of the picture, admiring the prowess of their troops. The dress and general appearance of Chinese soldiers are given with great accuracy.

We must add, that the event portrayed in this is sheer invention; the town having been found by the English authorities to be still quietly in possession of the insurgents long after the date of its asserted re-capture. Had the Duke of Wellington been a General *à la Chinoise*, he would, no doubt, on raising the siege of Burgos, have sent to England an announcement of the capture of the place, with a spirited sketch of the final assault, for insertion in the *Gazette*.

Tching-kiang, the scene of this imaginary victory, is situate on the Yang-tse-kiang river, between Nankin and its mouth, and is a place of great importance.

THE CITIES OF LONDON AND PARIS.—The Lord Mayor has received an answer to the address presented to the Municipality of Paris, recording the reception of the Lord Mayor, Aldermen, and Common Council of the City of London in the year 1851. The document, which is framed and emblazoned in the most splendid and tasteful manner, acknowledges, on the part of the Prefect of the Department of the Seine, courteous address forwarded through the medium of her Majesty's Ambassador at Paris; and, after expressing satisfaction at this new proof of those good feelings which exist between England and France, conveys the assurance that the municipality of Paris, like that of London, appreciates the benefits of the happy brotherhood which peaceful competitions tend to establish between civilised nations. This document is dated "August 18, 1853," and is accompanied by a note, dated the "17th of December, 1853," from the present Prefect of the Seine; the receipt of which was acknowledged on the 22nd of December last by the Lord Mayor, who expresses an earnest hope "that the reciprocation of kindly feelings, which were cemented by the Great Exhibition of 1851, may long be cherished by those much powerful and distinguished communities as the cities of Paris and London."

CAUTION TO CAPTAINS OF PASSENGER SHIPS.—The *Melbourne Herald* of the 10th of September gives an account of a punishment inflicted in Melbourne on Captain Howes, of the *Anna*, under the following circumstances:—Captain Howes was convicted at Williamstown police-court of divers breaches of the Passengers Act in the passage of the ship from England to Australia, and was fined in the aggregate amount of £1800. In default of payment, Captain Howes has been sentenced to a series of imprisonments amounting altogether to nearly thirty years—a period longer than the whole past lives of the majority of the colonists. This tremendous sentence has begun to take effect.

A SNAKE IN A FIX.—A Texas correspondent of a New York paper gives the following snake story:—"One night myself, my wife, and myself were awakened by a noise from a shelf which contained our small store of crockery, followed by a crash, which showed that a great portion of our cups and plates had been flung on the floor. Springing up to discover the author of this 'smack upon chins,' I found a large snake in a somewhat unpleasant 'fix.' He had crawled upon the shelf, attracted by a number of eggs which were scattered about. One of these he had swallowed, and, in order to get at the next, he had put his head and a portion of his body through the handle of a jug, which happened to stand between the coveted delicacies. The handle was just open enough to let his body, when puffed out by the egg. In this position he had swallowed the second egg. His snakeship thus found himself unable to advance or retreat; and, in floundering about to escape from this novel stock, had caused the accident which had aroused us. I, of course, proceeded at once to execute summary justice upon the interloper; but the eggs which he had swallowed were a dead loss."

DESTRUCTIVE FIRES.—A very large amount of property was destroyed on Saturday night, by a fire which broke out among the large warehouses in Cheapside and the immediate neighbourhood. The fire commenced on the premises of Messrs. Townley, hat-manufacturer, and ran along the back warehousing, lying in succession the premises of Messrs. Liddiard and Co., 61, Friday-street; those of Messrs. Le Willet and Co., No. 62; and those of Messrs. Muir and Son, No. 60, all warehousemen. At the same time the flames were driven into the warehouses of Messrs. Mackerrow and Sons, manufacturers, No. 54, Bread-street, and those of Messrs. Douglas and Co., manufacturers, No. 6 in the same street. The firemen of the Brigade and West of England office made a vigorous attempt to confine the fire to the scene of its present operations, but without the least success, the flames extending to the warehouses of Mr. W. Airey, jun., silk and mohair manufacturer, No. 4, Bread-street; also into those of Mr. Thomas Greenless, warehouseman, and bakers into the property of Messrs. Broughton, Son, and Co., hardware and button warehousemen. The flames illuminated Bow Church, and brought out in bold relief the beautiful tracery round the gallery of St. Paul's Cathedral. So great was the main body of fire that for hours all the men could do was to protect off the flames when they threatened to seize upon the contiguous houses. Most of the premises and stock appear to have been insured. The fire was not fairly extinguished until Tuesday. The damage is estimated at from £500,000 to £600,000.—Several other serious fires have since taken place. On Tuesday evening, between eleven and twelve, the residence of Lord Normanton, Seymour-place, Curzon-street, May-fair, took fire, and considerable damage was done before it was extinguished. On Tuesday morning the premises of Messrs. Hobb, look-manufacturers, Cheapside, took fire, and nearly destroyed the whole building. On Wednesday morning the Lansdowne Arms, Old Paradise-row, Islington, was found to be on fire about half-past one; and, notwithstanding a bold had the flames obtained, that the inmates escaped with great difficulty. Owing to the deep snow, the supply of water was short, and the consequence was that the flames extended to the neighbouring premises. The property destroyed is valued at several thousand pounds.

THE military lines to the north and east of Devonport, long left unfinished, are now under the hands of engineers. It would seem to be the intention of the authorities to complete them.

CHINESE MILITARY DESPATCH.—(SEE PRECEDING PAGE.)

CAVALRY: ITS HISTORY AND TACTICS.*

THE Encampment at Chobham has awakened that degree of public interest in the condition of our army without which it is impossible to effect any great reform in this country. In no branch of our military armament is reform more needed than in the cavalry, which has for a period beyond the memory of living men been given up to the control of foreign martinets, and Royal tailors.

We are the best horsemen in the world, take us for all in all—that is to say, a given number of Englishmen, mounted on any horses, with or without saddles, will get over a rough broken country in a shorter time, in better condition, than any other civilised nation. We ought to have, and could have, the best horses in the world. With these advantages to start from we ought to have a high and special reputation for our cavalry, which we have never earned.

Why we are deficient where we ought to excel, and how we may attain the superiority due to our condition, Captain Nolan has come forward to tell us, in a capital book, written with full knowledge of the subject, both practical and theoretical; exhibiting, at the same time, enthusiasm and admirable common sense. Having served with our own army in India and with foreign armies on the Continent, he is able to speak with much more confidence and experience than the most learned pupil of riding-schools and reviews.

The first two chapters contain an historical sketch of cavalry, from the earliest times down to 1815. The remainder of the work is descriptive, critical, and suggestive. Although mainly addressed to the profession, to which the author belongs, there are considerable portions which will interest, and be fully appreciated by all the horse-riding public.

At the conclusion of his historical sketch, he comes to the following conclusions:—that "individual prowess, skill in single combats, good horsemanship, and sharp swords, render cavalry formidable." "That in the long run light active horsemen have prevailed over heavily equipped cavalry, and that speed and endurance are to be specially prized in the horseman." "Therefore our European cavalry is not organized on an efficient system." "For the present riding drill makes few good horsemen. The swords blunted by steel scabbards, are not efficient weapons. Speed and endurance cannot be expected from horses that are overweighted."

Pace is power: the heavier the man, his arms, and accoutrements, the less his power of moving rapidly or long. Captain Nolan objects to placing grenadiers of six feet on horseback. He shows, by copious authentic evidence, that Indian Irregular Cavalry, with sharp swords, on small horses, have inflicted more formidable and more numerous sword cuts than any European Cavalry, number for number. The cuirass gives weight, yet leaves the arms, the legs, the head, unprotected; yet the moment either of the horseman's arms is wounded, it signifies not which arm, he is at the mercy of his adversary. "If a heavy-armed horseman gallops and exerts himself only for a few minutes the horse is beat by the weight, and the rider is exhausted in supporting himself and his armour in the saddle; his sword arm hangs helplessly by his side; he can hardly raise his heavy broadsword." Let those who have seen the exhausted state of our splendid Life Guards or Blues after a sharp canter as Royal escort, imagine what their condition would be after a day's march over a stiff broken country.

The nations of the Continent cannot obtain sufficiently well-bred horses, of size and power, to carry their heavy cavalry, and are, therefore, obliged to mount their heavy dragoons on large, clumsy, and slow horses. To make the best of a bad job they case them in armour, in order that they may have a better chance of reaching the point of attack alive. England, if reduced "to mount her heavy dragoons on Barclay and Perkins' dray horses, would most likely imitate the French charge at a trot, or arm the men *cap-a-pied;* but whilst no dearth of horses has reduced her to this expedient, it is truly pitiful that she should copy from such bad originals as Continental cuirassiers." Heavy cavalry should have the largest and most powerful horses; but their men and their accoutrements should be light. "If you weight powerful horses with heavy men and accoutrements you bring them down to the level of smaller and weaker horses." Certainly, war is harder work than hunting; and, in hunting the object is always to have a horse above your weight. Properly mounted and armed, our English dragoons could, on an emergency, make their way across a country where no foreign dragoons could ride and follow.

With these views Captain Nolan would discard the cuirass, give the dragoon a neat short frock coat, the sleeve from the elbow to button slashed, so as to turn back, for work, in a long cuff; cover the hand and arm with a steel gauntlet, formed so as to leave the inside of the hand naked, to grasp a sword. This would be light yet strong enough to ward off a disabling blow. Put on the head a well ventilated not too heavy helmet, and arm with a really sharp sword, with a grip well fitted to the hand, substituting a leather or wooden scabbard for the steel, which renders it impossible to keep a sword sharp. "To me it appears that we have too much frippery, too much toggery, too much weight in things worse than useless. To a cavalry soldier every ounce is of consequence. I can never believe that our bussar uniform is the proper dress to scramble through thickets, to ford or swim rivers, to bivouac, to be nearly always on outpost work, to 'rough it' in every possible manner." Instead of overalls or trousers, which are constantly getting torn, rotten with mud, and inconvenient from the straps, Captain Nolan recommends overalls without straps, ankle boots, and black leather leggings, made in the shape of Napoleon boots, with a covered bar of steel running down the side, fastened with straps above and below; with fixed spurs attached, to be only worn when mounted, and to be left hanging to the saddle when dismounted in the field. Thus while the dragoon would be unencumbered with spurs and straps when dismounted, when mounted he would have the comfort and strength given by boots, an advantage which every hunting man knows.

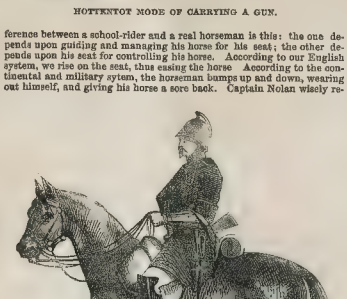
With regard to fire arms, he would give them short handy rifles (we suggest that if loaded at the breech on the American "Mould's" plan, exhibited at the Institute of Civil Engineers' last soirée, so much the better); and he recommends for carrying the rifle a bell-mouthed holster, open at the bottom, fastened below the off-wallet, pointing to the horse's shoulder. To this plan there are several strong objections. The bullet shakes down, and the gun misses fire or bursts.

Mr. Francis Galton, in his recent "Travels through Tropical South Africa," recommends the Hottentot method of carrying a gun as far better than any other, viz.:—"Have a case of strong leather of such size and shape as to admit the gun-stock a little stiffly (See Cut). This case is fastened tightly above to rings or clees in the pommel of the saddle; below it is unsupported, except by a thong which passes round the saddle-girth, and keeps the gun-case from tilting too far forward. The gun is pushed stock downwards into the case; the barrel passes between the right arm and the side; while the muzzle is so clear of the person, that, even in taking a steep leap, it never shifts into a dangerous position. The hands of the rider are free; the lock is in full sight; a cover to keep out rain is easily put on. In a moment the gun is out of the case—almost as quickly as a whip could be raised."

Captain Nolan's improvements in the saddle must be reserved for separate illustration. But, supposing the horse, the rider, the costume, the arms, and the accoutrements, as near perfection as possible, all will be useless without a good seat. With a good seat and a good horse, a bold man can ride over anything; with a weak horse, or a loose seat, a stick can turn his sabre.

We ride across country in a style no other European native can equal, yet we are silly enough to import our system of military riding from the Continent. When we fly across the pastures of Leicestershire or Northamptonshire, we sit back, bend the knee, and grip firm with thigh and calf, with the leg straight from the knee. In our cavalry we ride by balance. Our officers have one style for show and another for work. The established military seat is upright. The knee drawn back and the heel in a perpendicular line with the point of the shoulder. The man's legs, from the knee down, are carefully brought away from the horse in order to prevent what is called "clinging." A form of riding, in which not one man in a hundred could get across a dozen fences on a pulling horse. The balanced seat originated in times when knights sheathed in armour, ran a course with lance in rest. "The upright seat enabled them to carry the weight of the armour with more ease; the long stirrup supported the leg at that point to which the weight of the armour pressed it down. They were obliged to study balance on horseback; for the equilibrium once lost, no effort of strength could save them—the weight of armour brought them to the ground. The necessity has long ceased to exist, but the system is kept up"—perhaps, chiefly, because cavalry are the toys of kings and princes, and there is something showy and imposing in the balanced seat of a tall horseman on a well-trained fiery horse. But those who have only learned to ride by balance are helpless on untrained horses. The difference between a school-rider and a real horseman is this: the one depends upon guiding and managing his horse for his seat; the other depends upon his seat for controlling his horse. According to our English system, we rise on the seat, thus easing the horse. According to the continental and military system, the horseman bumps up and down, wearing out himself, and giving his horse a sore back. Captain Nolan wisely recommends us to stick to the seat we practise as a nation of foxhunters while teaching our dragoons how to work their horses with hand and leg, so as to make them as handy as Eastern cavalry. His idea of what a seat should be and should not be is exemplified in the two accompanying illustrations, copied from the work under review:—

HOTTENTOT MODE OF CARRYING A GUN.



THE MILITARY SEAT AND COSTUME AS IT OUGHT TO BE.

THE MILITARY SEAT AND COSTUME AS IT IS.

In the first, the horseman is in a position to gallop fast, leap anything, hold and control a fractious horse, and hit hard. In the second, if the horse pull hard or become restive, half the rider's strength must be exhausted in preserving his balance—hold him in he cannot. We conclude our notice of this valuable contribution to military literature without being able, from want of space, to make further extracts from a crowd of interesting historical passages and anecdotes.

* By Captain L. E. NOLAN. Bosworth.

THE IMPROVEMENTS IN PARIS.

LONDON astonishes us by its *ensemble.* Paris charms by its individual features. It may be said of these two great capitals, that the first commands admiration, like those majestic women, of handsome Juno-like features, who owe their charms to a regular and perfect harmony of proportion; of the other, that it pleases, like those women who, without being strictly beautiful, irresistibly captivate us by their expression of countenance, by their *piquante* liveliness, by the grace of their person and the *je ne sais quoi* which fascinate as entirely as beauty itself. The traveller, fresh from the grandeur of London, the magnificence of its streets and squares, and the imposing spectacle of the Thames, is, on his arrival in Paris, first impressed by the narrowness of its streets, with their inextricable windings, which exactly resemble a skein of silk entangled. He is struck especially by the absence in the houses of that decent exterior which characterises our English cities. To find the proper character of the physiognomy of Paris we must enter into its details. When we have visited its monuments, its treasures of art, its public institutions, its curiosities of all kinds, we feel that we are in the midst of a people who, in attaining to the splendid and the showy, sometimes sacrifice the enjoyments and comforts indispensable to the Englishman.

During the reign of Louis Philippe, great improvements were made in Paris. New quarters of the city, well built and airy, were substituted for squalid and ill-drained districts. The fine double line of quays which border the Seine along the entire length of the city is a remarkable work, which France owes to the same Monarch. The present Emperor, actuated not only by good intentions, but probably also by the suggestions of public policy which represented the necessity of creating great public works, in order to find occupation for the working classes, has prosecuted the good work commenced by Louis Philippe with the suddenness and vigour which characterise his acts, and has organised a series of gigantic enterprises, the result of which will be to effect the entire transformation of Paris.

The first and the most important of the improvements now being made in Paris is doubtless the junction of the Louvre and the Palace of the Tuileries, and the opening up the approaches to the north of these two edifices. This project, conceived by Napoleon I., but which he could only partly execute, had been abandoned after his time by reason of the enormous expense which it entailed. In 1849 the National Assembly, wishing to find employment for a portion of the industrious classes, had decreed the completion of the Louvre, under the name of the People's Palace. This decree was not put in execution. It is this project considerably expanded, which is now being carried out, under the orders of Louis Napoleon, with such remarkable promptitude. It is to him the Parisians owe the destruction of the wretched hovels which encumbered the space between the Louvre and the Palace of the Tuileries, and to him also they are indebted for the prolongation of the Rue de Rivoli as far as the Place du Louvre. This undertaking has been conducted with such activity that the space between the two buildings has long since been cleared; and in less than a year the wing, which is too close in on the northern side the immense Place du Carrousel, is already half finished. The street, which is to run by its side, is laid out as far as the Louvre, and even beyond it, as we shall hereafter describe. The total expense of this construction, including the cost of purchasing the houses demolished, amounts to the sum of £1,912,000.

M. Visconti's plan consists of two detached edifices parallel to the wings of the Louvre, and which stand a little in front of the west façade of the Palace. These two edifices are destined—that to the north for the residence of the Minister of the Interior; and that to the south, very probably, for a barracks. They will be separated from one another by two semicircular enclosures; in the centre of one of which will be placed a colossal statue of Louis XIV., and in the other a statue of Napoleon. The façade of the Louvre which opens upon the Tuileries will be modified. The vast square thus formed may, upon occasion, be converted into a formidable fortress and *place d'armes.*

The prolongation of the Rue de Rivoli, which is to be carried on simultaneously with the completion of the Louvre, is a work of more decided utility. It necessitates the removal of low and filthy streets, the neighbourhood of which disgraced one of the most magnificent quarters of Paris. The piazza of the Rue de Rivoli will be continued along the Louvre, and around the Place du Palais Royal, which is about to be enlarged. An square will replace the houses, at this moment in process of demolition, at the end of the Rue Richelieu, and will extend as far as the Théâtre Français, the approaches to which will thus be cleared. The purchase of the houses pulled down for the purpose of clearing the approaches of the Louvre and the Tuileries, has amounted to the sum of £1,200,000.

The space comprised between the Place du Louvre and the Place de l'Hôtel de Ville presents a labyrinth of streets both straight and crooked, unwholesome, and occupied in a great measure by wholesale dealers, who found in the old and dark houses of this lifeless quarter warehouses at a low rent. The idea of cutting through this neighbourhood by a great connecting street had been long entertained, and a very old project, which dated from the construction of the colonnade of the Louvre under Louis XIV., made this street end at the eastern door of the Louvre, on one side, and on the other at the Bastille, following the line of the Rue St. Antoine, which is was intended to absorb. The municipal administration decided to continue the Rue de Rivoli on this side of the Place du Louvre towards the east in the direction of the Hôtel de Ville. This immense enterprise, which will give to the Rue de Rivoli a total length of nearly three miles, and a width of about 70 English feet, has been executed in less than a year, and the greater number of the new houses which are to form this magnificent thoroughfare are already constructed. The mania for building upon the land re-sold by the city has been powerfully stimulated by the legislative provision which exempts them from the land-tax, and from the door and window-tax, for twenty years. The number of houses demolished for the purposes of the new street of this part of the Rue de Rivoli is 240; they have cost the city about £1,000,000.

The passage of the new street across the ancient streets has occasioned differences of level which have rendered necessary a general survey, and this has led to a great number of new demolitions. Advantage has been taken to straighten and enlarge a crowd of cross streets, especially the Rue St. Martin, one of the great arteries of Paris, where the soil had risen twelve feet above that of the Rue Rivoli. The expense of this feature of the work has been about £800,000.

In this sweeping clearance, which has just effaced entire streets from the maps of Paris, all of them extremely ancient, archæological science will have to regret numerous losses, and history many precious souvenirs. The house which, under the name of the Hôtel Coligny, recalled one of the most execrable crimes that attended the massacre of St. Bartholomew, the death of the brave and virtuous Admiral de Coligny, the victim of his attachment to Protestantism—has been totally demolished. One monument only has escaped the general destruction. We mean the Tower of St. Jacques la Boucherie, one of the most interesting remains of Christian architecture, in the style of the *Renaissance.* It will occupy the centre of a square, one of the sides of which will be formed by the Rue Rivoli. The improvements of this quarter have required the destruction of 167 houses.

The passage of the Hôtel de Ville in particular reaps the greatest advantages from the continuations of the Rue de Rivoli. A barrack for 2000 men has been constructed behind the edifice, in a position which commands at once the Rue de Rivoli, the Hôtel de Ville, and the Rue St. Antoine. The construction of this barrack, which has a frontage of 360 feet, has cost the state, which has borne the whole expense, the sum of £450,000; the land, given by the city, being estimated at an equal sum. The block of houses which fronted the Hôtel de Ville to the west has been razed to the ground, and the new habitations will be carried further back, with a symmetrical façade opening upon the square. They will be constructed uniformly of five stories, at the height of forty-eight feet, with projecting cornice carried along on the same line, and windows adorned with striking mouldings.

The central markets are to be rebuilt upon a larger scale. These works are already in course of execution; they necessitate the purchase of property to the value of one million sterling. The construction of the stalls destined for the service of the dealers will cost the sum of £322,000; the approaches to the Halles will be entirely new; and the quarter, which up to this moment has been one of the most filthy in Paris, will become one of the most airy and the most easy of access.

If we add to this mass of alterations and improvements which will absorb a capital of £6,000,000, exclusive of the rebuilding (to be carried on at the cost of the new proprietors), the immense works which are being executed in other quarters of Paris—such, for example, as the laying down of the new Boulevard de Sébastopol, which opens upon the southern façade of the railway of that name, so far as the Boulevard St. Denis; the opening of the new Rue Napoleon, to the Faubourg St. Germain; the works for the canalisation of the Seine, under the southerly portion of the Pont Neuf—we shall not exaggerate when we say that the building trades employ at this moment in Paris a capital of £15,000,000 for the prosecution of the improvements.

CALENDAR FOR THE WEEK.

SUNDAY, January 8.—1st Sunday after Epiphany.
MONDAY, 9.—Plough Monday. Cape of Good Hope taken, 1806.
TUESDAY, 10.—James Watt born, 1736. Royal Exchange burnt, 1838.
WEDNESDAY, 11.—Hilary Term begins.
THURSDAY, 12.—Riots at Sheffield, 1840.
FRIDAY, 13. Cambridge Term begins. C. J. Fox born, 1749.
SATURDAY, 14.—Oxford Term begins.

HIGH WATER AT LONDON-BRIDGE,

TO CORRESPONDENTS

INVESTIGATOR is anxious to ascertain if there be in existence any descendent of the Rev. John Parry, who was Rector of Aston Somerville in 1666. Perhaps some one of our Correspondents can afford the information.

ABERYSTWITH and C. H. C.—A lady is not, under any circumstances, entitled to bear a crest.

WILFRED.—Clerk's "Heraldry."

HELIFELD.—The penalty of death attaches to the crime.

A SUBSCRIBER.—The two surnames will descend to all his posterity, except, of course, the descendants of married daughters.

H. A. D.—A person, A. B., is clearly entitled to quarter his *paternal* grandmother's Arms, if she was an heiress. A maternal grandmother, although an heiress, would not confer the right, unless the daughter (the mother of A. B.) was also an heiress.

T. R., Ampstead-road.—We have not space to print descriptions of the Arms, Crests, Supporters, and Mottoes of Lords Hardinge and Exeter. They can be found in any recent "Peerage."

UN SOLDAT.—Militia officers are entitled to place cockades in their servants' hats. Militia officers have no especial precedence.

W. M. HASTINGS.—Arms of Pole, Lord Montague: Per pale or, and sa, a saltire engr. counterchanged. Arms of Ferrers of Charsley: Vairé or and gu. Arms of Beauchamp, Earl of Warwick: Gu. a fesse between six cross crosslets or. Arms of Valence, Earl of Pembroke: Barry arg. and sa. an orle of marlets gu. Arms of Fitz Osborne, Earl of Hereford: Gu. a bend arg., over all a fesse or Arms of Fitz Piers, Earl of Essex: Quarterly or and gu. a bordure vaire.

A. Z.—Elizabeth, Countess Dowager of Hardwicke, widow of Philip, third Earl, is alive. Her Ladyship was born 11th Oct. 1763, and has, consequently, completed her 90th year. Anne, Dowager Lady Grenville, widow of Lord Grenville, is also living, aged 81.

OMER PACHA.—Edward Vernon Harbord, fourth Lord Suffield, died Aug. 22, 1853, at Gunton Park, Norfolk.

YNO.—Arms of Gilpin of Westmoreland: Or a boar passant sa. Crest: A pine-branch vert.

T. T. S.—Arms of Hide of Cone park, Essex: Erm. on a fesse sa., a castle with two turrets ppr. Crest: A castle as in the arms. Motto: Fide sed cui vide.

DELTA.—Arms of Mason of Yorkshire: Per fesse or and gu., a lion rampant counterchanged.

A SUBSCRIBER.—Arms of Jameson: Az. a saltire or, cantoned by ships under sail, in chief and flanks, and a mullet in base arg. Crest: A ship in full sail, her flag displayed ppr. Motto: Sine metu.

W. J. Arms of Nicholl: Sa. Three pheons arg. Crest: CCornish Chough, Wings elevated ppr., perched on the battlements of a tower arg.

DE MOWBRAY.—Arms of Cosens: Az. on a bend or betw. two lions rampt. arg. three martlets of the first. Crest: A Cookatrice, wings erect, or.

ALPHA.—The Arms are those of Atkinson, of Newcastle.

CHEVALIER.—All the ex-Lords-Lieutenant of Ireland are entitled to wear the Insignia of the Order of St. Patrick, although not Knights of the Order.

D. C. L.—1st, The wife of the son is Mrs. Smith. The widow of the father is the dowager Mrs. Smith, or Mrs. Smith, senior. 2nd, The son of an heiress entitled to a quartered coat may, with perfect heraldic propriety, bear his shield thus:—1st and 4th, his paternal coat; 2nd, his mother's paternal arms, 3rd, the quartering to which his mother was entitled.

M. A. F.—A wife should use her husband's arms without crest or motto.

U. A. W.—The Fenwicks of Maldon were a well-known branch of the Fenwicks of Northumberland. Our Correspondent informs us that the male descendants of Mr. Fenwick, who represented Newcastle-on-Tyne during the reign of George II., are now resident in the West of England, and retain the motto, "Ferit ut vivat."

A CONSTANT READER.—*Arms* of Langmead, of Devon: "Gu. a lion rampt. arg., on a chief wavy of the last, a lizard's face between two cinquefoils. *Crest*: a spur between two wings."

J. C. E. is very desirous of information as to the pedigree and arms of the family of Roughley, of Shirley Hall, near St. Helens, Lancashire. Can any of our readers indicate where such may be obtained.

J. J. T. M. The peer's or baronet's daughter would not loose her *innate* precedence of marriage. We do not think the wives of M.P.'s have any precedence as such.

G. D. C.—Can any of our Correspondents explain the origin of the Bee as an emblem of the Napoleonic Dynasty?

HUNWOOD.—*Arms* of Dodson: "Gu. a chev. or, between three peacocks arg. *Crest*: Two hands conjoined in fesse, winged at the wrist."

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 7th, 1854.

THE unanimity of feeling with which the English people demands a war with Russia will greatly facilitate the labours of the approaching Session of Parliament. The nation has learned to detest war, and the authors of war; but, with that innate common sense which inspires mankind in the mass, it feels that the best way to end a war is to carry it on vigorously. It is quite certain that the nation will begrudge no sacrifice to restrain and punish the Russian aggressor, and to maintain the national dignity and honour, as well as the equilibrium of Europe. In prosecuting the war, the Ministers will have no internal difficulties to contend with. The necessary funds will be cheerfully voted, and as cheerfully paid; and the highest honours that the country can bestow will be lavished upon the Admirals who shall destroy the Russian fleets in the Euxine and the Baltic. At such a time, and with such a task before it, the nation will scarcely expect the Ministry to make any fiscal experiments, unless with the object of increasing taxation. Although such brilliant success has attended the commercial policy of the last seven years, and although the results of Mr. Gladstone's admirable Budget of 1853 might well justify him in proposing a further extension of Free-trade principles in 1854, it is probable that the nation will have to wait for more tranquil times for the abolition of the many impolitic taxes that still operate injuriously upon the trade, the health, and the morals of the people. Yet, even at such a crisis, it may be wise to make some exceptions in favour of the nations with whom we are at peace. A Russian war will not greatly interfere with our commerce, and any fiscal relaxations that shall tend to increase our trade with friendly or allied states, may enable us to bear with greater ease the war burdens that will necessarily be laid upon us. For the first time in their history, Great Britain and France are cordially united upon a question on which the sympathies and good wishes of the whole civilised world are with them. Free-trade has answered so well with us, that the French Emperor—already more than half a convert—med itates its introduction into France. The French nation is not so well informed as its chief; but Louis Napoleon has lost no opportunity that ever presented itself to him, of introducing the wedge of sound policy into the dense block of Protection. The reduction of the duties on iron and coal is a strong proof of what he would do if the French nation were sufficiently enlightened to support and follow him. If one thing more than another have strengthened the Protectionist error in France, and kept up a spirit commercial hostility towards this country, it has been the heavy impost which Great Britain has laid upon French wines. France, though an agricultural country, grows no more corn than she needs; but she produces the best, the most abundant, and the cheapest wines in the world. It is no exaggeration to say that she could send to this country an almost limitless supply. But unwise legislation has forbidden the English the use of the wholesome beverage. Had we traded with France for her wines, as we might have done, both nations would not only have been better friends, but each would have been richer; and the English people would not have incurred the reproach of being, next to the Scotch, the most drunken people under the sun. There can, we think, be scarcely a doubt that the admission of French wines into this country, either free or at a nominal duty, would help to convince the French people of the firm friendship of England. Such a measure would prove to them the excellence of Free-trade far better than any which their own Emperor can adopt. A duty of 300, or even 400, per cent, which is levied upon the excellent *vin ordinaire*—which the French merchants could deliver in the Thames, all charges included, at fivepence or sixpence a bottle—is a disgrace to us as a commercial nation. The prohibition—for such it is—has done as much to estrange the two countries as all the battles that they ever fought against each other; and its removal at this time, when a common cause unites them against the disturber of the peace of the world, would add moral force to their efforts, and operate as heavy a blow against the Czar as an additional fleet or army. Experience has amply shown that the abolition of unwise taxation is no ultimate loss to the revenue. What we lose under one item is compensated under another. Two such great and wealthy nations, separated from each other only by a few miles of sea, ought to have traded more and fought less. They would assuredly have done so, had we been commercially as wise in 1789 as we were in 1845. Our own experience has been tardy. France still lags behind us, but her present chief magistrate shows, whenever he can, that he has not studied in vain the recent history of this country. It is not from any adherence to the old principle of Protection that the duties upon French wines are still maintained. The question is one of revenue only; and, notwithstanding the demands which the war is likely to make upon us, the finances of the country are in so buoyant and prosperous a state, that a far more timid Chancellor of the Exchequer than Mr. Gladstone has shown himself to be, might well be induced to give the subject his serious consideration. Even although a temporary loss of revenue might ensue, the experiment would be amply justified, if, upon the eve of war, it cemented the friendship of allies, and led to an extension of commercial intercourse between two of the foremost nations of the earth.

THE Great Fire of London, in 1666, was a double misfortune;—a misfortune that so much loss of property was occasioned;—a still greater misfortune that the rebuilding of the City was left in the hands of short-sighted and incompetent persons. If the citizens of London at that time had had the courage or the common sense to reconstruct their capital upon the admirable plan proposed by Sir Christopher Wren, London at this day might have been the most beautiful city in the world. But the men of 1666 were deaf, blind, and narrow-minded. They rebuilt their narrow and crooked lanes and streets, exactly as they had stood before. They seem to have thought that their city, before its destruction, was a model of elegance, convenience, and propriety; and, therefore, made it their pride to restore it in all its old and familiar, but most objectionable, features. The consequences of their obstinacy beset us at the present day. London has no street wide enough for its traffic; and the enormous increase in the value of property, renders it a matter of extreme difficulty to carry out the smallest and most imperative improvement. Among many other obstructions to the widening of streets, and the creation of new thoroughfares, have been a mass of ugly and inconveniently-placed churches; to hint at the removal of which was long held to be as bad as sacrilege. If these churches had been well attended—if the parishes in which they are situated had been occupied by dwelling-houses—and if their several incumbents administered, each of them, to the spiritual necessities of two or three hundreds of people, it would have been still more hazardous for any sanitary reformer to have expressed an opinion in favour of their removal. But churches without congregations are like nuts without kernels, or purses without money; and, most of the sacred edifices within the ancient limits of the City being in this condition, it has become safe for sanitary reformers and street improvers to advocate openly the expediency of taking them down and replacing them in the roomy suburbs whither their congregations have preceded them. No loss a person than the Bishop of London has at length bestirred himself in the matter. His Lordship is in favour of the removal of thirty City churches; and, with his support, there is no fear of any considerable opposition, in or out of Parliament. The Bishop of London takes up the question on religious grounds alone—not thinking it conducive to the temporal credit or the spiritual efficiency of the Church, that, in so many temples for the worship of God, Divine service should be weekly performed to congregations ranging from twenty to fifty persons, while in the outskirts of the metropolis there should be a crying and increasing want of Church accommodation. We trust that the sanitary, as well as the religious, part of the question, will meet with due attention, and that the amenity and convenience of the whole metropolis will be studied. It would be a misfortune if so favourable an opportunity for improvement were thrown away. London not only wants wider thoroughfares, but new ones, and there is no reason why it should not be the most convenient and beautiful as well as the richest and most religious city in Europe. When the Bill necessary for the removal of all these churches shall come in due course before the Legislature, it is to be hoped that means will be taken to promote all the interests involved. The Bishop of London requires coadjutors—not to interfere with his projects for the spiritual improvement of his dioceses, but to aid in a kindred spirit in carrying out a good and necessary work—in other departments, only next in importance to that which the Bishop himself has so properly undertaken.

THE COURT.

The Queen's Christmas gifts to the poor were distributed in the Riding-school, at Windsor Castle, on Saturday last. The recipients consisted of about 600 poor persons, residing in Windsor and Clewer parishes. At ten o'clock the Queen and Prince, accompanied by the Royal children, the Duke of Cambridge, the Marquis of Abercorn, the Earl and Countess Granville, Lady Harriet and Lady Beatrix Hamilton, and attended by the whole of the Ladies and Gentlemen in Waiting, left the Castle, and proceeded to the gallery of the Riding-school, to witness the distribution, which took place under the superintendence of the clergy of Windsor and Clewer.

On Sunday, the Queen and Prince, the Prince of Wales, the Princess Royal, the Princess Alice, the Duchess of Kent, and the Duke of Cambridge, the ladies and gentlemen of the Court, and the domestic household, attended Divine Service in the private chapel of the Castle. The Marquis of Abercorn and the Ladies Harriet and Beatrix Hamilton were also at the service. The Hon. and Rev. G. Wellesley officiated.

On Monday morning, Prince Albert, with the Prince of Wales, Prince Alfred, and the Duke of Cambridge, skated on the ice in the Home-park. Her Majesty was present.

On Tuesday the Queen and Prince, attended by the Viscountess Jocelyn, Colonel Bouverie, and Lieut.-Colonel F. Seymour, left Windsor Castle at one o'clock, for London, by a special train of the Great Western Railway. The Royal party drove from Paddington to the exhibition of the Photographic Society, in Suffolk-street. Her Majesty and his Royal Highness also visited the Duchess of Gloucester, and the Queen returned to the railway station, and arrived at Windsor at ten minutes before two o'clock. The Prince proceeded from Gloucester House to Mr. Bailey's studio, in Newman-street, to inspect his cast for the statue of Lord Mansfield. His Royal Highness afterwards honoured Mr. Bell's studio, at Kensington, with a visit, to see his cast for the statue of Sir Robert Walpole, for which, when completed, it is to be executed for the Houses of Parliament. The Prince called at Buckingham Palace, and returned to Windsor at a quarter-past four o'clock.

On Thursday Prince Albert entered her Majesty out in a sledge, towards Sunset. The Princesses followed in another sledge.

The office of Lord High Steward of her Majesty's Household, filled, since the accession of the Earl of Aberdeen to the Premiership, by his Grace the Duke of Cleveland, has been resigned by that nobleman. The desire of the noble Duke to be relieved from official duty has been no secret for some time past. The post has been offered to, and accepted by, the Earl Spencer, K.G.

The Lord Chancellor will receive the Judges, Queen's Counsel, &c., on Wednesday next, the first day of Hilary Term, at his Lordship's residence in Upper Grosvenor-street, at twelve o'clock.

The Marquis of Abercorn and the Ladies Hamilton arrived at Chesterfield House, on Tuesday, from visiting her Majesty at Windsor Castle. The Marchioness of Abercorn and the younger branches of the family are staying at St. Leonard's-on-Sea.

The Earl of Eglinton is expected to arrive next week at his mansion in St. James's-square, from Eglinton Castle. In consequence of the death of his lamented Countess, the noble Earl is breaking up his establishment.

Lord and Lady John Russell have returned to Pembroke Lodge, Richmond, from visiting her Majesty, at Windsor Castle.

Note.—The sign — denotes below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the Barometer decreased from 29·65 inches at the beginning of the week to 29·39 by the afternoon of December 30th; increased to 29·68 inches by the morning of the 31st; decreased to 29·23 inches by the afternoon of January 2; increased to 29·31 inches by the morning of the 3rd; and decreased to 28·94 inches by the end of the week. The mean for the week at the height of 82 feet above the level of the sea, was 29.295 inches.

The reading of the Thermometer very early in the morning of December 30, was 22°; it then turned to increase, and reached the maximum for the week, 39·1°, at 4h p.m.; decreased to 36° by 9h p.m.; it then turned to decrease, and was 24·1° on the morning of January 1, during which day the temperature never reached 29°—its highest point was 31·5°. On the 2nd, the extremes were 23° and 33°. It was painfully cold, and the temperature declined till 1h a.m. on the 3rd, when it was 13°; and still further declined to 13°, which is the lowest point yet reached At 8h a.m. it rose to 14°; at 9h a.m., to 19°; and reached 33·5° during the day. From this time to the end of the week the temperature, both night and day, has been between 23·5° and 37·7°.

The mean temperature of the week was 29·2°, which is 7·5° below the average of the same week in thirty-eight years. The mean temperature of the week ending January 5, in 1839, was 29·5°, and in 1821, was 27·2°, so that the temperature of the last week was lower than any corresponding week since the year 1821.

The range of temperature during the week was, 26·1°, being the difference between the highest reading on December 30, and the lowest, on January 3.

The mean daily range of temperature during the week was 11·2°. The greatest was 20·5°, on January 3, and the least 4°, on the 4th.

Snow fell to the depth of a foot on the level during the night common to the 3rd and 4th, and to one inch on the following night, producing about seven-tenths of an inch of water.

This severe period set in on November 9; on the day preceding the temperature was considerably above the average: on November 7, it was 10·2° above the average, and has continued so with very few exceptions to the present time. The mean temperature of the period from November 9 to January 5, has been 30·9°; the corresponding period ending January 5, 1853, was 34·9°; and that in the year 1815, was 36·2°, so that with one exception the weather has been colder than any since the memorable year 1814, when the Thames was frozen over.

Since the commencement of the year the mortality in the middle of November has caused a greatly increased mortality. From the following article, it must be seen that the number of deaths registered in the metropolitan districts the last week was 380 above the estimated average of the same week in the preceding ten years. The number of deaths registered to the week attained to the large number of 1656; of these some are Coroner's returns, which are always included at the end of every quarter. Allowing for these, the catalogue of mortality shows to a painful extent the fatal effects of the severity of the weather.

For the month of December, the mean reading of the barometer at the level of the sea was 29.969 inches.

The highest temperature during the month was 49°, on the 1st; and the *lowest* was 20°, on the 29th. *The range of temperature during the month* was therefore 29°. The mean of all the highest temperatures by day was 39·4°; and of all the lowest by night was 26°. *The mean daily range of temperature during the month* was, therefore, 9·4°.

The mean temperature of the month was 34·2°, being *below* the average of thirty-eight Decembers by 1·1°, and the coldest December since the year 1846, when its mean temperature was 32·7°. In 1840 it was 32·9°, in 1839 it was 32·9°; and in 1814 it was 32°.

The mean temperature of evaporation was 32·3°.

The mean temperature of the dew point was 31·3°.

The mean degree of humidity of the air was 90°, complete saturation being represented by 100.

The fall of rain during the month was six-tenths of an inch.

Lewisham, 6th January, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—The births of 1566 children were registered in the week ending December 31: of these, 791 were boys, and 775 were girls. The averages of the same eight weeks in the preceding eight years were 685 boys, and 648 girls. The deaths registered within the week were 1656. The high number exceeds the estimated average by 380, and is chiefly caused by the severity of the weather.

THE LONDON DOCKS.—The new building at the entrance of the London Docks, which is being erected by direction of the Government for the accommodation of the Customs department, is nearly finished, and it is expected will shortly be ready for occupation. It is intended to devote the new building entirely to the wine and spirit delivery department of the Customs, which forms so large and important a feature in the vast business transacted at this establishment.

EPIDEMIOLOGICAL SOCIETY.—A deputation, consisting of Dr. Babington, president, Dr. McWilliam, and Mr. Tucker, hon. secs. of the Epidemiological Society, had an interview with the Earl of Aberdeen, on the 2nd December, at his official residence, Downing-street.

POSTSCRIPT.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The intense severity of the weather, if productive of good to the country in the way of destroying the blights and insects that have for the last two or three years proved so ruinous to the grape and other crops, is in the mean time extremely trying in various ways, and adds much to sickness, misery, and the stagnation of commerce. The streets of Paris are in a condition—between frost, snow, ice, thaw and mud—that renders circulation equally difficult, and even dangerous, on foot or in carriages: colds, influenza, inflammation of the chest, and cholerine abound; several grave accidents have occurred through the imprudence of skaters and sliders, on the Seine; and altogether the *jour de l'an* has not passed brilliantly.

Among other effects of the rigour of the season, it is a subject of remark, that a number of the Senators—who are, for the most part, somewhat advanced in years—find it absolutely necessary, for the preservation of their health, to seek a milder climate; and, with the commencement of the winter, with its severities, its gaieties, and the fatigues the necessity of display and hospitality would entail upon them, to remove themselves and their *dotations* to a softer clime, where such dangerous duties are not entailed upon them.

A very large body of the inhabitants of Paris—the domestic servants—are up in arms from a proceeding that has been adopted by the Government. The retailers of provisions have been visited by the commissaries of their quarters, and received intimations that it would be well for them, instead of giving their usual *étrennes* to the servants of their customers, to deliver them into the hands of the said commissaries, to be distributed to the poor. Placards to the same effect, are posted in all quarters. Had this measure been, as there was some idea of its being, adopted by the tradesmen themselves, we venture to say that few complaints would have been made; but, as it is—if not in form, at least in fact—an almost compulsory measure of authority, the sentiments it inspires are those of anything but satisfaction among both classes concerned in it; and we doubt if the poor will be much benefited by the scanty alms thus unwillingly bestowed.

Much and sincere regret has been felt both in public and private circles, from the sudden death of M. Visconti, the architect of the Emperor, from apoplexy. M. Visconti had just been named one of the members of the Commission under the Prince Napoleon, for the *Exposition Universelle* of 1855. It was under his direction that the Church of the Invalides, with the tomb of Napoleon, has been arranged in its present condition; and the extension of the buildings of the Louvre now in progress, is the last monument of his taste and talent.

We learn that M. de Lamartine has sold his monthly production, "La Civilisateur," to MM. Mirès et Milhaud, for 100,000 francs, ready money, and 26,000 francs a year; we believe that M. de Lamartine's uncertain health, rendering the fatigues of the whole of the conduct of this publication too severe for him, is the cause of this arrangement.

A correspondent of the *Indépendance Belge* signalises the discovery of a new talent in Napoleon I., as displayed in a book existing in French literature, entitled, "Bonspartiana; ou, la Fleur des Bons Mots de l'Empereur Napoléon Ier."

The celebrated romancer and poet, Comte Alfred de Vigny, who, for nearly ten years, has retired almost completely from the ranks of the literature of the day, has, it appears, just completed the second volume of a work, of which the first excited so much attention and admiration at the time of its appearance and since—"Stello; ou, la Première Consultation du Docteur Noir." It is expected shortly to be published. Another most interesting and valuable work, the eleventh volume of the biographical and bibliographical dictionary, "La France Littéraire," of M. Quérard, has just been brought out. Its peculiar interest lies in its being an *exposé* of the real names and conditions of the "*écrivains pseudonymes et autres mystificateurs*" of French literature during the last four centuries.

Fresh demolitions and fresh alterations are planned to take place in the course of the year in Paris. The Rue de Strasbourg is in active progress in the midst of one of those quarters, where, in the six-storied houses, men, women, and children are densely crowded; round the Théâtre Français is to be cleared a vast square, which will permit carriages to be stationed and to circulate freely; and the Boulevard Malesherbes, so often projected, and as often abandoned, is to be finally carried out from the Madeleine to the Park of Monceaux—an enormous undertaking, which will carry away a whole series of streets and buildings in the midst of one of the best-inhabited quarters of Paris. A new street between the Rue de Rivoli and the Boulevard des Italiens is to be entitled Rue de l'Impératrice.

Two new clubs, of importance, are being founded, and are shortly to be opened. The one, the Circle Napoléon, at the Hôtel d'Osmond, is under the special patronage of Louis Napoleon, who is to be Honorary President; the actual President, to be named by him, will, it is believed, be his cousin, the Prince Napoleon. The second club is the Circle des Chemins de Fer, to be built on the space lately occupied by the Bains Chinois. M. de Rothschild is, we hear, to be the President of this *réunion*.

A robbery of jewels, belonging to the Princess Galitzin, has just taken place in a furnished *appartement* temporarily occupied by her in the rue Jean Goujon, Champs Elysées. The jewels—consisting of diamonds and emeralds, of immense value—were, by some unaccountable carelessness, left behind in a drawer in the apartment when the Princess moved to another residence. On sending to seek them, they had, as may well be supposed, disappeared; and as yet no trace of the robber has been discovered.

A sale of valuable autographs, almost exclusively political, took place, a few days since, and attracted much attention and interest. The greater number were of the period of the Revolution, and the Empire, and traced by the hands of the most conspicuous men of those times.

At the theatres there is still little of novelty. "La Pierre de touche," at the Française, by MM. Jules Sandeau and Emile Augier, has an immense and merited success. "L'Aventurière" of the latter writer is to be *repris* for Mdlle. Judith. The Opéra Comique has given a new opera in one act, "Les Papillotes de M. Benoist"—a work with some pretty music in it, but mediocre as a whole. This theatre is preparing "L'Etoile du Nord" (a production from which great things are expected), for the end of the month.

Alexandre Dumas is really pursued by a *guignon*, which would utterly destroy the confidence of any man but Alexandre Dumas. We are told (we pretend not to assert the statement as a fact) that *la Cessear* has forbidden the appearance of a piece of his, entitled "Olympe de Cléves" at the Vaudeville. The second volume of the "Mémoires d'un Bourgeois de Paris," by M. Véron, has appeared. It is said to be more interesting than the first, and contains some most remarkable letters from the Duchesse d'Angoulême, "*l'homme de la famille*," which we regret our limits will not permit us to quote. An account of the assassination of the Duc de Berri, among a series of most singular and but little-known conspiracies; a biography of M. Thiers; a highly interesting chapter on the three epochs of the Restoration, containing most valuable documents hitherto inedited; and an account of M. le Duc de Polignac, and the *ordonnances*, form some of the contents of this volume. Two new illustrated works, "Les Métamorphoses du Jour," of Grandville, and "Les Œuvres Nouvelles de Gavarni"—Gavarni, "le Balzac du Crayon"—are highly worthy of notice. Nothing can be more admirable or more characteristic than these designs.

In the official circles of Paris it is believed that war is inevitable. The decision of the Emperor Nicholas with respect to the Vienna proposition was known, though not officially. His Majesty's remark when he heard of his being asked to send an Envoy to the Conference was, that he would never send any General of his to sign his own condemnation—his own dishonour.

A communication has been addressed by the French Government to the Cabinet of St. Petersburg on the general question of the East, and in particular with reference to the Black Sea. It consists of an autograph letter from the Emperor Louis Napoleon to the Czar, and it demands that the Euxine shall no longer be exclusively Russian, but that it shall be thrown open to all the nations of Europe. How the Emperor Nicholas is likely to receive such a demand it is scarcely necessary to say.

It is not doubted that a *corps d'armée* will be despatched from France at the proper time to Turkey. It is said that two considerable camps will be formed: one, the most important, at Adrianople; and the other, probably, close to Constantinople: the former to be under the command of General Canrobert; the other under the immediate direction of the Minister of War, who will, in fact, command the whole expeditionary army. The combined fleets will be commanded by Admiral Dundas. Candia will probably be the general depôt of the army.

In the midst of preparations for what, if it break out, must be a war of giants, the negotiations of the Fusionist party are, according to the reports of some of its members, going on most satisfactorily. The Comte de Chambord, we are again assured, is positively going to England in the month of March next; and a meeting of the whole of the members of the Bourbon family, including the Duchess of Orleans, who by that time is to be confined over, will take place thereupon; a complete reconciliation will be effected, and plans for the future arranged. Their hopes are founded, they say, on some of the many chances of a general war; and on the hope, not yet abandoned, of the separation of England, which would be of immense service to them, as to the Emperor Nicholas. In the meantime there are symptoms of considerable activity in the departments, where the scarcity and consequent dearness of provisions is a real cause of discontent.

Some fresh arrangements have been made by the French Government, by which telegraphic messages may be despatched during the night from Paris, Lyons, Marseilles, and Bordeaux, to Brussels, Berlin, Vienna, and Trieste; but England is not included in the list of countries so favoured. We hope, however, that equal facilities will be afforded to this kingdom as soon as the necessary measures can be adopted for that purpose.

The Levée at the Tuileries on Monday evening was the most brilliant since the Restoration. There were 2000 persons present, belonging to all nations, and in every variety of the richest costume. The train of the Empress, which was upwards of ten feet in length, was supported by two of her Majesty's suite, most elegantly attired.

Dr. Bowring had a private audience of the Emperor on Tuesday, at the Tuileries. He was to leave Paris for London on the following day.

TURKEY.

It is said that since the massacre at Sinope no Russian vessel has been seen in the Black Sea, they having taken refuge in Sebastopol, which they seemed very disinclined to quit upon any account whatever.

The united fleets were still in the Bosphorus on the 26th ult.

Advices from Malta state that his Excellency the Governor had received orders from his Government to make the necessary arrangements at the arsenal for the establishment of a reserve of artillery and ammunition about to be sent forthwith from England.

PERSIA.

Letters from Persia, dated the 30th of November, announce that the Persian Government had, in consequence of the steps displayed by the English Chargé d'Affaires, withdrawn from its warlike attitude towards England, and given our Minister every assurance of its pacific intentions; so that the intrigues of Russia in that quarter, for the present, at least, have been unsuccessful.

The British mission was on the eve of quitting the capital, but the Shah, who is afraid to proceed to extremities on the subject, will do his utmost to prevent it. The official announcement sent abroad by his Majesty, regarding the cessation of diplomatic relations with the British representative, is very moderately worded, and even goes so far as to state "that the Shah, although grossly insulted by Mr. Thompson, will do all in his power to prevent the mission leaving Teheran until a Persian Ambassador be sent to England to explain the matter to the British Government.

All accounts from Teheran confirm the important fact that the Turkish Ambassador was on the worst terms with the Divan, on account of the determination of the latter to send only a small two armies to the frontiers of Kirmanshah and Ayajik, and to proceed immediately to Bagdad. The motive which has induced Persia to join Russia is money; indeed, neither the Shah nor his crafty Ministers could find in their hearts to turn away from the sight of gold. The lower classes would have preferred joining the Turks against Russia; but they are counteracted by the officials, who calculate on appropriating to themselves a large portion of the money from St. Petersburg.

Letters had reached Tabreez from Tiflis, announcing that Schamyl had defeated the Russians.

SPAIN.

The Generals Sauzet and Lersundi have been dismissed from the Captain-Generalcies of Galicia and Andalusia.

UNITED STATES.

The mail steam-ship *Atlantic* arrived in the Mersey on Thursday afternoon, with the usual mails from the United States and British North America. The *Atlantic* sailed from New York on the 24th inst. Owing to the interruptions of railway communication, we have not yet received her news.

CHURCH, UNIVERSITIES, &c.

PROROGATION OF CONVOCATION.—The Convocation of the Prelates and Clergy of the Province of Canterbury was further prorogued, on Wednesday, pursuant to the Royal writ, to Wednesday, the 1st day of February next. The Archbishop of Canterbury, attended by the Registrar of the Province, entered the Jerusalem Chamber shortly after twelve o'clock, when the Royal writ having been read by the Registrar, his Grace signed the schedule of prorogation.

THE NEW BISHOP OF LIMERICK.—The consecration of the Bishop of Limerick (Dr. Henry Griffin) took place on Saturday last, in Trinity College Chapel. The consecrating Bishops were the Archbishop of Dublin and the Bishops of Cork and Derry.

REVENUE OF THE CHURCH OF ENGLAND.—It is stated in the Census report of religious worship, just issued, that the income of the Church of England in 1851, was upwards of £5,000,000 per annum.

PREFERMENTS AND APPOINTMENTS.—*Rectories*: The Rev. F. J. Walker to Finmere, Oxfordshire; Rev. W. Jephson to Hinton Waldust, Berkshire; Rev. J. Prior to Papplewick, near Nottingham; Rev. A. F. Cust to Cheddington, near Aylesbury; Rev. Dr. Rowley to Willey, Salop; Rev. R. C. Jenkins to Lyminge, near Canterbury; Rev. H. J. Sawyer, M.A., to Sunningwell, near Abingdon; Rev. Dr. Hawtrey, Provost of Eton College, to Farnham Royal, Bucks; Rev. R. W. Pearse, B.A., to Gaywood, Lynn Regis; Rev. J. T. Walters to Stradsehall, near Newmarket. *Vicarages*: The Rev. G. Rainier, M.A., to Ninfield, Sussex; Rev. W. H. Hicks to Walton, Norfolk; Rev. J. Pennell to Horley, near Banbury. *Incumbency*: Rev. J. Griffiths to Trinity Church, Brighton. *Metropolitan Curacies*: The Rev. J. W. Hammond to St. Martin's-in-the-Fields; Rev. S. G. Fraser to Grosvenor Chapel; Rev. C. M. Church to Curzon Chapel, May-fair; Rev. R. W. Bush to St. Marylebone; Rev. T. Mackitrye to St. Dunstan's-in-the-West; and the Rev. W. H. Foy to St. Simon Zelotes, Bethnal-green.

CHURCH PASTORAL AID SOCIETY.—A meeting of the friends of this society was held on Tuesday evening, at Lawson's Rooms, Gower-street. The Hon. Arthur Kinnaird, M.P., Vice-President, occupied the chair, and observed, that the Pastoral Aid Society was one of the most deserving and practical of the numerous religious associations which were labouring for the best spiritual interests of the poor. The society provided curates for railway and canal churches; increased the stipends of ministers; assisted, indirectly, in the erection of churches; and provided lay assistants to labour in those parishes where the light of the Gospel was scarcely known.

TESTIMONIAL.—A testimonial of affection and regard has been presented to the Rev. L. M. Sharpe, by the parishioners of Southover, on his leaving the curacy.

UNIVERSITY OF LONDON.—The council of this University have made the following arrangements for the various examinations of the present year:—The Matriculation examination commences on the first Tuesday in July. The examination for the degree of Bachelor of Arts commences on the fourth Monday in October. The examination for the degree of Master of Arts commences on the first Monday in June. The examination for the degree of Bachelor of Laws takes place in the last fourteen days of June.

LATEST INTELLIGENCE.

REDUCTION OF NATIONAL DEBT.—The National Debt Commissioners give notice in last night's *Gazette*, of their intention to apply £511 858 17s. 11d.—one fourth part of the surplus revenue of last year, to the reduction of the National Debt.

THE NEW GOVERNOR OF VICTORIA.—Sir Charles Hotham, Bart., who intended leaving England by the General Screw Shipping Company's steamer *Oneaus*, which sails from Southampton on Tuesday next, has been compelled to postpone his departure. It is probable he will leave England by the *Bosphorus*, which will sail for Australia next month, and will carry the mail.

HOSPITAL OF ST. CROSS, WINCHESTER.—The Master of this Hospital—Francis North, Earl of Guildford—has resigned the two livings of Alresford and St. Mary's, worth (exclusive of their houses, glebe, and fees) about £4000 per annum. His Lordship, however, holds for the present his Mastership of St. Cross's Hospital.

DEATH OF LORD PLUNKET.—The ex-Chancellor of Ireland died on Wednesday morning, at his seat in the county of Wicklow, at the age of ninety.

THE THAW, which took place yesterday, rendered the "circulation," in the metropolis, of cabs and other vehicles more easy, but was kingmore difficult. Many of the streets could not be crossed at all, except by wading in the abominable slush, some six or eight inches deep. A deputation waited on the Lord Mayor, yesterday, to ask what steps they ought to take to abate the nuisance. His Lordship referred to the Thames and Sch of Victoria, wherein the flues were set forth for rubbish, &c., being al owed in front of dwelling-houses, shops, &c., and said, that the best and readiest way would be to have the snow removed, and instead of being forced down the street sewers, to throw it over the bridges into the Thames. The statement that two policemen had died from exposure to the cold on Tuesday night has been contradicted. Two persons in London died that night, however, owing to the cold.

UP to yesterday afternoon the accounts from the North were that the railway obstruction still continued in many places. Some amusing accidents had happened. A lady residing in Liverpool was, on Thursday, to have been married to a gentleman from London, who was expected to join the guests assembled at the marriage feast. Instead of his bodily presence, however, the bride received a telegraphic message conveying the intelligence that her intended was "snowed up" at Stafford.

EFFECTS OF THE WEATHER.—In consequence of the non-arrival of many of the mails on Wednesday, no less than 880 bills were noted, the same evening, at the Bank of England, and the same was the case at many private bankers. But for the use of the electric telegraph, the instances would have been more numerous.

FOREIGN.

The *Moniteur* of yesterday (Friday) morning contains a circular, dated December 30, addressed by the Minister of Foreign Affairs to the Legations of the Emperor in foreign countries, on the Eastern question. This document, which is very moderate, but very firm, after narrating the different phases of the question, declares that France, England, Austria, and Prussia, have recently, by their agreement concerted at Vienna, solemnly recognised that the territorial integrity of the Ottoman Empire is one of the conditions of their political equilibrium. It affirms that "the affair of Sinope took place against all prevision, Russia having declared that she only desired a material guarantee for the fulfilment of what she demanded;" and announces that, "to prevent the Ottoman territory, or the Ottoman flag from being the object of a new attack on the part of the naval forces of Russia, the French and English fleets have received the order to enter the Black Sea." In conclusion, a hope is expressed by the French Minister that Russia will not expose Europe to new convulsions.

The general rules which the Governments of Sweden and Denmark have laid down for themselves in the event of the outbreak of war, are—abstention during the struggle that may take place, from all participation, direct or indirect, in favour of one belligerent party to the detriment of another. Admission into Swedish, Danish, and Norwegian ports of the men-of-war and merchant-men of those same belligerent parties, each of the two Governments reserving to itself, however, the right of prohibiting the entrance of vessels of said vessels to certain ports or into certain basins of those ports—an interdiction which will naturally be extended to the vessels of all the belligerent parties. Permission to said vessels to provide themselves at the ports of the two monarchies with all goods and merchandises they might stand in need of, with the exception of articles regarded as contraband of war. Exclusion from the entrance, and from the sale in the said ports, of war prizes, &c. The Sovereigns of Denmark, and Sweden and Norway, on the other hand, claim for the vessels of their respective states the right of the continuance of enjoying safety and every facility in their commercial relations with the belligerent Powers, under the obligation of submitting to the rules of the law of nations in special cases of blockade, &c.

Among other rumours circulated in Paris is one, taken from a German paper, that the Russians have obtained possession of Batoum. Another report is to the effect that the French Government is about to order a levy of 150,000 men, and that the decree will soon appear in the *Moniteur*.

By way of following up his rejection of the propositions of the Four Powers, it is said that the Czar has ordered that immediate preparations shall be made to cross the Danube. Both the French Government papers, the *Patrie* and *Bulletin de Paris*, expressly countenance this rumour, which they affirm to be well-founded. The fresh having rendered the ground favourable for operations in Wallachia, it is thought that an attack will be made on Kalafat.

A letter from Bucharest of the 16th gives very serious news. Russia has, it is said, replied by a fresh movement of forces, and by extraordinary warlike measures, to the last propositions of peace which were made to him. According to instructions received from St. Petersburg, the army of invasion of the Danubian provinces, which does not now exceed 80,000 men, is about to be immediately carried up to an effective strength of 240,000 men.

Australian advices nearly a fortnight later than those by the last arrival have been received, *viâ* Panama. The advices from Sydney are to the 1st of October. The general tone of the markets for imported goods was favourable. The receipts from the mines continued large, and the persons engaged at them were increasing.

CABINET COUNCIL.—A Cabinet Council was held on Tuesday afternoon, at the Foreign-office, Downing-street. The Ministers present were—the Earl of Aberdeen, Lord John Russell, the Lord Chancellor, Earl Granville, the Duke of Argyll, the Marquis of Lansdowne, Viscount Palmerston, the Earl of Clarendon, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, the Right Hon. Sidney Herbert, and Sir William Molesworth. The Council sat three hours and a half. A second Cabinet Council was held on Thursday, which lasted four hours.

THE HORSE GUARDS.—We are assured, on what we believe to be good authority, that Lord Hardinge yesterday gave in his resignation as Commander-in-Chief of the army; that his Lordship is to be succeeded by Lord Raglan; and that General Brown will resume his former appointment of Adjutant-General.—*Morning Post*, Thursday.—[We are enabled to state that the resignations and changes in the Horse Guards, reported by a morning contemporary, are quite unfounded.—*Globe*.]

CHRISTMAS IN MADRID.

THE Engraving upon the next page presents an interesting picture of an important locality of Madrid, upon the day of Christmas-eve; and specially illustrates the extensive preparation made in the Spanish capital for the celebration of the festive season.

The scene is the Great Square, in every corner of which are various packages—as sacks, boxes, and baskets; and lambs, turkeys, and other articles of good cheer—where the confusion and crowding are insupportable. The number of "Nacimentos" (figures representing the birth of Christ) and images of every description is infinite, as well as rattles, back-scratchers, and other instruments of amusement. The place becomes a Babel, where a thousand different language are spoken. On one side are enormous pyramids of pomegranates of various kinds, Valentia oranges, Arragonese apples, opposite are sellers of the walnuts and chestnuts of Galicia, grapes, and Malaga sweet potatoes. In another corner rabbits and hare are strewed upon the ground. Here also are castles of "pestiños," and tables covered with almond cakes, songs of the sepulchre, and Castilian biscuits. Further on are interminable columns of sweetmeat boxes, flanked with strong walls of tambourines, drums, pipes, &c. In the centre are herds of turkeys of Castell, and capons of Biscay; and the "virtuous" pullets of Puercarral.

The vast assemblage, seen beneath a bright sun, and clear blue sky, has a very animated appearance. The costumes are not the least attractive characteristics.

SPORTS ON THE ICE—CURLING IN SCOTLAND.

MEDAL MATCH OF THE FINGASK CURLING CLUB.

EVERYBODY who knows anything of Scottish out-door sports has heard of the game of Curling; but, as few Englishmen are in the habit of visiting the "land of the mountain and the flood" in winter, and as no description, however elaborate, can give a correct knowledge of the exhilarating game, the only way in which it can be presented to the reader who has never seen it is, by depicting the game in progress. In 1851 and 1852 the winters were so mild that there was little or no ice; and, therefore, the lovers of this favourite sport had no opportunity of enjoying themselves

In February and March, last year, there were several short periods of frost, which were busily improved by the numerous curling clubs throughout Scotland. A Correspondent has favoured us with a pair of Illustrations of this fine sport. One of these scenes is the "Fingask Curling Club Medal-day, 17th February."

On occasions of this kind each member of a club who competes for the medal, which is given by the patron or patroness of his club, plays, in turn, a variety of points in the game, which are defined in the "Annual" of the Royal Caledonian Curling Club, whose rules are binding among all curling associations. In order to avoid delay, there are generally two rinks marked off on the ice; and each player takes, first, the one rink down with his pair of curling stones, and immediately returns on the other rink. Thus, in the Sketch, the principal figure to the left, who is standing on an iron cramp, is attempting to achieve one of the points of the game which is called "chip the winner;" the method of which is attempted to be shown in the rink to the right when the object of the player (who is out of sight), is to pass with his own stone, another half guarding the one at the tee (the point aimed at), and displace the latter. In ordinary matches at curling there are two sides formed, generally consisting of four players on each side, when the game is contested in turn by players from the rival parties. The brooms, broom-cows, or besoms, are then busily in operation, as each is bent on keeping the ice favourable to his own party's progress in the game; but in this instance it is "every man to his own hand," and no brooming is allowed. The eye and the hand must work steadily together to ensure success. Markers are placed at each rink, who note the successful shots; and the winner of the greatest number is victor of the day, and medal-holder.

The much-respected President of the Fingask Curling Club is Sir Peter Murray Threipland, Bart., of Fingask; and the medal which is competed for annually is the gift of his mother, Lady Murray Threipland, who is patroness of the club. The Curling-lodge, or *Scottice* "bothie," adjoining the pond, is used as a keep for the Curling stones, brooms, cramps, compasses, and apparatus proper to the game, as well as for the preparation on a field-day of the excellent "restoratives" of hot potatoes and whiskey punch. On the Medal Day an excellent *déjeuner à la fourchette* is given by the President to all present. A musician or two are generally in attendance; and strathspeys and reels on the snow keep the lookers-on in exercise, and add to the amusement of the scene.

The second View shows a Curling Match, which was played on the 3rd of March last, on Invernytie Loch, near Perth, by his Grace the Duke of Atholl, and eight of his Grace's rinks, against eight rinks from the Carse of Gowrie. In this match, the Duke was victor. This, being more of a landscape Sketch, only shows the players in the game at a little distance. The Hill of Birnam, near Dunkeld, is conspicuous in the distance; and on the right are some farm-houses, the property of

CURLING MATCH ON INVERNYTIE LOCH, NEAR PERTH.

DINNER IN THE IGUANODON MODEL, AT THE CRYSTAL PALACE, SYDENHAM.

Sir W. Stewart, Bart.; with, in the middle ground, an old Scotch fir wood and forester's lodge.

Should the winter of 1854 prove to be as severe a one as has been predicted, and as it threatens to be, we should not be much surprised to see a number of Curling Clubs formed on this side of the Tweed.

THE CRYSTAL PALACE, AT SYDENHAM.

IN our Number of last week we gave a whole-page Illustration of Mr. B. Waterhouse Hawkins's Model-room, or Studio, at the Crystal Palace, Sydenham, where he is constructing his gigantic restorations of the Extinct Inhabitants of the Ancient World. We then had only the opportunity briefly to allude to this novel and great undertaking; and repeated the speculations of enthusiastic discoverers of antediluvian remains which are now, with anatomical severity, being reconstructed and restored to a state of life-like nature by Mr. Waterhouse Hawkins; to whose talents and knowledge this department of the great educational scheme of the Directors of the Crystal Palace Company is now confided; and with how much credit to their judgment was most agreeably exemplified on Saturday evening last (the last day of the year 1853), when Mr. W. Hawkins, with the concurrence of the Directors, invited a number of his scientific friends and supporters to dine with him in the body of one of his largest models, called the Iguanodon, which occupies so conspicuous a place in our Illustration of last week. In the mould of this colossal work of art—for as such it must deservedly rank very high—Mr. Hawkins conceived the idea of bringing together those great names whose high position in the science of palæontology and geology would form the best guarantee for the severe truthfulness of his works; and, at the same time, show to the public the high tone of criticism and knowledge which the Directors of this truly national undertaking require those officers to sustain to whom they confide the carrying out of any important part of their plan which so particularly bears on the education of the people.

To carry out this extraordinary idea, cards were issued at the beginning of last week—and such cards! as startling as the invitation they bore: "Mr. B. Waterhouse Hawkins solicits the honour of Professor ——'s company at dinner, *in the Iguanodon*, on the 31st of December, 1853, at four p.m." The incredible request was written on the wing of a Pterodactyle, spread before a most graphic etching of the Iguanodon, with his socially-loaded stomach, so practicably and easily filled, as to tempt all to whom it was possible to accept, at such short notice, this singular invitation. Many have to regret the rapidity of executing this novel idea, at a season when almost all have a plurality of engagements. Nevertheless, Mr. Hawkins had one-and-twenty guests around him in the body of the Iguanodon on Saturday last; at the head of whom, most appropriately, and in the head of the gigantic animal, sat Professor Owen, supported by Professor E. Forbes; Mr. Prestwick, the geologist; Mr. Gould, the celebrated ornithologist; and the Directors and officers of the Company.

The dinner, which was luxurious and elegantly served, being ended, the usual routine of loyal toasts were duly given and responded to—allusion being gracefully made by Mr. Francis Fuller, Managing Director, to the great interest evinced and approbation expressed by H.M. the Queen and H.R.H. the Prince, on their recent visit to the extraordinary works by which the company were surrounded.

Professor Owen then took occasion to explain, in his lucid and powerful manner, the means and careful study by which Mr. Hawkins had prepared his models, and had attained his present truthful success; Professor Owen adding that it had been a source of great pleasure to him to aid so important an undertaking, by assisting with his instruct on and direction a gentleman who possessed the rarely-united capabilities of an anatomist, a naturalist, and a practical artist, with a docility and eagerness for the truth which ensured Mr. Hawkins's careful restorations the highest point of knowledge which had been attained up to the present period. The learned Professor then briefly commented upon the course of reasoning by which Cuvier, and other comparative anatomists, were enabled to build up the various animals of which but small remains were at first presented to their anxious study; but which, when afterwards increased, served to develop and confirm their confident conceptions—instancing the Megalosaurus, the Iguanodon, and Dinornis as striking examples.

Professor Forbes also bore testimony to the truthful care and study with which these great models were produced by Mr. Hawkins, and which would render them trustworthy lessons to the world at large in a branch of science which had hitherto been found too vast and abstruse to call in the aid of art to illustrate its wonderful truths.

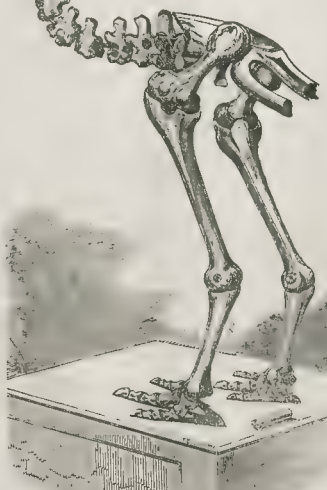
After several appropriate toasts, this agreeable party of philosophers returned to London by rail, evidently well pleased with the modern hospitality of the Iguanodon, whose ancient sides there is no reason to suppose had ever before been shaken with philosophic mirth.

THE numbers attending the Museum of Ornamental Art at Marlborough House, during December, were—19,630 persons on the public days, free; 475 persons on the students' days, and admitted at 6d each; besides the registered students of the classes and schools—an increase of 5,567 over last year.

GIGANTIC BIRD OF NEW ZEALAND.

IN the fine Museum of the Royal College of Surgeons, in Lincoln's-inn-fields, is a most interesting illustration of the pitch to which comparative anatomy has reached in this country; the result of an immense induction of particulars in this noble science. Such is the Skeleton of the *Dinornis* of New Zealand, which the visitor will immediately recognise on the left side of the old Museum, having the skeleton of O'Brien, the Irish giant, on its right. The means by which the Museum obtained this valuable acquisition is thus graphically described in Mr. Samuel Warren's truthful and eloquent lecture on "The Intellectual and Moral Development of the Present Age:"—

In the year 1839, Professor Owen was sitting alone in his study, when a shabbily-dressed man made his appearance, announcing that he had got a great curiosity which he had brought from New Zealand, and wished to dispose of it to him. Any one in London can now see the article in question, for it is deposited in the Museum of the College of Surgeons, in Lincoln's-inn-fields. It has the appearance of an old marrow-bone, about six inches in length, and rather more than two inches in thickness, *with both extremities broken off*; and Professor Owen considered that, to whatever animal it might have belonged, the fragment must have lain in the earth for centuries. At first he considered this same marrow-bone to have belonged to an ox—at all events, to a quadruped; for the wall or rim of the bone was six times as thick as the bone of any bird, even the ostrich. He compared it with the bones in the skeleton of an ox, a horse, a camel, a tapir, and every quadruped apparently possessing a bone of that size and configuration; but it corresponded with none. On this he very narrowly examined the surface of the bony rim, and at length became satisfied that this monstrous fragment must have belonged to *a bird*—to one at least *as* large as an ostrich, but of a totally different species; and consequently one never before heard of, as an ostrich was by far the biggest bird known. From the difference in the *strength* of the bone, the ostrich being unable to fly, so must have been unable this unknown bird; and so our anatomist came to the conclusion that this old shapeless bone indicated the former existence, in New Zealand, of some huge bird, at least as great as an ostrich, but of a far heavier and more sluggish kind. Prof. Owen was confident* of the validity of his conclusions, but could communicate that confidence to no one else; and, notwithstanding attempts to dissuade him from committing his views to the public, he printed his deductions in the "Transactions of the Zoological Society" for the year 1839, where, fortunately, they remain on record as conclusive evidence of the fact of his having then made this guess, so to speak, in the dark. He caused the bone, however, to be engraved; and having sent a hundred copies of the engraving to New Zealand, in the hopes of their being distributed and leading to interesting results, he patiently waited for three years, viz., till the year 1842, when he received intelligence from Dr. Buckland, at Oxford, that a great box, just arrived from New Zealand, consigned to himself, was on its way, unopened, to Professor Owen; who found it filled with bones, palpably of a bird, one of which was three feet in length, and much more than double the size of any bone in the ostrich! And out of the contents of this box the Professor was positively enabled to articulate almost the entire skeleton of a huge wingless bird, between ten and eleven feet in height, its bony structure in strict conformity with the fragment in question; and that skeleton may be at any time seen at the Museum of the College of Surgeons, towering over, and nearly twice the height of the skeleton of an ostrich; and at its feet is lying the old bone from which alone consummate anatomical science had deduced such an astounding reality: the existence of an enormous extinct creature of the bird kind, in an island where previously no bird had been known to exist larger than a pheasant or a common fowl!



SKELETON OF THE DINORNIS, IN THE MUSEUM OF THE ROYAL COLLEGE OF SURGEONS.

* The paper on which he even sketched the outline of the unknown bird, is now in the hands of an accomplished naturalist in London—Mr. Broderip.

THE distinguished artist, Don Rafael Benjumea, has had the honour of a private audience of her Majesty the Queen of Spain, to deliver to her Majesty a splendid historical picture of the presentation of the Princess Royal in the Royal palace after the birth took place. This painting has been executed by the artist, by special command of her Majesty, and has taken the author two years to complete.

SOUTH SEA COMPANY.—On Thursday the half-yearly meeting of this company was held at the South Sea House, when a dividend of 1½ per cent for the half-year was declared. After some discussion, it was resolved that a special meeting should be called, to take into consideration the proposition for obtaining an Act of Parliament to continue the company as a trade company.

ASYLUM FOR FEMALE ORPHANS.—On Thursday the quarterly court of this charity was held at the Asylum, Westminster-road; W. Wild, Esq., in the chair; when it was reported that the school was now quite full, the number of children in the Asylum being 160, and their general health, notwithstanding the inclemency of the weather, very satisfactory. Since the last meeting, £200, being part of the proceeds of the triennial dinner, at which his Royal Highness the Duke of Cambridge presided, had been invested in the Funds. The report was adopted, and a special vote of thanks given to his Royal Highness for the great zeal evinced by him in the success of the institution.

ROYAL NATIONAL INSTITUTION FOR THE PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday last a meeting of the General Committee of this old and valuable institution, was held at the offices, John-street, Adelphi; Mr. Alderman Thompson, chairman of the society, presiding. The gold medallion of the institution was voted to the gallant Captain Ludlow, of the American ship *Monmouth*, in admiration of his noble and humane conduct to the crew and passengers of the unfortunate emigrant ship *Meridian*. The silver medal of the Society was also presented to R. Harrington, and W. Waters, first and second coxswains of the *Southwold* life-boat, for their frequent services in saving life in the life-boats of that place. The thanks of the committee, on vellum, were voted to the Rev. Mr. Williams, jun., and to Captain Redenchi, of the Peninsular and Oriental Steam Navigation Company's Services, for their intrepidity in saving life. A reward of £4 10s. was granted to the crew of the *Boulmer*, new life-boat, for saving the crew, consisting of seven men, of the brig *Robert Nicol*, of Perth. The boat was placed on this station by the Duke of Northumberland, K.G., and liberally presented by him, as president, to the institution. Other rewards having been voted, the committee decided that a public dinner should be held, early in March next, in aid of the funds of the society, and for the purpose of bringing the truly benevolent and national objects of the institution prominently before the public. It was reported that four new life-boats were nearly ready to be sent to the coast. Colonel Tulloch, R.A., as successor to the late Colonel Colquhoun, C.B., having been elected a member of the committee, the proceedings closed.

A FIRE BROKE OUT IN DOCTOR'S-COMMONS at half-past eight on Thursday morning, destroying the extensive manufactory of Messrs. Hodgkinson and Burnside, envelope makers, and the premises of Mr. Coombs, builder—these buildings lying between the Church of St. Benet, and the College of Advocates, both of which narrowly escaped destruction; but the residence of Mr. Pritchard, adjoining the Hall, has met with some partial damage from the heat of the flames. Had the fire happened a few hours earlier, the library of the College (only separated a few feet from the burning premises), and the whole range of the buildings, including the Will-office, might have become a heap of ruins. The damage is estimated at from £9000 to £4000.

CHESS.

TO CORRESPONDENTS.

BUSHEY.—You have forgotten to send the conditions and solution of the Problem.
J. M.—Moderately good only.
PALAMEDES, SPESSA, ONE OF THE OLD SCHOOL.—The appointment rests with the Committee of the St. George's Chess Club. Your applications should, therefore, be addressed to the Hon Secretary
NEMO (Bath).—The article on "A New Chess Notation," appealing from its length and the complication of its symbols, shall be returned if you will be good enough to send an address
It is quite unsuited for publication in a Journal like ours.
H. G.—Very look again. It is a mate in *one* move. So obvious, that a player of three days' experience could not miss it.
J. K. B.—T. T. On the contrary, the variation you omit is the most difficult and beautiful.
C. D. de J.—Intelligence—a private communication has been forwarded.
KNIGHT.—We have received the first number of the Manchester Chess Magazine. The correspondence between the representatives of the two par. ies in Manchester has been of so amicable a character as to render unnecessary the hon. mode to keep Mr. Harrwitz to his engagement, but happily without success. We hope to find room next week for the final proposition made by Mr. Staunton with the view of bringing the matter to an issue.
A CARDINAL.—In the appointment in question, we believe the preference will be given to native players.
COMO.—We should take Black's game for choice, as he has a Pawn more than you, without any inferiority of situation.
A CHESS-PLAYER.—The subscription is very trifling; but we do not know exactly the amount. Pay to Dr Robertson, Grange-street, Edinburgh.
J. P.—If the SUN shall be returned, if it is not destroyed.
C. D. de J.—Intelligence—a private communication has been forwarded.
ANNIE.—We have taken cognizance of the suggestion which you and many others have sent us, and shall endeavour, whenever it is practicable, to give the Chess Column in the Supplement.
J. B. H.—We cannot engage a person in the act of stating
A. N. M.—Your last solution was the more elaborate, but the shorter is not observed on. In speaking of the play of Messrs. Harrwitz and Löwenthal, in the late match, we confined ourselves to *their* skill, relatively one with the other's. We are as conscious as our Correspondent can be of the great advantage a player of the highest level of second class chess [illegible] the latter is the better of the players, as a set encounter, would have the same result—although [illegible] first case.
D. N. Sheffield.—If those who must now send the account of your Club to the Chess Players' Chronicle, which proposes to give a Monthly List of matches [illegible] duly [illegible] should adopt the suggestion as to remodel the intention will be a useful publishing such a list.
P. B.—Reported. They shall be examined, and the solutions given.

SOLUTIONS OF PROBLEM No. 515, by Arnold, Memphis, Mona, Douglas, W. F. H., Amicus, are correct.

SOLUTIONS OF PROBLEM No. 516, by J. P. M., Dawson, Jack of Shrewsbury, Sarcinula, Jack of Worcester, T. K. B., J. Addison, I., F. X., Almaric, D. J., of Hanworth; I. C., Medicus, I. H. F., S. P. Q. R., are correct All others are wrong.

SOLUTION OF PROBLEM No. 513.

WHITE.	BLACK.	WHITE.	BLACK.
1. K to K B 5th (ch)	K takes P, or (a)	4. Q to Q 2nd (ch)	K takes Kt
2. K to K 2nd (ch)	K takes R	5. Q to K R 2nd (ch)—Mate.	
3. Kt to K Kt 2nd (ch)	K takes P		

(a) If K to K 7th (ch) K to K sq, B to Q 3rd
2. K to Kt 7th (ch) K to K 2nd
3. Q to Q Kt 4th (ch) P to Q B 4th

SOLUTION OF PROBLEM No. 514.

1. Q to K 7th	B takes Q, or (a)	3. Kt to B 3rd	R to Q Kt 5th
2. R to K 8th (ch)	K takes R	4. P to K Kt 4th (ch)	

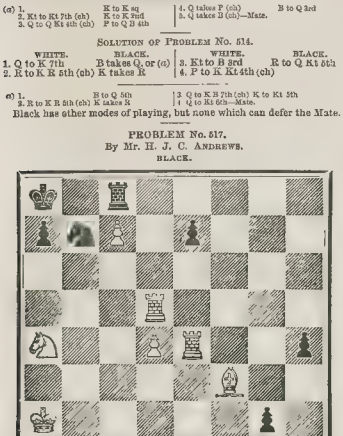
(a) If B to Q 5th [3 Q to K R 7th (ch) K to Kt 5th
2. R to K R 8th (ch) K to Kt 6th—Mate.

Black has other modes of playing, but none which can defer the Mate.

PROBLEM No. 517.

By Mr. H. J. C. ANDREWS.

BLACK.



WHITE.

White to move, and mate in four moves.

CHESS IN BELGIUM.

The following well-contested Games were lately played at Brussels, between Mr. VON HEYDEBRAND AND Mr. STAUNTON.

(Allgaier Gambit.)

BLACK (Mr. V. H.)	WHITE (Mr. S.)	BLACK (Mr. V. H.)	WHITE (Mr. S.)
1. P to K 4th	P to K 4th	26. Q Kt to his sq (i)	B takes Q P (ch)
2. P to K B 4th	P takes P	27. K to Q 2nd	Q to her R 6th
3. Kt to K B 3rd	P to K Kt 4th	28. Q R to his 4th	Q to her B 6th
4. P to K R 4th	P to K Kt 5th	29. K takes B	Kt to K B 7th
5. Kt to K 5th	P to Q 3rd		(ch)
6. Kt takes Kt P	P takes Kt	30. K to Q 2nd	Q to her Kt 3rd
7. Kt K R 3rd	B takes K R P		(k)
8. P to Q 4th	Q to K Kt 4th	31. K to Q B 2nd	Kt takes K R
9. Q to K B 3rd	B to K Kt 6th	32. R to K 3rd	P to Q B 4th
10. Q Kt to Q B 3rd	K Kt to K B 3rd	33. P takes P (in passing)	Q takes Q P
11. B to Q 2nd	B to Q 2nd	34. Q takes K Kt	P to Q R 3rd
12. Castles	Q Kt to Q B 3rd	35. K to Q 3rd (l)	P to Q K 4th (m)
13. Q Kt to K 2nd	B takes K Kt	36. K to Q 4th (n)	K to K Kt 3rd
14. B takes P	Q to Q R 4th (c)	37. Q to K R 5th	Q to K R 3rd
15. Q takes B	Q takes Q B P	38. Kt to Q 5th	K to Q B 3rd
16. Kt to Q B 3rd (d)	Q to Q R 5th (ch)	39. K to K B 4th	Q to K B 3rd
17. Kt to Q Kt sq	Castles on Q side	40. Q to Q 4th	K to Q B 2nd
18. R to Q Kt 3rd	K Kt to K 5th	41. Q to K Kt 6th	Q R to K 3rd
19. Q to Q Kt sq (e)	Q R to K sq	42. Kt takes Q R	P takes Kt
20. P to Q 5th	Q Kt to his 5th	43. Q Kt K 5th (ch)	K to Q B 3rd
21. Q to her Kt 4th	Q Kt to K B 3rd (f)	44. Q to K B 7th (ch)	K to Q B 2nd
22. Q to K Kt sq (g)	B to Q Kt 4th (f)	45. Q to Q R 7th	Q to Q B sq
23. Kt to Q B 3rd	Kt takes B (ch) (g)	46. Q to K 7th	Q to Q sq
24. P takes Kt	Q to Q 3rd (h)	47. Q takes K P	
25. K to Q B 2nd	Q to her K 3rd		

And wins the game.

(a) This move gives White at once an almost decisive advantage.
(b) He had no better move.
(c) A tempting retreat, but he could not afford to lose another Pawn, and had no other way to recruit it.
(d) Threatening to win the adverse Queen
(e) Again Black appears to have had no better move than to retire his Queen to this distant post.
(f) An ill-judged step. He should have thrown forward his P to K B 4th, and Black would then have had a hopeless game.
(g) Again White plays without due consideration, for he might still have preserved a great superiority of position, by checking with the Kt at Q 7th, instead of exchanging pieces. For instance—

23.	Kt to Q R 7th (ch)
24.	K to Q 2nd
25.	B takes B. &c.

(h) Q to her K 3rd would have been better. By checking with the Queen, he enables Black to bring out his pieces
(i) Very finely played. Black has now fairly turned the tables on him.
(k) This was imperative; for, if he had taken the K Rock, Black would have won his Queen by playing D to K 3rd, &c.
(l) Mr. Heydebrand plays all this termination admirably.
(m) This exposes his King too much. He should rather have replied the King to Kt sq. In that or any other case, however, White would have had a winning game.
(n) After the coup White's game is beyond retrieval.
(o) To enable him to bring the Rook to bear against the adverse King and Queen.

CHESS ENIGMAS.

No. 856.—By E. B. C., of Princeton.

White.—K at his 7th, Q at her sq., Kt at K 3rd, P at K Kt 2nd.
Black.—K at his 4th, Ps at K Kt 6th and Q 3rd.
White to play, and mate in three moves.

No. 857.—By RICARDO.

White.—K at K Kt 7th, R at Q B 6th, B at K Kt 4th, Ps at K 2nd and Q Kt 5th.
Black.—K at Q 6th; Ps at K 5th and 6th, Q B 2nd, and Q Kt 3rd.
White to play, and mate in five moves.

THE SNOW-STORM.—THE WEATHER.

There was another fall of snow on Thursday morning, but not to any depth. It commenced with a slight thaw, which became stronger in the morning; and the consequence was, that the streets became overloaded with mud and snow, and, to the serious impediment of the traffic. The omnibuses generally had four horses; a few had three only; and very few indeed had but the ordinary complement of two horses. Several cabs had two horses, and the crawler along at a very moderate pace. At first all other vehicles, except the butcher's cart, which, despite of ice, or snow, or rain, or hail, must rattle along at an arbitrary pace which butchers' horses driven by butchers' boys can alone accomplish.

The railway traffic between Havre and Paris was completely obstructed by the snow on Tuesday, and no train reached Paris from that place, but the line from Rouen to Paris was open. The arrivals of the trains from Brussels and the north of France had also been much retarded in their progress, but the line was not completely obstructed. Between Dunai and Lille the snow was so deep on the line that the directors of the company found it necessary to apply for the assistance of the troops in garrison at the former place, which was promptly given.

So much snow has recently fallen in the country near the upper part of the Seine, the Marne, the Yonne, and the Aube, that serious alarm is felt at the probable effect of a sudden thaw.

The thermometer at Toulouse on the 3th ult. stood as low as 14 degrees. On the same day it was at 7 degrees at Marseilles and at Nimes, and 8 degrees at Montpellier. As to the north of Europe, a letter from Dirschau, 28th ult., states that the ice on the Vistula and Nogat is so strong that carriages can cross those rivers. In Paris the frost entirely ceased on Wednesday, and was followed by continued rains.

THE REVENUE.

An Abstract of the Net Produce of the Revenue of Great Britain, in the Year and Quarter ended 5th Jan., 1854, showing the Increase or Decrease thereof.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that there have been numerous rather large sales of Money Stock, and that the accounts from Turkey are of an unsatisfactory character, the fall in the quotations during the week has not been more than about three-eighths per cent—the lowest figure having been 93 for the Three per Cents for the Opening. There has been a full average supply of money in the Exchange. In Lombard-street the demand for it has continued steady, yet first-class Bills have been discounted at from 4½ to 5 per cent.

In the year just concluded, the extreme range of Consols was 10½ per cent against 5¼ in 1852. On the 1st January, 1853, the stock of bullion in the Bank of England was £20,527,692; it is now about £18,800,000. At the Bank of France, the total at the beginning of the year was £20,450,000; but it is now only £12,700,000. The Board of Trade tables for the month ending the 5th ult. show very satisfactory results, the comparative increase in our exports being £1,595,730. The total value of shipments during the first eleven months of the year was £93,784,515, against £89,339,184 in the corresponding period in 1852. The increase, therefore, is equal to 24 per cent.

The South Sea Company have issued a notice to the effect that the directors ready to make advances on the security of South Sea Stock, at the rat eof 100 per cent., to such proprietors as may give three days' notice to the cashier. The rate of interest is to be four per cent; and the reason why the notice has been issued is, the directors cannot divide the £3,662,784 now being paid off by Government without a special Act of Parliament.

The commercial mills falling due on the 4th were well and generally met, although, in some cases, owing to the stoppage of the mails from the effects of the severe snow storm, the remittances were not received till a late hour.

On Monday, Consols opened at 93⅛, and closed at 93⅜ to ⅝ ex div. for the 18th January. The Three per Cents Reduced were 93½ to ⅝; and the New Three-and-a-Quarter per Cents, 94⅛ ⅜. Bank Stock was 217½. The Unfunded Debt was rather active, at 7a. to 10s. prem. India Bonds sold at 2a. to 5s. prem. The Market, on Tuesday, was very flat. The Three per Cents reduced were done at 93⅛ ⅜ ½; the Three per Cents for the Opening, 93⅛ ⅜ ½; and the New Three-and-a-Quarter per Cents, 94 ⅛ ¼ ⅜. India Bonds were 4s. prem., par, to 5s. prem; Exchequer Bills, 5s., 10s. prem. Bank Stock was unaltered. On Wednesday, 21st. The Three per Cents Reduced, were 93½ ⅝; Consols for Account, 93⅝; and the New Three-and-a-Quarter per Cents, 94½ ⅝. The Market, on Thursday, was very inactive. In the Foreign Stocks little alteration took place. The Three per Cents for Account were first done at 93; but they subsequently became rather firm, and closed at 93⅜ to ½ ex div. The Three per Cents Reduced were 93⅜ ½ and the New Three-and-a-Quarter per Cents, 94¼ ⅜ ½. Exchequer Bills were steady, at 7s. to 10s., and India Bonds, 1s. to 5s. prem.

All Foreign Bonds have met a very dull market; in many instances quotations have ruled almost nominal. Brazilian Old rive per Cents have been 99; Danish Three per Cents, 84½; Dutch Two-and-a Half per Cents, 62⅜ ex div.; Equador Bonds, 4⅜ ⅝; Grenada Deferred, 19; Ditto Active Cents, ex Dec., 1849, Coupon, 20; Ditto Deferred, 7½; Mexican Three per Cents, 21½ ¾; Portuguese Four per Cents, 40¾ to 41¼ ex div.; Russian Four-and-a Half per Cents, 94⅜ to 95 ex div.; Spanish Three per Cents, 44¼ ex div.; Ditto New Deferred Three per Cents, 21¼ ¾ ex div.

Miscellaneous Shares have met a dull market, and prices have ruled rather lower:—London Chartered Bank of Australia have been 18⅜ Crystal Palace, 6⅜ ½; Scottish Australian Investment, 2⅜ ⅝; South Australian Land, 3⅝ ex d.v.; Berlin Waterworks, 1⅜ ½; East London, 130; Grand Junction, 73; West Middlesex, 110; Chelsea Water, 84; Hungerford Market, 8⅜; Albion Insurance, 85; Globe, 144 to 143; Guardian, 53½ to 50; Imperial Fire, 275; London, 99; Sun Fire, 165; Sun Life, 65; Australian Royal Mail Steam, 2⅞ to 3; Canada Six per Cent Stock, 119; Peninsular and Oriental Steam, 66 to 63.

The imports of specie, this week, have amounted to £430,000 from Mexico, and 440,000 dollars from New York 325,000 of the latter being destined for Havre. The shipments are £120,000 to the Continent, and 425,000 to India, China, &c.

The market for Railway Shares has been in a very quiet state, without sales of magnitude. Prices have been kept tolerably steady, though their tendency has been to decline. The following are the official closing prices on Thursday:

ORDINARY SHARES AND STOCKS.—Ambergate, Nottingham, and Boston Junction, 4½; Bristol and Exeter, 95; Caledonian, 50½; Dundee, Perth, and Aberdeen Junction, 8½; East Anglian, 4⅜; Eastern Counties, 12⅝; East Lancashire, 64; Great Northern, 84; Great Western, 88; Lancashire and Yorkshire, 66½; London and Blackwall, 8; London and North-Western, 102; Ditto, Eighths, 1⅞; London and South-Western, 76; Manchester, Sheffield, and Lincolnshire, 21⅜; Midland, 61⅞; North British, 28⅜; Shrewsbury and Chester, 13; South-Eastern, 59⅜ York, Newcastle, and Berwick, 63⅜; York and North Midland, 46.

LINES LEASED AT FIXED RENTALS.—East Lincolnshire, 141.

PREFERENCE SHARES.—Caledonian, 10⅜; East Anglian, 4¼; Eastern Counties, New Six per Cent Stock, 13⅝; Great Northern, Five per Cent, 119; Ditto, Redeemable at Ten per Cents prem., 10⅜; Ditto, Four-and-a-Half per Cents Scrip, 10⅜; Lancashire and Yorkshire, Six per Cent Stock, 142; Oxford, Worcester, and Wolverhampton, 103.

FOREIGN.—East Indian, 22⅝; Grand Trunk of Canada, 6¾; Hamilton and Toronto, 10; Luxembourg, 10¾; Ditto New, 5¾; Ditto, Guaranteed, 4⅝; Northern of France, 34⅜; Southern of France, 9¼

In Mining Shares scarcely any business has been doing. Linares have sold at 11; Santiago de Cuba, 9¼; Yuba, ⅜.

Friday Evening.

The arrival of warlike intelligence from Vienna has had some effect upon the Consol Market to-day. Prices have fluctuated to some extent. The Three per Cents Reduced have been 93⅜ ⅝ 93; New Three-and-a-Quarter per Cents, 94¼ 93⅝ to 94; Consols for Account, 93⅝ ⅞ 93. Bank Stock, 218 to 217. India Bonds, 3s.; Exchequer Bills, 7s. to 10s. pm. In Foreign Bonds and Railway Shares very little doing.

THE MARKETS.

CORN EXCHANGE (Friday).—Fresh up to-day the arrivals of English wheat were on a very limit scale, and the show of samples of both red and white was trifling. Owing to the closure of the inland navigation rendering it impossible to deliver, the amount of business doing was limited, nevertheless factors were very firm and nearly buyers were compelled to pay an advance of from 1s. to 2s. per quarter on Monday's prices. The import of American wheat is very good, yet the sale for all kinds was cheap, and prices nearly 1s. per quarter higher. Floating cargoes were held as value at 45s. per quarter. We were very moderately supplied with barley, which sold steadily, at 1s. per quarter more money. Malt was in good request, and 1s. dearer. We had a good demand for oats, at 6d. per quarter more money. Beans, peas and flour were held at enhanced rates

ARRIVALS.—English wheat, 1,650 loads; foreign, 2,000 qrs.; flour, 1,050 brls. Irish, barley, 750; oats, 13,750 Foreign, wheat, 13,000 barley, 350; oats, 2,100 flour, 17,020 brls.

English.—Wheat, Essex and Kent, red, 44s. to 52s.; ditto, white, 52s. to 56s.; Norfolk and Suffolk, red, 44s. to 52s.; ditto, white, 44s. to 52s.; rye, 34s. to 37s.; grinding barley, 23s. to 25s.; distilling ditto, 26s. to 27s.; malting ditto 31s. to 34s.; Lincoln and Norfolk malt, 54s. to 56s.; Severn ditto, 52s. to 54s.; kingwood and Ware, 50s. to 52s. Chevalier, 57s. to 59s. Yorkshire and Lincolnshire feed oats, 20s. to 23s.; potato ditto, 23s. to 25s.; Youghal and Cork ditto, 22s. to 23s. ditto, white, 24s. to 25s.; tick beans, new, 42s. to 45s.; ditto, old, 43s. to 45s.; grey peas, 42s. to 44s.; maple, 42s. to 46s.; white, 40s. to 43s.; boilers, 42s. to 45s. per quarter. Flour, 38s. to 39s.; Suffolk, 37s. to 38s.; Stockton and Yorkshire, 40s. to 42s. per 280 lbs. *Foreign.*—French flour, —s. to —s. per sack, American, 36s. to 40s. per barrel.

Seeds.—There is rather more doing in clover seed, at full quotations. In cut harseeds very few transactions have taken place.

Linseed, English, sowing, 50s. to 52s.; Baltic crushing, 47s. to 49s.; Mediterranean and Odessa, 50s. to 54s.; hempseed 32s. to 34s. per quarter; Coriander, 10s. to 15s. per cwt. Canary seed, 44s. to 46s.; Carraway, 24s. to 26s.; rapeseed, 42s. to 44s.; linseed cakes, £9 10s. to £10 per ton; Canary, 6s. to 7s. per quarter. English clover-seed, red, 36s. to 66s.; ditto, white, 70s. to 80s.; trefoil, 20s. to 24s.; rapeseed, 42s. to 46s.; maple, 42s. to 46s.; white, 40s. to 43s.; boilers, 42s. to 45s. per quarter. Flour, 38s. to 39s.; Suffolk, 37s. to 38s.; Stockton and Yorkshire, 40s. to 42s. per 280 lbs. *Foreign.*—French flour,—

THE CORPORATION OF LONDON.

THE CITY BRIDGES.

The bridges of London, or at least some of the bridges of London, the structures of which the authorities are justly proud; and it was with no small amount of satisfaction that they heard uttered the high encomium attributed to Canova, that if London contained no other attraction, the Strand-bridge (now called Waterloo-bridge) would amply compensate for a journey of a thousand miles. London-bridge is another of those noble works which demands the highest approbation. The question, however, which we desire to discuss is not whether some of the bridges are not a credit to the metropolis, but whether we have a sufficient number to properly accommodate the immense traffic desiring to cross the river. However important and useful to a large city a tidal river may be, it is nevertheless an immense inconvenience to those residing on its banks; preventing, as it does, that free communication, so important to all classes, but more especially to a mercantile and trading community. Whatever interferes with the immediate fulfilment of an object desired, is an evil which those who have the power ought to remedy without delay. Before scientific minds had conceived a plan for carrying a roadway over a river, the only plan by which the difficulty could be overcome was by boats of the rudest character, constructed of the bark of trees, or of wicker-work covered with hides. These times have long passed away; but, judging from the antipathy to the increase of bridge accommodation in London, it would almost seem as if barbaric notions, in a modified degree, still possessed the minds of the rulers of the city of London. The Government has determined on a large improvement in the bridges at the West-end, where they are less needed than in the City: wherever the population is the densest and trade the largest, there should bridges be the most numerous. It is curious to note how the Corporation of London have always opposed the building of bridges. No bridge has ever been thrown over the Thames without meeting with the determined opposition of that body. Even last year they put in motion all the machinery they could bring to bear against the Government plan for building the new bridge at Westminster. In like manner, they opposed the building of Putney-bridge—the strong argument being, that it would injure the business of the watermen; and change the current of the river, and greatly interfere with its navigation. But, the most extraordinary opposition ever persevered in, was that of the Corporation to the company which proposed the construction of Southwark-bridge. In May, 1811, the Navigation Committee of the Corporation reported "that it was proved by the most clear, distinct, and incontrovertible testimony of witnesses, that, from the strength of tide, and the extreme velocity of the current, vessels are wholly unmanageable from London bridge to parts of the river above where the intended new bridge is to be placed; and that, in their opinion, it will be impossible for barges, and other vessels, to proceed up the river from London-bridge without the most imminent hazard of destruction from striking against the intended bridge." There is something almost grand in the decided tone of the language just quoted. Yet the bridge has been built; and the barges have not been destroyed; the dangers apprehended have not been experienced; nor has the river run itself dry, as some wise folk predicted, by the removal of the dam of the river caused by old London bridge.

Then-a-days, as now, the leading members of the Court of Common Council always attributed personal motives, when any independent man proposed a scheme of improvement; and the opposition to the New Bridge arose chiefly because it was observed by some "that the principal merit of the scheme consisted in its becoming the means of *forcing* the City to take down or rebuild London-bridge."

The City was not to be cajoled or forced, and not to be caught napping. Their watch-dog, the Remembrancer of that day, was on the alert in the House of Commons, and the civic pride was roused. Their pet, old London-bridge, was to be destroyed by the innovators; and, if they succeeded in demolishing their favourite of antiquity, what would become of London—where would be its charters and its privileges? If they succeeded in this, who could tell but they might next desire the annihilation of Temple-bar; the removal of Smithfield market; and, perhaps, seek to deform the Corporation of the City of London itself, and for ever put an end to the wonder and admiration of the world—the famed pageant of the Lord Mayor's Show? Therefore, to prevent the possibility of such a result, the safest course for them to adopt was determined opposition to everything not initiated by the favourites of their own court. For nearly twenty years they succeeded in their protection of the old and dangerous bridge, though they did not prevent the completion of the new iron bridge. The climax to the absurdity of their opposition appeared in the following paragraph, extracted from the report already referred to—"That an iron bridge *will be disgraceful in appearance, compared with the other bridges*" (old London, Blackfriar's, and Westminster—*all* condemned or destroyed), "and, in the opinion of many men of science, such a bridge, of upwards of 700 feet in length, with only two bearing piers, of twenty five feet in thickness, thus subject to vibration, contraction, and expansion, *cannot stand*; therefore, and for other reasons therein set forth, the committee submit the necessity of continuing to oppose the bill." This they did unsuccessfully; and, although they predicted its speedy downfall, it has stood for nearly forty years; and the Corporation are desirous of buying it for the free use of the public. The record of opinions, such as those quoted, should teach men humility, and make them less prone to condemn things as impracticable, because their experience has been insufficient to enable them to arrive at truth. Some two years ago, the subject of New Bridges was brought before the Corporation of London by Mr. Bennoch, who was then a member of the Common Council. The entire project was ably discussed; and we, in common with the great mass of the public, hoped to have seen some evidence of the earnestness of the Corporation long before this. But petty squabblings seem to have obstructed the progress of the question; and now that that gentleman has left the Corporation, we suppose his plan for additional bridges will be laid on the shelf. It is, however, just within the range of possibility that now they have got rid of that, to them, troublesome person, they may, of their own accord, urge forward the questions proposed by him, and which they have hitherto opposed.

From a valuable pamphlet on the "Bridges of London," written by Mr Bennoch—which has already been noticed by us, and which is full of interesting details—we gather that while conveyances of every kind have increased fourfold, while the population of the metropolis is larger by a million of persons, we have only had added to our bridge accommodation some ten feet of carriage-way since 1821. From various reports that have come before us, we learn that the reason assigned for delaying the question is want of means. If the question is important, means will be found. The plea of poverty by the Corporation of London is one that will not be accepted by the public. The disclosures made before the Royal Commissioners sufficiently prove that, had the Corporation the will, the way would be found. There is no city in the world so wealthy as London; and there is no city of any pretensions to power or credit possessing so little bridge accommodation as London. Paris, Lyons, Glasgow, Dublin, are a credit to their respective countries, so far as bridges are concerned; while London is a disgrace to England in that respect.

At the close of the last session of Parliament Mr. Oliveira gave notice of a motion to inquire into the Bridges of London, which it is understood will pass unopposed by Government. The honourable member has been travelling on the Continent, to make himself thoroughly acquainted with the working of the Wine Duty; and, judging from his energy, we may fairly expect that the Bridges of Paris and other places will have received a due amount of attention. The evidence to be given, will, in all probability, establish the fact that, in its want of attention to the convenience of the public, the Corporation of London has, in the matter of bridges, as in the several matters referred to by us in former articles, shown itself wholly unequal to the performance of duties it had undertaken.

Every bridge on the river should be purchased and made toll-free, and other bridges should be added, without delay. The first new bridge should undoubtedly be that projected by Mr. Bennoch, near St. Paul's; because it would permit the traffic north and south to cross the river without any deviation. The improvement of the thoroughfares of the metropolis is of such vital importance to all that it might, for the information of the public, be advisable to lay down an entire scheme of alterations, which ought to be proceeded with simultaneously. Before concluding the series of articles in which we are now engaged, we shall in all probability, give, in a condensed form, a list of such improvements as are imperatively called for. Next week we shall turn our attention to the Markets of the City, with a view to ascertain whether in that respect the arrangements are equal to the requirements of the public.

INDUSTRIAL INSTRUCTION.*

As a step towards realising the plenary education of all classes of the people, nothing of late accomplished is, perhaps, of more importance than the published "Report of the Committee appointed by the Council of the Society of Arts, to Inquire into the Subject of Industrial Instruction; with the Evidence on which the Report is Founded." This industrial application of the educational process brings it to a practical level, where its value can be appreciated by the general understanding. The object of the Committee was to ascertain "how far and in what manner the Society of Arts may aid in the promotion of such an education of the people as shall lead to a more general and systematic cultivation of arts, manufactures, and commerce—the chartered objects of the Society." The better to promote this object, they sought, first, proof of the sentiments of manufacturers on the question; and next, that of those of its advocates and students—of all, in fact, who had regarded the subject of education as a great social movement. To the circulars which they consequently issued they obtained a great number of valuable answers—amounting on the part of the manufacturers to "a decided expression of opinion as to the urgent necessity of industrial instruction;" and on the part of the various friends of education in general, to "a most cordial sympathy with their object, hope for the success of so important a movement, and regret that reform had been delayed so long." Thus, as we have suggested, the question formerly discussed on abstract grounds alone has been brought to a practical result, from which much good may be expected.

Such, then, is the stage of progress attained; and our arrival at it is no doubt partly due to the influence of the Great Exhibition on the minds of those who think. To quote the words of the Report, that Exhibition "at once showed to manufacturers their true position; it brought the truth home, not only to the well-informed few, but to the mass of our ill-instructed population." To this may be added the conviction of an intelligent foreigner, M. de Cocquiel, that "the Universal Exhibition was a great school in which every nation came to seek, from the example of others, the means of improving its own labour, its own industry; and one by which the British people has therefore been extensively benefited by the improvements which their rivals have brought to the work of production. The idea (he adds) which originated the Great Exhibition is now fructifying and developing itself in the United Kingdom, and will certainly expand to a magnificent system of industrial instruction which, I have no doubt, will, ere long, serve as a model to all the nations of the Continent."

The Committee, nevertheless, have not been blind to the unfortunate fact that "there is still, in some quarters, an unwillingness to promote industrial instruction, especially so far as the cultivation of taste in the Fine Arts is concerned." Capitalists in this country, it would appear, have preferred to pirate foreign patterns, rather than to raise at home the requisite artistic talent. This practice, to some extent, has been found profitable; but it is not without its inconveniences. Thus we are told, that the foreign pattern is frequently modified by varying the arrangement and quality of the colours—a delicate operation, sometimes left to the workmen themselves, which does not always turn out happily. "The result," says M. de Cocquiel, "is often seen in these patterns jarring in colour and absurd in form, overladen with a multitude of incoherent accessories, from which we avert our gaze as we would stop our ears in listening to a discordant concert of sounds." One of the strongest points of objection to the plan is the presumed want of necessity for the kind of education proposed. Those who are unfavourable to its promotion, roundly urge that "the supply of science is always equal to the demand for it; that none of our works, either public or private, is at a stand-still because architects, engineers, or skilled workmen are not to be had; that we have attained to an eminence of commercial and manufacturing prosperity, unrivalled in any age of the world, and that all this has been accomplished without the aid of colleges of chemistry, or of schools of industrial instruction; that, whenever great discoveries were wanted, men to make them have always been forthcoming; and that improvements or discoveries in the arts and sciences are rather the accidents of a lucky chance than the elaborated results of well-directed research and scientific investigation." The Report before us has opposed to this the obvious reply, that the question is not, how this superiority has been acquired, but how it is to be retained. Invention, it has already been produced in spite of the want of favourable conditions, not because of it; and should operate as an encouragement in future for the furnishing of such, as so much capital to be expended on an enterprise which has proved to be exceedingly productive of remunerative return. Nations, also, that have survived their internal convulsions, will naturally come into the market, and compete with us in the peaceful pursuits of industry, in which, from our peculiar position, we have previously got the start.

Conclusions such as these are corroborated in the Report by the expressed opinions of Mr. Disraeli, Lord Seymour, and Lord John Russell. The most forcible way of placing the subject, however, was reserved for Sir Robert Peel. Some years ago, he observed—"All the facilities of intercourse," said he, "are operating as bounties to skill and intelligence. They are shortening the distance between the producer and consumer, and it is not safe for us to remain behind-hand; for, depend upon it, if we are inferior in point of skill and intelligence, or general knowledge, to the manufacturers and producers of other countries, the increased facilities of intercourse will result in transferring the demand from us to others."

The requisite means for maintaining our superiority are not to be found in the further application of capital, which is already, from the mere fact of its superfluity, seeking to stimulate new sources of productive industry; but, in the improvement of labour, and its translation from the muscular spheres of activity to the nervous, or mental. "The whole of industrial competition," says Dr. Playfair, "is now resolved into a struggle to obtain a maximum effect by a minimum expenditure of power." The Continent, it is allowed, has been enabled to seize the *preparing* element of progress. "The man, (to quote an eloquent passage from the Report) has become a limner, the electric fluid a postman, galvanism thrusts aside the goldsmith, and chemical action dispenses with the need of mechanical agency." These discoveries render muscular energy or brute animal strength less significant and less productive than the exercise of refined intellectual power. In illustration, the following instances may be profitably cited from the Report *in extenso*:—

> For example, in cotton-mills and factories, the feebler strength of women and children has supplanted the robuster vigour of able bodied men and the locomotive has driven the horse from the great lines of communication. On the other hand, an increasing amount of intellectual skill is required to guide the steam-engine, to prepare the photograph, to work the electric wire, or to manage the electrotype. On the farm, the steam-engine supplies the place of manual labour, and agriculture is fast becoming a branch of chemistry. To meet this altered state of things, it is obvious the kind of instruction hitherto given must be modified and enlarged. The knowledge which half a century ago would have constituted its possessor a man of science, does not now suffice for the every-day working uses of the intelligent artisan. This shows that the question is not one of mere competition. Were we the only producers in the world, it would be still our interest to provide for the development of natural forces by an adequate cultivation of those powers of man which correspond to it. "Nature is subjugated only by obedience," is the maxim of Bacon. There is also another great advantage that would result from an improved instruction of this kind. Men would no longer have to pass their lives in hopeless wretchedness whenever that branch of art or manufacture to which they happened to turn their early attention, chanced to fail, either through the change of fashion, or the adoption of improved methods of manufacture. Education would give them that versatility of mind which would enable them to turn to something else. There are none so helpless as the hand-loom weaver or the farmer's boy. Their skill is not rational, but instinctive, like that of the beaver or the bee.

Some persons may, even yet, be found who lament that the progress of civilisation tends to extinguish the ignorant and untrained; but lamentations, however just—which this is not—cannot alter the law of tendency and the fact of position. The instinct of a benevolent heart ought rather to suggest the desire that the instructed should aid their less fortunate brethren in acquiring those additional attainments which have become indispensable for their subsistence; and a practical recognition of the ever-increasing necessity for an improved education of the mind in proportion to the advance of civilisation.

A considerable portion of the Report is occupied with combating the vulgar sophism that presumes an antagonism between theory and practice, that is essential, and indeed so fatal, as to amount to an incompatibility. It is not necessary for us to dwell on such a point. Our readers are sufficiently aware that theory and practice, in the nature of things, inseparable, and must ever help each other. The objection, indeed, may be voted obsolete, as well as fallacious. No amount of practical skill and experience can replace the want of theoretical knowledge; and this every one, who knows anything of the subject at all, knows well enough, now-a-days. That the public mind just at present so clear on this point, is in part due to the Society of Arts, which justly claims the credit of having greatly conduced to the desirable result, in the encouragement of scientific agriculture, and the share which it had in the idea and the working out of the Great Exhibition.

Such being the facts and the argument, it becomes evident that an enlarged plan of general education for all classes is required. A merely classical education is, in these times, not enough. A mathematical and scientific education should be added, to enable the student to take an active part in the ever-variable developments of modern society. Schools of all sorts must undergo improvement in accordance with the spirit of the age. Those of the Dean of Hereford are quoted as examples. In them it is stated that the instruction is worth paying for and staying for. The great evil of popular education is the early age at which children are taken from school—an evil only to be remedied by an improvement in the means and character of the instruction accorded. The low standard of instruction adopted, for instance, by our parish schools, has made the class just above the labourer look upon them with contempt. We must prove to the public that the instruction given in schools bears directly on the future prospects of young men; and they will then be numerously and properly attended, but not until then. To make the instruction efficient, there should be brought to bear on it the agency of a Central Board of Examiners, with power to grant certificates of merit; the opposition to which (which is right) is strongly urged by the Committee.

The selfish doctrine that people should not be educated above their condition, is now an exploded error. Men exercise with pleasure any craft in which they are conscious of excellence. They like their profession, because they know it. If they like the Report before us, "it be a wise economy in a flourishing trading establishment, or in a large manufactory, to have all the hands, and tools, and machinery, each the best of its kind, and in the most perfect working order, it surely cannot be unprofitable to have a refined public; this country should develop all its native force of character and strength of intellect, to the utmost perfection of which it is susceptible." New wants, too, require new means. Professions and occupations lately unknown, are now highways to fortune and eminence; some of the greatest fortunes, have been overfilled and become unprofitable. The movement of civilisation is evidently in the line of the useful arts. Our education, it is manifest, should travel in the same direction.

To sum up our analysis with the practical result which the Committee have embodied in their Report, as the résumé of the facts and suggestion which they had solicited:—

To found schools for art and colleges for science, is by no means a novel idea. It has been tried for centuries, and by some of the most ingenious men for more than two centuries. Some of our most practical manufacturers have come to the same result, that some central institution is required, and should originate with the state, as in continental nations throughout the country. We believe the following outline would, to a great extent, include their several plans:—

That a central institution be established in London or Manchester, or in some other convenient locality. That, on the plan of the London University, it should admit into union with it, colleges, mechanics' institutions, schools, and even private examinants; that the conditions of admission should be few and simple; that, like the London University, it should hold examinations, not, however, in London only, but throughout the provinces also. Under the London University, it would be only examine, but teach. It should be its especial duty to train masters as teachers of science, so far as it bears on industrial instruction, and not teachers only, but those also who are to be trained to follow other occupations. They believe it better that there should be no separate school for teachers, but that all should be instructed together, as in our older universities and their colleges, of which this has been in part modelled, is not a truly admirable institution. We do not mean to imply by this that teaching should not be taught as an art. Experience has established the principle, that to teach knowledge is an art, and that it may be taught. It is founded on certain principles, and general principles, and certain rules founded on these principles. The central institution to have attached to it exhibitions or scholarships to reward those students who, by the local examinations, have established such claims to enable them to receive a higher kind of instruction. The examinations in the provincial districts would enable the examiners to see at the elite of our youth, who could then be in a position to perfect those studies they had so worthily begun. This is a brief sketch of some of the suggestions we have received.

A central institution of this kind would not only be well adapted to advance and assist the present local institutions, but also to aid in the setting up of new ones. Even the mere establishment of the central institution would encourage the formation of others in the provinces, and, in fact, it would be a rallying point for advice and assistance.

So far, so good. But, in the cause of plenary education for all classes, something more remains to be said. In order effectually to teach the people, education must be made attractive. Dry knowledge, cultivating the memory at the expense of the mind, is not sufficient. This has been found to be the case with Mechanics' Institutes; and they have, accordingly, been turned into places of amusement rather than of instruction. In that sphere they will perform an important duty. But a higher aim will be required for an Educational Institute; and in order to realise it, an improved method of teaching must be adopted, which shall lend to the facts of science a life capable of commanding an active sympathy. The circle of learning must, in fact, be extended, and learning itself must be popularised, not by being deteriorated, but by enlargement and elevation.

All real and permanent improvements of the kind have proceeded in this way. The art of printing, which has given to the poor man cheap books, was a higher art than that of writing, which it superseded; and every spelling is a more scientific system than that of stage coaches on the high-roads. An eloquent writer, in enforcing these or similar views, has aptly remarked that "the arts of education that will summon the people to learn, are *toto cœlo* different from, and greater than, those which have been sufficient for schools. A petty magnet (he adds) is sufficient to take up a few hundreds of isolated persons; but, when the nations are to be attracted, there is nothing less than the earth that will draw their feet."

The problem of Universal Education, therefore, will require the fullest application of the highest philosophical intelligence to direct it, in its complicated bearings and various relations, to the most successful issue. Theory and practice must unite; low and narrow views must be carefully repudiated; while the loftiest principles and the most generous motives should be not only sedulously conciliated, but permitted to rule with absolute power, as the legitimate initiatives of every plan proposed for adoption, and the ultimate tests of its prospective advantages and its probable fitness for the growing wants of modern society—as ambitious in its objects as ceaseless in its progress.

* "Report of the Committee Appointed by the Council of the Society of Arts, to Inquire into the Subject of Industrial Instruction; with the Evidence on which the Report is Founded." London: Longman, Brown, Green, and Longmans.

THE ILLUSTRATED LONDON NEWS.

No. 663.—VOL. XXIV.] SATURDAY, JANUARY 14, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE ALLIED FLEETS IN THE EUXINE.

THE British and French fleets have at last entered the Black Sea. The Emperor of Russia has no longer all the "material guarantees" to himself. The new phrase which he introduced into the popular parlance of Europe has received an interpretation of which he did not imagine it to be susceptible. The nations that are determined to uphold their independence, and the civilisation of the world, against Muscovite aggression and barbarism, have also determined to have a "material guarantee." Every honest politician had, of course, a moral certainty that the Czar would not be allowed to dictate his own terms, or cut and carve the map of Europe at his pleasure; but the Czar himself set the example of preferring "material guarantees" to moral certainties, and he will not be surprised that others should imitate him. "Material guarantee," in the sense in which the Emperor Nicholas employed it, is, doubtless, a very fine phrase. A pickpocket, diving his hand into his neighbour's waistcoat, and abstracting his watch or his purse, might allege that the article thus appropriated was but a "material guarantee" to prevent his endurance of the pangs of hunger, or his lingering death from starvation. Society, however, even in Russia and Kamschatka, does not recognize such logic—and calls the forcible seizure of "material guarantees" of this description by a very ugly name—and gives it, when it can catch the offender, a very ugly, but a very just, punishment. The morality of the Russian seizure of the Danubian Principalities was exactly on a par with that of the pickpocket, with this difference, that, judged of by its results, it was infinitely more wicked and mischievous. The swell-mobsman does not usually calculate a loss of human life among the contingencies of his evil-doing; even the burglar and highwayman, though he may make up his mind to homicide as an unhappy eventuality consequent upon his forcible seizure of the "material guarantees" that it pleases him to exact, does not count upon the loss of thousands, or even of hundreds, or of scores of lives, as likely to result from the war which he declares against society. If he did, it is possible that he would relent and amend his ways. Not so merciful and so considerate are the greedy and irresponsible despots who covet the territories of their neighbours, and exact "material guarantees" for the possession of that which they have not the shadow of a right to claim. But there are two sorts of material guarantees; and when society, by the agency of its police and gaolers, locks up, and prevents from doing further injury, the felonious misappropriator of other people's goods, it takes the body of the delinquent as its guarantee against his persistency in ill-doing. Tardily, and to a limited extent, this is the course which has been adopted by Great Britain and France in their naval occupation of the Black Sea. This act, which was partially accomplished on the 30th of December, will convince the Emperor of Russia, if he were not convinced before—that the allies of Turkey are in earnest. A finer and a stronger fleet than that under the French and British flags, now in possession of the Euxine, never put to sea in any period of the world's history; and we may add, without exaggeration, that a force more thoroughly animated by a sense of high moral duty, and more cordially united on the great objects to be pursued, was never before employed for purposes of warfare.

The effect of this proceeding upon the mind of the Emperor of Russia remains to be ascertained. If it please him to consider it a declaration of war, he is of course at liberty to do so; and he will recall his Ambassadors at the Courts of St. James's and the Tuileries, and proceed to such active hostilities as are within his power. But he is under no such necessity. If he be at length convinced of that which is quite

THE ROYAL CHILDREN'S SLEDGE.

HER MAJESTY'S SLEDGE.—(SEE NEXT PAGE.)

apparent to every one out of Russia, and beyond the pale of Russian partisanship, that the combined strength of the Allies will prove an overmatch for him, he has still the opportunity of remaining quiescent, and trusting to the chapter of accidents, if not of withdrawing altogether, and with the best grace he can, from the dilemma into which ungovernable lust of dominion has led him. The naval occupation of the Euxine is not an act of war, nor a declaration of war. It is a strictly legal act, against which the Russian Emperor has not the legal right even to enter a protest. His invasion and appropriation of Moldavia and Wallachia was an act of war, not only against Turkey, but against every State that was a party to the last territorial settlement of Europe; and if the Great Powers were contented to look upon it in a different light, it was only with the hope that the Czar himself would escape by the loophole which had been mercifully left for his pride as well as for his convenience. But the entrance of the allied fleets into the Euxine admits of no such designation. The Black Sea is not the property of Russia. Neither nature nor treaties give her any exclusive rights over it. It is a highway for the commerce of all nations that choose to make use of it; and the only power in the world that has the right to assume a dominion over it, is the power that commands its entrance.

The reasons which have induced the British and French Governments to take this decisive step, have been concisely and admirably set forth by M. Drouyn de l'Huys, in a circular addressed to the representatives of France at all the Courts of Europe. We have reproduced this document *in extenso* in another column. The logic of M. Drouyn de l'Huys is unanswerable. It was the same able statesman who so effectually demolished the false pretences of M. de Nesselrode. There is no ambiguity or double dealing about the French Foreign Minister. He can crush a crafty opponent in the most quiet but most effectual way in the world; or he can administer a reproof, with irresistible logic, and the most cutting sarcasm—not impossible for the Emperor of Russia to mistake the meaning of this temperate but significant State paper. It means war in every line of it—war avoided as long as was consistent with duty and honour—not from cowardice, but from a sense of the awful responsibility resting upon the souls of those who rashly or wickedly undertake it; but a war, when finally resolved upon, that will be fought out to the utmost limits to which it can tax the spirit, the energies, and the resources of a mighty nation. We have not the smallest doubt that a circular to the full as emphatic has been addressed by the British Court to all its envoys and representatives. The French nation, not possessing a Parliamentary Government, must obtain the publicity of such documents from the Ministry by means of the official columns in the *Moniteur*; but England, when its Parliament is not sitting, must be contented to wait for a knowledge of the contents of similar State papers until cognizance of them comes fairly before the great Council of the Nation. French statesmen have thus an occasional advantage over their British compeers; and thus, at the present moment, the name of M. Drouyn de l'Huys stands more prominently and advantageously before the European public than that of the English Foreign Minister. But no one in England will begrudge him the advantage and the honour. He speaks like a man; and his words will have weight wherever there are manly hearts to respond to them. Lord Clarendon's instructions to the representatives of this country at foreign Courts, we feel confident, will be as worthy of this country as those of M. Drouyn de l'Huys are of France; though it is, perhaps, a matter for regret that the British circular could not have been given to the world contemporaneously with the French one. Be this as it may, Lord Clarendon's opinions are known to the Emperor of Russia, and will operate as strongly upon his mind as if they had already been printed in every newspaper in Europe.

We trust that the occupation of the Euxine will not be wholly warlike one. If the Emperor will persist in braving the justice and the strength of the world, on his own head must fall the consequences. The loss, not only of Sebastapol, but of the whole Crimea and the Black Sea fleet may happen to be the least of them; but, even although the necessity should not arise for resorting to such extremities, the fleets of Great Britain and France have nobler tasks than to destroy. Under their protection a work of reparation ought to be attempted while they have the opportunity. The Sulina mouth of the Danube, which, contrary to treaty, the Emperor has allowed to be silted up, and which is actually choked with the wrecks of hundreds of unfortunate vessels that might have escaped destruction if he had fulfilled his solemn pledges, must be cleared and deepened, so that the Danube may be restored to Europe as the great highway of commerce to many fertile regions. The cost of this necessary work ought to be reckoned as One of the heavy items which the Emperor will yet have to pay for his indulgence in the mad freaks of his guilty ambition.

THE MANIFESTO OF THE FRENCH GOVERNMENT.

The *Moniteur* of Friday, the 6th inst., contained, in its official columns, the following Circular, addressed by M. Drouyn de Lhuys, the French Minister of Foreign Affairs, to the various diplomatic agents of France throughout Europe:—

"Sir,—The affairs of the East now assume a turn too serious for me not, at the moment when circumstances impose fresh duties on the Government of his Imperial Majesty, to remind you of the efforts which we have never ceased to make in order to prevent the complications with which Europe is so seriously threatened.

"The question of the Holy Places—either badly presented, or wrongly understood—had excited the alarms of the Cabinet of St. Petersburg. We endeavoured to quiet that uneasiness by complete explanations, given in good faith. It had appeared to us that, while reserving the rights of the Porte, a discussion of this kind would better have taken place at a distance from the scene where it began. Our opinion was not shared in by Russia and Prince Menschikoff received orders to proceed to Constantinople. I shall confine myself to remarking that, if we had entertained the exclusive views which were attributed to us—if the vindication of our old and incontestable privileges had not been supported with so much moderation—the mission of that Ambassador Extraordinary would have been immediately the object of a conflict which we have known how to avoid. The affair of the sanctuaries of Jerusalem having no tie, according to the testimony of Count de Nesselrode himself, settled in a satisfactory manner, another difficulty arose. Prince Menschikoff claimed guarantees for the maintenance of the privileges of the Greek Church. The Cabinet of St. Petersburg did not establish by any particular fact, that these privileges had been violated, and the Porte, on the contrary, solemnly confirmed the religious immunities of its Christian subjects.

"Animated with a desire to put an end to a difference which, if it on the one hand concerned the sovereign rights of the Sultan, on the other affected the conscience of the Emperor Nicholas, the Government of his Imperial Majesty, in concert with that of her Britannic Majesty, carefully sought for the means of reconciling the interests, at once so delicate and so complicated, which were engaged in it. The Cabinet of St. Petersburg cannot have forgotten the zeal and the good faith with which we endeavoured to fulfil this difficult task; nor can it deny that the resistance of the Porte to accede to a first plan of arrangement, emanating from the conference of Vienna, has not been the sole cause of our want of success.

"In the course of this new negotiation grave facts occurred. A Russian army crossed the Pruth, and invaded in full peace two provinces of the Ottoman Empire. The squadrons of France and England were made to appear in the Dardanelles, and at that time, if the Government of his Imperial Majesty had desired it, its naval forces would have anchored in the water of Constantinople. However, if it thought it necessary to establish its right, it was only, as it were, to make its moderation more striking. The nature of the relations between Russia and the Sublime Porte had become such that it was necessary for the state of war to succeed the state of peace; or, to speak more correctly, it was necessary that things should take their veritable name, and that the aggression of which the Turkish territory was the object should produce its consequences. This change in the situation necessitated a new movement of our fleet, and on the demand of the Sultan the French flag appeared in the Bosphorus at the same time as the British flag. However, Monsieur ——, we had not abandoned the hope of an arrangement, and, in accord with Austria, we had not ceased to act with England, when we continued to pursue a pacific object. New propositions, for the success of which we shall not cease to employ our efforts, have been addressed to the Porte by the representatives of the Four Powers.

"No treaty concluded with Russia interdicted the navigation of the Black Sea to our vessels of war. The treaty of the 13th July, 1841, by closing, in time of peace, the entrance of the Dardanelles and the Bosphorus, reserved to the Sultan the faculty of opening them in time of war; and from the day on which his Highness left us free access to the Straits, that of the Euxine was legally acquired to us. The same motives which had detained us so long in the Bay of Beikos detained our squadron in the roadstead of Beyoos. The Government of his Imperial Majesty had at heart to testify to the Emperor Nicholas the sentiments of friendship which it professes for Russia, and to reject in the eyes of the world the responsibility of an aggravation of the state of things which a little circumspection (*ménagements*) had not succeeded in modifying. It took pleasure in believing, besides, from recent despatches from General de Castelbajac, that the Cabinet of St. Petersburg, satisfied with a taking of possession which it considered as a pledge, would take no offensive steps in a conflict which has commenced so unfortunately for Turkey. It appeared to us sufficient that the pavilion of our flag in the waters of Constantinople should attest our firm resolve to protect this capital from a sudden danger, and we did not wish that its premature appearance in a spot nearer to the Russian territory should run the risk of passing for a provocation.

"The state of war rendered, no doubt, a collision possible on sea as well as on land between the belligerent parties; but we were warranted in believing that such a misfortune would be imitated by Russia, and that her Admirals would avoid, with the same care as ours, the occasions of a rencontre, by abstaining from proceeding to measures of aggression within limits in which they have supposed the Cabinet of St. Petersburg to be animated with different intentions. our fleet would certainly have exercised a more active surveillance.

"The affair of Sinope, Monsieur ——, took place contrary to all our provisions, and this deplorable fact also modifies the attitude which we should have desired to maintain.

"The accord which has recently been effected at Vienna, between France, Austria, England, and Prussia, has established the European character of the difference which exists between Russia and the Porte. The four Courts have solemnly recognised that the territorial integrity of the Ottoman Empire is one of the conditions of their political equilibrium. The occupation of Moldavia and Wallachia constitutes a breach struck on that integrity, and it is not doubtful but that the chances of war may lead to others.

"Count de Nesselrode, some months since, represented the invasion of the Danubian Principalities as a necessary compensation for what he then called our maritime occupation. In our turn, Monsieur ——, we think that it has become indispensable to ourselves to measure the extent of the compensations which have a right, both from our own title of a power interested in the existence of Turkey, and from the military positions already taken by the Russ an army. It is necessary that we should have a pledge which will ensure to us the re-establishment of peace in the East on conditions which shall not change the distribution of the respective strength of the great States of Europe.

"The Government of his Majesty and that of her Britannic Majesty, have, in consequence, decided that their squadrons shall enter into the Black Sea, and combine their movements in such a way as to prevent the Ottoman territory from being invaded, and from their title of a power interested in the existence of Turkey, and from the military positions already taken by the Russ an army. It is necessary that we should have a pledge which will ensure to us the re-establishment of peace in the East on conditions which shall not change the distribution of the respective strength of the great States of Europe.

"The Government of his Majesty and that of her Britannic Majesty, have, in consequence, decided that their squadrons shall enter into the Black Sea, and combine their movements in such a way as to prevent the Ottoman territory from being invaded, and from being the object of any fresh attack on the part of the naval forces of Russia.

"Vice-Admirals Hamelin and Dundas will receive orders to communicate to whom it may concern the object of their mission; and we take pleasure in hoping that this straightforward proceeding will prevent conflicts, which we should see with the greatest regret. The Government of the Emperor, I repeat, has only one object, that of contributing to effect, on honourable conditions, a reconciliation (*rapprochement*) between the two belligerent parties; and, if circumstances should oblige it to provide for redoubtable eventualities, it has the confidence that the Cabinet of St. Petersburg, which has given such numerous examples of its prudence, will not expose Europe, scarcely yet recovered from the shocks it has experienced, to bring down upon it the lofty reason of sovereigns has been able to preserve it for so many years.

"I authorise you to read this dispatch to M. ——.

"DROUYN DE LHUYS."

HER MAJESTY'S SLEDGE.

DURING the severe weather of last week, the deep snow presented an opportunity for the enjoyment of sledge drives in the neighbourhood of Windsor. On Wednesday afternoon, his Royal Highness Prince Albert drove her Majesty in the Royal Sledge, towards Staines; the Princesses following in a second Sledge; and on Friday morning, the Queen attended by Viscountess Jocelyn, again drove out; the Prince of Wales, accompanied by the Earl and Countess of Shelburne, following in a second Sledge.

The Royal Sledge is drawn by two grey horses, across whose backs are thrown leopard-skins; in the network over the harness are suspended small circular bells, mounted with feathers, besides larger bells, which produce three different notes. The body of the Sledge is painted with a dark ground of crimson, carved with gold; and the inside is lined with red velvet. Her Majesty is attended by Colonel Bouverie and Colonel Seymour; and the outriders and grooms wear their scarlet liveries. The second Sledge, containing the Princess Royal, and the Princess Alice, the Duchess, was driven by Colonel Grey; and was drawn by two grey horses.

The children's Sledge, also represented upon the preceding page, is simply made from a carriage, and drawn by a pony.

SHAMEFUL TREATMENT OF ENGLISHMEN BY RUSSIA.—Of the Turkish fleet destroyed by the Russians at Sinope, among the frigates riding at anchor, was one belonging to the Pacha of Egypt, officered by three English engineers and English stokers; the frigate was captured, and the engineers and stokers, together with a great number of the crew, were made prisoners by the Russians. They were taken to Sebastopol, and thence transported to Odessa, barred with gold; and the inside is lined with red velvet. Her Majesty is attended by Colonel Bouverie and Colonel Seymour; and the outriders and grooms wear their scarlet liveries. The second Sledge, containing the Princess Royal, and the Princess Alice, the Duchess, was driven by Colonel Grey; and was drawn by two grey horses.

The children's Sledge, also represented upon the preceding page, is simply made from a carriage, and drawn by a pony.

SHAMEFUL TREATMENT OF ENGLISHMEN BY RUSSIA.—Of the Turkish fleet destroyed by the Russians at Sinope, among the frigates riding at anchor, was one belonging to the Pacha of Egypt, officered by three English engineers and English stokers; the frigate was captured, and the engineers and stokers, together with a great number of the crew, were made prisoners by the Russians. They were taken to Sebastopol, and thence transported to Odessa, barred with gold; and the uniforms of officers, they were treated as common Russian sailors, that is most shamefully, being kept in strict confinement, and with the allowance of 8½ copecks altogether per diem. On their arrival at Odessa the Consul-General represented the facts to the authorities there and required that the chief engineer, at least, should be treated as an officer and a gentleman, but to all his remonstrances the authorities turned a deaf ear, and it was said intended to march them eighty miles into the interior on foot. The Consul-General has reported the case to our Ambassador at St. Peterburg, whom we trust will take some more energetic step; but it would appear that they have met with as little respect as those of the Consul-General. Had the authorities acknowledged the rank of the officers, it would have cost them twice as many copecks, or the difference per diem. The chief engineer in question is the chief engineer of the Pacha of Egypt's dockyard at Alexandrina, well known to many of the officers of her Majesty's men-of-war, as one of the Peninsular and Oriental Company, for the facilities he was always ready to afford, where assistance was required in case of derangement of machinery, &c. Now, when it is considered that the Russians at the same time have the chances of an unequal war threw these unfortunate gentlemen into the power of the Russians, a Russian frigate was actually being repaired by English engineers in one of her Majesty's dockyards; such conduct in return is, to say the least of it, most dastardly.

By the *Valparaiso Echo* we learn that Mr. George Maughan, the able engineer, who but a few months since arrived from England to head the engineering department of the Valparaiso and Santiago Railway, died on the 9th November, after a short illness. The directors and a large number of their friends accompanied Mr. Maughan's remains to the tomb.

INCREASE IN THE PRICE OF GAS.—The Phœnix Gas Light and Coke Company have notified their intention of forthwith raising the price of gas from 4*d.* to 5*d.* per 1000 cubic feet. The advance has been occasioned by the increased cost of coal, freight, iron, and labour.

THE SEARCH FOR FRANKLIN.—The Admiralty have determined again to despatch the screw-steamer *Phœnix*, in the ensuing spring, to Beechy Island, to communicate with, and to convey supplies to, Sir Edward Belcher's expedition in search of Sir John Franklin.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The announcement that the Prince de Chimay had been sent by the King of the Belgians on a secret mission to Louis Napoleon furnished speculators in the Bourse with new rumour that war was likely to be arrested. The report was contradicted next day, but it served the stock-jobbing purpose of the moment. The Legitimist organs are still busily endeavouring to sow dissension between France and England, but they make no impression.

Some further details have transpired relative to the mission of the Prince de Chimay to Paris. M. Rogier, Belgian Minister at Paris, is not popular with the French Government. This feeling being communicated to King Leopold, he proposed to substitute for him the Prince de Chimay, as per orally agreeable to Louis Napoleon. The Council decidedly opposed the change, M. Rogier's services not permitting such a slight. A middle course was adopted, the Prince de Chimay was sent as on a special mission, with directions to pass the winter in Paris.

The publication of the circular of M. Drouyn de Lhuys has been followed by another announcement not less significant. The *Moniteur* of Saturday publishes a decree calling into active service all the young soldiers available under the second portion of the contingent of the class of 1852. The number of this force is variously estimated at 45,000 to 50,000. This decree is substantially an augmentation of the effective force of the army by from 30,000 to 40,000.

TURKEY.

As many contradictory statements have been made regarding the nature of the note presented to the Porte by the Ambassadors of the Four Powers, we give the actual text; as future proceedings may, to some extent, depend upon it:—

The undersigned Ambassador of her Britannic Majesty, in accordance with the representatives of France, Austria, and Prussia, has the honour to make known to the Sublime Porte that the Governments of the Four Powers, having still reason to believe that his Majesty the Emperor of Russia does not regard the thread of negotiations as broken by the declaration of war, and by the events the consequence thereof; and knowing, moreover, that, according to the proposed declarations of his Imperial Majesty, that he desires only to behold secured a perfect equality of rights and immunities *octroyéd* by his Majesty the Sultan and his glorious ancestors to the Christian communities, subjects of the Sublime Porte:

On its part, the Sublime Porte, responding to these declarations by that which it made itself to regard as concerning its honour to continue to maintain the said rights and immunities, and to be still disposed to put an end to the differences arising between the two powers, the negotiation to be followed shall be based upon:—

1. The evacuation of the Principalities, to take place as soon as possible.
2. The renewal of ancient treaties.
3. The communication of the firmans relative to the spiritual privileges freely granted by the Sublime Porte to all its subjects not Mussulmen, which communication, made to the powers, shall be accompanied by suitable assurances given to each of them.

The arrangement already made to complete the agreement relative to the Holy Places and to the religious establishments at Jerusalem shall be definitively adopted.

This arrangement concerns the erection of a church and the establishment of a Russian hospital at Jerusalem.

The Sublime Porte shall declare on its part in the same interest its firm resolution to deve op more efficaciously its administrative system, and those internal reforms of a nature to satisfy the wants and the just expectations of its subjects of all classes.

(signed) STRATFORD DE REDCLIFFE,
BARAGHAY D'HILLIERS,
L. DE WILDENBRUCK,
B. DE BRUCK.

Pera, Dec. 12, 1853.

The *Trieste Zeitung* announces, under date of Constantinople, Jan. 2, that three Persian corps were marching against Erzeroum, Bagdad, and towards the Persian Gulf.

A private telegraphic despatch, dated Constantinople, Jan. 2, says:—

The combined squadrons of France and England entered the Black Sea this day, together with the first division of the Turco-Egyptian fleet. Six vessels are left at Beicos, to guard the entrance of the Bo-phorus, and the second division of the Ottoman fleet is anchored at Therapia.

The French Government received despatches from Constantinople of the 31st ult. On Wednesday last the Divan gave its adhesion to all the propositions of the Four Powers.

THE TURKISH INSURRECTION.

Private letters from Constantinople give some interesting particulars regarding the threatened insurrection in that city on the announcement that Turkey was about to make peace with Russia. The note presented by the Four Powers was signed by the Ministers of the Porte on the night of the 20th ult. The news got abroad that evening, and the excitement became very great. Early next morning crowds of Softas (students of Mahomedan theology, candidates for the priesthood, and the hottest votaries of Moslemism) assembled in different parts of Constantinople in strong bodies. Round the mosques of the Sultan Mehmet and Ghiol Djami no less than 2000 of these men gathered, very wroth at what was passing, and deeming the cause of Islamism betrayed to the interest of the infidel Giaours. A dragoman belonging to one of the embassies, who had to go to Constantinople early that morning to see Redschid Pacha on urgent business, started from Pera at about half-past eight, and crossed the great bridge that stretches across the Golden Horn from Galata, on horseback. He penetrated far into the immense city, and was nearing Redschid Pacha's palace, when, having to pass by the mosque of the Sultan Mehmet, he was surprised at seeing so many Softas assembled in the great space surrounding that noble edifice. On passing, in his chimney hat and European dress, he was, however, greeted by a shower of stones; and, striking spurs to his horse, pressed on to the palace of the Pacha, with the intention of informing him of what had occurred, and of demanding redress. After rushing through the narrow lanes of Stamboul, at the risk of breaking his neck, he neared Redschid Pacha's residence. The Turkish Minister of Foreign Affairs was just entering his carriage; two carriages were behind, with his suite in them. Consternation and alarm were depicted in the countenance of the Turki h Minister, and he beckoned to him to return immediately, as he could not possibly attend to him. Redschid Pacha drove off, surrounded by his attendants and guards, to the Seraskier's palace of Tchiflick, which is situated on the Bosphorus, not thinking himself in safety at Stamboul.

Every person, who has visited Constantinople, knows that the waters of the Golden Horn (the port) divide the Turkish capital from the European suburbs. Never-the-less, numbers of merchants have warehouses in Constantinople. It is easy to conceive, therefore, the consternation of those gentlemen on receiving communications from their respective emissaries, or close of their offices, as the town was in a state of revolt. They had seen nothing, remarked nothing. But Stamboul is an immense place, and men of business do not stroll. The alarm spread—warehouses, offices, bazaars, shops, &c., were shut—and all the Christians hurried across the bridge to Galata and Pera as fast as they could. Their fellow countrymen on that side, eager to learn the cause, gathered on the other side of the water, questioned them in vain. They had seen little assemblies in the streets, and some of the shops were shut. That was all their reliable relate; but they were much frightened, and eagerly inquired whether the fleets were not coming down.

When the tumult was at its height General Prim and Lord Dudley Stuart (so one of the letters says) presented themselves alone, and without any protection whatever, in the midst of the excited assemblage; and it is but just to say that, at that critical moment, not only without menace or insult being offered to them, but with marks of respect. General Prim, who has served rather a fair apprenticeship in insurrectionary movements, must have felt quite at home on the occasion, and probably it recalled to his memory scenes or other days of a similar kind—Barcelona, Vich, Valencia, Reus, and Madrid, *quorum pars fuit*. On former occasions, and those not very remote, it would have been as much as his life was worth for a Giaour to have presented himself in the midst of a crowd of Softas in the Turkish capital.

At two o'clock a meeting was held at the British Embassy, at the desire of Lord S ratford de Redcliffe. The Representatives of Austria the gium, Spain, Sardinia, Holland, Naples, and others, attended. General Baraguay d'Hilliers, the French Ambassador, being absent at Therapia, an express was sent off for him, and he returned to Pera that afternoon. M. de Wildenbruck, the Prussian Ambassador, was likewise not in town, but at Kuruczesme, his residence on the Bosphorus. On the news reaching him of the state of Constantinople, he immediately repaired to the place of meeting.

Measures for the protection of the Christian suburbs were taken with

the most judicious precaution, and in such a way as not to alarm the inhabitants. The steamers did not come down until after dark, and their presence in the Golden Horn was scarcely remarked; indeed, some persons doubted whether any were coming at all. Any person, however, who knew the prompt manner of acting and the decision of the British Ambassador, felt sure that all that was necessary would be done. The marines were in readiness to disembark, and the boats were prepared to be launched at a moment's notice. The three wooden bridges that unite the suburbs of Constantinople with the Turkish city were kept open during the whole night. On such an occasion as this it is necessary to prepare for the worst, though not believing in very serious disorders, as a European cannot possibly estimate the intentions of a Turkish mob with much accuracy. At the same time any very sudden display of military or naval force might irritate the population, and cause the very thing which they have been called on to prevent. The immense naval force lying in the Bosphorus was more than sufficient to put down any attack upon the Christians that might be meditated by the Turkish population.

The city continued in a very excited state on the 22nd and 23rd; but no further tumult took place. The ringleaders, and more active of the rioters, were put in prison. They declared that they had no intention of harming anybody, whether Turk or Christian, but that their demonstration was simply against those Pachas (meaning, no doubt, the newly-named Ministers, Riza Pacha and Halil Pacha) whom they did not trust, and who did not in any way inspire them with confidence, their precedents being unfavourable, and they being suspected of standing under Russian influences.

THE WAR ON THE DANUBE.

Telegraphic despatches from Hermannstadt of the 6th inst. announce that a serious engagement has taken place at, or in the vicinity of, Kalafat. Cars were arriving at Krajova filled with the wounded. Krajova is placed in a state of siege, and the commandant has threatened to visit the severest punishment all who shall disseminate disquieting reports.

According to accounts from Bucharest of the 4th, a Turkish squadron drove in the Russian outposts at Bolleschi Cotate, a village on the high road between Kalafat and Krajova. A Russian battalion came up, and a combat ensued in which each side suffered severely.

A letter from Krajova, dated the 30th ult., states that the insurrection of the peasantry along the left bank of the Danube, is every day becoming wider and wider. The movement is spreading even to the irregular Wallachian militia, and has extended from Kalafat to the Aluta. Turnul, also, on the right shore of the Aluta, has been abandoned by its civil authorities, which were favourable to the Russians. Additional numbers of Russian troops have been sent into the disaffected district. The present Turkish force at Kalafat numbers more than 80,000 men, and is constantly being increased. Judges of military matters believe the Omer Pacha will soon again assume the offensive, and attempt to cross the Danube at Turnul-Magurele. The cold had become intense, and an unusually long and severe winter was expected.

A letter from Bucharest, dated the 28th ult., states that there was no prospect whatever of a suspension of hostilities. Notwithstanding the extreme cold and great depth of snow, the dislocation of the Russian troops continued. At Oltenitza three large subterranean dwellings had been constructed for the Russian outposts stationed at that point. Similar winter quarters have been constructed for the troops in other parts of the Principalities. The skirmishes between the outposts of the two armies have not ceased, as the number of wounded daily, for some time, brought to Krajova and Bucharest, indicates. Twelve pieces of the heaviest Russian artillery had recently been sent from Bucharest to Giurgevo

The theatre of war is approaching nearer and nearer to the Austrian frontier. The Russians already occupy Grajs, a village scarcely four leagues from the Austrian territory. The troops stationed in the vicinity came down from the northern part of Lesser Wallachia. Omer Pacha's camp is at Rustchuk; but he visits Widdin every four or five days.

RUSSIA.

As matters stand now between the Western Powers and Russia, we must be prepared for an angry outburst from the North If the language used by the Western Powers, in their notification of the orders given to the combined fleets to enter the Black Sea (or, as others call it, the *Western ultimatum*), is at all calculated to touch the pride of the Imperial Autocrat to the quick, then nothing can be more sure than that the Russian Ambassador will be ordered to leave London and Paris forthwith. But, even in this case, it is thought that the diplomatic relations will not at once be entirely broken off. On or before the 15th inst. it is said that the all important answer—not to say decision—may be expected from St. Petersburg. The general belief is that the Emperor is resolved to refuse the intervention of a mediating congress; he will only consent to receive the propositions of the Four Powers by the intermediation of the Four Powers. It is quite impossible to be deceived, therefore, as to the gravity of the situation. The excitement at St Petersburg is equal to that at Constantinople. The national movement which in 1848 caused so much agitation has extended to the Czar. It was a political question so publicly discussed at St. Petersburg before as this Eastern question The pris-ts make it the text of their sermons: they preach a crusade against the infidels, and, in the eyes of the national party, the question is a reparation to the honour of Russia, and to put down the revolutionists. In Russia, all persons opposed to the orders of the Emperor are called revolutionists. The exaltation is such that it would be difficult even for the Emperor to follow a peaceful and conciliatory line of policy.

A rumour was prevalent at Jassy on the 23rd December that General Woronzoff had died at Tiflis, and that his successor *ad interim* is to be General Osten Sacken.

GERMANY.

A telegraphic despatch, dated Berlin, 9th inst., states that the Second Chamber held a secret sitting to receive a communication from the Government relative to the acquisition by Prussia of a military port on the North Sea.

The Russo-Polish authorities have announced to the Prussian Government the discovery of a political plot, which had come to light through numerous arrests in the ex-kingdom of Poland and the Grand Duchy of Posen. The Emperor Nicholas has expressed a desire that the Prussian papers should abstain from all communications on the movements of the Russian army.

For some time past a certain degree of animosity has prevailed amongst the soldiers of a Hungarian regiment in garrison at Vienna against Italian sub-officers. Last week, while a party of them were drinking in the canteen of the barracks a quarrel began with a sub-officer, which soon came to blows, in which the latter was killed.

SWEDEN AND NORWAY.

On the 21st., the secret committee of the Four Chambers met his Majesty, King Oscar, to receive communications explanatory of the large demands lately made for the defence of the kingdom; and the *Folkes Rost* (a Stockholm journal) gives an outline of the proceedings. The King laid before the committee numerous notes exchanged with the great European Powers, amounting to not less than twenty-five, from A to Z, the substance of which is that Russia had begun by making several demands, most offensive to Sweden, in case war should break out in the Baltic or its neighbourhood; that the Government has declined these requisitions in the most precise terms; that it has, at the same time, made communications on this subject to England, France, Prussia, and Austria; and that it has finally obtained the satisfactory result, that perfect neutrality shall be a guarantee, in case of war, to the united kingdoms (i. e., to Sweden and Norway). But France, England, and Prussia stipulated as one condition that the said united kingdoms shall keep a sufficient force, so as to be able to maintain their neutrality (of themselves) and that neutrality, in case of need The reason why his Majesty judged it right to convoke a secret committee for establishing an intercourse between himself and his States-General in this conjuncture was to obtain, in compliance with these expressed wishes of England, France, and Prussia, the consent of the Diet for raising next spring, if circumstances required it, about 600,000 rix dollars banco upon the extraordinary credits reclaimed during a certain number of years for completing the defence of the country. It is said that the unanimous confidence felt by the Government on this question, as likewise the energy it has displayed in defending the independence of the united kingdoms, has given great satisfaction to all the members of the committee.

A letter from Christiania says:—

Norway has decided on the fitting out of a squadron, composed of four frigates, five corvettes, and three brigs. This measure has been adopted in view of the events which are in preparation. The country, although united to Sweden, has, as is known, a constitution of its own, a fleet of its own, and a national flag. Its inhabitants, like the Swedes, are altogether opposed to the Russian policy, of which they know the ambitious intentions, and, in consequence, they reckon on the power of France and England to aid them, if necessary, to cause their neutrality to be respected. The Russian officers sent on mission have been received with courtesy and consideration; but they must have convinced themselves of the slight sympathy which the conduct of their Government inspires in any class of society. At the date of the last despatches they were in the province of Soundefjeld, having just visited that of Nordland.

SPAIN.

An extraordinary *Gazette* was published at Madrid on the 5th, announcing the birth, that morning, of a Princess to the Queen, and that her Majesty and the child were going on well. The French Embassy, in consequence of the inability of the Ambassador to assist on the occasion of the accouchement, was represented by the First Secretary, and that of Great Britain by Mr. Otway, the Secretary of Legation—Lord Howden, on account of the recent loss of his mother and ill health, having excused himself on the occasion.

A despatch dated Madrid, January 8, announces the death of the Infanta that day, at noon.

PORTUGAL.

It is stated that the young King is about to marry his Coburg cousin, the Princess Charlotte of Belgium. Lisbon is perfectly quiet, and is likely to be, as long as the British squadron remains in the Tagus.

AMERICA.

The steamer *Asia* has brought New York papers and letters to the 26th ult. The steamer *Pacific* had arrived two days previously. Another terrible conflagration had occurred in New York on the 26th ult., by which upwards of 1,000,000 dollars worth of property had been destroyed. The conflagration first commenced in Front-street, and extended on both sides. Some of the sparks from the burning buildings were blown into the sails of the colossal ship *Great Republic*, which was lying in an adjacent dock, nearly ready to sail for Liverpool; and, in a very short period, she was a mass of flame. The burning materials then communicated to the packet-ship *Joseph Walker*, and the celebrated clipper *White Squall*. The three ships, notwithstanding energetic endeavours to save them, were totally destroyed. The *Great Republic*, valued at 300,000 dollars, was insured for 180,000 dollars; the cargo, valued at the same amount as the vessel, was insured for 275,000. The *Joseph Walker*, valued at 90,000 dollars, was insured for the full amount; the cargo, valued at 40 000 dollars, was uninsured. The *White Squall* was fully insured, for 80,000 dollars. Many vessels had narrow escapes from sharing the fate of the *Great Republic*. The *Red Jacket* steamer was cut adrift, and escaped the flames; as did likewise the clipper *Wavkwind*, not, however, before she had some part of her rigging destroyed.

Cincinnati has been the scene of a riotous demonstration against Monsignor Bedini, the Pope's Nuncio, who was on a visit to the Archbishop Purcell, of that city, and officiated in the cathedral. A most violent animosity, it seems, is entertained towards M. Bedini by a body of Germans in the city called the "Society of Freemen," and about 500 members of this society assembled at their hall, and, having organised, marched in a body to the vicinity of the Archbishop's residence, with the supposed intention of doing personal violence to the Nuncio. The chief of police, having received an intimation of the movement, retained the entire police force at the Town House, which is situated opposite the Archbishop's residence. As the "Freemen" approached they set up a dismal groan, accompanied by shouting and discordant music. When the procession was passing the watch-house, the police, at the word of command, rushed upon it, and each arrested a man. A general melée began. Many shots were fired, and shouts and execrations filled the air. The rioters finally fled, but were pursued by the police, and upwards of sixty of them were captured and placed in the cells of the watch-house. The bitter animosity against the Nuncio which led to this outbreak is in consequence of his alleged betrayal of the cause of liberty in Italy during the Revolution of 1848. Several inflammatory articles have recently appeared in the German papers touching this matter, in one of which the following sentence occurs:—"If the Hungarian butcher, Haynau, met with so warm a reception in Monarchical England, what ought the Pope's Nuncio to expect in Republican America?" The persons arrested have been held to bail. Fourteen of the rioters were wounded, of whom one has died. It will be recollected that M. Bedini experienced a somewhat similar reception in Pittsburg

The mail steamer *Winfield Scott*, which sailed from San Francisco on Dec. 1, with upwards of £1,000,000 in gold dust, went ashore on the following day, and became a total wreck; but the mails and treasures were saved

It was ah advices of the 22d ult state that the new Governor of Cuba signified his determination to do all in his power to prevent the landing of slaves, and also to capture slavers approaching the island.

Advices from Vera Cruz to the 22nd ult. state that Santa Anna had issued a decree accepting the Guadalajara with a salary of 60,000 dols., but taken the title of Most Serene Highness, instead of Captain-General Santa Anna had also decreed that, in case of his death, or moral disqualification, he should name his successor.

INDIA.

By the extraordinary express in anticipation of the Overland Calcutta Mail we have news from India and China. The dates are—Calcutta, Dec. 5; Madras, Dec 8; Bombay, Dec. 14; China, Nov. 14. The news from India is of a gloomy character. There were rumours of war in Burmah. In the north-west there had been some fighting with the Afreedies, who were ultimately beaten. At Lucknow there had been a serious engagement between Captain Bunbury and the Talookdar and followers of a rebellious Rajah, whose fort was stormed. The news of the Russians having made themselves masters of Khiva was confirmed. the certainty of their presence there had caused the Governor-General to place an army of observation on the north-west frontier. There is no news from China of much importance.

AUSTRALIA.

By the arrival of the ship *Francis Henty*, we have advices from Melbourne to October the 18th. The passengers express the greatest confidence in the gold fields, all of them bringing substantial proofs of success, from £1000 to £10,000 each. The population of Melbourne and the neighbourhood was again beginning to move for the summer diggings campaign, and this movement had caused an increased demand for commodities; but there appeared no chance and no expectation that the excitement, speculation, high prices of former years would be again experienced. Labour market was at present very slack, there is a great demand for all kinds of labour, at increased wages. Seamen for the coast were abundant, but for home few offering, as most men seemed unwilling to leave the colony.

Three of the ringleaders of the daring gang of mounted highwaymen who stopped the Mount Alexander gold escort, and plundered it of nearly £10,000 of treasure, suffered death on the scaffold at Melbourne gaol on the 4th of October, in the presence of a large concourse of persons. They were lastily convicted through one of the gang, named John Frances, a ticket-of-leave convict, transported from Sheffield, turning approver According to his evidence it appeared that, on July 26th, he, with the three condemned men and two others, left the Mt Ivor gold field for a place on the road, where they propo-ed to attack the gold escort on its way from the diggings to Melbourne. They all had horses, and each man was armed with a revolver, which they loaded with bullets and duck shot. They then cut large boughs from the trees, which they stuck upright in the road, so as to screen those of the gang who were behind, from the advance troopers of the escort coming up, they espied the prisoners behind the boughs, and instantly fired at them. The gang then rushed forward, and a volley was poured upon the escort. The fight then became general, and those in charge of the treasure being either wounded or overcome, the convicts soon obtained possession of the boxes of gold, which they put into a cart, and made off into the bush. The gold was then measured out in a powder-flask, and equally divided amongst them. Flynn took a different route to Melbourne, where Frances had a house. They evaded the vigilance of the police until the 11th of August, when four of them, including the approver, were captured.

WEST COAST OF AFRICA.

WE have been favoured by a Correspondent with the accompanying letter and Sketches

On the 7th November, the *Penelope* having arrived off Lagos, the following day King Ducimo and suite went off to pay his respects to Rear-Admiral Bruce, accompanied by Abbeokutan chiefs. On his arrival, he was received on the quarter deck by the Admiral, Captain Lyster, and Captains of her Majesty's ships *Polyphemus*, *Ferret*, and *Waterwitch*. His Majesty, after being presented to the Commander-in-Chief, took his seat on the quarter-deck, his followers going down in succession on their knees and kissing the deck before him. On going round he ship, the Admiral ordered a shot and shell to be discharged from one of the 68-pounder guns. They were astonished at the distance the shot was propelled, and more so when the shell burst in the air. After partaking of some refreshment, the King with his suite, left for the shore, evidently much pleased with what he had seen.

King Ducimo has just been placed on the throne, by the death of his father, King Akitoy, who, as far as report goes, poisoned himself The present King has taken the direction of affairs at a very troubled period, several attempts having been made by the deposed chief Kosoko, assisted by the slave dealers, to retake Lagos, and revive that infamous traffic. However, the late attack made on him (Kosoko) at Appi, and the massacre of the slave-dealers, at Jabu, it is hoped, has caused a check on that at present.

The first illustration represents the Admiral showing King Ducimo round the ship; his "Majesty" appearing naked to the waist, which is considered the highest mark of respect that can be paid by native chiefs to Europeans.

The next incidents in our Correspondent's letter are of a less pacific character.

In July last, the British merchant schooner *Heroine*, then at anchor off Grand Taboo (a large village thirty miles to the eastward of Cape Palmas), was boarded by about sixty of the natives, who barbarously murdered the captain and the whole of her crew, excepting one boy, who saved himself by hiding in the schooner's hold. The particulars of the sad affair are as follows:—Captain Cormack, who had been some time trading on the coast of Africa, purchased a quantity of palm oil, and landed some of his goods as part payment, the residue to be paid on his receiving the oil. It would appear that the chiefs never intended fulfilling their part of the agreement; at least, their breaking faith with, and not bringing the oil on board, induced Captain Cormack to believe as much; for, after waiting a considerable time without obtaining any satisfactory or conclusive answer, he deemed it necessary to adopt some other measures, to prevent his owners being defrauded; and it is to be regretted that the measures he resorted to were stronger than the circumstances of the case actually required. He got some one or more of the chiefs of Taboo and Basea on board, and put them in irons, intending by having them prisoners until he received payment for his goods. How long they were kept in confinement is not known; but the result was, a number of canoes came off laden with palm-oil casks, but only two containing oil, the others water. Of the deception the unfortunate master of the schooner was ignorant; and, of course, allowed them alongside his vessel to discharge their loads: when they rushed on board, shot the captain, clove open the mate's skull with a hatchet, and forced overboard and murdered the remainder of the crew, with the exception of the boy before mentioned. Rear-Admiral Bruce, in the *Penelope*, arrived off Grand Taboo on the 27th November, when a canoe with six natives came alongside; they were immediately made prisoners, and their canoe hoisted on board. The *Penelope* then proceeded to Grand Basea, and sent a cutter on shore with an invitation to the King to come on board; after a great deal of palaver, his Majesty consented; but, much to his surprise, was made a prisoner—and told, until George Macauly, Chief of Taboo, either came or was brought on board, his Majesty would be kept as a hostage. Means of communicating with the shore were afforded him, and he was informed that, at daylight, the ship would get under way for Taboo, to receive their chief, he being the promoter and principal leader of the attack on the schooner. Having ascertained from the six natives taken prisoners on the previous day had nothing to do with the affair, they were liberated. Messengers were sent on shore, but neither inducement nor threat would make the natives deliver up their chief. The Admiral then informed them, unless they complied with his demands he would blow their town down; their answer was—that "if the Admiral want one year, two year, three year, he would not get George Macauly." Consequently, the *Penelope* proceeded to within half a mile of the shore, getting a spring on the cable so as to bring broadside on, and opened fire with shot and shell. The place was soon observed to be in flames, and before sunset was completely reduced to ashes: the fire spreading rapidly among the dry huts and palm oil. After a couple of hours' good shot and shell practice, the *Penelope* hauled off into deeper water. King George of Basea was then that evening transferred to her Majesty's brig *Waterwitch*, where he will be kept as a hostage until George Macauly surrenders; this he will doubtless soon be compelled to do, as the *Waterwitch* is to remain blockading the coast.

The Illustration shows the *Penelope* hurling the *White Man's Fetish* into the town of Grand Taboo.

(From another Correspondent.)

A murder of a most revolting character has recently been perpetrated by some natives of the Island of Kanzabac, Bijouga Islands. The victim of the Blacks' ferocity was Mr. Carr, second mate of the merchant-man *Myrmidon*: he had landed on some rocks opposite where the ship lay, on the 28th November, to amuse himself with spearing fish, but had not been above ten minutes when he was fired at from the bush or jungle; he was hit, and jumped or tumbled off the rock into the sea. Immediately two natives made their appearance, one of whom advanced when poor Carr rose from the water, shot him dead, and rushed into the bush. All this occurred so rapidly, that a gun was fired, and a boat shoved off, just as the murderers disappeared; but night soon setting in, the body was not recovered till next day.

The crew were greatly distressed; for Carr was universally beloved, and as promising a young officer as any on the station

THE ACCIDENT AT THE SOUTHAMPTON DOCKS.

THE accident at Southampton Docks, on Tuesday week, of which we gave a brief notice in our last Publication, appears to have been of a much more serious nature than was supposed; indeed, it must have been a terrible spectacle to those who happened to be present. When the great lifting-sheers fell into the dock they carried with them a length of nearly 140 feet of the solid masonry, comprising the walls of the dock and a vast extent of the foundations, weighing in the aggregate some thousands of tons. The granite legs of the sheers, each of 16 tons weight, appear to have snapped off in several places like carrots; and the massive wrought iron bolts and fastenings securing the various parts together were torn away as though they had been pasteboard; while the immense blocks of granite lining the coping of the quay wall, together with immense masses of masonry, 40 feet in length, were swept away and engulphed in the dock with a noise exceeding that of artillery or thunder. The Peninsular and Oriental Company's steamer *Bentinck* was alongside the quay at the time, under repair, her boilers having been lifted in by these very sheers only a few days since. Owing to the tide being high, she sustained no damage whatever, the heavy pieces composing the débris of the sheers having fallen outside of her into the dock, while the quay wall skipped inside The sheers were of the largest kind ever made, and capable of lifting 80 tons dead weight at one time. They have been tested to a lift of 50 tons, and, while constantly used in hoisting weights of 15 to 40 tons, no symptoms of defect or instability either in reference to the sheers or the dock walls have been observed. The sheers were 80 feet high and with the necessary chains, gearing, blocks, and hoisting apparatus, cost several thousands of pounds. They are now a complete wreck. The damage done altogether by the accident is loosely estimated at from £30,000 to £40,000. The eastern wall on the dock, together with its foundations, is nearly in ruins. nearly 140 feet in length of it has fallen into the water; while a great portion of the remaining masonry is so insecure as to render its removal necessary. As regards the cause of the accident, it is supposed that, owing to the recent low tides, caused by the prevalence of heavy north-east winds, the severe frost had penetrated between the dock wall and the earthwork, and, acting upon a column of fresh water in the intervening space, as well as upon the inner part of the foundation, had shaken the stability of the fabric upon which the sheers were erected, and caused their entire destruction.

In the accompanying Sketch, of that part of the Docks where the accident has occurred, the peculiar use of the Oriental Company's noble steam-ship *Bentinck* is introduced, undergoing refitment at the sheers previous to her departure for India some few months back.

STATUE IN MARBLE OF ADMIRAL LORD DE SAUMAREZ, FOR THE HALL, GREENWICH HOSPITAL.

BY JOHN STEELL, R.S.A., EDINBURGH.

THIS work of art, of which we this day give an Engraving, has now been fixed in its place, and is one of the three statues of celebrated naval heroes commissioned for Government by the late Sir Robert Peel. In consequence of an accident which befel the model, the marble has only now been completed; but the fine conception, careful finish, and artistic feeling displayed, more than compensate for the delay, and almost dispose us to believe that works of art in this country acquire new genius by executed with more precipitancy than is consistent with excellence

The mode of treatment adopted by Mr. Steell is that daily gaining ground—all the essential characteristics of costume, badges of honour, and emblems of rank being retained, although partially concealed beneath the simple and picturesque folds of a boat cloak—the continuous

H.M. SHIP "PENELOPE," DESTROYING THE TOWN OF GRAND TABOO. (SEE PRECEDING PAGE.)

THE ADMIRAL RECEIVING KING DUCIMO IN BOARD "THE PENELOPE," OFF LAGOS.

SHEERS AND REPAIRING QUAY, SOUTHAMPTON DOCK.—(SEE PRECEDING PAGE.)

sweep of which, terminating in graceful lines, falling over a cannon sculptured in base, invests the entire figure with true classic feeling. There is a calm dignity and thoughtful expression in the countenance of Lord De Saumarez which harmonise well with his character, for he

MARBLE STATUE OF LORD DE SAUMAREZ, RECENTLY PLACED IN GREENWICH HOSPITAL.

was no less distinguished for sagacity than bravery; uniting, during his long and arduous career in his country's service, all the essentials of a skilful statesman and a daring warrior. The introduction of the telescope, united with the unostentatious attitude of the figure, is very suggestive, and we at once imagine De Saumarez engaged weighing well the result of his observations, when, after having discovered the ships of the enemy, he is about to engage in some of those heroic naval achievements with which his name has been identified.

MEMORIAL AT HONG-KONG.

THIS Monument has recently been erected at Hong-Kong, in the Wong-nei-Chung (mis-named the "Happy Valley"), by the officers, non-commissioned officers, and private soldiers of the 59th Regiment, to the memory of their deceased comrades, and of the women and children, who have died since the regiment embarked at Cork, on the 11th June, 1849. The height of the entire monument is 30 feet, in eight pieces of solid granite. The inscription is as follows:—

North Side: Sacred to the Memory of all those of the 59th Regimen who have died between the 11th June, 1849, and the ——.*

South Side: Erected by the Officers, Non-Commissioned Officers, and Soldiers of the 59th Regiment.

East Side: Quartermaster Wm. M'Donald, Surgeon G. W. Powell, Surgeon A. Campbell.

West Side: * Sergeants, — Corporals — Drummers, — Privates, — Women, — Children.

MILITARY MEMORIAL LATELY ERECTED AT HONG-KONG.

Up to the 25th of September the Regiment had lost 2 surgeons, 1 quartermaster, 12 sergeants, 9 corporals, 3 drummers, 213 privates, 15 women, and 41 children. The above numbers are exclusive of those who have died on the passage home, after having been invalided in Kong-Kong.

* To be filled in when the Regiment leaves Hong-Kong.

NEW YEAR'S RECEPTION BY THE EMPEROR AND EMPRESS OF THE FRENCH, AT THE TUILERIES.—(SEE NEXT PAGE.)

NEW YEAR'S FESTIVITIES AND JUVENILE PARTIES IN FRANCE.

Although the French have no Christmas-day, they have a Christmas time as well as the English: the season of balls, fêtes, juvenile parties, and the interchange of visits, which commences with New-year's-day, and is carried as far into the months of January or February as people please.

"Coming events cast their *shadows* before," is the beautiful but hackneyed expression of the poet; but it may be said, with equal reason, that some "coming events cast their *glory* before;" and this view of the question applies admirably to the season of juvenile parties, both in England and in France. For does not the party accepted three weeks in advance cast its long bright halo before it in the imagination of juveniles? Who shall depict worthily and truthfully the pleasures of the interim, when the thought of the glad event so occupies the youthful

JUVENILE EVENING PARTY, AT PARIS.

mind, that what with brooding over it during the day, and dreaming about it during the night, the young ladies and gentlemen almost fancy when it has actually taken place, that they have been to a dozen parties instead of one?

First comes the postman with the letters. See how leisurely he walks along, with what *sang froid*, with what indifference, although he holds in his hand the magic missive that shall make a dozen hearts leap for joy! Oh shame! he is going to pass by—no, he hesitates, he stops, he turns back, with a neat little envelope between his forefinger and his thumb. Then the ring at the door (they have no knockers in France), then the delivery of something to the *concierge*, then the sound of the postman going down the steps—then the delivery of the letters at each successive stage or apartment—then the greedy snatch at the unconscious letters—then the breathless silence while Julie breaks the seal and reads the precious contents—and then the mingled cries of happy voices, and the bustle to and fro. O, what power in a senseless piece of paper that can move the life-springs of so many living creatures! Of course they accept with great pleasure the kind invitation, &c., and make all the preliminaries for the joyous occurrence. And, when at length the day arrives, be sure it will find no pouting lips in this happy family, but all the bright eyes, and shining teeth, and glittering dresses, that give the lie to those grumblers of the press who *will* persist in declaring that France has no longer any festivities, and that the dark shadow of the approaching war has shut up the usual sources of rejoicing. What cares the juvenile for the Emperor Nicholas? Not a straw. "*Vive la danse! Vive la fois!*"

THE NEW YEAR'S RECEPTION AT THE TUILERIES.

THE Levee usually held on the 1st of the New Year took place on Sunday week, in the superb Throne-room of the Tuileries, with the state represented in the Illustration upon the preceding page.

The Ministers, grand functionaries of State, the Judges of the Courts of Law, the Cardinals and Bishops, Canons, Marshals, Generals, and superior officers of the National Guard, the members of the Diplomatic Corps, all in costume of ceremony, were punctual in attendance. It was considered probable that the Emperor would address a few words at the moment the Representatives of the Foreign Powers presented the salutations usual on such occasions; and, as may be easily believed, a good deal of curiosity was manifested on the subject. After saying a few words to the Nuncio, which were not overheard, the Emperor addressed the other members of the Diplomatic Corps, and said, in substance, and very nearly in words, as follows:—"I sincerely hope to be able to maintain the relations of amity which now subsist between my Government and the Sovereigns whose Representatives you are;" and, turning to the Ottoman Ambassador, he added:—"My good wishes, my sympathies, and my efforts are in favour of your Sovereign; and you will be good enough to communicate what I say to him." He then bowed to the Ambassadors, and the rest of the ceremony proceeded.

THE ARCTIC SEARCH.

A DESPATCH has been received from Captain Maguire, giving an account of the Arctic Expedition, from his leaving Port Clarence, on the morning of the 21st August, 1852, till the vessel was released from her icy prison, near the Esquimaux settlement on Point Barrow, in August, 1853. Among the first of the incidents mentioned by Captain Maguire is the trouble which he had with the natives, some of whom were unfriendly, and nearly all dishonest. A great deal of forbearance was manifested towards them for the sake of the object of the expedition, notwithstanding very gross provocation. Sometimes, however, they were obliged to be taught a lesson, as in the following instance:—

"During the forenoon several "u-mi-aks" arrived alongside the ship, disclosing their crews in swarms on our deck, so as literally to crowd it for the day. They were allowed every freedom consistent with their known propensity for stealing; but some bolder than others, were difficult to deal with. One man attempted to force back the after ladder-door, and my stopping him brought about a fight entirely between us. That did not seem to have satisfied him, as he soon afterwards came in contact with the quartermaster of the watch, a quiet but rather short-tempered powerful young man, who, before he could interfere, gave him a lesson he will not soon forget: he dealt him fair English blows about the head, each of them sufficient to stun any one except an Esquimaux, but he received them until they had the effect of quite taming him, when he was put over the side in the presence of at least sixty of his countrymen, few of whom offered to interfere, and the remainder looked on with indifference.

"Arrangements were subsequently made to allow only a few on board at a time, which the captain was at great pains to explain to the chiefs in order that it might not be misunderstood; still little difficulties occurred from the numerous chiefs which the natives committed.

"A more serious affair took place on board the ship. The officer in charge, Mr. Hull, second master, in keeping back a large powerful man who attempted to force his way over the side, had a knife drawn on him by a friend of the other on board the ship, who immediately called out for the women and children to arm. Mr. Simpson, the other officer of the standing near, and very soon produced before the man with the knife one of Colt's revolving pistols, and explained to him the use of its six charges, which had the effect of keeping them very quiet for the remainder of the day. I met the women and children re reating over the ice ahead of the ship, and thought something must have happened, although they told me they were going home to dinner. A chief, striving at the same time, reassured the retreating party, when we explained to them that if they used knives we must use guns, but otherwise we wished to be good friends. Similar squabbles took place frequently. This was a cause of a good deal of anxiety with me, as our men, being unarmed, were very much at their mercy under such circumstances; and, in the event of arming them, more forbearance was necessary than some of them would have been found to possess, from the frequent provocations they had received in return for the usual kindness and good-nature that characterise seamen. On giving the subject every consideration, and seeing that it must excite an unpleasant feeling for our men to have knives pointed at them without a means of defence being at hand, the quartermaster of the watch, and two putty officers of the party would, when on shore, have armed with pistols, but properly cautioned not to produce them unless under circumstances of necessity, as I hoped the mere knowledge of their having them would be sufficient. Of this we soon had an instance. One of them played off one of their usual practical jokes on one of our men, by kicking him in the back of the knees when carrying a spar, for which he was rewarded with a bow on the face. He then drove him to the corporate entrance of the coming up, and being known to have a pistol, the offender ran away. These sort of annoyances continued as long as our men had work to do outside of the ship.

"On another occasion the natives bowed a very riotous disposition, so much so, indeed, as to require a sharper mode of dealing with them, as he thus relates:—

"We observed with our glasses an unusual stir at the settlement. In the first place, some women and children were seen moving across the bay to Cape Smyth; afterwards the men were advancing over the ice towards the ship in three single files, armed with their bows and arrows and quivers. I fancied on this occasion they saw spears also, but did not observe them afterwards. The leading men were discharging their arrows ahead of them as they advanced, picking them up again as they reached them, which satisfied me their visit was not entirely friendly, and my mind was soon made up to keep them in check at the distance of the nearest man, by firing over their heads, wishing above all things to avoid taking a life, unless under the most urgent necessity. Our small force, forty-one in all, was placed under command of the officers appointed to guard the quarters, forecastle, and previous to their getting within range, a blank charge from one of the 18-pound carronades and ... ce from the gun, which had not the effect of dispersing them, as I hope ... and when within musket range we commenced firing over them from the forecastle. This had the effect of dispersing them for a short time, when they advanced ... from the ship's bows. At the time one of the chiefs who had been on board the ship previously, with every kindness made a rush down ahead of the ship towards us first by others ... when he found ... had a bayonet fixed on the end of a musket ... ran down his bow and quiver, ... a powerful fellow, and ... with barbed iron heads. This man had become very unpopular with the crew, from one or two acts of fun, and I'm ... determined ... case, that, although the order to fire over his head was carried out, this direction was very much infringed upon. A few now extended themselves ... over the bows, but, as a constant fire was kept up in that direction, not many attempted to reach the ship's ... being fired so as to graze it, had the effect of ... them. At this time a false alarm was given that they were breaking down the house and carrying things away. I was on the forecastle, and on hearing the report, ordered a man next me, a marine, to fire at a man then escaping from under cover of it, and, from the sudden way he seemed to fall and kick out his legs, I thought he was killed. Immediately afterwards the report was found to be incorrect, and no more shots were fired at them; and I had the satisfaction to find out that the man fired at (the only instance) was not killed.

"After this, the captain and some of the crew paid visits to the Esquimaux settlement, and friendly intercourse continued, though with partial interruptions, owing to the felonious propensities of the natives. One of the natives was shot by accident on the 8th of June, and the misadventure, on being explained, was attributed to the right cause. Whilst these proceedings were going on, two of the officers fell in with a chief who had been previously seen by Capt. Pullen; and from this man they obtained some interesting information as to the migratory habits of the natives. In May they found a native, who brought them papers, showing that Commander M'Clure had been making his passage along shore in the *Investigator*. On the 9th of July, Capt. Maguire left the ship with the gig and whale-boat for Cape Lisburne. The boats were lost in this expedition, but the whole party returned to the ship in safety. On the 26th of July, the ice having cleared away for a considerable space round the ship, preparations were made to move off; and on August 7, at eight p.m., Capt. Maguire left the anchorage where he had found shelter for eleven months and four days. On the 10th he fell in with the *Amphitrite*, with which he returned to Port Clarence, the point from which he originally set out.

PROVINCIAL INTELLIGENCE.

BREAD RIOTS IN DEVONSHIRE.

The dearness of food has led to serious disturbances in Devonshire within the last few days. The first breach of the peace took place at Crediton, about eight miles from Exeter, where a mob of navvies and labourers, thrown out of employment in consequence of the snow, assembled on Friday evening last, armed with sticks and stones, and proceeded to the shops of the principal bakers, demanding a supply of bread. This having been refused, missiles were hurled through the windows, and the mob helped themselves. In some instances the shopkeepers heard of the approach of the rioters in time, and closed their shutters without any loss of time. This precaution, however, was of little avail; the shutters were beaten in with immense sticks, and the men seemed determined to have all they could lay their hands upon. The parish constables attempted to interfere, but they were powerless. Mr. Buller, a county magistrate, having arrived, a number of special constables were sworn in, who prevented any further outrage. On Saturday morning a band of fifty navvies went through the market, and one of them se zed a pound of butter throwing down a shilling. The woman told him the price was 1s. 6d.; but he coolly replied that the rioters had closed their shutters without any sort

gine, the railroad, and the electric wires, and that has made us the most enterprising, the most industrious, and the most prosperous people in the world. But we became all this, and shall become much more, not by the aid, but in spite of the education given to our people. There remains, however, a large substratum of society which has not the advantage of any education at all, and which might help us in the struggle to maintain our proud preeminence, if we would extend to them some portion of the advantages which they cannot obtain for themselves. The poor require secular knowledge to enable them to become good workpeople, and to live and thrive. In default of it, hundreds of thousands remain destitute, and in due time become criminal. Every one knows the not quite hopeless, but often heart-breaking, trouble that it costs the State and benevolent individuals to reclaim and to educate the young outcasts of society; but all the world is unfortunately not convinced of the comparative facility with which they might be educated into virtuous and intelligent citizens, if they were taught and cared for at the proper time. Squalor, filth, obscenity, and dishonesty are the only "common things" that most of them understand, unless the pursuing policeman, the stern judge, and the relentless gaoler, may be considered to extend their knowledge a little further. The good chaplain gives his ministrations at too late, and for too short, a period to be of much service. The question incidentally raised by Lord Ashburton, has a deeper root than perhaps even his Lordship imagined. The neglect of it has already done us much injury, and thrown upon us much merited obloquy. If we are again to become a fighting nation, the necessities and temptations of war will doubtless greatly diminish the numbers of our destitute and criminal population; but if we would enjoy the blessings of peace—when peace shall again be restored to us—we should teach our poor what the rich and the comfortable teach themselves, that man is made for this world as well as for the next, and that to be ignorant of the uses and benefits of the "common things" which surround us, is to be practically ungrateful to Heaven for the blessings which it has bestowed upon us, and to degrade ourselves, by our apathy and ignorance, into the condition of savages.

MUSIC.

THE WEDNESDAY EVENING CONCERT of this week consisted of the materials prepared for last week's concert, which (as we mentioned) was postponed in consequence of the severity of the weather. It was the weakest concert of the series. Indeed it is impossible to make a strong concert in London at a time when almost all our principal performers are absent from town. The chief attraction was Madame Anedei, who seemed conscious of the necessity for the exertion of all her powers, and certainly did exert them most effectively; particularly in the splendid scena, "Pensa alla patria," from Rossini's "Italiana in Algieri," in which the charms of her lovely voice were shown to the greatest advantage. The only other singer of note was Mr. Augustus Braham, whose performance of the celebrated song in Weber's "Oberon." "Oh, 'tis a glorious sight to see," was received with much applause. There were solos on the pianoforte, harp, and violin, by young players, who showed promising talents, but something more than promise is expected a t a great concert like this. We trust that the directors of these concerts, who appear to have always done their best, will next week have it in their power to produce a stronger programme.

SIGNOR MARCHESI, who for several seasons has held a distinguished place in the London concert-rooms, is at present in Italy. He has an engagement at Ferrara, as *primo baritono assoluto*, during the Carnival; and made his first appearance on the 26th of December, as *Charles the Fifth*, in Verdi's "Ernani," with great success.

THE THEATRES, &c.

DRURY-LANE.

Mr. Mark Lemon had a three-act drama produced at this theatre on Monday. It is entitled "Paula Lazarro; or, the Ladrone's Daughter." The scene is laid in Spain, and the story extends over a considerable period. The action consists of the consequences of a feud between the houses of Tavero and Lazarro. *Sidi-on Lazarro* (Mr. T. Mead), apparently a blind beggar, but really a ruined nobleman, seeks revenge for the destruction of his family. He is accompanied in his wanderings by *Paula* (Mrs. E. Lewis) his daughter, who guards him with tender affection, but revels from his plans of vengeance. They do not appear until the second act; when the old father leagues with the brigand *José Maria* (Mr. G. Bennett), who undertakes to surprise the alcazar of the *Marquis of Tavero*, and effect the abduction of his daughter, *Juana* (Miss Featherstone). This purpose is effected at a masked ball. Soon after, *Paula* discovers that *Juana* is her long lost sister, who had been taken away by the former Marquis. She has a lover, one *Pablo* (Mr. Belton), a supposed muleteer, who, in like manner, turns out to be the son of the *Marquis*. In the *melée* which succeeds, this state of things *Gideon* is shot by soldiers in pursuit of the brigands. Mr. Mead, in the character, won much applause; and Miss Featherstone, an encore for one of her two songs The scenery and costume were picturesque; and the play was accompanied by melodramatic music, the composition of Mr. Alfred Mellon. Altogether, the piece may be accounted a success, though not of the class which we should prefer witnessing on the classic boards of this theatre.

WHITTINGTON CLUB.—On Monday the annual juvenile soirée took place in the spacious rooms of the above institution. The members of the club, with their juvenile friends began to assemble at seven o'clock. From 300 to 400 pretty, well-dressed children shortly congregated in the hall, which was varied with conjuring tricks by Mr. Farley, and dissolving views by Mr. Cox. The children were served with supper in the drawing room, and afterwards kept up dancing till after midnight, when they retired, highly delighted with their entertainment at the Whittington Club

WOODCOCKS have been very plentiful this season in Appin-Argyle. On the 1st inst. a friend of Miles Lockhart, Esq., shot 11½ couple of cocks, and 6 braces of snipe, in 2½ hours, at Ardsheal, Appin, N.B.

CHEAP NOVELS.—(*To the Editor of the* ILLUSTRATED LONDON NEWS.)—"24, Cockspur-street, January 8th, 1854.—In your article on Literature, Art, &c., of last week, you mention our names in connection with Mr Bentley's new scheme of publishing novels at a reduced price, and that he was not supported by the circulating libraries. How far he was encouraged by others, we know not; for ourselves, we can say that we took *three* times the number of copies we should have taken at the old price of 31s. 6d. We trust that you will give this explanation, in order that those who take an interest in cheap literature may know that we did not offer any impediment to its well-working. Your obedient servants, CAWTHORN and HUTT."

DISTRESS IN LONDON.—A meeting of the inhabitants of St. Saviours, Southwark, was held in the vestry-room of St. Saviour's Church, on Tuesday, to consider the distressed condition of the poor, from want of labour and the high price of provisions and fuel, and to devise the necessary means for their temporary relief. The prolonged severity of the weather, combined with the great dearness of coals and bread, has brought upon large numbers of deserving poor persons considerable want and suffering. Various resolutions, approving of the above object for the welfare of their poorer neighbours, were passed, and subscriptions entered into.

MARYLEBONE FREE LIBRARY.—The reading-rooms of this institution—the first of the kind established in the metropolis—were opened for the gratuitous admission of the public, at 27, Gloucester-place Newroad, on Monday. The books are arranged round the rooms on the first floor of the house, tables being placed in the centre for the convenience of readers. The name of the institution is local, but persons of any locality have free access to the books. The library already possesses about 3000 volumes, comprising works in a.. branches of literature, and endeavours are being made to increase the number.

Verdi's "Luisa Miller" has been given at the Oriente, in Madrid, with great success; Mdlle. Gazzanga, as the heroine, is very highly spoken of.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Lord Brougham is expected to leave his chateau at Cannes at the close of next week for Paris, *en route* to London. The noble Lord, who is now in his 76th year, is in the enjoyment of good health.

It is stated that Lord Harris, whose period of service as Governor of Trinidad will shortly expire, has been offered the Governorship of Madras. Captain Charles Elliot, R.N., now Governor of Bermuda, is spoken of as the new Governor of Trinidad.

The *New Prussian Gazette* lately announced the mobilisation of the entire Russian army; adding, that the measure would enable the Czar to dispose of 1,000,000 soldiers.

Captain Hast, the oldest and one of the most experienced commanders in the Royal West India Mail Steam Packet Company, and who was the commodore of their fleet, has retired from their service.

With reference to the trade with Russia at the present juncture, it is of some interest to know that large purchases of grain have been made with "hard money," as usual, with the provision that it will be returned in the event of hostilities preventing its shipment.

There died at Moscow, on the 11th of October, a soldier, named Peter Sosnowsky, aged 122 years, 1 month, and 25 days.

Mr. Edward Johnstone Manley is appointed Colonel Auditor; Mr. John Foster, Accountant of Stores; Mr. Francis Smith, Solicitor-General; and Edward M'Dowell, Crown Solicitor—all in Van Diemen's Land.

The *Voce della Liberta* of Turin having been some time ago condemned for insults against Napoleon III., and having appealed, the Court of Appeal has just confirmed the sentence of the lower court.

The neighbourhood of Exeter has again been flooded to an extraordinary extent. On the Exeter and Crediton Railway it was found impossible to carry on the traffic.

A great curiosity has been exhibited on the Stock Exchange. It was a receipt for £1300 Consols, dated July 20, 1798, at the price of 47½, the purchase-money being only £590 15s. The above is nearly the lowest price Consols ever fell to.

A letter from Eisenach says:—"On Christmas-day, the Duchess of Orleans gave an abundant dinner to 400 poor persons of this place, and also distributed clothes to 400 poor children."

The Parliamentary estimate for constructing the Wellington Docks, Southwark, is set forth at £917,000; being £908,000 for the dock works, and £11,000 for the connection by tramway or railway.

There has been an increase in the exportation of soap since the duty was removed. In the month ended the 5th ult. the value of soap exported was £24,863, against £18,450 of the same month in the preceding year.

The Count de Peyronnet, formerly Minister of Justice under Louis XVIII., and afterwards Minister of the Interior under Charles X., has just expired, at Montferrand, near Bordeaux, aged 77.

Mr. Milner Gibson has arrived at Malta from the Ionian Islands, and proceeds on by France to England.

The Peruvian Government has instructed its agents in this country to advance the price of guano to an amount equal to the advance in the rates of freights during the past year.

The orphan child of one of the oldest of the Irish baronets was admitted a few days since into the Wanstead Infant Orphan Asylum.

The committee of the Société Française de Bienfaisance have received from the Emperor of the French £40 in aid of the funds of their institution, for the relief of the French poor in this country.

Mr. John Sadleir, M.P., has ceased to be connected with her Majesty's Government. Lord Aberdeen has received the resignation of his office as one of the Junior Lords of the Treasury. It is rumoured that Mr. C. Fortescue, M.P. for the county of Louth, will succeed Mr. Sadleir.

The *Freeman's Journal* states, that "a commission has been sitting for some weeks, under order, to prepare a report on the proposed transfer of the heads of the Irish Post-office department to London.

J. H. O'Byrne Redmond, Esq., of Killoughter Hall, Ireland, has been appointed Chamberlain to his Holiness Pope Pius IX.

The Emigration Commissioners have chartered the following ships to take out emigrants to Australia—viz., the *Royal Charlie*, the *America* the *Parade*, and the *Taymouth Castle*. The *Royal Charlie* is bound to Adelaide, and all the others for Melbourne.

Sir Edward Bulwer Lytton, M.P., has named the 25th instant for his visit to Leeds. The annual soirée of the Mechanics' Institution and Literary Society, at which he is to preside, has been fixed to take place on that date.

In the Southampton graving dock there is a screw steamer with a boomerang propeller, the first that has been seen in Southampton water. The vessel is named the *Hanalin*, and is intended for a trader in the Chinese seas. She will carry nearly a thousand tons of coals.

In consequence of the very inclement weather, and other circumstances, the opening of the Londonderry, Seaham, and Sunderland Railway, which was to have taken place on the 7th January, is postponed until June.

The extramural cemetery for Islington has been adopted by the parish of St. Pancras, by vote: 397 for the cemetery, and 607 against it.

The Academy of Sciences, in Paris, have elected M. Tulasne a member in the section of botany, in the place of M. Jussieu, deceased.

The Czar of Russia was burnt in effigy a few days ago at Cupar—a band of music and torchbearers assisting.

The success of the New Stamp Act is immense. Already £400,000 more than Mr. Gladstone calculated has been realised. Some thirty-five millions have been sold.

The Russian clergy have offered to the Czar, from the large Church property, a sum of 20,000,000 roubles towards the war expenses with Turkey.

It is understood that a bill is in preparation for the abolition of the practice of locking up juries "without meat, drink, fire, or candles, until they come to a verdict."

Fires seem to be more numerous in Paris than even in London. In one day, lately, the gendarmes, besides having to extinguish fires in twenty-eight chimneys, had nine serious conflagrations to combat between midday and six o'clock next morning.

The Duke of Richmond, it is stated, has sold his stud, and retired from the turf.

Captain Inglefield, under whom the late Lieut. Bellot served as a volunteer, has had an audience of the French Emperor. So has Dr. Bowring.

Raglan Castle, the seat of the Duke of Beaufort, narrowly escaped being burned down last week.

The printers of western and southern New York (says the *Le Roy Gazette*) are to celebrate the anniversary of Franklin's birthday, at Albany, on the 17th of January.

The barque *Hannah Maria*, with 100 emigrants, has been lost off the south-east coast of Australia. Happily, no lives were lost.

An accident happened on the line last week, near Holyhead, to a train getting up the rain, and running into a snow-drift. The driver and stoker were suffocated.

Three immense flights of wild ducks, and one of wild geese, passed over Cambridge last week. They were making their way in a southerly direction.

The number of vessels employed in the coasting-trade of the United Kingdom in the eleven months ended the 5th ult., that entered inwards, was 123,746, and the tonnage 11,866,448; while the number cleared outwards was 135,419, and the tonnage, 12,485,516.

On Tuesday week Major Rait, of Anniston, was sledging in true Russian style through the streets of Brechin. Colonel Maule was also driving alone in his sledge, with his brothers, Lord Panmure and the Hon. William Maule

His Excellency Mr. Mason, the newly-appointed Minister from the United States to Paris, arrived in London from Washington, *en route* to enter on his diplomatic duties

The dearness of provisions in Poland has caused the Administrative Council at Warsaw to issue a decree prohibiting the exportation of every sort of corn and flour from Poland, dating from the 1st January.

The Earl of Portsmouth died at his seat in Hurstbourne Park, near Andover, on Monday. The second Peer, Newton Fellowes, was born in 1772, and had succeeded his brother but a few months. His only surviving son, Viscount Lymington, now in his 29th year, becomes Earl of Portsmouth.

The mortality of the town and parish of Montrose for the year 1853 was 307. This is twenty less than 1852, and sixty-five less than the average of the preceding ten years.

A testimonial, consisting of a magnificent candelabrum, value £230, was presented to the Right Hon. George Bankes, M.P., by his Dorsetshire admirers. The presentation took place on Wednesday, at a public dinner in the Town-hall of Dorchester.

The *Journal de Calais* mentions the arrest there of a person named Antoine Wenzel, a Saxon by birth, who had just landed from England. A pocket-book containing forged bank notes to the amount of 90,000 fr. is said to have been found on him.

Prince George Stourdza, son of the ex-Hospodar of Moldavia, has offered his services to the Sultan, who has accepted them; and the Prince was to set out for the army of Omer Pacha, where he will command a brigade.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

The question of an English copyright in books in America has again been under agitation at the Board of Trade; but the progress made in determining the question is neither very great nor, to English authors and publishers, very satisfactory. Jonathan wishes to deal out a hard measure to John Bull. The Americans possess, at present, an enormous advantage in the acquisition of English books. It is true that, at times, they give a little money for what they get—and give it, we believe, willingly; nay, some houses are, indeed, liberal, and would like to be still more liberal; but the feeling of the nation is, apparently, against any full recognition of an English author's claim to a copyright in America. There is a belief abroad, supported by a rumour from the Board of Trade, that a duty is about to be levied in America on the importation of new books from England, and that an English author's claim to a copyright, in America shall only exist in cases where the type of the book has been actually set up, and the pages printed off by American hands. This, perhaps, to very popular authors will not be a very heavy tax, but it will have, we fear, a very different effect with books that do not rush immediately into reputation. The class of books requiring the kindliest recognition by a nation, such as history and biography, will, under the rumoured treaty, receive but very least. This should not be.

A very useful society—the Shakspeare Society—terminated its labours on the first of the present month. This society had existed for twelve years, and has given to its members and to the public some really useful and important publications. If it failed to throw any valuable light on the life and works of Shakspeare, it was not from any want of activity or desire, but rather to the circumstances, only too well known, and too true, that diligence is ever failing in any endeavour to "unsphere" Shakspeare. Not but what the society has contributed several points of minor value to the received story of Shakspeare's career, or that it has failed in throwing light on some of the obscurer passages of his writings. The essential service, however, rendered by the society to our literature, has been in what it has done for Shakspeare's contemporaries. The forty-seven volumes issued by the society abound in most curious matter. What excellent materials are to be found in the "Registers of the Stationer's Company," the "Account-Book of Heaslowe," and the lives of Alleyne and Inigo Jones. And how fine a print has the society supplied in Mr. Cousins's admirable mezzotint, after the Chandos portrait of Shakspeare. That print alone cost in the mere engraving one hundred and eighty guineas, and is a faithful and admirable translation of the original picture. The society's stock of books will, it is said, be sold. Mr. Cousins's plate was destroyed after seven hundred and fifty impressions were taken.

The reading-room of the British Museum was re-opened on Monday last, but without any visible improvements in the arrangement of the books and tables. The selection of works of reference on the shelves might be easily improved, and there is still a want of a printed catalogue of the books to which readers are allowed access without tickets of application. A great improvement might have been made in the interval, and at a small cost. The catalogues are placed at the furthest extremity of the room, and at the greatest possible distance from the station to which the reader is obliged to carry his ticket. He has, in the present arrangement, to pace the whole extent of the room before he can obtain the book he requires. This is not only inconvenient, but is annoying to readers. Either the person receiving tickets should be placed nearer the catalogues, or the catalogues carried nearer to him. Though Mr. Panizzi is not over-fond of out-door suggestions, he will, perhaps, kindly look to the evil and its obvious remedy.

The daily papers announce the death of Mr. Maltby, the friend of Porson, and known to every frequenter of Mr. Rogers's breakfast-table, where his varied information was contrasted very favourably with the repartees of Sydney Smith, Mr. Rogers's own witticisms, and the ceaseless puns of Mr. Luttrell. As those we love decay, we die in part; and Mr. Rogers, who had lived in uninterrupted friendship with Mr. Maltby for more than eighty years, will indeed feel the loss of his early friend. Mr. Maltby was in his ninetieth year, and had seen and known many eminent men belonging to bygone generations. He linked us to the past—to the days of Porson and Sneridan, of Grey and Mason.

This linking with the past receives an admirable illustration in one of the new volumes of "Moore's Diary:"—

In talking of the close *rapprochement* which long lived individuals establish between distant periods of history, Lord Lansdowne said, as an instance that he himself had been acquainted with Sir Edward Baynton, who knew Sir Stephen Fox, who had been on the scaffold with Charles I. I mentioned, as another instance, William Spencer having, when a boy, played on the sofa with his grandfather, Lord Vere, who had done the same thing (played on a sofa), when a boy, with Charles II. Lord Lansdowne remarked, how curious it was to think that by this sort of links, the number of persons necessary to carry tradition down from the time of Adam to the present day might all be contained, with ease, in the room we sat in, calculating them, at a rough guess, about 70 persons.

We will not endorse the calculation of Lord Lansdowne, though his Lordship was, at one time, Chancellor of the Exchequer. We shall never, indeed, look upon Lord Lansdowne without saying to ourselves, Here is a living being who knew Sir Edward Baynton, who knew Sir Stephen Fox, who had stood, two hundred and four years ago, on the scaffold with Charles I.!

The recent death of the Principal of Brasenose, Mr Harrington, at the age of fifty-two, is suggestive of a very appropriate but unusual reflection. Mr. Harrington was the youngest of the Heads of Houses at Oxford, and was not even born when the still-living President of Magdalen (Dr. Routh) was made President of Magdalen. Dr. Routh was well acquainted with a former President of his College, who had lived on terms of intimacy with Hough, the famous President who made so conspicuous a figure in the Revolution, and who is seen to such advantage in Mr. Macaulay's History. Here is another living link with the past; but still not so extraordinary as Lord Lansdowne's.

Sir Charles Eastlake has preserved a saying of Talleyrand's connected with the irreparable loss of the Lawrence collection of drawings, that calls for general circulation. Sir Charles, as might have been expected, was eager in urging the purchase of the collection by the British Government "When the drawings were in Mr. Keightley's hands," says Sir Charles, "I requested permission to take some of them to Lord Brougham, then Lord Chancellor. Lord Lansdowne and Talleyrand were present: the drawings were examined by them; and I remember Talleyrand saying, 'If you do not buy those things you are barbarians.' His expression was, 'Si vous n'achetez pas ces choses là, vous êtes des barbares.' And so we are barbarians about works of art; but the real barbarians in the Lawrence case were Lord Grey and Sir Martin Archer Shee."

Critics well up in old glass are praising and directing attention to the stained-glass window, just completed by Miss Harriet Clarke, for the little church of St. Martin's, at Canterbury. Mr. Winston (whose knowledge of mediæval glass is not for a moment to be doubted) is, we are assured, high in his approbation of it. We have seen it ourselves, and can safely commend it for skill in design, and rich but sober colouring. Miss Clarke has not suffered herself to be led away by a blind admiration of what is old, but has endeavoured successfully to engraft whatever is valuable in fifteenth-century glass on the skill in design to be found in the best Italian painters.

It is estimated by the Census Tables that the number of men engaged in London alone upon omnibuses on the Sunday is as many as 6,000.

OBELISK, AT CONSTANTINOPLE.

THE BLACK SEA.

In the present interesting crisis, the united fleets of England and France having, for the first time, in the history of the world, entered the Black Sea, hitherto viewed as a Russian lake, we feel called upon to give a full and faithful portraiture of this important spot, which may, before very long, become the scene of events materially affecting the destinies of Europe.

The Black or Euxine Sea is a great inland sea between Europe and Asia; its extreme length being 700 miles, and its greatest breadth 380 miles. It is bordered by the countries of Russia, Armenia, and Asiatic and European Turkey; and communicates by the Strait of Yenikale with the Sea of Azov on the north-east, and by the Bosphorous with the Sea of Marmora, on the south-west. The Black Sea is larger than the Baltic, and receives larger rivers. The land which surrounds the Black Sea is almost everywhere fertile; and it can be navigated at all seasons, except in the Sea of Azov, and some of the ports adjoining Odessa. The shores are high and bold on the north-east, east, and south-west, but flat on the north and north-west. The water contains one-seventh less salt than the ocean, and is so fresh that it freezes very easily. The Black Sea has excellent harbours on all sides; but the only gulf of importance is that of Kerkinit, between the Crimea and the continent of Russia. From its extent, position on the earth's surface, and physical structure, the commerce of the Black Sea ought far to exceed that of the Baltic; yet we find our trade with the former limited to comparatively minor operations on the Lower Danube, at Odessa, Taganrog, and Trebizond; while the Baltic trade of Sweden, Prussia, Russia, and Denmark, constitutes no inconsiderable fraction of our aggregate national commerce. The Black Sea, which has at a comparatively recent date been opened to all trading vessels, is still hermetically sealed in time of peace against the ships of war of all nations situated outside the Dardanelles.

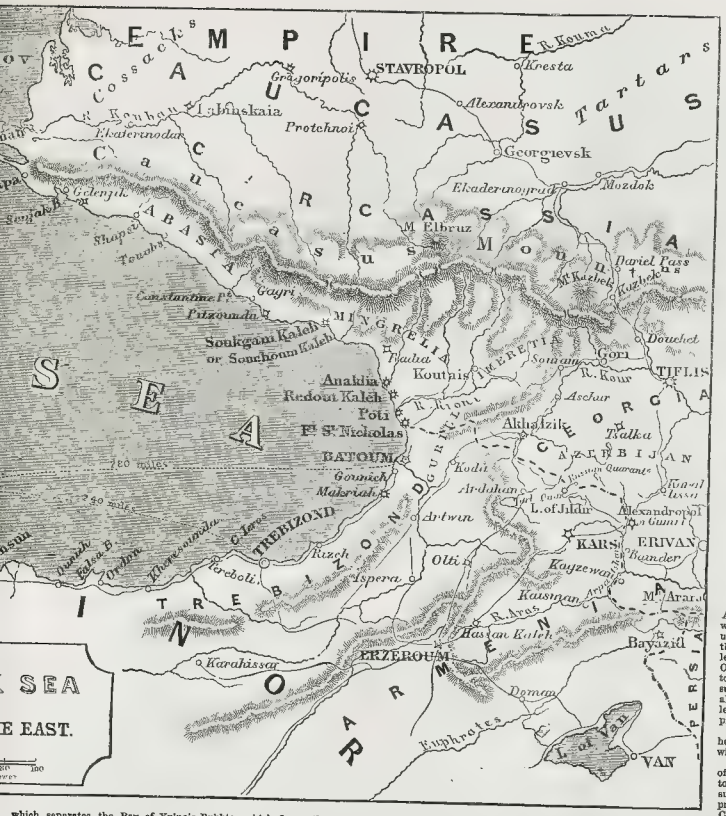
The *Cologne Gazette* contains the following details of the positions of Russia on the eastern coast of the Black Sea:—

"Anapa is the most northern point on the eastern coast of the Black Sea. It is a celebrated fortress, which the Turks originally constructed to protect their commerce with the tribes of the Caucasus. Since then the Russians have made it the most important military position in Circassia. The harbour is open to every wind, and is useless except in the fine season.

"The first port on the coast is Sudjouk-Kalé, which the Russians have defended by three redoubts. In this port the Russian squadron captured the English vessel the *Vixen*, an event which produced so great a sensation in 1837. Some way further down is the Bay of Guelendjik, the finest and safest on the coast, and the most important station of the Russian flotilla appointed to watch the movements of the Circassians. Further on, is the Bay of Pchilat, at the entrance of which the Russians have had a fort since 1837. Along the coast, inhabited by the formidable tribe of the Chapsuke, are the little bays of Nonlan, Djonhou-hon, Kodos, Subachi, Naidan, and Mamai. This part of Circassia, which is marked by rich cultivation and numerous villages, opposes the most determined resistance to the Russian rule. Beyond Mamai the western coast of the Caucasus assumes a more imposing character—the rivers being larger, and the general aspect of the hills more rugged and lofty First of all is seen the fine valley of Sutchali, then the fort of Navakinskoi, Cape Senghi, called the Cape of Hercules by the ancients, and the bays of Komomichelaz and of Kinschuli; next, the sombre fortress of Sagri, commanding the entrance into Circassia on the side of Abasia; behind which rise the precipitous rocks which constitute the most elevated points of the Caucasus. Pozunda, famous for its church, which is said to have been founded by the Emperor Justinian, is the first important point of Abasia; then comes the fort of Bomborai; next Guelendjik—one of the best bays on the coast, where the Russians have a fort, built in 1838, by the Sultan Amurath; and, lastly, Iskuriez, known in the time of the Romans by the name of Sebastopolis, about 1½ English miles below Cape Iskarias. The mountains of the Caucasus on the north, and those of Akhalzick on the south, surround this magnificent basin, watered by the rivers Khopi and Rion (Phasis). At 8½ English miles above the Phasis, the little river Nabs-Nelea (Lixis, of Arrian) separates the Russian territory from that of Turkey. In the middle is situated Trebizond—become, since the commercial blockade of Russia, one of the most important places of the Black Sea, being the great *entrepôt* of all the articles of importation and exportation from Northern Persia and Turkey in Asia. The situation of Russia, in appearance so powerful, is exceedingly critical on the eastern shore of the Black Sea. She possesses there only detached forts; and the Turks have taken one of them, that of St. Nicholas, which the Russians, notwithstanding all their efforts, have not as yet been able to retake."

The town and port of Sebastopol is, however, the famous stronghold of the Russians in the Black Sea. Vsevolojsky, the Russian topographer, describes Sebastopol as one of the most modern creations in the rapidly-growing empire of the Czars; its site, until 1786, having been occupied by a miserable village of Tartar huts, named Akhtiar. The splendid natural advantages of its harbour for a first-rate naval port, however, attracted the keen notice of Catherine II.; and in 1780 the first stone of the new fortress and arsenal was laid. Sebastopol is situated on the western coast of the peninsula of the Crimea, in an amphitheatre to the south of the harbour, extending along a point of land

BURGAS, ON THE BLACK SEA.



which separates the Bay of Yajnaia-Bukhta, which forms the port, from Artillery Bay, a small indentation on the other side. The town stands on a chalky stratum, which rises from the height of thirty feet at the extremity of the point to an elevation of 190 feet above the sea in the upper part. This elevation, with the steep coast opposite, which also consists of a calcareous rock, perfectly defends the bay, which, from the summit of the heights, appears to lie at the bottom of a deep cavity; and, indeed, at a very short distance from the shore inland, it is impossible to perceive the tops of the highest masts Near the extremity at the point of land stands the house built in 1787 for the reception of the Empress Catherine II. Behind are situate the Admiralty, the Arsenal, and the houses of the naval officials, while higher up are the dwellings of the inhabitants of the town, the market, and the Greek Church; besides which there is a Russian Church, for the use of the sailors belonging to the Black Sea fleet. The seamen's hospital and barracks, and the magazines, are mostly situate on the other side of the harbour, and, together with the barracks of the garrison, built a short distance from the former, compose a sort of suburb. The town of Sebastopol itself is not much above a mile in length, and is nowhere more than 400 yards wide.

The harbour, the most important feature in Sebastopol, has been compared to that of Malta. The principal bay is about three miles and a half in length, with a width of three-quarters of a mile at the mouth, widening to nearly a mile, and then narrowing to 600 or 700 yards at the head. The entrance of the harbour is defended by strong batteries placed at the extremity of the two points of land that form the bay. Besides these, there is another fronting the town, and two more on the double point on which the town stands, with a redoubt higher up.

THE TOWER OF GALATA, AT CONSTANTINOPLE.

About a mile from the mouth of the bay the grand port for vessels of war forms a sort of small arm, running in a south-west direction. It is upwards of a mile and a half in length, with a width of 400 yards at the entrance, and has a little narrow creek of about 600 yards in length, in which ships can be laid up in ordinary with perfect safety. On the other side of the town, in Artillery Bay, is a similar creek, used to careen vessels of war. The sea-worm, *teredo navalis*, which pierces submerged wood, exists in large numbers in the Black Sea, especially along the shores of the Crimea, and in the harbour of Sebastopol. In less than two years, if a vessel is not copper-sheathed, these worms pierce through the whole of the outer timbers.

The situation of Sebastopol on a dry soil causes it to be extremely healthy, the air being tempered in summer by cooling winds; in winter it is sheltered by lofty hills to the north and east.

Kherson is an important fortified town and port on the right bank of the Dneiper, and about ninety-two miles E.N.E. of Odessa. The town was founded by Potemkin, under Catherine II., in 1778 (after the successful war which resulted in the treaty of Karnadji); and the proud Empress, in exultation, inscribed over the gates, "The way to Constantinople." The arsenal, barracks, and citadel are represented as formidable in their dimensions and arrangements. In the town are buried Potemkin, the founder; and Howard, the philanthropist, who died here January 20, 1790.

For a period of three hundred years the commerce of the Black Sea was closed against the nations of Europe, and was exclusively the privilege of Turkey. But the conquests of Peter the Great and Catherine changed all this. The Russians advanced to the south and made themselves masters of the Sea of Azov, the Crimea, and all the northern coasts of the Black Sea. In 1774 the treaty of Karnadji was signed, which, by throwing open the Bosphorus and the Dardanelles, definitively secured to Russia that immense influence which she exercises to this day over the destinies of the East. England has secured a position at Trebizond, which enables her now to supply all the neighbouring provinces of Asia with the manufacture of

RESIDENCE OF PRINCE GORTSCHAKOFF, NEAR BUCHAREST.

Western Europe, while the rapid rise of large commercial towns in the Danubian Principalities has diverted much of the vast corn trade which was once carried on through this port.

Odessa is, next to the two capitals of the Empire, one of the most important cities of Russia. Its position on the Black Sea, the rapid increase of its population, its commercial wealth and its brilliant society have enabled it to outstrip the other half Sclavonic, half Tartar cities of the Empire. The Russians themselves prefer it to St. Petersburg, as they enjoy greater liberty, and are relieved from much of the etiquette of the capital. Odessa is the Paris of the Russian ladies, where they can indulge their taste for dress and their luxuries without the ruinous expense whi h they entail on them at St. Peter burg

The town is defended by a wall and ditch; but the fortress built by Suwarrow, in 1793, is now used as a quarantine establishment. The city is built of stone, is paved with granite, and has macadamized roads. It has a cathedral and 21 other churches, and 30 bridges; and among the chief buildings is the bazaar, "*le petit Palais Royal.*" It has open boulevards, botanic, and other gardens. The port is formed by two moles, bordered by a quay, on which is a bronze statue of the Duke of Richelieu, erected in gratitude for his services in improving the city. Odessa was founded in 1792. It affords a remarkable example of commercial prosperity. In 1802, its population was only 9000; it was made a free port in 1817; in 1837 its population had increased to 53,803; and in 1846 it amounted to 70,877. It is still rapidly increasing. Its chief trade is the export of Russian products, and the import of foreign goods; and it has two steam navigation companies.

Kustengee is a fortified town of Bulgaria, forty miles east of Rassova, at the termination of Trajan's Wall, of which some traces exist. It has some trade in corn, abundant supplies of which are raised in the neighbourhood; but its harbour is exposed, and ill adapted for large ships. Kustengee is supposed to have been originally one of the principal mouths of the Danube, the passage of which river towards this point has, in course of years, become filled up; but the important saving in distance to be accomplished by resorting hitherto, instead of by the present circuitous route by Sulina Passage, has been frequently agitated; and the late Sultan, as well as his successor, has at times seriously entertained the project of re-opening a line of traffic in this direction, either by means of a canal or railway. These projects have always been industriously opposed by the Russian Government, who see that their realisation would fatally interfere with their present command of that important river.

Varna—the ancient Odessus—is situated in Bulgaria. The fortifications have been repaired and strengthened since the rumours of approaching hostilities with Russia. As a naval and commercial position, the possession of Varna is almost indispensable to Turkey. The bay is deep, and of great extent; the anchorage safe, and completely protected against the winds of the north and south—the most disastrous to shipping in the Black Sea. Varna has one great advantage over its great rival, Odessa, in Southern Russia, that navigation is never interrupted during the severest winter. Varna is the outlet through which the products of the vast and fruitful territory adjoining find their way. In these provinces of European Turkey, the corn of every description cannot be surpassed in weight and nutritious qualities: the wine and fruits are excellent; and oil, tallow, hides, wax, honey, timber, and live stock of every description, are produced in abundance. The commerce of Varna with Great Britain has largely increased since the repeal of the Corn-laws; and, if the Sultan would only declare Varna a free port, the inhabitants of the country around would find the market which they need for the sale of the surplus produce of their labour. Such is the fertility of the soil and the favourable nature of the climate, that the productions of the provinces of which Varna is the natural *entrepôt*, might easily be quadrupled in a few years. The population of the rich and fertile province of Bulgaria are industrious, but they labour under disadvantages in the want of roads; in the absence of which they are obliged to transport the produce of the country on the backs of mules and horses across steep mountains and through rugged defiles.

The province of Bulgaria, in the centre of which Varna is situated, forming as it does the frontier of this portion of the Turkish Empire, has frequently been the theatre of war between the Turks and their neighbours the Austrians and Russians. Having the Black Sea and the Danube for a boundary to the north and east, and being defended by a connecting chain of strong towns and forts from Varna to Widdin, nature and art have made the province of Bulgaria a position of great strength.

Bourgas, or Burghaz, is an important sea-port town in Roumelia, on the Black Sea, about ten hours' sail south of Varna; on the Constantinople side of the Balkan, and seventy-six miles north-east of Adrianople. It is situate at the extremity of a gulf, fourteen miles in length, which forms a natural harbour, sheltered from the wind in almost every quarter. The town itself is neat, and tolerably clean, and is very picturesque in appearance from the harbour; the country in the neighbourhood is extremely beautiful. There is here a considerable trade in iron, coarse woollens, and provisions. The population is, probably between 6000 and 8000.

Sinope, the scene of the late disastrous outrage, has recently been described in our Journal.

THE OBELISK AT CONSTANTINOPLE.

THE Obelisk, which our cut represents, is, in itself, one of the most interesting relics of ancient Byzantium, and is situated in a spot on which many most interesting events have since occurred. The famed Hippodrome, or horse-course (now translated into Turkish as the At-Meidan), is situated in the neighbourhood of the mosque of Sultan Achmet, and not far from the Seraglio and the far-famed St. Sophia. At the upper end of this place stands the granite Obelisk represented in our Engraving, and called after the Emperor Theodosius, though it is probable that he only removed it from another part of the city after it had been thrown down by an earthquake. The Obelisk is partly covered with hieroglyphics, which, however, are not of the best workmanship. Near this Obelisk is the fragment of a wreathed column of bronze, which has been the subject of many discussions, some alleging it to have been a three headed serpent from the oracular shrine of Delphi, whose three heads were struck off at a blow by Mahomed II. Whatever be their history, these relics are, in truth, but poorly esteemed by the inhabitants of Constantinople, who have neither much regard for art in itself, nor its associations.

THE TOWER OF GALATA.

THE Tower of Galata is a venerable and striking object, lifting its time-honoured head in the midst of the European quarter of Constantinople, and where it serves as a watch-tower, particularly in the case of fire. On such events, which are of every-day occurrence, flags are hung out, which, by their colour and arrangement, indicate with precision the spot in which the fire for the day rages. The view from the top is, perhaps, the best of Constantinople and the neighbourhood which can possibly be obtained; presenting all the principal edifices of the city, including the Seraglio, and the various mosques of St. Sophia, in their best point of view, as well as a magnificent general panorama—to which the bright waters of the Golden Horn, of the Bosphorus, and of the Sea of Marmora in the far distance, give a life-like effect indescribable.

RESIDENCE OF PRINCE GORTSCHAKOFF, NEAR BUCHAREST.

UPON the preceding page we have engraved a View of the Residence of Prince Gortschakoff, in the neighbourhood of Bucharest; and subjoin an interesting account of an inspection of troops by the Prince, in the neighbourhood, from the journal of a Correspondent, who has just returned from the seat of war:—

Some days ago I went to see Prince Gortschakoff review a portion of the Russian army, which was encamped about six miles from Bucharest. The vast plains of Wallachia are admirably adapted for displays of this kind, or for the more serious operations of actual war. There was not a wall or hedge, and scarcely a tree, to impede the movements of the troops. There were about 18,000 men present. They at first formed in line, with the artillery on the extreme left, and next to them the cavalry, composed of lancers and hussars, and then came the infantry. The infantry, regiment by regiment, then broke into open columns of companies, and marched past the General. Each company, as it passed before the Prince, cheered; and the light troops ran by in double time, for about two hundred yards, cheering all the way. The cavalry marched by in squadrons, each squadron cheering when they came in front of the Commander-in-Chief, and a body of Hulans, who waited some little time behind, went past at a charge, shouting wildly. The light artillery also went past at full gallop. Each regiment of infantry then formed in close column, with cavalry and artillery on their rear. They were, in all, a magnificent body of troops, and went through the different movements with wonderful precision. The effect of the great mass of infantry formed in close column, with the sun sparkling on their helmets, was very fine. Seen at a distance it looked like a lake of flames. When the inspection was over the troops marched off the ground to their respective quarters; each body, as it passed, singing the National Anthem, or some war song. Prince Gortschakoff is more than sixty years of age; but he is firm and erect, and has all the appearance of a veteran soldier. None of the generals under his orders seem less than fifty years old, and all have the same stern, war-worn look.

FORTRESS OF SEMENDRIA.

SERVIAN VILLAGE.

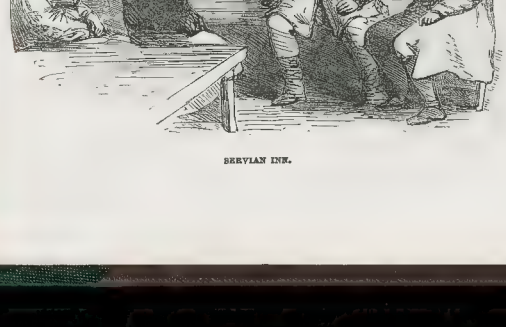
THE WAR ON THE DANUBE.

(From our Special Correspondent.)

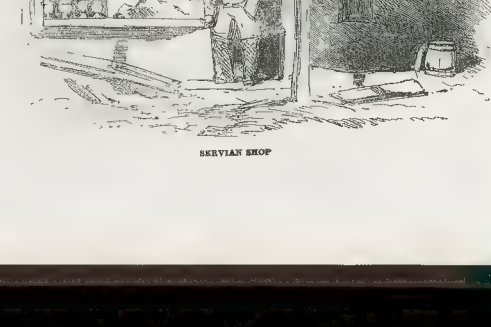
NEGOTIN, Dec. 25.

THERE are two ways in summer leading from the Austrian frontier at Semlar to the Turkish at Widdin: the first short and agreeable, the second long and fatiguing. In winter, however, there is no choice. The navigation of the Danube, so agreeable and so varied by splendid scenery, is interrupted by the frost, and the traveller who seeks to journey into Turkey must perforce consent to undergo the long privations of a land journey. These privations are very much increased by the mountainous formation of the country through which it is necessary to pass, and by the natural impediments superadded of snow, ice, and fog. It was not, therefore, without considerable preparation that your Correspondent started from Belgrade on a journey crossing Servia, and on a route encompassed by alps of considerable height. The roads, it was well known, were execrable in good weather. What might they not be after snow had lain upon them? Inns, it was equally certain, there were none—at least in the European sense of the word. It was, therefore, politic to carry, besides the usual baggage and complement of furpelisses, a coverlet to sleep on, tea, knives and forks and spoons, napkins, and provisions.

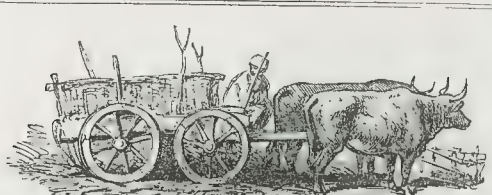
A hurricane was blowing at Belgrade on the 16th of December. The snow had fallen thick throughout the night, and but little chance appeared of change. It was, therefore, under unpromising auspices that the little party of horsemen composing our expedition left Belgrade behind. Perhaps, under more favourable circumstances, the sight of the semi-Turkish city in its prominent position on the promontory that commands the Danube and the Save might have been picturesque and beautiful. The sight of minarets intermixed with Christian steeples is not a spectacle that leaves the mind long unimpressed. The struggle of the Crescent and the Cross is manifest externally; the Turk and the Christian mingling in the streets, and scowling at each other. All this is present to the mind. But snow and wind, with its accompaniments, soon drive attention from all, except from one's self; and the traveller, shivering, turns his back on Belgrade, and commences the ascent of the hills behind it. Suddenly, as the upland opens, one sees through the rents in the dusky clouds the square towers of a ruined Roman castle. The Crescent and the Cross vanish for a moment, and dim visions of Imperial legions guarding Servian passes rise before the eye. By the time the ideas thus raised and dwelt on are replaced by others, a village is in sight, consisting of small, low houses, made of wood and mud, and covered with the branching straw of Indian corn. Each little cottage, with its dirty yard and oxen, its watchful dog and gobbling geese, nestles separately, in the midst of orchards surrounded by wooden palisades, six or seven feet in height. In the centre of the place is the inn where the horses and their riders park together and take refreshments. There are but two apertures in the common inn of Servia: through the first the traveller enters, and through the second the smoke of a blazing fire makes its exit. In truth, the houses in Servian villages, like those in the Highlands of Scotland, are more like chimneys than anything else. The fire and the smoke are such paramount necessities, that all is sacrificed to them. Round the cheerful logs that blaze in the midst, the Servian squats and sips. With his complement of saucepans the *meiandjich* makes the coffee of the guests, or boils the beans, which are the only fare obtainable in days of fast. Hanging in festoons along the sides are hides of oxen, sheep, and pigs, in various stages of smoke and preservation. Higher up the chimney are lines on lines of strips of beef; and straggling everywhere, on pegs, and poles, and nails, the fat of hogs and wedders is suspended till the day of marketing. In the



SERVIAN INN.



SERVIAN SHOP



SERVIAN OX-WAGGON.

midst of the smoke which emanates not only from the blazing logs, but from the pipes of every person in the place, the martial figure of the Tartar, with moustache and arms, the far less handsome uniform of the Europeans; and the stalking innkeeper, with red cap and white apron, and his store of knives stuck in his belt, are but dimly visible, and look like visions of the Brocken. Such is a truthful sketch of the first Servian inn I entered—a picture which may be found repeated throughout the length and breadth of the country.

Grotshka, on the map, seems no great distance from Belgrade. The road, however, was so bad that it was dark before we reached it. The inn had one advantage, which the first we visited had not: it had a stove and a window; and when the door was opened, a score of swineherds, drovers, and peasants were dimly visible on the raised dais, which forms the sleeping place for all. On this a Turk was squatting, and quietly enjoying a narghilé. Around him were the drowsy forms of sleepy peasants; the cunning face of the Sinza trader peered amidst the smoke; and the *melandjiah* was quietly making coffee amidst the noise and uproar.

It may be well to remind the traveller who visits Servia that, for five weeks before Christmas-day and for seven before Easter, the Greek Church enacts a fast from everything but fish and vegetables. Accordingly, at Grotshka, beans and *pariblatsch* (a peppery soup of salted fish) was all the food that could be had. We rejoiced that some excellent *saucissons de Lyons*, a cold roast turkey, and sardines, from Bordeaux, were part of our stores, which enabled us to eke out the miserable Servian fare. But it was with a still more pleasurable sense that we laid out our well-prepared bed upon the boards of the inn, when we discovered that there were no separate rooms for travellers, and no beds to be had in Servia. There is no denying, however, that sleeping in one room, in company of twenty others, is a practice to which more civilised Europeans do not at first become reconciled. There is no general *esprit de convenance* which makes the silence on which sleep depends imperative. Those who fall asleep at six perhaps will rise at three, whilst others who go to roost at nine will possibly be up as late as six. There is, therefore, no single instant of silence or repose. Those who are accustomed to it, however, sleep in spite of noise. The only quiet and noiseless things about, are one or two varieties of the insect species, who are as indefatigable in their attacks as the noise is ceaseless. A Servian inn affords you every day what Punch's Eastern Correspondent has gracefully called an Arabian Night's Entertainment. "Late to bed, early to rise," is the result of such discomforts. The Servians and Turks, whose skins are hardened from early youth to every species of insect attack, get up as fresh as I would get up from a bed at Long's. The former, as they rise, devoutly say their "*cospodi pomilui*," bow down their heads as they make three times the sign of the cross, and depart on their errands; the Turks, more cleanly, wash themselves. And thus the scene is renewed each night and morning.

SERVIAN PEASANT.

Early dawn saw us on the road to Semendria. The way for a time remained as dull as that from Belgrade to Grotshka; but as the sun appeared above the hills, the Danube came in sight, its frozen surface glistening in the rays, whilst behind it, in the limpid atmosphere, lay the plains of the Banat and the mountains of Weisskirchen. If you have seen from Klosterneuburg, above Vienna, the hills that form the gorge in which the town of Presburg lies, then may you have a faint idea of the distant view from Grotshka of the mountains of Weisskirchen. There, not many years ago, a series of fearful engagements marked the quarrels of the Servians and the Hungarians. Weisskirchen, a strongly-fortified town, was taken and retaken twice. This quarrel between the Servians and Hungarians was a strange one. Previous to the break-out of the war between Austria and Hungary there had been a quarrel between the Magyars and the Croats, on the Banat, on a question of education. The Hungarians were desirous of imposing upon the Croats their language. This the Croats resisted, and they were numbered during the revolution amongst the enemies of Hungary. The Servians, whose antipathy to Austria is very great, were ready to join the Magyars; and many of their chiefs were at Pesth when the Hungarian army was at the gates of Vienna. But here, again, a false policy was pursued by the Magyar leaders, and the Servians were alienated by the same assumption which had deprived Hungary of the sympathy of the Croats. The more politic Servians, whilst refusing to be absorbed in the Hungarian nationality, determined even to return to their homes, others to fight the Austrians in Italy. Austria, however with considerable cleverness fomented the quarrel of the Servians and Hungarians, and then obtained well-timed assistance from the former. Hence the battles of Weisskirchen, which rank among the sharpest and best-contested of the Hungarian struggle.

SERVIAN PEASANT.

There is nothing so free or inspiriting as a glorious sunrise; and none was ever more so than on the occasion of our leaving Grotshka. At the foot of the Servian hills, which reared their forms to an enormous height upon the right, and casting bright reflections on the frozen Danube, towered the countless squares of the Roman fortress of Semendria; impregnable possibly at the period of the battering-ram, but of little use at present, though containing a small garrison. A pity it would be to see this stately edifice and splendid reminiscence destroyed by modern cannon-balls. Behind the fortress, and far away to the left, were stretched the ample folds of the Austrian landscape. The winter wind had not yet robbed the Servian oaks of their withered leaves; the sharp northern gusts had drifted almost all the snow into holes and gullies, the plains of the Banat, brown with reeds, lay broad and majestic in the morning sun, and the light blue hills in the distance formed a noble picture. What a contrast between the great remains of the Roman conquerors and the humble wooden, broad-brimmed, red-tiled, rickety cottages of the Servians. Of such the town of Semendria is entirely composed. There is but one house in the town that has more than a ground floor, and that belongs to a minister. Yet Semendria is a large trading city, through which the cotton traffic of Turkey passes on its way to Trieste. It furnishes with fish, caught in the Danube, almost half of Servia; and exports hides, tallow, and lard to foreign countries. It is in Semendria, also, that one begins to see real Servian peasant women. One rarely finds them about on the roads as they keep very much at home; but here they were marketing and bargaining at the little shops, in highly picturesque attire. Their white woollen robes are embroidered with blue and red list; they wear the sandal with a brown and red stocking; a white or red drapery hangs from the back of a species of comb or crown, adorned with silver, and sometimes golden coins; and collars of the same pieces adorn their necks. It is computed that in this species of ornament the Servian women altogether possess upwards of 10,000,000*l.*; a sacred fund, which is never touched except in times of war and peril, and when it becomes imperative to defend the national independence. The custom first arose apparently at the time of the Turkish inroads, the Osmanlies generally respecting the property on the persons of women, who thus became the safest repositories for Servian savings.

Pojarewacz, remarkable, perhaps, for little more than that its name is given to a well-known treaty with the Turks, is the second sleeping station on the road from Belgrade. From thence the country gradually rises till the road entwines itself amongst the gorges of the valley of the Pêk; whose precipitous sides barely give passage to the bullock-carts of the Servian peasantry. The magpies no longer peck their food from off the backs of swine; the trees no longer crowd the landscape, transformed into incipient haystacks, for in the lowlands the oaks appear to serve two purposes—the acorns feed the swine, and the twisted boughs are laden with the hay from the broad-leaved maize; but snow and ice are closely packed around, the mountains which roar above one on each side are peopled by bears, and the rocks are rich in lead and iron. The road through the gorges of the Pêk is generally in the bed of the river, and it seemed an inviting place for a brigand attack; but this in Servia is never known. The people bristling as they are with arms, their shining pistols and horn-hilted knives sticking out of their belts, are peaceful when they are not engaged against a foreign enemy. Their swine feed in the recesses of the forest, and afford them ample revenue. The land is rich in the yield of wheat and maize, and scarcely requires tilling; the population is thin, and here, certainly, "there is room enough for all." The valley of the Pêk opens as one ascends, its course until the village of Kruchenitza is reached, where one eats and sleeps in the usual unsatisfactory manner. The weather, which until we reached Semendria had been cold, became milder, and was quite genial in the valley of the Pêk; and it was under a pure and almost cloudless sky that Neresnitza, at the foot of a high range of mountains, was passed. From thence the road begins to ascend, and winds through the gorges of the chain of mountains, which, where they extend into Turkey, are called the Balkan. The mildness of the weather was very deceptive, however. Although on the plain below the snow was well nigh melted, and the sky was pure, we were not long to enjoy these advantages. The wind, as we advanced, appeared to sigh amongst the beeches; then the darkness of thick clouds enveloped us and the landscape. The snow under foot became higher, the fog drifting through the trees suspended to their branches large crystalline formations, which, dropping on the road, formed a rough and slippery medium. The horses' hoofs gradually sunk deeper and deeper, and soon a snow-drift appeared in sight, which it became evident it was impossible to pass. In vain attempts were made to turn this obstacle. The way was along the crest of a hog-backed mountain, and precipitous descents on both sides prevented all further passage. This most provoking barrier put an end to all hopes of reaching Widdin through the pass of Maidampêk; and, necessity compelling, our horses' heads (not reluctantly as regarded them) were turned, and after dark the village of Neresnitza, with its humble inn, was welcomed with considerable pleasure.

Rather than return to Pojarewacz—from which another and a longer road leads to Widdin—it was determined to strike across country, and join the road some distance forward. A guide, in the shape of the master of the inn at Neresnitza, promised to see us in safety through the cross roads, but decamped after seeing us to Milutzza, a village composed of mixed Wallachs and Servians. The whole of this portion of Servia is thus composed; and the Greek cap of the native is silvernailed by the sheep-skin covering of the Wallach. It is only since 1833 that this portion of the country has formed part of Servia, and has become independent. The people then were still rayahs, and retain in part the sullen manner of the Christian subjects of the Porte. The Servians are hospitable to a degree. At Sehetoh, a little village where it became necessary at night to repose, the largest house (which is the hall of justice) was heated and prepared for our repose, there being no sleeping-place in the tavern of the place; and your Correspondent was served at dinner by the mayor of the village, and attended by the *birou*, or policeman, who punctually came in to keep the fire up and to attend to his wants; and, further on, during the day, a second curious instance of the hospitable feeling was witnessed at a village. On passing a house, and asking the way, the master rushed out, accompanied by a priest and almost all his relatives. Each of them clamoured to have the honour of dragging us in to eat and drink at their expense. "Have some fish," said the master of the house; "Take wine," said the priest; "A bottle of raki," said a third; and so the chorus went round. But we refused the kind offers, left our half tipsy yet hospitable friends, and with difficulty escaped from a score of similar invitations from each house in the village. Two young men, as we went forth into the fields, were the last who cried "Take wine, take raki;" and our horses were put to speed to avoid their kind intentions. It seems that this was the anniversary of the patron saint of the village, and during three days feasting is the order of the day; and it is esteemed a special advantage to have strangers at the board. The priest, on these occasions, generally honours the feast with his presence. He is generally an humble man, paid chiefly by the proceeds of marriage ceremonies, baptisms, and burials, who earning a little theology at Belgrade, is sent by the Archbishop to his native village, where he at first acts as curate, and then succeeds his rector. The influence of the priest appeared to me to be considerable; if one may judge of this from the respect paid him by his parishioners, who kiss his hand, and pay him other marks of respect at his approach. In Russia it is not so the *popes*, or priest, is an object rather of ridicule than respect; but there he belongs to a country differently constituted from Servia. The priests in this country have asked to be entrusted with the right of education; but, as there is great jealousy of Russia, and as the Czar is protector of the Greek religion, the Servians refuse to allow their priests to meddle in the teaching of their children. In the primary schools—of which there are great numbers—there are lay teachers and the priest come every Sunday to give what religious instruction he may. The priests are appointed by the Archbishop of Belgrade, who himself is nominated by the Senate and Prince in conjunction.

Popowitz, on the main road to Negotin, was ultimately reached in safety; and Chuprier, a large town on the Moldava, was a resting-place for the night. The road then leads to Krivivir, and across the mountains to Bohowacz. Here the snow rendered the road again hardly passable. The hurricane which blew at Belgrade on the day of our departure had filled the roads with snow, uprooted scores of large trees which had fallen crosswise, and whose boughs impeded travelling. Three days elapsed before we came in sight of Zaichar, and then an open road brought us to our present quarters in Negotin.

THE LATE SNOW-STORM.

The metropolis, on Sunday, so far as the state of its main thoroughfares was concerned, bore little resemblance to the London of Wednesday, Thursday, and Friday last, when its streets were piled with a mixture of snow and mud, through which omnibuses, cabs, and foot passengers pushed their way with difficulty. The rain, which commenced to fall on Friday evening, and continued at intervals throughout the night, with a total absence of frost, resuming again about ten o'clock on Saturday morning, and pouring down without intermission until about three o'clock, completely changed the aspect of the metropolis. The mud became liquid, while the action of the rain, united with the mildness of the temperature, speedily converted huge masses of snow into water. The effect of this upon the streets was such that, on level spots, a series of ponds were formed upon the roadways, the footways at the same time being often overflowed, owing to the stoppage of the water channels through the accumulated snow. On the other hand, where the slightest declivity existed, the water in the earlier part of the day rushed down like a torrent, sweeping mud and snow before it. This was especially the case on Ho born-hill, where a vast body of snow lay heaped up till Friday night, and through which street orderlies were employed in making and keeping clear a channel to the gullies, so as to prevent the lower part of Farringdon-street from becoming flooded. A number of dust carts belonging to the parish contractors were drawn up and down the streets with beams attached behind by means of chains, and which, sweeping along the surface, compressed the water from the snow, and speedily cleared the carriage way. In the earlier part of the morning few cabs were out, but towards the middle of the day they were fully equal to the usual supply. This was also the case with the omnibuses; few vehicles of either description driving the extra cattle which they had been compelled to use on the previous days. On Sunday the action of the thaw had been so complete, that the principal streets of the metropolis generally resumed their ordinary aspect.

Some alarm was felt lest the sudden thaw might cause destructive floods in low-lying districts. The weight of water brought from the uplands sloping to the Medway was so great, that the river gradually rose during the night to an alarming height, overflowing its banks and flooding the neighbouring fields and meadows to a far greater extent than during the floods which occurred on the 20th and 21st of October last, and which occasioned the loss of a number of lives at Hadlow. At Maidstone the paths and wharfs on each side of the river were placed completely under water, which, in passing under the bridge, assumed the wild strength of a torrent. The cellars of the houses near the bridge were filled with water.

On Saturday most distressing information was received from the various coast-guard and Coast Guard stations, giving in detail the disastrous effects of the late snow-storm along the north-east and west coasts, which not only involves an immense destruction of property, but a no considerable loss of life. From the accounts received, it would appear that not less than 120 vessels were driven on shore at various points on the coast, most of which, from the violence and continuance of the storm, have become total wrecks, their cargoes lost, and many valuable lives sacrificed: and it is feared, from the large quantity of wreck that is to be seen floating in the channel, that a number of wrecks have occurred at sea by collisions occasioned by the extreme opacity caused by the falling snow.

Several persons were frozen to death during the storm. A travelling tinman and his two little boys were seized by the frost when making their way from Sheffield to Glossop. They were found standing against a wall—the father with his legs frozen stiff, and his two children by the arms, one on the other, dead! The father survives. A man was found dead by the roadside near Barnesgreen, towards Maidstone; a woman was lost in a drift at Oldham; a man was burned to death at Heywood by falling against the furnace of a locomotive engine upon which he was warming himself; and a child was lost in the snow at the same place, but was recovered after a long and painful search; and it is feared that upon the moors in the West Riding of Yorkshire, east of Lancashire, and in Derbyshire, many casualties have occurred.

EDINBURGH.—The frost broke up on Saturday, a rapid thaw, with a drizzling sleet, having set in about one o'clock, which soon converted the ice and trodden snow on the streets and pavements into a mush and water. In passing along the pavements during the progress of the thaw process, passengers could not fail to remarken some those negligent shopkeepers and householders whose portions of the foot-path were left to become puddles almost ankle deep.

"SNOWED-UP."—The Rev. G. W. Brameld, M.A., of Lincoln College, Vicar of East Markham with West Drayton, Nottinghamshire, was appointed to preach before the Oxford University on Friday, being Epiphany; but he telegraphed to appoint his Vice-Chancellor, that he could not come in consequence of the railway being blocked up with the snow.

WRECK OF A STEAMER.—The steamer *Yorkshireman* was totally wrecked during the storm of last week. On Wednesday, at half-past two o'clock p.m., she left Morecambe with only one passenger, and, although it was blowing a strong gale, proceeded satisfactorily until she came in sight of the lighthouse at Donaghadee. The Copeland light was not observable, owing to the snow squalls; and the intention of the captain being to keep to the right of the Copelands, and to shun the Sound, dangerous on such a night, he imagined that he was doing so when he sailed to the right of the light which was visible, but which proved to be the lighthouse of Donaghadee. By this mistake he was led into the very danger which he had endeavoured to avoid, and the first apprisal of it was the striking of the steamer, at half past eight o'clock p.m., upon a bed of rocks, about a mile to the north west of Donaghadee. The fore compartment immediately filled with water, and in a short time the stern canted towards the north; and scarcely an hour had elapsed from the time at which she struck, when she was broken in two at the fore part of the paddle box; and the bow portion twisted round till it was at right angles with the remainder of the vessel. About a quarter past twelve, the bow portion began to break up, and it then became evident to Captain Sully that it would be folly to risk any further the lives of those aboard, as there was no prospect of their being able to render the smallest assistance towards the saving of the vessel or her cargo; accordingly the boats were lowered, and, at half-past twelve o'clock the mate, with two or three others, including the pas-senger, dropped down under the ship's quarter, and at one o'clock one of the quarter boats with a crew of seven persons, got also under the shelter of the stern. There they remained until seven o'clock on Thursday morning, during which time signal lights were kept burning and pistols firing with unabated constancy by the people on shore. At seven o'clock the quarter-boat left the vessel, and having made to a particular spot indicated by the burning of a large blue-light, succeeded, with great difficulty and at considerable danger, in effecting a landing, in which they were a short time afterwards followed by the life-boat and her crew.

A LONDON STREET SCENE DURING THE LATE FROST.

THE LATE SNOW-STORM.

THE STREETS OF LONDON.

In our Journal of last week we recorded the most remarkable effects of the great fall of snow, which commenced on Tuesday night, and continued during part of Wednesday morning; by which the traffic of the metropolis suffered an interruption so great as forcibly to remind one of the inconvenience experienced from the great Cab Strike, with the addition of an Omnibus Desertion. Such a great fall of snow had not been remembered in the metropolis for many years: many of the inhabitants found their homes almost blocked up, the strong easterly wind having drifted the snow in some parts to a height of three feet above the doors and area railings. The scraping and shovelling of the snow from the footpath, according to the Police Act, and the shooting of it into the carriage-way, soon formed an additional obstruction to the passage of the few conveyances in the roads. Early on Wednesday morning the streets presented a truly desolate appearance; and, later in the day, the omnibuses were "few and far between;" and these were mostly drawn by three, and even four, horses attached to them. Of the cabs, fully one-half of those out were drawn by two horses *tandem*.

THE RAILWAY.

But the most serious interruption to the course of metropolitan business arose from the effect of the snow blocking up the various lines of railway, owing to which the mail and other trains were delayed to an extent unknown for many years past; and, probably, unprecedented since the introduction of the railway system.

Our Illustration represents one of these instances of railway obstruction—a blocked-up train—where the snow was up to the buffer-beam of an engine, sufficient to stop a train, as the wheels became clogged, and would not go round. To free the train, the men, with spades or scoops, clear the rails for eight or ten feet at a time; when, however, the snow drifted down from the top of the cutting, thus filling up nearly as fast as the men cleared.

The scene of the Engraving is this operation at night.

SCENE IN THE POOL OF THE THAMES.

The severity of the late weather has been felt more or less in everything connected in any way with commerce; but perhaps nothing in the mercantile world has suffered more from the effects of the inclement season than the shipping interest: frightful storms and wrecks, frozen rivers and detained shipping, have been unhappily the order of the day; and the commencement of 1854 will be remembered by all as unparalleled in the history of cold weather.

Our Sketch represents the river as it appeared on Wednesday week. For some days previously the ice had increased to such an extent as to render the navigation of the river above bridge not only difficult and dangerous, but so destructive to the bows and paddles of the steam-vessels plying between London, Chelsea, Woolwich, and other parts of the Thames, that it became necessary to discontinue running them; which, coupled with the scarcity of vehicles and doubtful travelling on land, occasioned an amount of public inconvenience unequalled on any previous occasion.

Under the circumstances before noticed the river assumed a most

RAILWAY TRAIN IN THE SNOW.

THE THAMES BELOW BRIDGE, DURING THE LATE FROST.

forlorn appearance, being, at high water, a field of moving ice, with occasionally a solitary coal barge vainly endeavouring to make the shore through the mass of obstruction which surrounded it; and at the bottom tide it assumed a still more wretched aspect—immense blocks of ice and frozen mud (in some instances seven and eight feet thick) entirely filling the distance between high and low-water mark, and giving the banks of the river the appearance of a miniature polar region.

Below bridge the numerous steamers and other craft, which line either side of the Pool, became totally surrounded by the floating ice; and their moorings affording facilities for the stoppage of the blocks of ice, they quickly became completely surrounded, and at certain times of the tide so perfectly was the Thames covered that but for the strong current of the stream, the river must have again become stopped for some distance below London-bridge. Altogether, the dark gloomy sky and falling snow, the ice-covered and deserted river, the bitter cutting wind, and the absence of the busy scene which usually pervades the Pool of the river, caused Father Thames to assume an appearance which has rarely been witnessed.

SHIPWRECKS AND LOSS OF LIFE AT TYNEMOUTH.

On the morning of Wednesday week, while the snow-storm was raging over the greater part of England, one of the most destructive gales that has been seen for many years was experienced on the east coast. On the day previous no less than 1300 vessels left Yarmouth Roads, with a fair wind, the greater number of them bound for the northern ports. That evening the storm began, and the result was that a great many vessels were driven on shore at various parts of the coast.

At Tynemouth great destruction of life and property took place during the storm, but the most melancholy accident was the shipwreck of the schooner *Eliza*, of Kirkwall, with eight or nine men on board, all of whom perished. The ill-fated vessel approached the Bar about eleven o'clock on Wednesday morning, during the height of the storm, and in a few minutes she became unmanageable, and capsized. As she emerged from the waves, the crew were observed in the chains and fore rigging. The vessel then neared the shore, her topmast fell, and a poor fellow was seen crawling up towards the cross-trees in the mainmast, holding on for life. He was distinctly seen to make desperate efforts to retain his hold, but as the vessel plunged violently into the surf of the sea, he lost it, and his foot having got entangled with a piece of rope, he hung by his leg, with his head downwards, and, as the vessel fell, his head came in violent contact with the mast, by which he must have been instantly killed. The vessel drove nearer and nearer the shore, and at every plunge, the body of the man hanging by the leg was dipped into the sea, and then hurled into the air. At this time three of the crew were seen in the main rigging and two in the fore rigging, lifting up their hands for assistance; but the rockets could not reach them, and there was nothing but a small model life-boat, manned with five hands, who attempted to reach the vessel in order, if possible, to save some of the crew, but they had not proceeded far before the boat filled, and it was with considerable difficulty that they themselves reached the shore in safety. Another attempt was equally unsuccessful. Indeed it would have been instant death to all in the boat if they had dared to approach the wreck, as the sea was making a complete breach over the schooner, every wave dipping her crew over head in the sea. Two seamen went on board the barque *Sir Rober*

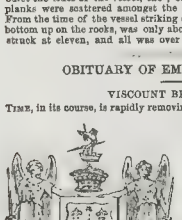
WRECKS ON THE COAST.—TYNEMOUTH.

Peel, which was stranded, and under whose stern the schooner was driven, and, having got a line, affixed an oar to it, and threw it in the direction of the ill-fated vessel; but the line reached the schooner, but the poor fellows were so exhausted they could not take advantage of this assistance. By-and-by a huge wave washed one man out of the fore rigging; and the vessel made three or four more lurches after which it seemed to subside towards the haven, and many a prayer was breathed for the drowning men who were still piteously crying for help, and lifting their hands above their heads, as another huge wave broke over and buried the vessel beneath. The crowd of spectators held their breath, and when the vessel rose again, those who had struggled so long, dying inch by inch, struggled no more, except one bald-headed seaman, who had been washed by the wave from the main rigging into the waist of the vessel, and who was seen for a minute, as the vessel drove away towards the point. His face was turned to the people on the shore with a despairing look for assistance, and his hands were pointed towards heaven. Soon, too, his trials and struggles were ended; for another sea struck the vessel and turned her bottom up, extinguishing the life of the poor fellow, and hiding in an instant the miserable spectacle presented by the body of his unhappy shipmate. The pent up air having burst the sides of the vessel, tubs, casks, sailors' hammocks, and loose planks were scattered amongst the waves, and the sad sight closed. From the time of the vessel striking on the Herd Sand until she turned bottom up on the rocks, was only about three-quarters of an hour. She struck at eleven, and all was over by a quarter to twelve.

OBITUARY OF EMINENT PERSONS.

VISCOUNT BERESFORD.

TIME, in its course, is rapidly removing from amongst us those stalwart chieftains who, on either side, have made the late war a glorious and imperishable theme. All the Marshals of the great Napoleon are now dead: our own mighty Captain, when the vault of St. Paul's closed over him, left few of his attendant warriors behind him. One of the last was the subject of this notice—William Beresford—a soldier whose daring and brilliant deeds have placed him in fair juxtaposition with Murat, Ney, and other paladins of the opponent Imperial host.



William Carr Beresford—Viscount Beresford, Baron Beresford of Albuera, and of Dungarvon, co. Waterford; a General in the British Army, Governor of Jersey, P.C., G.C.B., G.C.S., K.T.S., K.S.F., K.S.H., Colonel-in Chief of the 60th Foot, Colonel of the 16th Foot, Duke of Elvas, Marquis of Campo-Mayor and Count Francoso, a Field-Marshal of Portugal, and a Captain-General of Spain—was the son of George De la Poer, first Marquis of Waterford. William Carr Beresford was born in 1770, and entered the British army in 1785. His first services were performed in Nova Scotia, his next at Toulon. He fought through the Egyptian campaign in 1800. He then, as Brigadier-General, commanded in Southern America, and seized upon Buenos-Ayres, but was at length forced to yield to numbers, and became a prisoner of war to the French. He escaped from captivity in 1807. After some armed assistance rendered to the Royal family of Portugal, and, after acting as Governor and Commander-in-Chief in Madeira, Beresford became a leader in the Peninsular struggle. His military career is embodied in the history of that victorious war. He was with Sir John Moore at Corunna. On the 28th of April, 1808, the rank of Major-General was conferred upon Beresford; and in February, 1809, he was ordered to proceed a second time to Portugal, for the purpose of taking the command of the army of that kingdom, under the authority of the Prince Regent of Portugal, with the local rank of Lieutenant General. His appointment as Marshal Commanding (Sir Arthur Wellesley being Marshal-General and Commander-in-Chief of the Portuguese) was made on the 1st of March, 1809; and placing himself, as soon as possible, at the head of 12,000 men, he, with chivalrous valour, attacked the French in the north of Portugal, crossed the Upper Douro, drove Loison's division back to Oporto, and there, with Sir Arthur Wellesley under Sir Arthur Wellesley pursued the retreating enemy till that division of the French army was utterly disorganised. Beresford, then, entirely re organised and re-disciplined the Portuguese army, and, on the 27th August, 1810, led them to the victory of Busaco. For this he was created a Knight of the Bath. Upon many memorable occasions Sir William Beresford performed the duties of a General of Division; and not one among the illustrious leaders who contributed to the military renown of England during the campaigns of Spain and Portugal, ever displayed more ability, daring, or devotion, in carrying out the instructions of his commander.

Having resumed, in 1811, an independent and separate command, he won gainst Soult, on the 16th May of that year, the sanguinary and memorable battle of Albuera, where he personally displayed prodigies of valour. This victory gained him the thanks of Parliament. In the subsequent course of the war, Sir William Bere-ford was present at Badajos, where the Duke of Wellington marked his conduct with especial approbation; at Salamanca, where he was severely wounded; at Victoria; at the various battles in the Pyrenees; at Nivelle, where he led the right of the centre; at Nive; and at Orthez. He commanded the British troops which took possession of Bordeaux, and he subsequently bore a distinguished part in the battle of Toulouse. He was raised to the peerage as Baron Beresford, the 17th May, 1814, and a grant of £2000 per annum was made to himself and the two next inheritors of the title; but he died without issue. Soon after his return to this country the city of London presented him with a valuable sword; and in July, 1815, he received the acknowledgments and thanks of the Prince Regent; and he obtained various honours both British and foreign.

In the latter end of the summer of 1815, Lord Beresford was commissioned to proceed to Portugal, for the purpose of negotiating with respect to the support to be rendered by that country against the enemies of England; but the necessity for any aid from Portugal soon passed away; and Lord Beresford continued to maintain so good an understanding with the Portuguese Government, that within two years from that time he was employed by them to proceed to Rio Janeiro, where he suppressed a conspiracy that at first threatened to be formidable. In the year 1822 he received the appointment of Lieutenant-General of the Ordnance, the command of the 16th Foot, and became a Viscount. In 1825 he was promoted to the rank of General in the army; and, when the Duke of Wellington became Head of the Government in 1828, Viscount Beresford served under him as Master-General of the Ordnance, which office he held till the Whigs came into power, in November, 1830; when his public career ended.

Viscount Beresford married on the 29th Nov., 1832, Louisa, youngest daughter of William Beresford, Lord Decies, Archbishop of Tuam, and widow of Thomas Hope, Esq., of Deepdene, Surrey. By this lady, who died the 21st July, 1851, he leaves no issue. Viscount Beresford departed this life on the 8th inst., at his seat, Bedgebury Park, near Goodhurst, Kent.

The late Rear-Admiral Sir John Poer Beresford, of Bagnall, county of Waterford, K.C.B., K.T.S., was Viscount Beresford's brother.

A more copious and detailed account of the distinguished services of Viscount Bere-ford, with a fine Portrait, from a painting by Reuben Sayers, appeared in the ILLUSTRATED LONDON NEWS for Dec. 18, 1852.

WILLIAM CONYNGHAM, LORD PLUNKET.

THE family of Plunket, from which Lord Plunket descended, claimed to be a branch of that from which springs the noble house of Louth. His Lordship's father was the Rev. Thomas Plunket, a minister of the Church of Scotland, officiating in Dublin; and his mother, Mary, sister of Redmond Conyngham, Esq. He was the Rev. Thomas Plunket's second son; the late Dr. Plunket, an eminent physician, was the elder. This second son, William Conyngham Plunket, was born at Enniskillen in July, 1764, he was educated at Trinity College, Dublin, where he obtained a scholarship, taking his degree of B.A. He was called to the Irish bar in 1787. His speedy success in the legal profession soon brought him into public notice; he entered the Irish House of Commons as member for the borough of Charlemont; and henceforward, for more than half a century, the name of Plunket stood prominent in almost every parliamentary or legal event that occupied the attention of his country. At the trials consequent upon the rebellion of 1798. Mr. Plunket appeared among the counsel for the defence. He displayed much forensic ability in his speech in favour of the unfortunate Henry Sheares, who, together with his brother, John Sheares—both barristers and gentlemen of family and station—was convicted of high treason, and suffered the penalty of the law. Mr. Plunket, after voting against the Legislative Union, still d himself more closely with the high Whig party, and, in the proceedings for another re-ellion, or rather insurrection that of Emmett and others, in 1803—Mr. Plunket was one of the counsel for the Crown. At the trial of the unhappy and misguided leader of the conspiracy, Mr Plunket's conduct gave rise to some animadversion. The prisoner, it seems, had addressed no evidence in his own behalf, nor had a speech been delivered for him, yet Mr Plunket insisted on the exercise of his right to a reply, which he made with an energy rather unusual on such occasions. This was thought to come with less grace from him, as he had been the known intimate friend and frequent guest of the prisoner's father, Dr. Emmett. William Cobbett, in his *Political Register*, commented so violently on what Mr. Plunket had done, that the latter brought an action for libel against him, in 1804, in the King's Bench, Westminster, and recovered £100 damages. Meanwhile, Mr. Plunket's advance went rapidly on. Three months after Robert Emmett's execution he became Solicitor-General for Ireland; and, shortly after, Attorney-General and a Privy Councillor.

Mr. Plunket resigned office, with his party, in May, 1807; his extensive business had by that time, placed him at the head of the Irish bar. In every Chancery suit he appeared as leading counsel, and continued in the undisputed enjoyment of his position from 1807 till 1827; in the course of which period his fees, exclusive of professional gains during the preceding twenty years, could not have amounted to less than £120,000, or an average income of £6000 per annum. In 1807 Mr. Plunket had become a member of the British House of Commons. He sat first, for a short time, for Midhurst; and, subsequently, in 1812, he was returned for Dublin University. His first important speech—one in favour of Catholic Emancipation—achieved his success in the imperial senate—a success which lasted throughout his subsequent Parliamentary course of fifteen years.

In 1822 Mr. Plunket was again Irish Attorney-General. In 1827 he was elevated to the Irish bench as Chief Justice of the Court of Common Pleas, and created a Peer of the United Kingdom, as Baron Plunket, of Newtown, county Cork. In 1830 he became Lord Chancellor of Ireland. This high office he held, with the exception of an interval of four months in 1834-5, until 1841, when he was succeeded by Lord Campbell. Lord Plunket, then seventy-six years of age, retired into private life. He died at his seat, Old Connaught, Wicklow, on the 4th inst.

Such was the career of Willliam Conyngham Plunket. a man who, without attaining actual greatness, was most useful to the State. He had intellectual powers of a very high order, and he knew well how to employ them. His sound sense and cool judgment—his constant care, too, of his own interests—steadied his natural ardour, and made his talents subservient to his own and the public advantage. He may have been blamed by the more fiery politicians of his country and party; but there is no doubt he long and extensively benefited more than contributed to the dignity, stability, and reputation of the bar and Government in Ireland, than Chancellor Plunket. Lord Plunket married, in 1791, Catherine, only daughter of John McCausland, Esq., of Strabane, M.P. for the county of Donegal by whom he had six sons and four surviving daughters: of the latter, the eldest, Elizabeth is the widow of the Rev Sir Francis Lynch Blosse, Bart; and the third, Isabella, wife of Henry Gunn, Esq., of Burleigh, county Wexford. The sons are:—1. Thomas, Bishop of Tuam, now second Lord Plunket, who is married to Louisa Jane, daughter of J. W. Foster, Esq., of Fanevalley, and has four daughters; 2. John, Q.C., who married a daughter of the late Chief Justice Burke; 3. David, Examiner in the Irish Court of Common Pleas; 4. William Conyngham, in holy orders. Rector of Bray; 5. Patrick, a Commissioner of Bankrupts in Ireland, and 6. Robert, in holy orders, Dean of Tuam.

SIR RICHARD GODIN SIMEON, BART.

SIR RICHARD SIMEON died on the 4th inst., at Swainston, Isle of Wight in the seventieth year of his age, being the eldest son of Sir John Simeon, M.P. for Reading, Senior-master of the Court of Chancery, who was, in 1811, at the head of the commission for placing in trust the real and personal estate of King George III. during his Majesty's illness. Lady Simeon, Sir Richard's mother, was the eldest daughter of John Cornwall, Esq., of Hendon House, Middlesex.

Sir Richard was born 21st May, 1784; and married, 8th April, 1813, Sarah Keith, eldest Daughter and co-heir of Sir Ratcliffen Barrington, Bart. of Swainston, Isle of Wight and Barrington Hall, Essex; and by that lady (who had a right to quarter the Royal Arms of England), he leaves several children; of whom the eldest son, now Sir John Simeon, third Baronet, married, in 1840, Jane Maria, only daughter of Sir F. T. Baker, Bart., at in Parliament, for the Isle of Wight, from 1847 to 1851, when he relinquished his seat on becoming a Colonel. Sir Richard, whose decease we record, succeeded his father in 1824, and served as High Sheriff of Hampshire in 1846. He was also the first member for the Isle of Wight, when made a county for Parliamentary purposes, under the Reform Act, and continued to represent the island until compelled by ill-health to resign. He was well known as a scientific and practical agriculturalist. Sir Richard was lineal representative of the ancient family of Simeon of Brightwell and Syrton, county Oxon, which for some generations enjoyed a previous Baronetcy created in 1677.

WILLS.—The will of the Right Hon. Valentine Browne, Viscount Castlerosse, and Earl of Kenmare, was proved in London by his widow and relict, the Countess of Kenmare; the personal by England, and within the province of Canterbury, being sworn under £35,000. To the Countess he has bequeathed the £2000 bequest, besides an annuity of £500 a year under settlement, also the house and furniture at Belgrave-square, and the linen, pictures, &c., at the mansion at Killarney, and all plate, enumerated in a list, amongst other articles 100 silver handled knives, and a large quantity of silver forks and spoons, all carriages and horses. The manor of Hendtal, and his estates in Limerick, he leaves to his brother, the present Earl of Kenmare, who is also appointed residuary legatee of the real and personal estates, and an executor. To his servants he has left annuities. His Lordship was a Privy Councillor for Ireland, and a Trustee of the College of Maynooth.—The will of General Sir Augustus De Butts, K.C.B., has been proved in London by his sons, Augustus De Butts, and James Whitshed De Butts, Esqrs., two of the executors; the personality in England being estimated at £10,000. This property, together with his estates in Dublin, he leaves to trustees to raise annuities for his widow, Lady De Butts, and his four sons. There are some minor and other bequests to a few of his relatives.

SUSPECTED HOCUSSING AND MURDER.—An old female miser named Mary Anne Allan, lately disappeared in a mysterious manner from her home near Brookes' market, Leather-lane. No trace of her was obtained till Friday last, when she was discovered leaning against the area railings of a house in Greville-street, Hatton-garden, partly unconscious, with a severe wound across her forehead. The poor creature was immediately assisted home, and taken to her room, where she was left to herself, the people in the house not apprehending danger, and she having an objection to any one entering her apartment. As she did not make her appearance during Saturday, the landlord became alarmed, and on Monday morning sent for the police, who, on entering her room, found her lying dressed and quite insensible upon the floor. Medical assistance was instantly called in, but she died in a few hours after the surgeon's arrival. On examining the wound across the frontal bone, it appeared to have been produced by a blunt instrument. The police have been making inquiries after the guilty parties, but hitherto without success. They have ascertained, however, that the poor old woman was turned out of a cab on the spot, and in the unconscious state in which she was found, by a man who then rapidly drove off. It is supposed that she has been the victim of hocussing and brutal treatment at the hands of some miscreants, who thought, no doubt, that the deceased carried a large sum of money about her, in consequence of her reported wealth and miserly habits. Upon searching her room, the police and coroner's officer discovered a quantity of plate, money, and other valuables, which they immediately secured.

THE LONDON CORPORATION.—THE CITY POLICE AND THIEVES' SANCTUARY.

THE tenacity with which the people of England cling to an old-established custom, even after the custom has been shown to be useless, or perhaps injurious, is proverbial. They hate changes. The fear of something worse makes them support with all their power things equivocal, and submit to that which is wrong. This partly accounts for the strong conservative feeling recognised everywhere, even among the stoutest Radicals, in matters where political prejudices do not enter. It is this feeling that makes some of the worst legislative enactments unpopular for awhile. The far-seeing statesman is, however, aware of the fact, and is prepared to endure the obloquy of the censorious, when satisfied that the good of the nation has been consulted in the change.

In nothing has this prejudice of the people been more strikingly exhibited than in the reception of the New Police Act, introduced by Sir Robert Peel; yet it is probable that were the people of England polled to-morrow, there is no independent act of the deceased statesman that would receive so unanimous a vote of confidence, as the measure to which we have referred. The dogged and unreasoning antagonism of some portion of the weekly press, excited much discussion at the time the law was enacted, and now the metropolitan police enjoy the unlimited confidence of the public. This change in the popular opinion is mainly attributable to the judicious conduct of the Commissioner and his many able superintendents.

A measure so general, and embracing the whole of the metropolis, received, as usual, the severest opposition from the Corporation of the City of London. They had their Marshals, Marshalmen, and their ancient watch, and required no new-fangled troop of mere—spies or soldiers in disguise—to protect the property of the citizens. They met, they spoke, they petitioned, and they prayed Government to exclude the magical district of the City from the operation of the dreaded measure. In this they succeeded; and were supported by the "fast" men of the City. The "old Charleys" being their pet amusement. When heated with wine, or the victims of *ennui*, they got rid of the effervescence of the one and the depressive effect of the other, by a nocturnal attack on the ricketty watch-boxes and their slumbering occupants.

We remember the late Sir Matthew Wood describing with much gusto the enjoyment the young men of his day had in their attacks on the gouty watchmen. They would quietly watch the jaded officer of peace into his box, then stealthily approach, and at a given signal upset it, face downward, and hilariously dance on the top, keeping time to the melancholy moanings of the half-stifled and quite overthrown protector of the property of the City.

A few years' experience of the admirable conduct of the new force induced the City to apply for an Act of Parliament, giving them the power of introducing a similar force into the City, of which the Corporation should have the entire control The present Corporation was forgiven its former opposition, the bill passed, and the City police force was established. A more efficient body of men could not possibly be found, and we believe that no fault has ever been found with them. Our objection to the City police is not in regard to the efficiency of the man, but in respect to its independent jurisdiction, from which many evils flow.

First, there is the unnecessary multiplication of highly-paid officers. If one commissioner of police is sufficient for nineteen-twentieths of the metropolis, surely the addition of the twentieth part, constituting the City and the cent e, would not unduly add to the labours of his office. One additional superintendent might be required to assist him, but that would be all. A considerable expense would, of course, be saved, and perfect unity of action secured. Under our present conflicting jurisdiction, there are some singular anomalies, which could not arise if all were placed under the power o one central authority. A single anomaly will serve to show the absurdity of the system, and perhaps surprise our readers. Few well informed men will believe that, under our police regulations, there is virtually created, in the centre of the metropolis, a *Thieves' Sanctuary*.

There are three classes of police exercising authority in the valley of London. These are—the Thames police, whose authority is confined to the river; the metropolitan police, whose functions extend to the river side; and the City police, whose authority does not extend below high-water mark, or, in other words, cannot go beyond the wharves on the banks of the river. It happens that, between high water and low-water mark, there is left, at every tide, a considerable strip of land or mud; and as the City police cannot go beyond high-water mark, and the Thames police have no power off the river, it necessarily arises that, from the Temple to the Tower, the shoals left bare by the receding tide are really under the control of the metropolitan police; yet as that force has no authority on the river, nor on the shores watched by the City police, there is virtually no police whatever, and it becomes a refuge for rascality. The absurdity of such a system requires no comment; but, it is another of those evils which arises from the obstructive policy of an effete Corporation, whose days are numbered. How puerile must be the Government that can longer permit such a condition of things to exist. The safety of life and security to property alike demand that all these artificial barriers should be broken down, and the entire area of the metropolis placed under one responsible authority so far as police is concerned; and thus would be saved the expense of one commissioner, several superintendents, and all the expense connected with the police committee of the city of London.

Mr Commissioner Harvey and his subordinates are doubtless able men; but they are not needed, and therefore ought to be dispensed with.

Under the old *régime* the heads of the City watch were the Marshals and their men. The Marshalmen have been deposed or pensioned. The duties of the Marshals are considerably circumscribed; but the officers are retained, and their salaries paid. It will hardly be credited that the united salaries of the Upper and Under Marshals, who are now-a-days only ornamental officers at the Mansion house, wearing laced uniforms and cocked hats, form an amount somewhat larger than is paid to the City Commissioner of Police, to whom and the force under him is confided the safety of all the property in the City, which, in the aggregate, must be reckoned by hundreds of millions of pounds sterling.

This is another illustration of the abuses of the Corporation in its retaining officers at high salaries, whose duties are nil, and whose offices ought to have been abolished when a new system of things was introduced. This, and other matters, will come under the cognizance of the Royal Commission, and will, doubtless, be amended. Much stress will probably be laid on the fact that towards the expense of the police force within the City boundary, the Corporation contributes annually out of its own funds the large sum of £10,000. But, as all the property left in trust to the City was really intended to be expended for the well-being of those residing within its limits, it matters little whether the £10,000 is paid towards watching, or in aid of improvements; as all additional sums required must be the product of a tax on commodities, or a rate levied for a distinct and definite purpose. We might multiply our facts and arguments, and swell their proportions immensely; but we believe that what we have stated will be sufficient to convince the metropolitan public that nothing valuable will be lost—no good perilled—but much advantage gained, by the establishment of a central authority in the matter of police.

A preliminary announcement has been made of a company, with a proposed capital of £250,000, for mining coals in the district of Burdwan, Bengal Presidency.

LITERATURE.

"THE REVIVAL OF POETRY."

THERE is some talk amongst professed critics, of what they are pleased to call "the Revival of Poetry." But a revival presupposes a state either of decease, or of torpidity; and, with all deference to critics, we are not aware that either of these calamities has in our day, befallen poetry. There is, how ver, a public taste, which is sometimes capricious, and which generally needs direction; and which for the last twenty years has turned a deaf ear to the claims of all, or nearly all, the new poets that have arisen in the interval, to exclaim "*Noi anche siamo poeti*"—and to demand the wreath of laurel and a niche in the great Temple of Parnassus. What we are so glad to observe as characteristic of the literature of the present day, is not, therefore, to be considered a revival of poetry, so much as a revival of poetic appreciation. Even within the last quarter of a century, there has not ceased to exist a class of readers of refined and cultivated taste; persons excessively difficult to please, and qualified by innate taste and the study of the best writers, to distinguish true from false poetry—the gold coin with the genuine ring of the mint of Apollo, from the base metal of Brummagem. But poetry has not been fashionable during that period, unless it were the poetry of the great authors who had died, and stood in nobody's way. The arbiters of fashionable literature were loth to admit that gentlemen who might be seen in the streets, at the Clubs, and at the theatres, and that might now and then be met with at an evening party, were entitled to rank with men who slept in Westminster Abbey. It pleased the critics and some clever writers to make fun fashionable, and to elevate slang above philosophy. New poetry did not sell. Many great booksellers, who had made fortunes by selling guinea and two-guinea quarto volumes of poetry—and who did not understand or approve the craving of the great mass of readers for cheap literature—stood aloof from all novelty in poetry, finding quite enough to do in turning their old copyrights to account. They made it their business to introduce the "old hands," who had so long wrought for them, to the numerous class who could not afford guinea and half-guinea volumes, and who thought five shillings a large sum to pay for a portion of Wordsworth, when they could get the whole of Milton for less money. The mass of readers were, at the same time, quite contented with Shelley, and Campbell, and Rogers, and Coleridge, and Southey, and Byron, and Moore. The last age was so prolific of poets that the public had not leisure even to make the acquaintance of the members of that brilliant galaxy—to say nothing of the new generation of writers that were ostracised by the fashionable bibliopolists, and pooh-poohed by the herd of criticasters. And always—with the exception of the select few who thoroughly enjoy and appreciate good poetry—the gentle public was but too apt to confound verse with poetry—a mistake as unpardonable as it would be to consider a purse full of copper as valuable as a purse full of gold. But, in spite of all this, the sun shone, the trees blossomed, the birds sang, the human heart throbbed with love and hope, and the clear current of poetry rolled its refreshing waves in the highways as well as in the by-ways of life. Critics no longer made the reputation of poets; the poets made their own—by a slower process, no doubt, but in all probability by a surer one. The absurdity of the idea that in any age of the world there could, in a civilised country, be any real distaste for true poetry, became gradually more and more apparent; and the false critics were reduced to the dilemma either of denying altogether a public taste for genuine poetry, or of denying poetic genius in the existing generation of writers. Both horns of this dilemma were successively clung to, and successively abandoned; for new poets actually appeared, and the public (by slower degrees than formerly) actually recognised them. But the faith in poetry never died out, either among the poets themselves, or among the choice readers, who were competent to form an opinion, and who had leisure to judge for themselves. The sacred fire still burned, and the vestals still continued to guard it. M. De Lamartine published in 1834 a pamphlet entitled "The Destinies of Poetry," in which he stated his belief that never at any previous period were there "such profound symptoms of a deep spirit of poetry pervading, not only France, but all Europe; and that the poet who should respond to this feeling by becoming the poet of the people and singing in popular strains their wants, their feelings, and their affections—the poet who should interpret nature to the people, and explain to them, in their own language, all the goodness, elevation, generosity, patriotism, and pious enthusiasm implanted by God in their hearts, was the poet demanded by the age, for whom the people were athirst." He defined poetry to be "the guardian angel of humanity in every age;" and he was right. The voice of song declared itself, and was always on the side of the people. True genius always is on that side, for truth is universal, not particular, and appeals to the common heart of humanity, or makes its appeal in vain.

This is the kind of poetry that is most appreciated in the great writers of the past. Passages imbued with this spirit are those which are "household words" among all classes, and form the gems of thought that are quoted from Shakspeare, from Cowley, from Milton, from Dryden, from Pope, from Rogers, from Campbell, from Burns, from Byron, from Moore, from Shelley, from Keats, from Wordsworth, from Coleridge—and, in fact, from every other great master of the art of song. If the poet do not appeal to the many as well as to the few—if he do not aim his impassioned words at the popular heart—he is but a verse maker at the best, and maunders around the basis of Parnassus, without having the power to reach the summits. All this, if not understood by the great bulk of the people, is felt by them; and those poets or verse-makers who do not act upon this principle, and who do not suffer it to pervade and permeate all they write, may be admired by the multitude for a while, but their fame will be of short continuance. They will not be quoted; their sayings will not become part of the every-day wisdom of a nation; and they will fall gradually into neglect. Who, now-a-days, quotes from the versicles of nine-tenths of the poetasters whose names are included in the well-known work of Dr. Johnson—though a sad misnomer—"The Lives of the Poets"? Who quotes from the writings of the rhymers of the last half of the eighteenth century? Who quotes even Sir Walter Scott as a poet? No one; for there is nothing to quote in those long strings of rhymed romances, vivid and admirable as they are, but which would have been more vivid and admirable if they had been written in prose, and served to extend the long and brilliant series of the Waverley Novels. Neither does any one quote the epics or ballads of Southey. They are full of gorgeous description—discloses a wonderful wealth both of fancy and imagination—and are prodigies of learning and research. But they teach nothing, and never touch the heart. They are as hard as the rock of Horeb; but no wand of the magician or the prophet can draw the healing water from them. They prompt no tears, and scarcely quicken the pulses of their readers. They are sealed books to the multitude, and so they will remain until the multitude prefer stubble to full ears of corn. But the great masters of song—the poets who will live as long as literature—have a consoling word for every man's and woman's sorrows—have sympathetic utterances for all the afflictions, as well as for all the joys, cares, hopes, and aspirations of humanity. They are perpetual fountains of the highest philosophy; and the weary and way-worn can never sit down and dip into them without feeling themselves refreshed, purified, and exalted. It is not the mere tale or legend which they may tell, but the philosophy and religion which they preach, that makes them such favourites; so that it would be as much a fallacy to assert that this age of the world despises philosophy or religion as it is to assert that it despises poetry. The mere verse-makers have no claim to such high function or prerogative: they yield neither healing nor refreshing, in the vapid streams of rhyme, which they incessantly pour forth. When they are at their worst they disgust; and when they are at their best they but fatigue us. That they are hateful to gods and men is a *dictum* as old as Horace—probably much older. For them we may be quite sure there can never be any revival of popular taste. Some few, or even many of them, may give pleasure in their own small circles of friendship, or cliques of interest. Some of them may acquire a certain degree of reputation in a wider sphere, consequent upon the renewed degree of attention which the public seems willing to bestow upon poetry, as the highest department of literature. But none such will achieve an abiding place in the popular memory—unless it be the unsavoury place which a future Pope may reserve for them in a new Dunciad.

While the poetic taste of the mass of readers—that great mass whose encouragement makes popularity and success—has continued to be sound, the taste of a smaller circle, in later years, has been vitiated. This circle, after speaking through the organ of a few public journals, whose conductors have accidentally happened to belong to cliques, has bestowed its patronage upon a kind of poetic mysticism, which would not be tolerated by them in a prose writer. The *blasés* of literature like other *blasés*, love the unwholesome, the startling, and the dreamy. To be intelligible is, in their estimation, to be dull. They love poetic riddles. They like a half-meaning to be half expressed, or a no-meaning to be wrapped in great words. The vague is to them delightful. But, luckily, the efforts of such writers and critics to pervert the public taste are futile. The great heart of humanity is sound; and the people, not too busy to be amused, are far too busy to solve riddles, and to look for meanings in authors who probably never had any. Common sense is the staple of all good writers whatsoever, whether they write in verse or in prose; and the test of the finest poetry is to strip it of its mantle of rhythm, and its adornment of rhyme, and make it plain prose, and yet leave it beautiful and true, and worth remembering. The best poetry is the finest common sense, illustrated by the grandest imagery, and allied to a pleasing and a musical form of expression. We may be sure that he who writes obscurely either thinks obscurely, or does not think at all. We may also be quite sure that mysticism and vagueness in poetry will not long pass current. They may please for a while, in a limited sphere, but truth triumphs are ephemeral, even in the minds of their own admirers. All the grand sayings of Shakspeare are clear as day; and nothing survives of any writer—however much he may be flattered in his time—which is not lucid and terse. Let us hope that, in the so-called "revival of poetry," we may see the downfall of sickly and vapid sentiment, and mysticism; and that our new poetry will be wholesome, hearty, and manly.

TESTIMONIAL TO MR. ALDERMAN MATTHEWS.

THE circumstance of Mr. Alderman Matthews (of the firm of Messrs. Turton and Co.) of Sheffield, filling at the same time the offices of Mayor and Master Cutler, with the auspicious coincidence that a son was born to him during his year of office, has been commemorated by the presentation of a very superb Testimonial to the highly-respected gentleman. The requisite fund was raised by private subscription in the latter weeks of Alderman Matthews' mayoralty; and the gift was presented on the 26th of December last, in the name of the subscribers, at Ald. Matthews' residence, Weston-bank, by Mr. Dodds, engineer, of the Holmes, and a deputation. The Testimonial consists of a massive silver Epergne and a Salver. The former was manufactured by Messrs. James Dixon and Sons, of Cornish-place, from designs and models by Mr. Vincent Nicholson. The design is that of an oak with six arms. In the centre it supports a crystal basin, surrounded by smaller crystals and nglets. The base represents rock-work with ferns and rock plants, among which are three stags couchant. On each of the three angles is a medallion, on which appear in relief the arms of the corporation of Sheffield, of the Cutlers' Company, and the crest of Mr. Ald. Matthews. The weight of the Epergne is 27½ lbs. The Salver was manufactured by Messrs. Hawksworth, Eyre, and Co. It is circular, and measures 24 inches in diameter. It is in the Renaissance style of art, the border being composed of medallions, foliage, and laurel. The medallions bear the arms of the incorporation of Sheffield, of the Cutlers' Company, and the crest of Mr. Ald. Matthews. The centre has a bold engraved border, enclosing the inscription, which is ornamentally engraved. The salver weighs 12 lbs. Both pieces of plate bear the following inscription:—

Presented to WILLIAM ANTHONY MATTHEWS, Esq., Mayor and Master Cutler of Sheffield, by a few friends, in testimony of his private worth and public spirit. 1853.

TESTIMONIAL TO MR. ALDERMAN MATTHEWS, MAYOR, AND MASTER CUTLER, SHEFFIELD.

We have engraved this Salver, which, with the companion Epergne, are fine specimens of an important branch of local manufacture. The cost was 250 guineas.

Mr. Alderman Matthews' splendid "Cutlers' Feast," it will be recollected, has been illustrated in our Journal; and the high estimation in which he is held by the people of Sheffield fully justifies the eulogium of the *Sheffield Times*, that "his genial spirit, his ever active benevolence, unrestricted by class or rank, and the liberality he has invariably manifested in furtherance of public objects worthy of promotion, have paved the way to the twofold distinction which was conferred upon him by his fellow-townsmen, and added to the éclat which attached to that peculiar honour."

LIGHT SOVEREIGNS.—Within the last few days Mr. Webster, the inspector of coins to the Mint, has had his attention called to a system of fraud now being practised to a very great extent with the good coin of the realm by a most ingenious method of reducing the value of a sovereign by several shillings. It appears that the fraudulent operator obtains new ones, and affixing them, by means of cement, to the clouck of a table, with a cutter turns off the wings of the proper edge of course, leaves the edge plain; but, by an ingenious process, the edge is again made as perfect as before, and the coin, but little varied as far as casual appearances are concerned, whilst in every other respect it being a good coin, no suspicion is created. By the process from eight to twelve grains are taken from each; and it is calculated that persons carrying on this nefarious trade have been making about £10 per diem. As no person is compelled to take coin unless full weight, and the Mint will not, of course, recognise such coins should they feel inclined to again call in the gold, the loss will fall upon the unlucky possessor, and it will average from 12 to 15 per cent. Formerly, an offence of this character was in the category of false pretences, punishable with death; and, as the law now stands, the punishment is of the most serious character.

THE NEW ROAD AT KENSINGTON.—The Commissioners for the Exhibition of 1851, in their financial declaration, explain that the works to be executed under the bill to be applied for in the ensuing session, consisting of the proposed new road at Kensington, are to be defrayed out of funds under their control; that the actual surplus of such funds is £49,000; that the cost of the new road will be £18,000, that no rates, duties, or revenue are created by, or arise under the bill, and that no private or personal pecuniary profit or advantage is to be derived from it.

NORTH METROPOLITAN RAILWAY.—The Parliamentary estimate of this company for proposed extensions to the Paddington station of the Great Western, and to the General Post-office; for communication between the London and North-Western and Great Northern; for stations and warehouses in the city, and for traffic contracts and other arrangements, amounts to £650,000.

PROPOSED REMOVAL OF THE LAW COURTS.—A serious proposition has at length been made for the removal of the law courts from Westminster-hall, to a more permanent and central situation. The site proposed is the most central in London, and is in the very midst of the dens of lawyers of all denominations. The site lies between the Strand on the south, Carey-street on the north, Chancery-lane on the east, and Clement's-inn and New-inn on the west. The proposed space occupies about 7½ acres, and is at present occupied by lanes and by streets, which contain some of the choicest abominations in London. The front would be towards the Strand, the back, naturally, in Carey-street, and these would form the shorter sides of a parallelogram. It is proposed by Sir Charles Barry that the building shall be in the Tudor style, and that it should be of so decorative a kind as to be an ornament to this part of the town. As may be seen by a glance at a map of London, this position is in the very centre of the inns of court—Lincoln's-inn, the two Temples, Gray's-inn, the Rolls'-house, the Incorporated Law Society, and all the minor inns, are in close proximity to it. It is proposed to defray the expense from the accumulated fund of the suitors in Chancery, as it is represented this money can be so applied without any injury to the actual suitors. In point of fact, from the year 1726 downwards, from time to time, money has been taken from the same fund for similar purposes—as the erection of the Six Clerks' offices, Masters' offices, the offices of the Examiners, and other Chancery offices in the Rolls yard. Acts of Parliament are quoted under which these appropriations have been made, and the authority of the late Lord Langdale is relied upon for similar applications of the fund. The ultimate cost of site and building is estimated at £675,874.

THE GREAT METROPOLITAN POULTRY SHOW.

IN spite of the inclement weather of last week, and the stoppage of most of the railways for a day or two, the meeting of this week—the second annual exhibition—which was opened to the public on Tuesday, has been the greatest Poultry Show which has taken place either in London or any other part of the kingdom. The number of specimens was double that of last year, there being nearly 2000 pens, comprising between 4000 and 5000 birds. Owing to the very large number of entries, the space occupied by the London Summer Pouliry show, at the Baker-street Bazaar, was found to be utterly inadequate; nearly the whole of that usually allotted to the exhibition of the Smithfield Cattle Show having been required.

Among the breeds most worthy of notice were specimens of the Brahma Poutra, exhibited by Messrs. H. D. Davies, H. Gilbert, J. Fairlie, and Mr. S. F. Baker. These were beautifully represented by about thirty pens. The first entry, sent by his Royal Highness Prince Albert, was much admired at the private view, and was highly commended by the judges. The first prize, however, was awarded to Mr. H. D. Davies, and the second to Mr. H. Gilbert, of Kensington, who was an exhibitor to a large amount, and a very successful one. The show of Dorking fowls was particularly good and varied; as was also that of Cochin-China fowls. Indeed, the same need of commendation as to quality is applicable to the Spanish fowls, the Malays, the Game fowls, the Polish fowls, and the cross-bred fowls. Bantams were beautiful, both in symmetry and plumage. In the pens allotted to the simplest of creation—the Geese—there were some valuable birds. There were numerous good specimens of Ducks of all kinds. The "Muscovy" birds were very fine. The Turkeys and Guinea-fowls were few in number, and there were very few good samples. As to Pigeons, the collection is declared to have been

PRIZES AT THE METROPOLITAN POULTRY SHOW.

RED TURBITS (95.) BLACK NUNS (91.) POUTERS (170, 167.) ALMOND TUMBLERS (56.) DUN COCK CARRIER (197.) WHITE FANTAILS (98.)

One of the most splendid that ever was got together. Mr. Butt's contribution of pouters formed the chief attraction to the connoisseur in such matters.

Her Majesty the Queen was among the first to avail herself of the rule of the Club, which declares that any pen of birds may be claimed at the price affixed to them after one o'clock on the first day of the show, by claiming on those terms the beautiful pen of gold-laced (Seabright) bantams, numbered 973, in class 51, bred by Mr Uriah Spiney, Market-street, Dunstable, hatched in 1853. Prince

GOLD-LACED BANTAMS (973.) GAME COCK (633.) WHITE BANTAMS (1000.) GOLDEN-SPANGLED HAMBURG (742.)

Albert also claimed the splendid Dorking cock, bred by Mr. Fisher Hobbs, of Boxted-lodge, Colchester, which obtained the first prize in class 7, and numbered 145. The second prize in the same class, also carried off by Mr. Fisher Hobbs, numbered 147, was claimed by Colonel Kingscote for ten guineas.

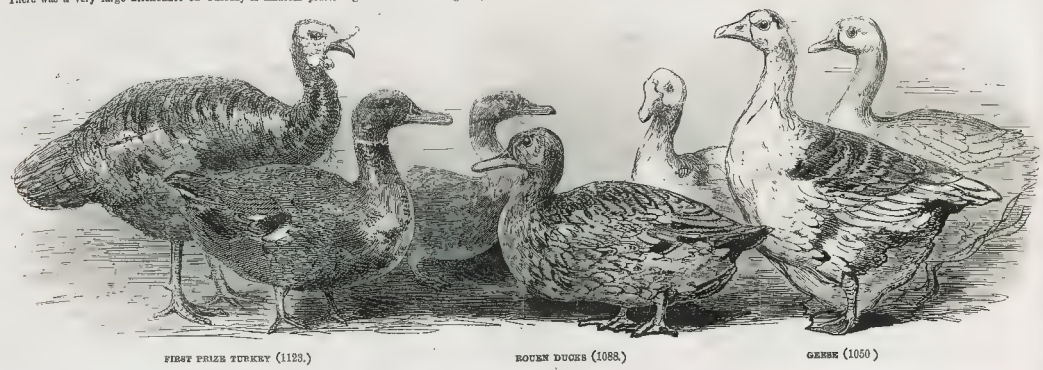
Prince Albert's pen of Brahma Poutra fowls, numbered 581, in class 22, and to which his Royal Highness had affixed a price of £25, were claimed, at that sum, although they had received no prize, by Mr. Fox, of Skinner-street, Snow-hill. Lord Robert Grosvenor claimed

SPANISH FOWLS (55, 6) WHITE COCHIN-CHINA (486)

at £15, No. 135 in class 6, a Dorking cock and two pullets, which obtained the second prize in the class, bred by Mr. Edward Terry, of Aylesbury.

There was a very large attendance on Tuesday of amateur professional bird "anglers," as well as of persons attracted by curiosity. The exhibition was agreed upon all hands to be the finest which had ever taken place in this country, and to have beaten the great show at Birmingham, at which so large prices were obtained for Brahma Poutras and Cochin-Chinas. The sales effected on Tuesday realised upwards of £400.

We have engraved a selection from the Prizes; the figures beneath which indicate the numbers in the Prize-list.



FIRST PRIZE TURKEY (1123.) ROUEN DUCKS (1088.) GEESE (1050)

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, TAKEN DURING THE WEEK ENDING THURSDAY, JAN. 12.

Note.—The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer increased from 29·03 inches at the beginning of the week to 29·15 inches by the morning of the 7th; decreased to 28·89 inches by six p.m. on the same day; increased to 29·91 inches by six p.m., on the same day; increased to 29·91 inches by six p.m., on the 11th, decreasing by the end of the week. The mean of the week at the height of 82 feet above the sea, was 29·320 inches.

The mean daily temperature was above the average on every day except the 6th, when it was 2·3° below it. On Sunday it was 7·6° above it. The mean temperature of the week was 36·9°, which is 1·8° above the average in the same week in 38 years.

The mean temperature of the dew point was 33·9°.

The range of temperature during the week was 15·9°, being the difference between the highest reading on the 8th, and the lowest on the 6th.

The mean daily range of temperature was 7·6°.

Rain fell to the depth of 0·96 inch (nearly seven-tenths of an inch).

The Weather has been dull, and the sky almost constantly overcast. Snow still remains in many places to which it has drifted. The direction of the wind had been variable.

JAMES GLAISHER.

Lewisham, JAN. 13, 1854.

HEALTH OF LONDON.—The births of 1372 children were registered within the week ending January 7, in the metropolitan districts: of these, 679 were boys, and 693 were girls. The average of the first week of the nine preceding years was 1686. In the corresponding week of 1853 the births numbered 1911. The number of deaths within the week was 1445; the corrected average of the corresponding week, derived from the preceding ten years, was 1288—so that the mortality is 56 in excess: of those deaths, 636 were of children under fifteen years of age; 431 were of persons between fifteen and sixty years; and 368, at ages exceeding sixty years. The corrected averages of these periods of life are 614, 458, and 212, respectively—so that the mortality was, in children, 52 in excess; in persons in the prime of life it was 25 less than the average; and of men and women in advanced life, who had completed sixty, and upwards, it was 21 excess—so that the severity of the season has caused an excess of mortality in children and old persons. The number of fatal cases in zymotic diseases was 264 (their average, 260): this excess was caused chiefly by hooping-cough, which carried off no less than 58 children—being about the double of its corrected average. The deaths in other classes of diseases were about their averages, excepting in those of the lungs and of the other organs of respiration: their number was 352 (average 278)—189 of bronchitis, 104 of pneumonia, and 26 of asthma. To violence, privation, cold, and intemperance, 38 deaths were referred. Only two deaths were registered as caused by cholera.

CITY CORPORATION COMMISSION.

The Commissioners have renewed their labours this week at the Privy Council Chambers. The most interesting evidence which has yet been tendered was that contained in a defence of the Corporation, read by the Recorder. This document, which occupies nearly seven columns of the daily papers, goes through the whole of the charges brought against the Corporation, and endeavours to show that they are all either exaggerated or untrue. The gross income of the Corporation, instead of being what some of the witnesses stated, is said to average only £300,000 a year; and this, they allege, is all obtained from unobjectionable sources. The coal-tax is defended as the least injurious mode of raising money to promote public improvements. The banquets and shows are deemed neither expensive, useless, nor absurd; and the Corporation has not yet heard any good reason for abolishing them. The City police force is well managed; and so likewise is the lighting, paving, and sewerage of the City. The defence winds up with a comparison of the eighteenth and nineteenth centuries, in order to show how much the Corporation has accommodated itself to the advancing spirit of the age. As a specimen of what it has done in that respect, the defence states that—

"In the eighteenth century, and even at the commencement of the nineteenth century, the Corporation, with an income of £80,000 a year, remunerated their four standing committees with cash allowances to the annual amount of £1100, and tavern expenses *ad libitum*; amounting, upon an average of seven years, to upwards of £4000 per annum. But in the nineteenth century, by a series of resolutions, the same four committees, administering a revenue of £210,000 a year, discharge their duties without any money allowance, and with tavern bills restricted to £1200 among them all."

CROSBY HALL ELOCUTIONARY CLASS.—On Wednesday the first public entertainment of this class was held, under the presidency of Mr. Leopold Smart, to whose well-directed efforts the proficiency of its members are due. Three scenes from "The Merchant of Venice," "The Rivals," and "The Recruiting Officer," were very well given; and some recitations from the poets effectively delivered; nor were the various pieces of humour without merit. The practice of elocution cannot fail to be of great value to the rising generation; and the classes at Crosby Hall are evidently well conducted.

TESTIMONIAL.—A handsome silver tea and coffee service has just been presented to John Thwaites, Esq., by the directors and shareholders of the Surrey Consumers Gaslight Association (accompanied with a purse of 220 sovereigns), in testimony of the high sense entertained by them of the valuable services rendered by him to the association. The service weighs 103 ounces, and has been manufactured by Messrs. Benson, Cornhill.

CHARING-CROSS HOSPITAL.—At a quarterly meeting of the Committee held in the Board-room of the Hospital, West Strand, on Tuesday last—R. Low, Esq., in the chair—a report of the operations of this charity for the past year was read. It appeared that 1203 in-patients and 13,462 out-patients had partaken of its benefits. The cost of effecting this great amount of good was £2668 12s. 5d. The committee have added additional wards and beds for sick children, and from forty to fifty more patients can be accommodated than heretofore. These wards will greatly increase the efficiency of the Hospital, and render it more worthy of the support of the benevolent.

COLDBATH-FIELDS HOUSE OF CORRECTION.—An important inquiry has been in progress some time, and is not yet completed, into certain matters in the financial administration of the Coldbath-fields Prison. One result has been the absconding of George C. Hoare, principal clerk in the finance department, and defalcations to a serious extent have been discovered in his books. A description of him has been published in the *Hue and Cry*, and a warrant for his apprehension placed in the hands of the police. The inquiry is being carried on by the visiting justices, and Captain Williams, the Government Inspector of Prisons, and a Government short hand writer has been in attendance.

CABINET COUNCIL.—A Cabinet Council was held at the Foreign office, Downing-street, on Tuesday afternoon. The Ministers present were—The Earl of Aberdeen, Lord John Russell, the Lord Chancellor, Earl Granville, the Duke of Argyll, the Marquis of Lansdowne, Viscount Palmerston, the Earl of Clarendon the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, the Right Hon. Sidney Herbert, and Sir William Molesworth. The Council sat four hours.

HILARY TERM.—Wednesday, being the first day of Hilary Term, the Lord Chancellor entertained the Judges of the several equity and common law courts, the leading Queen's counsel, and the serjeants-at-law, at breakfast, at his mansion in Upper Brook-street. Shortly after one o'clock the Lord Chancellor and the Judges left his Lordship's mansion, and proceeded in state to Westminster. The legal cortège arrived at Westminster Hall shortly before two o'clock, preceded by the High Constable of Westminster. The hall was well filled with spectators, principally ladies, anxious to witness the Judges appearing in their full state robes. The Lord Chancellor and the Judges were received at the entrance of the Court of Common Pleas by the Serjeants-at-law, and from thence they passed to and gained their respective courts.

ADVANCE IN THE PRICE OF BREAD.—The bakers have this week made a simultaneous advance in the price of bread. The 4 lb. loaf, which was selling last week at 9d., 8½d., and 10d., cannot now be obtained for less than 9½d. 10d., and 11d. respectively. Household or country bread is advanced 1d.; viz., from 8½d. to 9½d.; the League Bakery bread is at 10d. the 4 lb loaf, and the best, or full-priced, is from 1s. to 1s. 0½. The reason assigned for this increase in price is, that flour, which could be had last week at 7l8., is now fully 75s.

MADAME TUSSAUD'S EXHIBITION.—The Metropolitan Poultry Show, at the King-street BAZAAR, during the last week, has been indirectly tributary of visitors to Madame Tussaud's curious collection of WAXWORK costumes, and memorials of distinguished persons; among which the relics of the Emperor Napoleon are prominently attractive.

TELEGRAPH BY NIGHT TO THE CONTINENT.—In reference to the statement which lately appeared, to the effect that the Governments on the Continent had not extended to this country the advantages of night service which they had established with each other, we have learned that the Submarine and European Telegraph Companies have already concluded arrangements with the Continental Governments for a night service between the various countries and England. All the most important towns of France, Belgium, and Germany will in future be open both by day and night for the transmission of despatches.

A CHAPTER OF ACCIDENTS.—The driver of the mail cart between Trowbridge and Chippenham, has experienced a most unfortunate Christmas. One night last week his horse fell down, and the mail cart was very much damaged. On Sunday night, when leaving Lacock, the horse again fell, and broke off both shafts of the vehicle he was then driving; and, on Tuesday night week, on the road to Lacock, the horse took fright, and the driver was thrown off, the cart entirely beaten to pieces, and the horse much injured.

AN agitation is in progress in the City for the purpose of "procuring an alteration in the existing laws relating to the assessment of the poor-rate and the removal of chargeable poor." It has been resolved on to request the Lord Mayor to call a public meeting on the subject as early as possible.

SNOWBALLING UPON THE LIVERPOOL EXCHANGE.

SNOWBALLING ON LIVERPOOL 'CHANGE.

AN amusing scene was transacted on 'Change, at Liverpool, on Thursday week. The cotton-brokers and share-brokers, between whom there is frequently a good deal of harmless raillery, having no London papers to read, commenced a regular snowball engagement, which lasted nearly two hours. The contest commenced about two o'clock, and did not terminate till nearly four. For some time the battle raged with great waste of ammunition, and victory seemed doubtful. The snowballs flew in all directions, in some instances infringing somewhat disagreeably upon the faces of the combatants. Many fell in the conflict from the effects of blows, or from the slippery state of the ground; but, nothing daunted, they rose again, and renewed the fight. Hats were knocked off, and trodden under foot, many of them being so disfigured that they could not be identified by their owners. In order to keep up a continued fire, a portion of the troops made balls, while others were actively engaged in warfare; and the former, when prepared with ammunition, then advanced to the attack. At one period the cotton corps seemed to be gaining advantage, as they drove the enemy into a corner; the share-brokers, however, after a slight retreat, rallied, and almost routed their adversaries, making considerable havoc amongst them. It is but justice to say, that, although the sport was carried on with great spirit on both sides, the utmost good-feeling prevailed, and no exhibition of ill-temper occurred. All seemed animated with the spirit of their schoolboy days, and resolved to engage merely in a little harmless sport. Several squares of glass in the Exchange News-room were broken; and, during the heat of battle, a ball went through a window of the Council-chamber while a member of the Health Committee was speaking. The shock put a momentary stop to the flow of his eloquence; but, on ascertaining that no mischief had been done, he resumed his address.

During the heat of the engagement, Captain Greig, head-constable, having been directed by the Mayor to request that an armistice should take place, was imprudent enough to risk himself, along with a few policemen, on the battle-ground. But the brokers would brook no interference. They assailed the head-constable with the snowballs they were using, knocked his hat off several times, and otherwise handled him rather roughly. To such treatment the man of order could not submit, and, therefore, several of the leading plotters—among whom were some of the principal cotton and share-brokers—were taken into custody. They were marched off to the Central Police-office, amidst loud marks of disapprobation towards the police, who were considered guilty of improper interference. After some explanation, the prisoners were liberated. The battle then recommenced, and was continued as vigorously as ever for a short time, when the head-constable again made his appearance, under authority from the Mayor, to intimate to the gentlemen in the Exchange News-room the desirability of putting an end to the contest. On entering the news-room he attempted to state the object of his mission, but was instantly met with hootings, cries of "Out with him!" and other marks of disapprobation. In vain he attempted to speak; his audience would not hear a word: and a mob of them having got round him, they ultimately forced him to leave the room, amidst loud applause from within and without the building. The snowballing was then renewed, and kept up with considerable vigour until nearly four o'clock.

A gentleman who saw the whole of the extraordinary scene says the snowball contest lasted altogether for about an hour and a half; that it was witnessed or participated in by about 300 of the gentlemen who usually assemble on 'Change; that it was commenced in the sportive and jocose spirit often generated by the unexpected enjoyment of leisure; that it was, throughout, conducted in the most good-humoured and innocent manner; that even those who were knocked down got up and renewed the contest in a spirit of hearty and kindly enjoyment; in fact, that if it had been a battle between ladies on the one side and gentlemen on the other, it could not have been carried on in a more gallant and considerate manner. The contest was exhilarating even to the spectators; and so heartily did some of the oldest and most respectable frequenters of 'Change enjoy the novelty, the earnestness, and the gentlemanly spirit of the contest, that they frequently applauded the combatants, and urged them to continue the sportive strife.

CALENDAR FOR THE WEEK.

SUNDAY, January 15.—2nd Sunday after Epiphany.
MONDAY, 16.—Gibbon died, 1794. Battle of Corunna, 1809.
TUESDAY, 17.—First stone of the Royal Exchange laid, 1842.
WEDNESDAY, 18.—St. Prisca. Old Twelfth Day.
THURSDAY, 19.—Copernicus born, 1473. Earl of Surrey beheaded, 1547.
FRIDAY, 20.—American Independence acknowledged, 1783.
SATURDAY, 21.—Louis XVI. guillotined, 1793.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JANUARY 14.

Now ready, with upwards of 600 Engravings, price 21s., Volumes XXIII. of
THE ILLUSTRATED LONDON NEWS,
elegantly bound in cloth, gilt edges, rich in Illustrations of the events of the last Six Months; together with a mass of useful and highly-interesting articles on Art, Literature, and Science.—The Covers for Volume XXIII., with the New Design, price 2s. 6d. each, may be obtained, by order, of all Booksellers, &c., in the Kingdom; as also all the previous volumes.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 14, 1854.

THE press of this country is unanimous as well as cordial in its denunciation of the conduct of the Czar. At one time it is true that a public journal of considerable power and influence endeavoured to serve the cause of Russian ambition by unfounded accusations against the Turkish Government, and by equally unfounded laudation of the Czar. But that journal speedily discovered that it was on the wrong tack, and for the last month or six weeks has steadily advocated the rightful side. We are not aware of a single British journal which is at the present moment, either openly or covertly, the supporter of Russia. In France, however, the case is different. Although the press of France only exists upon sufferance, and can by no means be considered the free and unbiassed organ of public opinion, it is allowed sufficient liberty on questions of foreign policy to free it from the suspicion of being under the absolute control of the Government. A small portion of the French press is not ashamed to flatter the ambition of Russia, to goad it on to further violence, and to condemn the alliance between Great Britain and France. The partisans of what is termed the fusion between the elder and younger branches of the House of Bourbon are mean and cowardly enough, in the desperate state of their fortunes, to look with favour upon a Russian alliance as the only means of restoring Henry V. to the throne of his ancestors. They feel that, if the claims of Bourbon and Orleans are left to the decision of the French people, they have no more prospect of the Crown of France than the Duke de Modena has of the Crown of England. But, rather than not see their idol restored to its place, they would have it set up for their adoration by the enemy of the liberties of Europe. They would rather that France should be humiliated by the enthronisation of their *Fetish*, amid the salvos of Russian artillery and the support of Russian bayonets and Cossack lances, than renounce all hope for Henry V. and Louis Philippe II. If there ever was a chance in a country so notorious for change of dynasty and Government, that something might turn up in their favour by the storms of revolution, they have destroyed it by such base and anti-national policy. The friends of the elder branch of the Bourbons claim to be the representatives of honour, chivalry, and patriotism. The next time they talk of their honour, the indignant hisses of Europe will remind them that dishonour is the fate of those who, for a presumed personal advantage, take the side of the wrong-doer against his victim. The next time they talk of their chivalry, they will be reminded that it was the pride of chivalry to help the oppressed, and to fight even in a losing cause, if it were the cause of justice and humanity. Should they ever dare talk of their patriotism, it will be cast in their teeth, to their eternal disgrace, that they would have sold the independence of their country to a foreign barbarian if they could thereby have increased their slender chance of regaining possession of the Tuileries. But the Bourbons of both houses are true to their ancient character; "they have never learned anything from adversity." The hopeless stupidity of the one branch, and the hopeless pedlarism of the other, have sealed their doom; and the recent efforts of their organs in the press to embarrass the present Government of France, and to sow mistrust and disunion between the British and French people, have but served to cement the alliance, and to strengthen the throne of Louis Napoleon. Their "fusion" has been their "confusion;" and the young Count de Paris, who might have been a considerable personage, if he had had no effete cousin and no intriguing uncles to cloud his prospects, need encourage no hopes of ever ascending the throne of his grandfather. The friendship of such partisans as are possessed by the Legitimists is not simply dangerous—it is fatal.

BREAD riots are no novelty. "It is ill to reason," says the old proverb, "with a hungry belly." Whenever corn rises to a famine price, there is a danger of riots among the destitute population. If to the calamities of hunger be added the miseries of cold, the reason of the multitude too often gives way to a savage instinct, which exists more or less in all men, and which is only to be controlled by reason and education. The riots at Bristol during the present week, show no peculiar ill-feeling. Millers and bakers become invariably the objects of popular dislike, as the price of the loaf rises. The hungry and the ignorant know these traders; but their acquaintance with the laws of social and political economy which regulates the dealings of these men, as well as those of all other tradesmen, are things beyond their comprehension. They expect superhuman virtue from the baker, and seem to think that the miller ought to grind and sell to his own ruin, rather than that the price of flour should advance a farthing:

> Two millers thin, named Bone and Skin—
> They grind the poor, or near it;
> But be it known to Skin and Bone
> That Flesh and Blood won't bear it.

Such is the logic of the ignorant when they are hungry. The mere thieves, who always turn up on such occasions, are but too glad to exercise their propensities with a mob at their back. In Paris, at the close of the last and the commencement of the present century, the bakers' shops were so often besieged by the populace, that, by the advice and with the sanction of the Government, they barricaded their windows with strong iron bars, which the stranger at Paris may observe to this day. There have been bread riots in every civilised country under the sun; and it is well for a Government, when such events occur, if its members can absolve their consciences from the guilt of having, by their unwise legislation, created, or helped to create, an artificial scarcity. The bulk of the people of England know that, however dear bread may be, it is as cheap as it is anywhere else; and that no efforts of any Government, or of any men or class of men, could, by possibility, have made it cheaper. No misgiving can, in such circumstances, paralyse the arm of authority. We may pity the misguided men—but we must punish them. The mass of the people know that if Free-trade cannot give them a cheap loaf when there is a deficient harvest, nothing can; and they know, also, that a benevolent Poor-law will prevent the really destitute from dying of starvation. Whatever legislation can do is done, in this country, to prevent scarcity, and to help its inevitable victims. Such foolish and wicked assaults upon the property of unoffending men will, therefore, meet with no sympathy; and there is no reason to fear that the example of Bristol and Exeter will be extensively followed; or, if followed, that the perpetrators will not be promptly and severely punished.

CHURCH, UNIVERSITIES, &c.

CONSECRATION.—On Thursday, the 5th of January, a new church was consecrated at Northwood, in the parish of Ruislip, a hamlet distant three miles from the parish church, and on the borders of Rickmansworth and Watford; and the district assigned to the new consolidated chapelry is composed of portions of the three parishes. The edifice has been built by subscription. Lord Robert Grosvenor, in whom the patronage is vested, has given the ground, and endowed it. It is situate a little more than a mile distant from Moor-park. Although the district is in the two dioceses of London and Rochester, the ceremony of consecration was performed by the Bishop of London, on account of the church being in Middlesex. The Bishop was entertained by Lord Grosvenor, at Moor-park, on the previous day, but was obliged to return home after the service. A large party partook of a *déjeûner* given by his Lordship, at Moor-park, in the course of the afternoon. Tea and cakes were served to the school children, in the school-house, near the Church; and, on the following day, 110 old men and women, and others who had been recently employed in the very arduous duty of keeping the roads clear of snow, were regaled with a substantial dinner in the conservatory at Moor-park. An evening service was performed in the church, on the day of consecration, at the 5-past six o'clock, by the Rev. H. Loring, Rector of Cobham; and, on the following day, being Epiphany, lectures were delivered after both morning and evening service, by the Rev. Joseph Bayliss, D.D., Principal of the College at Birkenhead. The church, which is intended to accommodate 300 persons in nave and chancel, is in the Early Decorated style, and has a tower, a shingle spire, and five stained-glass windows. The architect is Mr. Teulon.

THE BISHOP OF LONDON'S VISITATION OF ST. PAUL'S CATHEDRAL.—On Monday and Tuesday the Bishop of London, assisted by Sir John Patteson, and Dr. Addington, as assessors, held an inquiry into the alleged abuses of the revenues of the metropolitan cathedral by the Dean and Chapter. The Dean, Canon Wilberforce, and Canon Champneys, as also several of the Minor Canons and other gentlemen officially connected with the cathedral, were present. Mr. Rolt, Dr. R. Phillimore, and Mr. Hale were employed professionally on the principal point of which, whether the Bishop has a right to share in the revenues of the Cathedral. The Bishop of London thanked the learned assessors for the assistance they had rendered him, and said he would take time to consider his decision.

PREFERMENTS AND APPOINTMENTS.—The Rev. J. Jones, Rector of Criccieth, Carnarvonshire, to be a Rural Dean. *Rectories:* The Rev. H. Cuddell, to Atwick, near Hull; Rev. H. M. Fletcher, to North Stoke, Somerset; Hon. and Rev. A. B. Hanbury, to Shobdon, near Leominster; Hon. and Rev. A. Douglas, to Corry Mallet, Somerset; Rev. to H. F. Strangways, to Kilmington, Somerset; Rev. J. A. Hall, to Bromham, near Sevenoaks; Rev. G. Hurd, to Sheinton, Shropshire; Rev. F. Broome, to Adderley, near Market Drayton; Rev J. T. Bennett, to St. Mary Aldermary and St. Thomas the Apostle; Rev. J. S. Hart, to Somerby, Lincolnshire; Rev. M. Jeffreys, to South Thoresby, Alford. Rev. W. J. Deane, to Ashen, Essex; Rev. C. Randolph, to East Garston, Berkshire; Rev. H. Dale, to Wilby, near Eye, Suffolk; Rev. E. S. Patrick, to Weston Beggard, near Hereford. *Vicarages:* The Rev. H. F. Bacon, to Castleton, Derbyshire; Rev. P. Bennett, to Shrewton, near Devizes; Rev. A. Brooke, to East Retford, Nottinghamshire; Rev. C. Nutt, to East Harptree, Somerset; Rev. E. Bagley, to Woburn, Bedfordshire; Rev. W. Gell, to Fulloxhill, Bedfordshire; Rev. S. G. Selwyn, to Milton Cleveland, Somerset; Rev. J. E. C. Leigh, to Bray, near Maidenhead. *Incumbencies:* The Rev. J. Hodges, to Middleton, Yorkshire; Rev. W. Smith, to Cowick, Yorkshire; Rev. E. Synge, to Trinity Church, Matlock; Rev. R. Hawes, to Tunstall, Staffordshire; Rev. R. J. S. Valentine, to Trinity Church, Portsea; Rev. J. Woolley, to St. George's, Portsea; Rev. J. H. Compton, to Kidderminster, near Reading; Rev. L. C. Bathurst, to Wythall, near Birmingham; Rev. W. C. Evans, to Campsall, near Doncaster; Rev. C. J. Westropp, to Hunningham, Warwickshire; Rev. T. G. M. Luccock, to Little Berwick, Shrewsbury; Rev. J. D. Massingham, to St. Paul's, Derby. *Perpetual Curacies:* The Rev. H. Munn, to Christ Church, Nailsea, Somerset; Rev. H. C. Seller, to Trull, Somerset.

THE Bishop of Worcester has intimated his intention of holding a general ordination in the Cathedral Church of his diocese on Sunday, March 12. The Bishop receives candidates for Deacons' orders to offer themselves at least three months previous to the time.

THE Convocation of York will meet in the Chapter-house at York, immediately after the Minster service, on Wednesday morning, Feb. 1. The Canon in residence (Rev. W. V. Harcourt) will preside as Commissioner for the Archbishop

BY the decease of the Rev. William Hodge Mill, D.D., a vacancy occurs of one of the proctors in convocation for the diocese of Canterbury. A mandate from the Archbishop is to be issued, and an election to supply the vacancy will shortly take place from among the clergy of the diocese. Dr. Mill was a very active member of that body.

TESTIMONIAL.—The Rev. H. H. Pearson, Vicar of Norton, has been presented by the ladies of the parish with a suit of clerical robes, a pocket communion-service in silver, and other silver articles.

MAYNOOTH COMMISSION.—The Maynooth College Commissioners have been sitting occasionally during the past week, and some further meetings for the examination of witnesses will be held this week, after which an adjournment will take place, probably for two months. In all likelihood, the report of the Commissioners will be ready for presentation to Parliament soon after the Easter recess.

THE WONDERS OF CIVILISATION IN INDIA.—The railway and the electric telegraph are attracting many native chiefs from the interior of India to Bombay. There was lately encamped on the island, with 2500 of his followers, the Rajah of Dhar, Rao Jeswunt Powar, a Rajpoot chief with a revenue of about £68,000, but principally remarkable for being the head of the great family of Powar, of which (as antiquaries suppose) Porus, the antagonist of Alexander, was a member. He had been admiring the gunnery practice of the Indian navy, the war-steamers now ready for launching in the Dockyard, the steam machinery of the factory and Mint, and, above all, the railway; and will return to his capital impressed with a high idea of the arts and resources of the British in India.

LIONS FROM ALEXANDRIA.—Letters from Alexandria of the 3rd inst., mention that the steamer "Bentinck"—which made the voyage from Southampton in ten days and fourteen hours (the quickest passage on record)—was to sail for England next day, and may, therefore, be expected at Southampton daily. Among the passengers by the *Colombo* is the Earl of Carlisle, who arrived at Alexandria on the 24th ult. in the *Waag*, from Beyrout. His Lordship intended to visit Upper Egypt, but the rumoured changes in the Ministry, and other news made him determine to return to England at once. The much spoken of Guzerat lions are also coming by this vessel; they are said to be exceedingly fine beasts, four years and three months old. This species of lion has not hitherto been introduced into England. They are intended for the Zoological Gardens, Regent's-park.

THE COURT.

The Queen and the Prince, with the youthful members of the Royal family, continue in the enjoyment of excellent health. Her Majesty has received, during the week, a succession of distinguished visitors at Windsor Castle. The Earl of Aberdeen has been a guest at the Royal table more than once; and other members of the Ministry have been commanded to attend at the Castle. The Marquis of Lansdowne, with his son and daughter-in-law, the Earl and Countess of Shelburne, closed their visit on Saturday last.

On Sunday, the Queen and the Prince attended an early service in the private chapel of the Castle, and received the holy Sacrament. Her Majesty and his Royal Highness were also present at the afternoon service.

On Monday the Queen and the Prince walked in the grounds adjoining the Castle. His Royal Highness afterwards rode out on horseback, attended by Colonel Bouverie. In the evening her Royal Highness the Duchess of Kent dined with her Majesty. The Earl of Aberdeen, the Right Hon. H. Labouchere and Lady Mary Labouchere, and Lady Elizabeth Grey, had the honour of joining the Royal party.

On Tuesday the Queen walked in the Home Park at an early hour. The Prince Consort went out with the shooting. In the course of the day Earl Spencer arrived from London, and had an audience of her Majesty, to receive his wand of office on being appointed Lord Steward of the Household, in the place of the Duke of Norfolk, who has resigned. In the evening the Duchess of Kent again dined with the Queen. The following had the honour of joining the Royal party:—His Excellency Lord Bloomfield and Lady Bloomfield, the Earl of Aberdeen, the Earl Spencer, the Earl and Countess of Mulgrave, and Viscount and Viscountess Sydney.

On Wednesday the Queen and the Prince walked in the Home-park and the Slopes. His Royal Highness afterwards rode out on horseback. The dinner party in the evening included, in addition to the Duchess of Kent, the Lord Chancellor and Lady Cranworth, the Marquis and Marchioness of Salisbury, the Earl and Countess of Derby, and Lady Emma Stanley, Viscount Jocelyn, and Major-General Sir George Bowles.

On Thursday, the Queen, with the Princess Royal and the Princess Alice, walked in the Home Park. The Prince Consort, accompanied by the Marquis of Salisbury, Viscount Sydney, the Earl of Mulgrave, Lord Bloomfield, and Major General Sir George Bowles, went out shooting. In the evening a dramatic performance took place in the Ladies' Room, at the Castle. The play selected was Sir E. Lytton Bulwer's comedy of "Money." Mr. Charles Kean, Mr. Webster, Mr. Buckstone, and Mr. A. Wigan filled the principal characters.

Lord George Lennox has succeeded Lieut.-Colonel F. Seymour in attendance on the Prince.

The Earl and Countess of Derby and Lady Emma Stanley arrived in St. James's-square, from Knowsley, on Tuesday evening, and on Wednesday left town for Windsor Castle, on a visit to her Majesty.

The Earl of Minto and Lady Charlotte Elliot are making a tour in the Italian States.

Mrs. W. E. Gladstone, the wife of the Chancellor of the Exchequer, gave birth to a son on Saturday last, at the official residence of the right hon. gentleman, in Downing-street.

Married, on the 5th inst., at Sutton Coldfield, Sir Francis Edward Scott, Bart., of Great Barr Hall, Staffordshire, to Mildred Anne, eldest daughter of Sir William Cradock Hartopp, Bart., of Four Oaks Hall, Warwickshire, and Gumley Hall, Leicestershire.

NAVAL AND MILITARY INTELLIGENCE.

ARRIVAL OF THE "SERPENT."—The *Serpent*, 12, Commander Edward H. G. Lambert, arrived at Spithead on Tuesday. She brings home nothing but herself—her sailings and doings having been announced from Sydney on the 26th of July: New Zealand, 14th of August; Valparaiso, 13th of October; arrived at the Falkland Islands on the 31st.—The *Thetis*, with pressure on board, left two days previous for England (vid Rio). Left Valparaiso her Majesty's ship *Portland*, 50, and sailed from thence direct to England. She left England in October, 1849, and has gone over about 30,000 miles; brings home about half the crew of the *Portland*. The crew are all well.—Rear-Admiral Fairfax Moresby, in the flag-ship *Portland*, was at Valparaiso, and had, a few days prior to the *Serpent's* leaving that port, left half the crew of his ship being succeeded by Rear-Admiral David Price, in the *President*.—The *Dido*, 18, Captain Morshead, had left Valparaiso for Pitcairn's Island; after which she was to visit the coast to collect freight.

The *Banshee*, 3, paddle-wheel steam-vessel, Lieut. Louis R. Reynolds, having completed coaling, went out of harbour to Spithead on Wednesday, and anchored there. She is to serve as a despatch vessel to Admiral Dundas' fleet.

The *Blenheim*, 60, screw guard-ship, Capt. the Hon. F. T. Pelham, remains in dock undergoing repairs.

The *Duke of Marlborough*, 131, screw three-decker, building in Portsmouth yard, makes a very perceptible progress, assuming an imposing and majestic appearance.

The *Simoom*, 18, iron screw troop-frigate, Captain Henry Smith, arrived at Spithead, with the Rifles and some Royal Artillery from the Cape of Good Hope, on Saturday. She came into harbour on Tuesday morning, and hauled alongside the Victory jetty: soon after which, on the Captain's landing, the whole of the troops on board, together with the blue jackets, ranged themselves from the poop to the headrails, and gave Captain Smith three hearty cheers. The Royal Artillery soon after this disembarked, and marched out of the yard, their brass band playing "Auld Lang Syne." The Rifles landed on Wednesday, and proceed to Dover via South Coast line. The gallant corps was marched to the railway station by the bands of the 2nd Battalion, the 35th, and the 77th Regiments

NEW SCREW-STEAMER.—The saw-mills at Woolwich Dockyard are actively employed in converting timber for the *Edgar*, 90, screw-steamer, one of the new class of the *Neptune*, and building on the same slip from which the *Ajax* was launched. The *Edgar* is progressing fast in her outward structure.

MERCHANT SEAMEN.—The Lords of the Admiralty have exercised the powers given to them by the 15 and 16 Vic. chap. 31, to dispense with so much of the Act 7 and 8 Vic. chap. 112, as relates to the system of registering seamen by means of tickets.

THE WELLINGTON COLLEGE.—Her Majesty has been graciously pleased to grant a Charter of Incorporation for the Wellington College. The subject is one of great interest to the army in particular, and to the public in general.

TROOPS FOR FOREIGN SERVICE.—Transports are daily expected in Queenstown, for conveyance of the service companies of the 9th and 62nd Regiments on foreign service. It is rumoured in military circles that it is in contemplation to form the different regiments doing duty in the Mediterranean with a reserve battalion. On the score of economy, reserve battalions are advantageous, for no additional staff is requisite.—*Cork Constitution.*

SOAP AS A MEANS OF ART.—Dr. Ferguson Branson, of Sheffield, writing in the "Journal of the Society of Arts," says:—"Several years ago, I was endeavouring to find an easy substitute for wood engraving, or rather to find out a substance more readily cut than wood, and yet which would allow of a cast being taken from the surface when the design was finished, to be re-produced in type metal, or by the electrotype process. After trying various substances, I at last hit upon one which at first promised success, viz., the very common substance called soap; but I found that much more skill than I possessed was required to cut the fine lines for surface printing. A very little experience with the material convinced me that, though it might not supply the place of wood for surface printing, it contained within itself the capability of being extensively applied to various useful and artistic purposes in a manner hitherto untried, and, in fact, becoming a totally new material, and no method of die-sinking that I know of admits of freedom of handling. A drawing may be executed with a hard point on a smooth piece of soap almost as readily, as freely, and in as short a time, as an ordinary drawing with a lead pencil. Every touch thus produced is clear, sharp, and well defined. When the drawing is finished, a cast may be taken from the surface in plaster; or, if you will, by pressing the soap firmly into heated gutta-percha. In gutta-percha several impressions may be taken without injuring the soap, so as to admit of "proofs" being taken, and corrections made—a very valuable and practical good quality in soap. It will even bear being pressed into melted sealing-wax without injury. I have never tried a sulphur mould; but I imagine an impression from the soap could easily be taken by that medium." Dr. Branson has also employed bees'-wax, white wax, sealing-wax, lace, as well as other plastic bodies; and in some of these cases a heated steel knitting-needle, or point, was substituted for the ivory knitting-needle. He has sent several specimens to the Society of Arts, which show that from the gutta-purcha or plastic cast a cast in brass may be obtained, with the impression either sunk or in relief.

TRANSHIPMENT OF SPECIE TO FRANCE.—Of the gold brought to this country by the *Asia*, at Liverpool, from the United States (332,730 dollars) the greater portion, viz., 269,000, was for French merchants, and was transhipped in the *Margaret* from Liverpool to Havre.

POSTSCRIPT.

DEFEAT OF THE RUSSIANS.

The following is the telegraphic message from Belgrade, announcing another defeat of the Russians by the Turkish troops under the command of Omer Pasha:—

"BELGRADE, Jan. 10.—On the 6th, a Turkish division, 15,000 strong, with 16 pieces of artillery, attacked the intrenched position of Citalenet far from Kalafat, and took it by storm. The Russians lost 2,500 men.

"A reinforcement of 18,000 Russians, marching from Karaul, was forced to retire, with a loss of 250 men."

CONSTANTINOPLE, Jan. 1.—The news that an important advantage had been won by the Cetinan army at Kalafat was officially announced to the representative of the Powers. A convoy carrying 15,000 men to reinforce the army of Asia will set out for Batoum on the 3rd.

BERLIN, Jan. 9.—The order given to the English and French fleets to enter the Black Sea has worked no change in the attitude taken by Prussia on the Oriental question.

PARIS, Jan. 12, Six p.m.—The Bourse has closed with a fall. The Three per Cents closed at 70f. 50c. for the end of the month, and the Four-and-a-Half per Cents at 98f. 90c.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

We regret to have to announce to our readers that the commencement of the year 1854 has been marked by an act of open rebellion against supreme authority, which is the more serious in that it is manifested in the upper ranks of society, and among a class which has hitherto—no matter whatever the various private opinions of its members—refrained from any overt demonstration of resistance to the orders of "the powers that be." We allude to the insurrection of the ladies of Paris on the grave question of Court etiquette, involved in the matter of trains, in which the heads of the State have received a check, so much the more mortifying, that it will be difficult, if not impossible, to inflict on the fair insurgents the punishment due to their disobedience, and that there seems to be no course left open but to pocket the affront. At the Reception, on the occasion of the New Year, not more than two hundred ladies, including foreigners, independent of those about the Empress, were present, in consequence of the absolute necessity of the *manteau de cour* on the occasion, and as upwards of three times that number were already invited to the ball of the 4th, or must be invited to the Court fêtes, whose non-appearance at the Reception was significant of their intentions on the subject, it is too late to attempt to exclude the *récalcitrantes*—that is to say, three-quarters of the women of society, whose position gives them a prescriptive right to be present on such occasions. The Empress, instead of the dress and train of cloth of silver, prepared for the event, wore one of cloth of gold, with crimson flowers in relief, offered by the town of Lyons for this Reception. Some magnificent toilettes appeared; the prevailing colours were white and violet, and, in most instances, the dress and train were of the same material and shade. Although the ceremony was not long, the Empress was evidently fatigued before its conclusion; some confusion took place at the *sortie*, it being expected that each person or party would leave after having defiled before their Majesties; but the fairer portion of the company, not having seen enough of the toilette of the Empress, the Princess Mathilde, &c., or perhaps not shown enough of their own, remained till the latest moment, and all departed, pell-mell, by the single door open on the occasion.

The ball of the 4th was magnificent; but like all the Court fêtes, cold. Louis Napoleon danced the first quadrille with the Princesse Mathilde, and waltzed with Madame de Persigny; the Empress only danced in the first *contre danse*—her partner was the Prince Napoleon; on this occasion she appeared in a dress of blue Lyons silk, with white flowers, and trimmed with knots of blue and silver ribbon. The Duke of Brunswick figured in a uniform of which no description can render a correct idea; suffice it to say that diamonds seemed to form the principal material of his dress. Vely Pacha's costume came next for brilliancy among those of the *laid sexe*. The illness of one of their children prevented the attendance of Lord and Lady Cowley. About twelve o'clock the news was generally that a despatch of the utmost importance had just arrived from Russia, wholly tending to a warlike demonstration, which caused the Emperor to retire almost immediately. At this ball, the first after the declaration that the train is *de rigeur* for the court fêtes, the number of these *necessary* appendages amounted to twenty—eleven borne by the wives of Deputies, nine by those of Senators! The husbands were *bien entrement* docile last year on the subject of the *culottes courtes*; and Heaven knows what good reasons the majority had for resistance.

A report existed some days since that the Marquis de Turgot had been recalled, in consequence of the affair of the late complication of duels at Madrid; so far from this being the fact, we are informed, on tolerably good authority, that he received a very flattering letter from the *Chef de l'Etat*; and, without affirming this statement as a fact, we do not hesitate to assert that Louis Napoleon has approved, rather than reprobated, his conduct in the affair.

The intense cold has entirely, and we trust permanently, given way, During eight-and-forty hours a constant *surveillance*, night and day, was preserved, in order to prevent the alarming accidents threatened by the breaking up of the ice on the Seine; and it was with the utmost difficulty, despite these precautions, that the bridges and the baths and wash-houses established on the river were secured against the shocks of the floating masses. During the interruption of the navigation the price of coal augmented upwards of one-third. The damage done to the macadam and the pavement in the streets has been very considerable, and will entail considerable expense.

The fact announced in the *Moniteur*, that the Prince de Chinay had had an interview with Louis Napoleon, in which he presented to him a private letter from the King of the Belgians, has produced much speculation and attention. In the absence of any satisfactory intelligence on the subject, many suppose that the purport of the letter in question is to express the intention of the King to follow in the footsteps of England and France in the case of war becoming inevitable. Others believe that it is to announce an intention, or at least a desire which he has for some time been supposed to entertain, to renew the efforts already made to induce the Emperor of Russia to arrive at measures of conciliation.

Great sensation has been produced in the diplomatic circle by the omission of M. de Kisseleff, the Russian Ambassador, in the invitations given for the select ball at the Tuileries. Every other member of the diplomatic corps has been invited; and as this is a ball *d'élite*, the slight put upon M. de Kisseleff is the more remarkable. The invitations are given, it is true, not in the name of the Emperor, but in that of the Empress; but it is generally understood that M. de Kisseleff would not have been left out without the formal order of the Emperor. Some persons imagine that this has been done by his Majesty to punish M. de Kisseleff for some remark which he is said to have made before the Imperial marriage, and which applied more to the Empress than to the Emperor; but this is not probable, for he has been always invited to the parties of the Empress until now, and was always very graciously received by her Majesty.

The recall of General de Castelbajac from St. Petersburg is spoken of at Paris, as not unlikely to take place before long; the gentleman designated as his successor being the Count de Reiset, his first Secretary of Embassy. It appears that the Emperor was exceedingly displeased at the conduct of the representative of France at the Court of Russia, particularly at his strange not in going to offer his congratulations to the Czar on the victory of Sinope. "It is not, sire," he is represented as having said to the Emperor of Russia, "it is not as Ambassador of France that I felicitate you; but as a military man." "It was precisely as a military man," was the remark of an august personage in France, on hearing of this saying of the Ambassador, "that M. de Castelbajac ought not to have offered congratulations on such a victory."

A levy of 10,000 seamen is very currently spoken of in Paris. Already, indeed, measures have been commenced at Havre for calling out such seamen as have been dismissed for more than one year. The Minister of Marine (M. Ducos) is at the present moment organising a third squadron, to be called that of the reserve, and to consist of seven line-of-battle-ships and six frigates. The expense is calculated at ten millions of francs; and it is said that M. Ducos, who is one of the firmest supporters of war in the whole Ministry, is displaying great activity in effecting this increase to the French navy.

On Sunday last a meeting of bankers and moneyed men took place in Paris, M. Koningswater in the chair. It was decided at the meeting that a memorial should be at once drawn up, and presented to the Emperor, praying him to take into consideration the great pecuniary interests engaged in commercial and industrial undertakings in France and throughout Europe, and not to allow himself to be lightly engaged in the difficulties of a distant war. The Emperor, it is said, replied to the persons who presented this memorial, that undoubtedly material interests possessed incontestable importance in his eyes, but that he could never place them above moral interests, and that a question of honour and national dignity must always weigh with him much more heavily in the scale than any mere question of money.

TURKEY.

The most contradictory statements are given as to what proposition it is that the Divan has agreed to. The Paris correspondent of the *Times* says he is assured that the conditions accepted are the abrogation of the existing treaties, virtually annulled as they are by the war—the evacuation of the Danubian Principalities as soon as possible by Russia guaranteed by the Powers—the withdrawal of the pretensions of Russia, as comprised in the note of Prince Menschikoff—that the great question of Russia interfering in the internal concerns of the Ottoman Empire—and the understanding that, if any reclamations be found necessary, they shall proceed from the four Powers together."

Other accounts say that the French Government has received a despatch from Constantinople, announcing a great victory gained by Omer Pacha over the Russians in the neighbourhood of Kalafat. The Russians, who were more numerous than the Turks, had from 25,000 to 30,000 engaged. It is said, besides, that the present results of the populist on of Lesser Wallachia have risen against the Russians; and the victory now gained by Omer Pacha is expected to decide such parts of the country as might still hesitate to join the insurgents. This insurrection would appear to be of an infinitely more general character than the partial outbreaks already reported from other quarters. Constantinople was said to be in the greatest joy and enthusiasm; the disaster of Sinope was almost forgotten in the delight caused by the signal advantage now gained. The news thus received is said to have produced a profound impression on the French Council of Ministers, which was convoked immediately on the arrival of the despatch at the Ministry of Foreign Affairs. The advantage thus obtained by the Turkish arms was not confined to a single encounter. Several took place—at Sistowa, and on the Danube in front of Isatchka and Matschin. The date given of these actions is the 19th December. The news of Omer Pacha's victory over from 25,000 to 30,000 Russians, arrived simultaneously in Paris by two different channels at the same time—from the French Consul at Bucharest, and from General Baraguay d'Hilliers, who wrote his account at the moment of the departure of the *Chapital*, which arrived on Tuesday at Toulon. The despatch of the French General announced at the same time that the united squadrons were on the point of conveying 15,000 Turkish troops to Batoum, and that Schamyl had safely received all the ammunition and military stores which had been forwarded to him.

On the 26th ult. it was known at Constantinople, that a Russian squadron, composed of three sail of the line and several frigates, had been cruising for several days in the Black Sea. On the 22nd they were seen at a distance of three or four miles from the entrance of the Bosphorus. The telegraphic despatch from Vienna, on Wednesday, says—All the Russian ships of war in the Black Sea, have orders to return to Sebastopol.

The following letter from Bucharest shows that the Russians were preparing for an active campaign:—

BUCHAREST, Jan. 4.

Since the 20th of December there have been 40,000 (deduct 11,000 in hospital) men of the corps under Osten-Sacken in Wallachia. In Bessarabia, a new concentration of troops is going on. Near Kremanesoff and Charcow preparations are made for the establishment of two camps of cavalry; each will be composed of 10,000 men. The park of artillery near Giurgevo is composed of 100 guns of large calibre; that of Galatz consists of 120 guns. The construction of the intrenchments near Bucharest continues north and south. Two companies of Sappers are employed for that purpose from Giurgevo at Bucharest. The offensive movements of the Russians have commenced on a grand scale. The corps of Osten-Sacken advances in the midst of ice. The Russian Alisatia is making an advance in three columns. The corps which will operate against Kalafat is estimated at 22,000 men. The second marches through Karakal, and the third along the Aluta.

AUSTRIA.

The accounts from the French Ambassador at Vienna to the French Government are said to be very satisfactory as to the intentions of the Austrian Cabinet in the Eastern Question. It appears that, although the Emperor of Austria, from motives which can be appreciated, will not stand forward as a determined adversary of the policy of the Emperor of Russia, he is really desirous to see that policy checked, his own good sense, and his private conferences or correspondence with Prince Metternich, having fully enlightened him as to the necessity of assisting the other Powers of Europe directly or indirectly, in preventing the further aggrandisement of Russia. The anti Russian policy of Prince Metternich is well known; but it is not generally known that the advice of this old diplomatist has been taken by the Emperor of Austria on the present occasion. On this subject, a letter from a diplomatist at Vienna contains the following passage:—

Our old friend Metternich, even before, in his retirement, a service to be couldn't even refuse to any capital he rendered when in office. He has opened the eyes of the Emperor to the dangerous projects of the Russian party. Having been told that he was inconsistent, as formerly he had made no effort to check the designs of Russia in Turkey, he replied that his counsels had always been anti-Russian; and that he had never been passive except when France and Russia were in harmony, for then, he said, it would have been useless to protest. In a conversation with Count——, the Prince said, "You know of the part I have taken in my views. I wished to do everything possible for the independence of Germany, which must cease if one day Russia should become all powerful; and the emancipation of Greece was an additional instrument of power in the hands of Russia.

AUSTRALIA.

By the way of Singapore and overland, Adelaide papers are to hand to Nov. 1, a month later than previous advices. The South Australians, like their sister colonists, were much occupied with the political and social changes incidental to the new Constitutions. The Colonial Parliament Bill was to be read a third time and passed on Nov 1. The Governor was expected to dissolve the Council soon on its return to business of the session was concluded, in order to take the opinion of the colonists on the Parliament Bill. The consideration of the Colonial Estimates had been adjourned for a week, to allow time for the committee on the increase of salaries to bring up their report. The harvest prospects were encouraging; the only drawback was the scarcity of labour.

Hobart Town journals state that Governor Sir William Denison intended to remove all the convicts from Norfolk Island to Launceston. This announcement had caused considerable excitement and dissatisfaction. On Sept. 23, an Address to her Majesty was moved in the Legislative Council, to prevent the introduction of the pardoned criminals located at Norfolk Island. The committee appointed had recommended a vote of £10,000 per annum for public education.

THE LATE MUTINY IN THE CHINESE SEAS.—It is reported that Admiral Sir Fleetwood Pellew has been recalled; and that Admiral Sir James Stirling is to take his place as Commander-in-Chief on the East India Station.

THE EGYPTIAN RAILWAY.—Mr. R. Stephenson, the eminent engineer and contractor for the Egyptian Railway, arrived at Alexandria on the 1st, in his yacht *Titania*, to inspect the line, which is not progressing satisfactorily just now, as the rise of the water in Lake Mariotis has rendered it necessary to take up three or four miles of rails in order to raise the embankments beyond the reach of the inundation. The President of the Council at Cairo, Hassan Pasha, has given the engineers every assistance; but the war between Turkey and Russia has drawn so many men from Egypt that the Viceroy is unable to prosecute the works with vigour.

CHESS.

TO CORRESPONDENTS.

A YEAR.—THE PROPOSED MATCH BETWEEN MR. STAUNTON AND HERR HARRWITZ.—We think, that either Mr. Harrwitz's "acceptance" of Mr. S.'s challenge was a piece of bravado, which he never intended to carry out, or those members of the London Chess-club who, according to their President's declaration, were prepared to back Mr. Harrwitz, have lost all confidence in their champion since the redoubtably redoubtable opponent of his play in the late match. Whichever is the case, as Mr. H. has virtually declined the contest, his backers are bound in honour to pay over the forfeited stakes to the opposite party. There can be no two opinions among gentlemen upon this point, and the sooner it is done the better, both for the credit of Chess and all parties concerned.

CHESS IN BELGIUM.

The following fine game was recently played in Brussels between Mr. HEYDEBRAND and Mr. STAUNTON.

(Sicilian Opening).

BLACK (Mr. V. H.)	WHITE (Mr. S.)	BLACK (Mr. V. H.)	WHITE (Mr. S.)
1. P to K 4th	P to Q B 4th	22. Kt to Q Kt 6th	B takes B
2. P to Q 4th (a)	P takes P	23. Kt takes B	Q R to Q B 3rd
3. Kt to K B 3rd	Kt to Q B 3rd	24. P takes P	Q Kt takes P
4. B to Q B 4th	P to K 3rd	25. P to K Kt 4th	Q Kt to K Kt 6th
5. K Kt takes P	B to Q B 4th	26. K R takes K (ch)	Q takes R
6. K Kt to Q Kt 3rd	B to Q Kt 3rd	27. Q to K Kt 2nd.	R takes Kt
(b)		28. Q takes Kt	Q to K 2nd
7. Castles	K Kt to K 2nd	29. Q to K B 3rd	R to Q B sq
8. Q Kt to Q B 3rd	P to Q R 3rd (c)	30. Kt to Q 2nd	R to K B sq
9. Q B to K B 4th	P to Q 4th	31. Q to K Kt 3rd	P to K R 3rd
10. Q B to K 3rd	B takes B (d)	32. Kt to Q B 4th	P to Q 4th
11. P takes B	Castles	33. Kt to Q Kt 6th	P to Q 5th
12. Q to K R 5th	P to K Kt sq (e)	(f)	
13. P to Q R 4th (f)	Kt to K Kt 3rd	34. K P takes P	P takes P
14. Q R to Q sq	Q to K 2nd (g)	35. R to K Bsq (m)	R to Q sq
15. Q R to Q 5th	Q to her sq	36. P takes P	R takes P
16. P to Q Kt 5th	P to Q 3rd (h)	37. Q to Q B 3rd	Q to her 2nd
17. P to K R 3rd (i)	B to K 3rd	38. Q to Q B 2nd	Q to her sq (n)
18. Q R to Q B sq	Q R to Q B sq	39. Q to K 3rd	R to Q 4th
19. Q to K 2nd	R to R sq (k)	40. Q to K 4th	Q to her 2nd
20. P to Q B 3rd	Q Kt to K 3rd	41. R to K B 3rd (o)	Q to Q B 4th (ch)
21. Q R to Q sq	P to K B 4th	42. K to B sq	Q to Q B 8th (ch)
		And Black surrendered.	

(a) This move, which Jaenisch and other authorities have pronounced the best that can be made at the present moment, was first given in Volume IV., page 30, of the *Chess Players' Chronicle*.

(b) We are not advocates of this move. It takes the Kt too far away from the grand point of action

(c) Better, perhaps, to have Castled. Black could have gained nothing by playing his Q Kt to Kt 3rd, and he does now obtain a very smart attack for some time.

(d) Hazardous because, although it doubles two of the enemy's Pawns, it opens the battery of his King's Castle upon a weak point.

(e) The only way to escape some serious damage. If instead of this move he had played the natural one of K Kt to K Kt 3rd, the game would have gone on thus—

	12.	K Kt to Kt 3	
	13.	R takes K B P	R takes B
	14.	Q R to K B sq;	and Black has by far the best of the game.

(f) Mr. Heydebrand remarked, afterwards, that this was a last time.

(g) White is hampered a good deal by his inability to advance the Queen's Pawn, which confines two of his best officers, and compels him to fight with four pieces against six.

(h) Taking the Q B Pawn would have been the height of imprudence. For suppose—

16	Kt takes Q B P	16	Kt to K 7th (ch) Kt takes Kt
17. Kt takes Kt	Q takes Kt	18	R takes K B P—and wins.

(i) The more enterprising play of Kt to Q Kt 6th would have led to some highly interesting combinations. Ex. gr

17.	Kt to Q Kt 6th		
18.	Kt takes Q B P	18	R takes K (ch) K takes B
19.	K takes Kt	19	K takes R
		20.	Kt takes R

This appears to be his best play. If to K B sq would not drive the King into a place of safety. Kt to Q B 5th

(k) It is difficult to see, in actual play, that this is the only safe move White has. If he play the obvious one of Kt takes Kt, or K to Kt sq, he must lose the game, or, at least, have so bad a position, that he ought to lose. For example—

	Kt takes Kt	22	R to K B sq (ch), and Black has a
21. Q Kt to K B P (compulsé)	Kt to Q B 6th		capital game.

So, also, if—

	Kt to Kt sq	22	Q to K Kt 5th
21.	Kt takes Kt		

And again Black has an excellent game; for he now threatens to play P to Q Kt 4th, by which he will be enabled to rescue his Kt, and obtain a terrible attack besides.)

21.	Q takes K R P (We see	Q Kt takes K P	22. R to Q 2nd Q Kt to K Kt 5th
	no better move for him)		

And White must now win the imprisoned Kt, and, consequently, the game.

(l) At length, through some dangers and difficulties, White [illegible] and to ensure the enemy to abandon the attack. Remforced to [illegible] all the ought to the catastrophe.

(m) Had he taken the Q Pawn, White would have won easily, by playing Q to K B 2nd, &c.

(n) If he had taken Pawn with Pawn, White's answer would have been Kt to K B 5th, and if he had taken Pawn with Rook, then, probably, White would have replied with Q to K 7th

(o) White might have won by simply exchanging Queens, and playing Rook to Q 6th, but preferred another course.

(p) His best move here was, perhaps, Kt to Q B 4th. But that would not have saved him, as we [illegible] for, as follows—

	Kt to Q B 4th		Q to K Kt 8th (ch)
42.	Q to K Kt 2nd		Q to K 8th
43.	Kt to K B 3rd		

(If K to R 2nd, then follows Q to her sq, threatening to win the Kt, and also to play Kt to K 7th (ch), &c.)

43.	Kt to K B 5th	44.	R takes Kt (best) R to h. Kt 6th
	And White has a Queen against a Rook and Kt		

MATCH BETWEEN MR. STAUNTON AND MR. HARRWITZ.

(From a Correspondent.)

As the proposed contest has been looked forward to with much interest, it may be well to show briefly how far the negotiations respecting it have proceeded, and why they have been interrupted.

It will be remembered that, at the Manchester meeting last May, Mr. Staunton put forth a general challenge, offering to play a match with any one in the world for £250 aside. To this challenge, for [illegible] there was no response; when, suddenly, Mr. Harrwitz wrote to say that he accepted the challenge, conditionally that the stakes on each side should be £100 only

Now, as Mr. Harrwitz is a player who has never risen above the second rank, even when in his best p ay, had lost every game he ever played with Mr. S. upon even terms, and had been beaten in a match where Mr. S. gave him the enormous odds of the Pawn and two moves, and, moreover, was at a very moment when he accepted the challenge under engagement to play a match with a competitor of his own calibre, reasonable doubt [illegible] aimed as to the bona fide nature of his "acceptance." In [illegible] for the encounter, Mr. S. took the precaution, [illegible] of sending to the President of the London Chess-club to ascertain whether that society undertook to find the stakes for Mr. H. From that gentleman's statement, it appeared clear that [illegible] of the club had subscribed the amount required, and that Captain Evans had consented to act on their and Mr. Harrwitz's part in arranging the minor preliminaries of the match. Upon his assurance, Mr. S. [illegible] to wrote to his opponent to say that he had deposited [illegible] with Mr. Bean, of the St. George's Chess-club, and somewhat later stated for a week stay on the Continent, with the condition that the match was settled, and that he must be ready for battle upon the termination of the match between Messrs Lowenthal and Harrwitz. On returning to England, at the early stage of this match, he had an interview with Captain E., and laid before him copies of the correspondence between himself and Mr. H. when Captain E. expressed his opinion that Mr. H. was unquestionably bound to play the match on the terms of the challenge. He stated, however, that Mr. H. was desirous of having those terms modified in some particulars. A short time afterwards Captain E. brought to Mr. S. and to the gentleman who acted as his representative, a draft of the terms upon which Mr. H., who, he said, "considered himself no longer bound to play upon the conditions he had before accepted!" now proposed to play. Upon Mr. S. demurring to an entirely new feature in the question of time in moving, Captain E. proposed, "as any restriction as to time was foreign to the spirit of chess," that the time-clause should be cancelled altogether! To this, after a few minutes' consideration and some reflection on the subject, Mr. S. consented, and it was believed that every impediment was now removed. This pleasant illusion was dispelled almost immediately by Captain E., after consulting with his principal, announced that Mr. Harrwitz would not agree even to this arrangement. The affair then fell into the hands of the two seconds, Capt. Evans and Mr. Sheppard; and, after much proceeding, in which they appeared to arrive no nearer a satisfactory adjustment, Mr. Sheppard, upon the conclusion of the late match, wrote as follows to Capt. E.:—"As I am actuated by a real desire to bring about this contest, I will not now enter into minutiæ nor peril the object in view by reviving useless discussions. We can settle all minor matters when we meet; let us now only concern ourselves with endeavouring to display the prowess of the respective warriors. If your principal is only half as willing to play as mine, we shall not have much difficulty. I can assure you that Mr. S. is as fully prepared to enter the lists now, as he was before the termination of the late match. As a proof of this, he authorises me to make the following final proposit-ion:—

"*He will play at the time Mr. H. himself proposes, either according to the terms of the challenge already accepted; or he will even consent to agree upon the terms you, as Mr. H.'s second, proposed, altogether waiving the question of limiting the time on moves; and in either case, if agreeable to Mr. H.'s supporters, he will double the amount of stakes.*

"If this offer is refused by Mr. Harrwitz, it must be obvious to you, as to every body else, that he is determined in every way to evade the contest."

This seemed a clencher, but did not prove so. Captain E. replied by saying he had resigned his appointment as second, and had forwarded the letter to Mr. H. Mr. Harrwitz, as might be expected, has made no reply. Mr. Sheppard has since written to the party who represented himself as the holder of Mr. H.'s deposit, demanding the forfeited stakes; and no notice whatever has been taken of his communication. Here the matter rests.

We have not room for a letter from Mr. Sheppard regarding the above affair, but shall try to give it next week.

RELIGIOUS WORSHIP.—CENSUS TABLES.

Another volume of the elaborate Reports of the Census Commissioners has recently been published, and relates to religious worship, to church accommodation, and to the number of persons who frequent church and chapel in England and Wales. It is a thick octavo of 484 pages, closely printed, and remarkable, like all the productions of the Commissioners, for minuteness and patient thinking. It consists of a report and a great number of tables, and the former has been written, and the latter compiled by Mr. Horace Mann, who has performed his task with great diligence and great care, and supplied the public with some much-desired and important information. He has not confined himself to a mere dry enumeration of buildings, seats, and persons present at church; but has made the subject interesting and intelligible, by a valuable sketch of the progress of religion amongst us from the earliest times to the present. Before stating the statistical results of the inquiry, we shall very briefly allude, for the benefit of our country readers, to the great religious changes which have taken place in England and Wales within the last century.

At the accession of George III., now little more than a century ago, there were not more than six well-defined and well-known denominations of Christians in the country, viz., the Church of England, Presbyterians, Independents, Baptists, Friends, and Roman Catholics—all but the first being subject to political restrictions, and the last being in a manner proscribed. There were one or two other denominations, off-sets of these, as the Unitarians, who sprang from the Presbyterians; and the Moravians, who had, a few years before, achieved their first settlement in England; but they were scarcely known to the public, and were unrecognised by the law. All these denominations, like the Church of England itself, grew out of the Reformation, which led, as its consequence—while Roman Catholicism admitted of no deviation, and abhorred toleration—to the existence and toleration of several sects of Christians. At the accession of George III., religious indifference was in the main the characteristic both of the clergy and the people. Hume could then exult at the easy quietude the land enjoyed under a well-endowed and well-contented clergy; and he, with Gibbon and others, encountered no fierce opposition in their gentlemanly though infidel attacks on Christianity itself. There had arisen, however, before their time—though then barely acknowledged, if known—a new man, who was to effect a greater change in the religious spirit of the people, if not a greater reformation in religion, than Luther himself. From amongst the clergy, like Luther, and even from Oxford itself, the new reformer arose. John Wesley was the son of a Lincolnshire clergyman, and was himself a member of Oxford University, and a clergyman of the Church. In 1727, he and his brother began at Oxford to devote themselves to a strictly religious life; and in that age, when religion was generally mocked at, were nicknamed Methodists. It is not for us to re-write his remarkable history—to describe the vast labour he went through, the opposition he encountered, the conditions he met with; it is enough to say that he directed his labours principally to instructing and enlightening the lower classes—that he excited the emulation of many of the clergy, and awakened amongst the great mass that religious spirit which has continued active to our time—that he laboured as a missionary, and as the head of a vast number of congregations, directed by a Conference—and formed, in truth, a great religious establishment, which ere long was to erect its chapel almost wherever there was a church, and very often to erect two or three chapels to one church, for the long period of sixty years. He died in the year 1791, having lived to see his efforts attended by a success it was impossible that he or any man should at first have anticipated. Since then the desire to promote religion amongst the people has never ceased to exist. The Wesleans, formerly so indifferent, or so occupied, like the meanest of the people, with worldly cares, has devoted time and funds to increase the facilities of worship, and make men moral by the influence of religion. The rise and success of the Wesleyans roused the emulation both of clergy and laymen, and both have in latter times exerted themselves and freely given of their wealth to provide religious edifices in every place. Existing and increasing toleration has permitted a free operation to religious zeal; and the change which has been at length had the same effect, but to a greater degree, as the Reformation in increasing the diversities of Christian worship. From that there grew only seven or eight denominations of Christians; there are now enumerated in England and Wales thirty-three distinct denominations or sects—twenty-seven native or indigenous, nine foreign," besides a number of isolated congregations, with little or no formal organisation, which are just numerous and consolidated enough to be called a sect. We shall at once copy from the tables appended to them, together with the number of places of worship each possesses:—

RELIGIOUS DENOMINATIONS.	PLACES OF WORSHIP.	RELIGIOUS DENOMINATIONS.	PLACES OF WORSHIP.
Church of England	14,077	Calvinistic Methodists:	
Scottish Presbyterians:		Welsh Calvinistic Methodists	828
Church of Scotland ..	18	Lady Huntingdon's Connection	109
United Presbyterian Ch. ..	66	Sandemanians	6
England	76	New Church	54
Reformed Irish Presbyterians	1	Brethren	132
Independents	3,244	Isolated Congregations ..	647
Baptists:		Lutherans	8
General	93	French Protestants	8
Particular	1,947	Reformed Church of the Netherlands	1
Seventh Day	2	German Protestant Reformers	1
Scotch	15	Italian Reformers	1
New Connection General..	18	Catholic and Apostolic Churches	32
Undefined	460	Latter-Day Saints	222
Society of Friends	371	Jews	53
Unitarians	229	TOTAL	34,467
Moravians	32		
Wesleyan Methodists:			
Orig nal Connection ..	6,579		
New Connection	397		
Primitive Methodists ..	2,571		
Bible Christians	483		
W. M. Association	419		
Independent Methodists ..	30		
Wesleyan Reformers ..	329		

The separate bodies not classed with these, and yet distinct enough to have names, are as follows:—

Calvinists, Calvinists (supra-lapsarian), Huntington fans, Universalists, Millenarians, Predestinarians, Trinitarian Predestinarians, Christians, Christian Association, Orthodox Christians, New Christians, Christ's Disciples, Primitive Christians, New Testament Christians, Original Christians, United Christians, Gospel Pilgrims, Free Gospel Christians, Believers, Non-sectarian, No particular Denomination Evangelists, Gospel Refugees, Freethinking Christians, Protestant Christians, Apostolical Protestants, Protestant Free Church, Trinitarians, Protestant Dissenters, Dissenters, Evangelical Dissenters, Episcopalian Seceders, Free Church, Teetotallers, Doubtful, Benevolent Methodists, General Christians, Christian Israelites, Sceptheniles, Inghamites, Temperance Wesleyans, Temperance Christians, Freethinkers, Rational Progressionists, Southcottians.

Of these last there are yet four congregations in the land.

By these lists the readers will at once see how vast has been the almost silent change in a century. From the new sects several others sects have split off. Thus there are five kinds of Baptists, and already, within sixty years of Wesley's death, ten branches from Methodism. They have not been without influence on politics; but we confine our view to the subject before us. As these various sects grew into strength, as they each began to exercise political power, and as the public money was appropriated to building churches, or to promote education, there arose a great desire, independently of all mere scientific reasons, to ascertain, not only the number of persons belonging to each sect, but the number of churches or chapels that each possessed, and the number of worshippers they could accommodate, and the extent of means they supplied for the religious education of the people. When the Census Act was passed, it was supposed that the words "to inquire into further particulars" warranted the Commissioners to ascertain all these circumstances respecting religious worship, and they endeavoured to do so; but when, in consequence, they issued their queries, they were met by objections to their authority—and that view having been supported in the House of Peers and by the law officers of the Crown—they were obliged to substitute requests for commands. The returns, therefore, were voluntary, not compulsory; and, though they have been obtained from 14,077 churches belonging to the Establishment, and from 20,390 places of worship belonging to all the various bodies of Dissenters, they are not complete. They are probably more defective in respect to Dissent than to the Church; but, incomplete though they be, they form by far the most valuable information on the subject that has ever been collected; and, indeed, the only information that can be called reliable.

Confining our remarks chiefly to the accommodation latterly provided for Church worship, we must remark that, of 14,077 churches and chapels enumerated as belonging to the Church of England, there were built—

Before 1800 ..	..	..	.. 3667
Between 1801–11 ..	..	..	.. 55
1811 21 ..	..	..	.. 197
1821–31 ..	..	..	.. 276
1831–41 ..	..	..	.. 667
1841–51 ..	..	..	.. 1157
Dates not ascertained	..	..	.. 2113

Taking no notice of the last line, as not knowing to what period to assign them, it is plain that the progress of church building has been much greater in the latter decennial periods of the half century than in the earlier decennial periods. The first large grant from the State was subsequent to 1821. In 1831 the number of churches and chapels of the Church of England reported in the Census, was 11,525; and the number in 1851 being 14 077, it is pretty certain that many of those of which the date of the erection is not mentioned were built within the twenty years, and still more within the century—and we may assume that not less than 2252, or nearly one-sixth of the whole were built within the twenty years 1831–1851. The result of this, stated in a tabular form, has been to provide in the five counties mentioned below the following increase of church accommodation, notwithstanding the large increase of people:—

	One Church to Population in 1851.	1831.
In Cheshire	2355 ..	1868
In Lancashire	4578 ..	3898
In Middlesex	5832 ..	4688
In Surrey	3059 ..	2434
In York West Riding	3481 ..	2894

At the same time church accommodation is yet so unequally distributed and so inadequate, that, notwithstanding the large increase, there are fewer churches in relation to the whole population in 1851 (one church to every 1296 persons) than in 1831 (one church to every 1175 persons). Amongst the places where in proportion to population church accommodation is least, are several districts of the metropolis—Shoreditch, St. George's-in-the-East, Newington, St. Saviour, Clerkenwell; and even the parish of St. James's, Westminster, in which is situated the ancient palace of the Sovereign.

(To be continued.)

DISSENTERS' FUNERALS.—For some time past a good deal of excitement has been produced by the refusal of the curates of Barking to admit the bodies of Dissenters into the church in that pic re previous to interment. In consequence of the unseemly scenes which have been witnessed, the parishioners determined to memorialize the Bishop of London upon the subject, and it is stated, his Lordship has recently intimated to the curates, that they are not, on any account, to refuse admission of such bodies into the parish church.

A curious discovery has been made near Jakobstad, Sweden. Some men gathering reindeer-moss in the forest found a serpent-lair, from one to two ells under the surface. The first day they killed 180, and the following days still more, so that the total number destroyed was 440.

THE WEATHER AND THE WOLVES.—The severity of the weather has rendered the wolves very daring in their attacks in France, particularly in the Moselle. On Tuesday morning last, as a man on horseback was entering one of the gates of Metz, he was assailed by one of these animals, which sprung at the horse's chest, but fortunately the man was able to beat it off with the butt-end of his whip. On the following day a cow, in a field close to the village of St. Julien, was pursued by three wolves, but escaped. An inhabitant of Lorry, while at work in a field near the village, suddenly saw three very large wolves advancing towards him, but he was able to obtain shelter in a shed before they reached him.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding the entrance of the combined fleets into the Black Sea, and that several rather heavy sales of stock for foreign have been effected, the value of British Government Funds is kept tolerably firm during nearly the whole of the week. The firmness is attributed to the continuous imports of gold from Australia (from whence about £400,000 has just arrived, with advices that £1,000,000 sterling is on passage), the steady increase in the stock of the precious metals in the Bank of England, the payment of the dividends, and the abundance of money. As a matter of course, we are always calculated to give an ability to the market, and to inspire confidence as respects the future. We may observe, however, that the purchases effected in Consols on the part of the public have been comparatively small.

On Monday the Three per Cent Reduced Annuities were done 92¾ & ⅞; the Three per Cent Consols, 92¾ & ⅞ ex div.; Consols for the Account, 92¾ & ⅞; and Three-and-a-Quarter per Cents, 93¾ up to 93⅝; Long Annuities, 1860, 5⅛. India Bonds were par to 4s. pm.; and Exchequer Bills, 6s. to 9s. pm. On Tuesday the latter securities advanced 1s. or 2s. to 4s. pm. India Bonds were the same as on the previous day. The Three per Cent Consols were 92⅝ & ¾; and the New Three-and-a-Quarter per Cents, 93⅜ & ½ pm. Bank stock was done on Wednesday, 214 to 216. The three per Cent Reduced annuities were 92⅝ & ¾; and the Three per Cent Consols, 92¾ & ⅞. The Market, on Thursday, was tolerably firm. In the general quotations on Thursday, there was an upward movement. The three per Cent. Consols for the 15th having been done at 92¾ & ⅞; the Three per Cents Reduced, 92¾ & ⅞; and the New Three-and-a-Quarter per Cents, 94 to 94⅜. Exchequer Bills were 7s. to 10s. premium.

The Money-Market has presented no new feature. It has been well supplied, and first-class bills of a short date, have been taken in Lombard-street, at 4¢ per cent.

In the ensuing quarter, £811,855 will be employed on account of the Sinking Fund for the Reduction of the National Debt. It is understood, however, that this amount will be disposed of in the purchase of deficiency bills. Since March last, the following sums have been handed over to the Commissioners for the Reduction of the National Debt:—

Quarter ending July 5, 1853	..	£604,380
Quarter ending Oct. 10	..	615,185
Quarter ending Jan. 5, 1854	..	832,175
Quarter ending March 5	..	811,855

It is rather important to notice that the surplus means of the various Savings Banks in this country are increasing, although "strikes" continue in some districts

The Foreign markets have been wholly devoid of animation. In most instances prices have tended downwards. Brazilian Small have been 97⅛; Ditto, Four-and-a-Half per Cents, 90 to 91⅛; Mexican Three per Cents, 23 to 23½; Ditto, Five per Cents, 17⅞ to 18; Peruvian Bonds, Four-and-a-Half per Cents, 90 ex div.; Spanish Three per Cents, 42¾ & ⅔ ex div.; Ditto, New Deferred, 20¾ ex div.; Venezuelan One per Cent, Deferred, 13; Austrian Five per Cents, 74¼; Dutch Two-and-a-Half per Cents, 61⅞ ex div.; Dutch Four per Cents, 94⅜.

In Miscellaneous shares we have very few transactions to notice. On the whole, prices have been in favour of buyers. Australasia Bank Shares have sold at 74; British North American, 64; London Chartered of Australia, 18⅜; Oriental, 44; Union of Australia, 75¾; Australian Agricultural, 62; Australian Royal Mail Steam, 33¾; Crystal Palace, 3⅜; Ditto, New, 3⅛; London Dock, 111; Peel River Land and Mineral, 6; South Australian 1 and, 30¾ ex div.; Berlin Waterworks, 1⅜; East London, 136; Grand Junction, 79; West Middlesex, 116¾ ex div.; Southwark and Vauxhall, 82¾ & ½; Hungerford Bridge, 12; Waterloo, 6¼; Vauxhall, 22. Albion Insurance have marked 95; County, 123; Globe, 144; Guardian, 20¾; Imperial Fire, 375; Pelican, 50; Phœnix, 168; Royal Exchange, 310; Sun Life, 65; Universal, 45¾; Canada Six per Cent Bonds, 112¾ ex div.; General Screw Steam Shipping Company, 1⅞.

The market for Railway shares has been very dull and drooping. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 20¾; Caledonian, 62⅜; East Anglian, 6¾; Eastern Counties, 12¾; East Lancashire, 89; Great Northern, 88¾; Ditto, A Stock, 81; Ditto, B Stock, 129; Great Southern and Western (Ireland), 100; Great Western, 82; Lancaster and Carlisle, 92⅜; Lancashire and Yorkshire, 85⅝; Ditto, Fifths, 3⅛; Leeds Northern, 18; London and North-Western, 102; Ditto, Fifths, 1⅛; Ditto, £10 Shares, 1¼; Ditto, Eighths, 1⅛; London and South-Western, 86; Manchester, Sheffield and Lincolnshire, 47¾; Midland, 71; Norfolk, 46; North British, 29¾; Oxford, Worcester, and Wolverhampton, 36; Scottish Central, 91½; Scottish Midland, 56; Shropshire Union, 7⅜; South-Eastern, 69¾; Vale of Neath, 79; West Cumberland, 62; Yorkshire, 63; Ditto Extension, 11⅜; Ditto G. N. E. Purchase, 9⅜; York and North Midland, 45¾.

LINES LEASED AT FIXED RENTALS.—Clydesdale Junction, 101, Royston and Hitchin, 142; Wear Valley, 30⅝.

PREFERENCE SHARES.—Caledonian, 99; Eastern Counties Extension, 1¾ prem.; Ditto New Six per Cent Stock, 10⅜; Great Northern Four-and-a-Half per Cent Scrip, 10⅜; Great Western Convertable and Redeemable 4¼ per Cent, 101; Ditto, Irredeemable 4 per Cent, 98; Londonderry and Enniskillen 5 shares, 12½; Manchester, Sheffield, and Lincolnshire, New £10 Shares, 9⅞; Oxford, Worcester, and Wolverhampton, 101; South Eastern, 20¾.

FOREIGN.—Grand Trunk of Canada, 6⅜; Great Western of Canada, 16¾; Luxembourg, 9⅝; Ditto, Railway, 6¾; Paris and Lyons, 21½; Paris and Strasbourg, 30¾; Zealand, 1¼.

The Mining Share market has been greatly depressed. On Thursday, St. John del Rey marked 20 to 32 and 31½; Copiago, 12⅞; Quartz Rock, 1⅜; Santiago de Cuba, 6¼ to 5.

THE MARKETS.

COVT ENGRAVER (January 9).—The supply of English wheat on offer in to-day's market was very limited. All kinds moved off briskly, at a rise in the prices of Monday last of 5s. per quarter. There was no active inquiry for foreign wheats, at from 4s. to 5s. per quarter more money than on the corresponding day of last week. Barley, the supply of which was moderate, ruled firm, at 1s. to 2s. per quarter more money. Malt and oats were quite 1s.; beans and peas, 1s. to 2s. per quarter dearer. Flour advanced 2s. to 3s. per sack. The top price of English being 75s. per 280 lbs.

Wednesday, January 11: The attendance of buyers to-day was limited. All articles moved off slowly, at Monday's prices.

English.—Wheat, Essex and Kent, red, 72s. to 82s.; ditto, white, 74s. to 92s.; Norfolk and Suffolk, red, 69s. to 83s.; ditto, white, —s. to —s.; rye, 44s. to 46s., grinding barley, 32s. to 42s.; distilling ditto, 41s. to 44s.; malting, ditto, 45s. to 50s.; Lincoln and Norfolk malt, 46s. to 72s.; brown ditto, 66s. to 68s.; Kingston and Ware, 72s. to 78s.; Chevalier, 74s. to 78s.; Yorkshire and Lincolnshire feed oats, 23s. to 30s.; potato ditto, 30s. to 33s.; Youghal and Cork, black, 23s. to 25s.; Sligo and Limerick ditto, white, 26s. to 28s.; ditto, black, 25s. to 25s.; ditto, red, 24s. to 25s.; grey peas, 42s. to 45s., maple, 42s. to 47s.; white, 46s. to 48s.; beans, 42s. to 45s. per quarter. Town-made flour, 70s. to 75s.; country marks, 54s. to 58s. per sack. *Foreign:* French flour, —s. to —s per sack; American, 38s. to 45s. per barrel.

Monday, January 16: The supply of wheat on sale last week, limited, moves off freely, at the late advance. Oakes are firm, at full prices.

Linseed, English, sowing, 39s. to 40s.; Baltic crushing, 47s. to 52s.; Mediterranean and Odessa, 46s. to 48s.; hempseed, 33s. to 38s. per quarter. Coriander, 10s. to 13s. per cwt. Brown mustard-seed, 10s. to 12s.; white ditto, 12s. to 14s.; and tares, 7s. 6d. to 8s. per bushel. Rapeseed, £20 to £24 per last of 10 quarters. Linseed cakes, English, £9 5s. to £10 10s.; ditto, foreign, £9 5s. to £11 10s. per ton. Rapeseed cakes, £6 0s. to £6 10s. per ton. Canary, 55s. to 70s. per quarter. Hempseed, 35s. to 36s.; ditto, white, 42s. to 46s.

Bread.—The prices of wheaten bread in the metropolis are from 11d. to 11½d.; of household ditto, 10d. to 10½d. per 4 lb. loaf.

Seeds.—Clover sold in firm and quite as dear as last week. Linseed moves off freely, at the late advance. Cakes are firm, at full prices.

Wool.—Our market is firm, at very full prices.

Provisions.—The demand is still active, and middling to fine white Bengal has realized 16s. 6d. to 17s. per cwt.

Tallow.—A good business is doing in Irish butter, the value of which is well supported. Foreign has advanced fully 2s. per cwt. English qualities are held at full quotations. The beef market is rather active at extreme rates. Lard is quite as dear as last week. In other kinds of provisions, very little is doing.

Tallow.—A good business is doing in the market, and prices are on the advance. P. Y. C. on the spot, 47s. 6d. Town Tallow, 45s. per cwt. Rough fat, 2s. 4d. per cwt. Town tallow, 52s. net cash.

Oils.—Our market is very firm, at enhanced rates. Linseed, £1 14s. to £1 15s.; cod, £36 10s. to £37 per tun. Sperm, £84 to £86; coco, £34 to £35 per ton. Spirits of turpentine, in punchcons, 41s. per cwt.

Coals.—Tanfield Moor, 30s.; Wylam, 30s.; Whitwell, 33s.; Hough Hall, 30s.; South Hartlepool, 30s.

Hay and Straw.—Meadow hay, £3 5s. to £5 15s.; clover ditto, £4 to £6 10s.; and straw, £1 14s. to £2 2s. per load.

Spirits.—The sale for rum is active, at extreme quotations. Proof Leewards, 2s. 7d. to 2s. 8d. per gallon. Brandy is brisk, and again dearer. Geneva firm. Corn spirits are 5d. to 6d. per gallon.

Hops.—The demand for all kinds of hops is steady, at full prices. Mid and East Kent pockets, £4 4s. to £17 17s.: Weald of Kent, £3 10s. to £13 13s.; Sussex, £10 to £12 5s. per cwt.

Wool.—Small parcels of East India and low foreign wools have passed off steadily. In the private market a fair amount of business is doing.

Potatoes.—The demand is steady, as follows:—Kent and Essex Regents, 140s. to 155s.; Scotch ditto, 130s. to 140s.; Scotch cups, 110s. to 120s.; Lincolns, 100s. to 120s. per ton.

Smithfield.—A full average business has been done in this market, as follow:—

Beef, 4 cut 3s. 2d. to 3s. 8d.; mutton, 3s. 6d. to 4s. 6d.; veal, 3s. 6d. to 5s. 6d.; pork, 3s. 4d. to 5s. 6d. per 8 lbs., to sink the offal.

Newgate and Leadenhall.—These markets continue steady, and prices are well supported.

Beef, from 3s. 6d. to 4s. 6d.; mutton, 3s. 2d. to 4s. 8d.; veal, 3s. 6d. to 5s. 6d.; pork, 3s. 4d. to 5s. 6d. per 8 lbs. by the carcase. ROBERT HERBERT.

THE LONDON GAZETTE.

FRIDAY, JANUARY 6, 1854.

WAR OFFICE, JAN. 6.

2nd Dragoon Guards Lieutenant O. F. C. Bridgeman to be Adjutant, vice Clemenna.

7th Foot: Staff-Surgeon of the Second Class A. P. Lockwood to be Surgeon, vice Mitchell.

9th: Wm. Hall Walpole to be Ensign, vice Hall. 16th: Captain D. Mahon to be Captain, vice Chancellor. 18th: Lieutenant C. E. Preston to be Paymaster, vice Kennedy. 97th: Lieut. W. H. Cooper to be Adjutant, vice Leighton. 30th: Ensign L. Macpherson to be Lieut.-Instr., vice Hepburn; J. S. C. Harcourt to be Ensign, vice Macpherson. 34th: Lieut. J. Wright to be Lieutenant, vice Twemlow. 39th: Lieut. H. Atherton to be Captain, vice Rundle: Ensign T. M. B. Gardyne to be Lieutenant, vice Atherley; F. F. Bisset to be Ensign, vice Harcourt. 41st: Lieut. J. Johnston to be Adjutant, vice Harnard. 46th: Ensign A. Healey to be Lieutenant, vice Gervis; W. Atkinson, to be Ensign, vice Hanley. 49th: Ensign W. P. Byrne to be Lieutenant, vice Grubbe. 70th: Capt. A. Chancellor to be Captain, vice Bernard.

2nd West India Regiment: Major S. J. Hill to be Lieut.-Colonel; Capt. J. Miller to be Major, vice Hill: Lieut. J. Harper to be Adjutant, vice Miller; Ensign E. J. Laughlin to be Lieutenant, vice Harper: C. F. Holt to be Ensign, vice Laughlin.

Memorandum: The Staff-Surgeon of the first class C. Tyler, Deputy Inspector-General of Hospitals, vice Shanks; Surg. J. Mitchell to be Staff Surgeon of the first Class, vice Wyber; Assistant-Surgeon J. Bell to be Staff Surgeon of the Second Class, vice Lockwood: F. M. Sen to be Assistant-Surgeon to the forces, vice Laing; T. M. Blockley to be Assistant-Surgeon to the forces, vice Quinody, M.D.; J. Bell to be Assistant-Surgeon to the forces, vice Rosen elected.

BREVET.—Capt. G F Duckett to be Major in the Army.

OFFICE OF ORDNANCE, JANUARY 5.

Royal Artillery: Second Lieut. M. le Par Taylor to be First Lieutenant, vice Mosly. Cadets to be Second Lieutenants—A. K. Hunter, W. C. Ramsay, C. P. Tillard, E. C. Bolton, G. H. A. Nicolls, D. G. C. Macdeehan J Barton C. J. H. Johnstone, R. H. Cleudinnell, E Humphrey, G. W. Wilson, L. B Broughton, G. A. A. Young.

Royal Engineers: Second Capt C. Fanshawe to be Captain, vice Denison; First Lieut. J. Grant, to be Second Captain; Second Lieutenant Lieut. H. C. Savage to be First Lieutenant, vice Grant. Cadets to be Second Lieutenants with temporary rank—The Hon. C. Wrottesley, L. A. Hale. H W. H. D. Dunsterville, R. Lempriere. G. Longley.

BANKRUPTS.

C. R. SMITH, Gloucester place, Newington, Surrey, J. RAYNES, Nottingham, Ironman. J. ALBISTON, Gloucester place, New road, coachmaker. J. W. LE GRAND, Lambeth-walk, grocer. J. EVANS and G. DAVEY, Glamorgan, ironmasters. T. WILKINSON, Exton square, coal-merchant.

TUESDAY, JAN. 10.

WAR OFFICE, JAN. 7.

Royal Marines: Cadet H. H. Nott to be Second Lieutenant.

BANKRUPTS.

J. HART, Borough-road, Southwark, grocer. J. READ, Hart-street, Bloomsbury, licensed victualler. W. H. SPICER, Tidley, Worcestershire, and Wolverhampton, baker. J. THURMAN, Birmingham, woollen draper. T. PITT, Hasebury Plucknett, Somersetshire, garth-wick manufacturer. J. HOWARD, Great Grimsby, Lincolnshire, and Hunmingtree and Hull, shipowner. J. HUTTON, W. P. HUTTON, Lancaster, grocer. W. FALLAS, Holme, Lancashire, builder. J. KAY, Freshwich, Lancashire, calico manufacturer.

SCOTCH SEQUESTRATIONS.

J. REID, Cooper Angus, Perthshire, grain merchant. W. BENNETT, Dundee, merchant. W. TREAL WELLS, Port Glasgow, wine-merchant. T. MONTEITH and SON, Devonside, woollen manufacturer.

BIRTHS.

BARNES.—On the 4th inst., at the Parsonage, Biddington, the wife of the Rev. E. F. Barnes, of a son.

BELL.—On the 5th, at Crescent-terrace, Millbank, the wife of Mr. Stephen Bell, of the West-India Docks, of a daughter.

DUNDAS.—On the 5th, at Edinburgh, the lady of Sir David Dundas, of Beechwood, Bart., of a daughter.

GARRIER.—On the 6th, in Upper Harley-street, the lady Caroline Garrier, of a son.

GREENWOOD.—On the 3rd ult., at Gwazdilla, near Ripley, Yorkshire, the wife of John Greenwood, Esq., of a son.

GILBERT.—On the 9th, at Stanton-hall, Lincolnshire, the wife of Joseph Livesey, Esq., of a son.

LIVESEY.—On the 9th, at Stanton-hall, Lincolnshire, the wife of Joseph Livesey, Esq., of a son.

RIPER.—On the 5th, at Tackley Rectory, near Woodstock, the wife of the Rev. L. A. Sharpe, of a son.

MARRIAGES.

AWDRY.—EVANS.—On the 3rd inst, at Rhayader, the Rev. W. H. Awdry, to Mary Llewellyn, eldest daughter of the Rev. W. Evans, Vicar of Rhayader and Cwmtoydd'are.

DRINKWATER.—On the 5th inst., at Bromham Church, Dr. Drinkwater, Esq., of Maddox-street, to Mary Helen Dorothy, eldest daughter of R. Mu pby, Esq., of Hale Lodge, Edgware.

HERRIES.—On the 5th inst., at Bromham Church, Wilts, by the Rev. J. A. Nicholl, Vicar, M.A., J. T. Emmerson, of Stockport, to Susan Skillitter, niece of John Herries, Esq., of Bromham, Wiltshire.

GILBERT.—On the 5th, at Chichester, the Rev. W. H. L. Gilbert, B.A., to Emily Jane, eldest daughter of the Rev. W. Hayley, Rector of the New Church, Chichester.

NEWTON.—CHARLES.—On the 6th, at St. Dunstan's-in-the-West, F. Newton, Esq., of Pleet-street, to Louisa, second daughter of the late J. Charles, Esq.

SCOTT.—HALTOFT.—On the 5th, at Sutton Coldfield Sir F. E. Scott, Bart., of Great Barr Hall, Stafford, to Mildred Anne, eldest daughter of Sir W. Haltoft, Bart., of Four Oaks.

DEATHS.

BANHAN.—In August last, at Beltast, Port Fairy, Australia, to the great grief of his family and friends, Mr. Edward William Joseph Banean, formerly a pupil at Harmony Hall (now Queen's College), Hammersmith, and second son of Mr. Joseph Banean, of Mecklenburgh-square, of the Western Times, Exeter, after a long and painful illness of consumption, which he bore with the truly Christian fortitude and resignation. His cleanliness and abstemious habits, and the simplicity and sweetness of his disposition, and his amiable temper, endeared him to a large circle of acquaintances and friends, who all long and decredly cherish his memory. In him society will have to mourn the loss of a promising young man, aged 23 years

BENCOMBLER.—On the 6th inst., at Greenwich, Reginald Latham, second son of the late Rev. W. Bercomblen, Vicar of Wandsworth, in the 81st year of his age.

BISHOP.—On the 5th inst., at the Grange, St. Sampson's, Guernsey, Charles Brownrigg, Esq., of the Ceylon Civil Service, second son of the late General Sir Robert Brownrigg, Bart., G.C.B., of Nilsland-park, Cumberland, aged 56.

COLLIER.—On the 8th inst., at Peckham, the Rev. William Bruge Collyer, D.D., aged 72.

HARRIS.—On the 8th inst., Mr. Samuel Osborne Harris, of Gloucester place, Park-walk, Chelsea, and formerly of High-street, Kensington, aged 53 years

HOLT.—On the 7th Jan., 1854, Mrs. Elizabeth Cuyler Holt (widow), the sister of Lieut.-Gen. Cuyler, of Cuyler Manor, Cape of Good Hope.

MALTBY.—On the 5th inst., William Maltby, Esq., many years principal librarian of the London Institution, aged 60.

MURTON.—On the 6th inst., at Brompton, Middlesex, Col. Henry John Murton, Royal Marines.

TAYLOR.—At Becombe, Devon, Major-General T. W. Taylor, C.B., Lieut.-Governor of the Royal Military College, Sandhurst, and Colonel of the 97th Lanners, aged 71.

TOWNSHEND.—On the 6th inst., at Chichurch, the Hon. Archelais Townshend.

THE ILLUSTRATED LONDON NEWS

No. 664.—VOL. XXIV.] SATURDAY, JANUARY 21, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE PRINCE CONSORT.

We have hitherto purposely abstained from making the slightest allusion or giving the least currency to the reports that, for the last six or seven weeks, have been industriously circulated in the Press and in society relative to H.R.H. the Prince Consort. But the time has at length arrived when it is no longer desirable—even if it were possible—to keep silence upon the subject. If, by our notice of them, the accusations of which the illustrious Prince has been the object could penetrate into any wider circles than those which they have already reached, we should deem it a matter alike of delicacy and of duty to refrain from giving their authors the advantage of our pages for the propagation of their slanders, even although the refutation went side by side with the falsehood. But the calumnies against the Prince have been so long and loudly blazoned abroad—from the pot-houses and the pot-house journals in which they originated, to the Clubs and places of public resort, and from thence to the columns of almost every newspaper in the country—that our silence is no longer necessary.

The man who has the high honour of being the husband of a Queen Regnant of a country like England, stands in an exalted, and, therefore, in a perilous position. If any one be obliged to walk warily, it is he. To no individual who stands is the precept that he should "take heed lest he fall," so applicable as to him. Too lofty to be strictly a subject—too powerful in the secrecy of his home, to be safely trusted with power in the Senate or the Cabinet—too nearly allied to the Crown to be quite dependent upon its favour, or to be quite independent of all that concerns its honour and dignity—he is surrounded on every side with difficulties and anomalies. He is placed too high to have any objects of ambition, such as those which captivate the minds or quicken the energies of other men. Wealth and title can have no attractions to his mind. He has the highest of all title; and if he have not wealth enough to satisfy him, no effort he can make, can procure him any increase to it. His pretensions can interfere

PLAN OF THE BATTLE OF KALAFAT, AND THE RETREAT OF THE RUSSIANS TO KRAJOVA.—(SEE NEXT PAGE.)

with no man's advancement. His functions are so entirely non-political and ornamental, that if any office be bestowed upon him, it is that the office may be honoured by his acceptance of it—and not that he may thereby acquire any additional rank or importance. And yet, though so little is allowed him to do, much is expected of him By custom and consent, if not by the Constitution of this country, he is the first and most honoured subject of the Crown. By the Christian law—and by the law of domestic affection—he is the head and chief of the most illustrious family in the land; and the Queen of Great Britain is as much his subject, as every other happy and dutiful wife is the subject of the lord and husband whom she has selected. If his hand be too much seen in social life, and if he manifest too lively an interest in the affairs that take place around him, he will be reckoned a meddler who oversteps his province; if it be too little seen, and if he does not sympathise with the world in which he lives, he will be accounted a simpleton or a nobody. The amiable Prince, whom the Queen of the greatest empire in the world freely chose for her husband, understood all these things. He felt both the delicacy and the difficulty of his position on the one side, and its responsibility and dignity on the other. Of necessity a stranger, he made it his first duty to become an Englishman—to study our feelings, our habits, and our virtues, that he might in all things become a model to English gentlemen and to English society. So admirably did he comprehend his duties, and so gracefully did he perform them, that, next to the Queen herself, he became the most popular person in her dominions. His public appearances were few, but they were always judicious. He never advocated a cause which it was not proper that he should countenance; but always—as in the case of the Great Exhibition of 1851—lent his powerful aid to schemes of utility that were national, but non-political. He felt, as if instinctively, what objects it was his duty and privilege to favour, and what objects it was better that he should leave to other and freer, but less splendid, agencies, to uphold and foster. His remarks, whenever he addressed an assemblage of Englishmen and women, invariably showed that he possessed not simply a good head but a good heart, and gave proofs of abilities that, had he been born in a less exalted station, would have raised him to eminence and honour. No one breathed a syllable in his disparagement. For his own sake, as well as for that of the Queen, he was esteemed and beloved by all classes. It was felt that, whatever the Royal families of other states of Europe might be, England had the happiness of possessing in Queen Victoria and Prince Albert models of domestic virtue and of public usefulness.

But it has pleased some malignant—or, perhaps, merely thoughtless—persons to set rumours afloat with respect to his Royal Highness which have a tendency to diminish his well-earned popularity, if they have not already accomplished that undesirable end. The accusations, at first vague and unmeaning, gradually shaped themselves into something like consistency. It was at first asserted that nothing could account for the dismissal of Lord Palmerston from office two years ago, but the enmity of Prince Albert to that statesman. The whispers, however, did not swell into a roar on that occasion. It was only when his Lordship announced, some weeks ago, his determination to withdraw from the Ministry that they again began to be heard. A certain class of political quidnuncs and pot-house busy-bodies could not imagine anything so preposterous as that Lord Palmerston should be capricious; or that he should be guilty, once or twice in his life, of an error of judgment; but they could imagine easily enough that Prince Albert should have a personal ill-will to the object of their adoration, and that he should forfeit the good opinion entertained of him, and which had been steadily increasing for twelve years, by exercising political power in an underhand and unworthy manner. They, therefore, explained Lord Palmerston's resignation in their own fashion, and without a shadow of proof began to accuse the Prince of unconstitutional intermeddling in the affairs of State. They broadly hinted that the husband of the Queen was the enemy of England—that he betrayed State secrets to foreign Powers; and, that while the responsible Ministers of the Crown were endeavouring to support the cause of Turkey, he, the irresponsible adviser of his wife, was doing his best to betray that cause, and to serve the interests of the Emperor of Russia. The utter improbability of such charges signified nothing to the hot brained partisans who made them. The accusation, once set in motion, rapidly acquired impetus. To journals that administer to the coarse tastes of the tap-room, such slanders against a personage so distinguished were in the highest degree welcome. There is nothing so intelligible and, we are sorry to say, so popular as scandal. It is not every one who can talk politics. Few can converse well upon the drama, the sciences, or the fine arts. Questions involving literary taste and scholarship do not greatly interest the masses; and, though all understand the great and daily topic of the weather, it is a topic that is apt to lose its flavour. Not so immortal Scandal! A piece of slander never tires either the great or the little vulgar. It is always acceptable, either at the club or at the tea-table—at the tavern or in the beer-shop. It taxes no man's brains to grapple with its intricacies; and the more lofty the position of the slandered person, the more keenly it is relished. Besides, as everybody knows, slander is a very marketable commodity to struggling newspapers that desire to thrust themselves into notoriety. The cowardly nature of the assaults against the Prince's character was never allowed to deter the utterers of such stories. The Prince could not reply to them. Had it been Mr. Brown or Mr. Jones, or any other companion of Mr. Doyle's Tour, who had been maligned, the Courts of Law might have been appealed to. Had it even been Lord Palmerston who had been the victim of misrepresentation, his Lordship might have stooped from his lofty eminence and demolished by a breath the flimsy superstructure raised by his assailants. The Prince Consort was not in so enviable a position. He was too far above the anonymous slanderers even to be aware of their existence; and it is likely that their stories had been for many weeks in circulation before his Royal Highness had any knowledge of them. The taunt of the Rev. Sydney Smith's against Sir Robert Peel seems to have been the maxim on which they acted—"Select for your attack," said the caustic wit, "a place where there can be no reply, and an opponent who cannot retaliate, and you may slander in safety." Much may be said for the prudence of such a course of conduct; but can anything be said for its manliness or for its decency?

Upon the general question of the influence which the Prince may naturally be supposed to exercise, it is scarcely worth while to enter. To deny to him all concern and interest in the events which so nearly concern and interest her whom he is bound to solace, to advise, and to protect, would be to deny nature as well as expediency. If a responsible Minister at any time demanded an audience with the Queen, and with the Queen only, Prince Albert would not, of course, be present; but if the Minister demand no such private audience, and have no objection to the Prince's presence, but would rather court it than otherwise, Prince Albert can do no wrong in remaining; or, if any wrong be done, the Minister, not the Prince, is responsible. He is not only the Queen's husband, but a Privy Councilor, and has a double right to give his advice. Those who clamour so loudly against the presumed political interference of the Prince, should ask themselves whether it would be better to increase his private and domestic influence, by degrading and lessening his public importance? That his influence was ever exercised in a manner injurious to the interests of this country, or to the rights of the responsible Ministers of the Crown, we hold to be a falsehood, not the less wicked because it happens to be absurd. It is an insult not only to Prince Albert, but to the Queen, even to suppose it.

THE BATTLES OF KALAFAT AND CITALE:

GLORIOUS DEFEAT OF THE RUSSIANS.

IT will be seen by the interesting letter from our Special Correspondent at Widdin, which appears in another column, that at the date when his communication was despatched, an attack by the Russians upon the Turkish entrenchments at Kalafat was daily expected. The prognostications of the writer have been amply fulfilled. His letter contains the latest intelligence that it has been possible to transmit by the post. For all later information we are indebted to the telegraphic despatches which have been received by the British and French Governments, and published in the columns of our London and Paris contemporaries. As well as we can make out the facts of the case from the fragmentary and often contradictory accounts, the series of engagements which ended in the decisive victory of Citale—a victory still more important than that of Oltenitza—commenced on the 30th of December.

At that date, not a Russian soldier had been seen at Krajova for two days; all had been marched off to assist in the great battles looked for between that town and the Turkish camp. A Krajova correspondent says that the Russian light horse and rifles were sent towards Kalafat, but all the heavy guns were sent towards Karakal. From Slatina, also, heavy ordnance, on its way from Bucharest to Krajova, was diverted to Karakal

The population of five districts composing Little Wallachia had been all the month in a state of indescribable excitement. The Russians had thought it prudent to seize a number of young Boyards, and shut them up in a convent, it being found inconvenient to transport them to Bessarabia, as had, until then, been the practice. At Bucharest, it was thought that the Wallachian militia would be broken up, with a view to the absorption of the men in the Russian ranks, as it was found impossible to do anything with them while they retained their national organisation. Above 500 of the Wallachian soldiers had gone over to "the enemy," that is to say, at the risk of their lives had rallied to the standard of their liege lord the Sultan. A number of the Wallachian clergy had also been bold enough to leave out the name of Nicholas I. from the Liturgy of their Church, substituting that of the Sultan Abdul Medjid.

All these circumstances seem to have prepared the way for an outbreak. On or about the 30th December, several slight skirmishes took place between the Russians and Turks near Krajova, in which the latter were victorious. The news of this event was officially announced to the representatives of the Four Powers as soon as it arrived at Constantinople, whither it was despatched by the Turkish Pacha in command. But nothing of importance occurred till the 6th of January, when a division of 15,000 Turks advanced from Kalafat, with fifteen pieces of artillery to storm Citale, where 10,000 Russians had encamped, in the intention of attacking Kalafat on the 14th. The loss on this occasion appears to have been very great on both sides; that of the Turks is not yet known, but that of the Russians is estimated at upwards of 3000. The triumph of the Turks was completed by the defeat of a new reinforcement of 18,000 (or, as some say, 22,000) men, which had advanced from Karoul to defend Citale. Upwards of 250 Russians are reported to have fallen on this occasion. The news was brought to Vienna by courier, and thence transmitted, by electric telegraph, to Paris and London. There was a report current that the Pacha commanding the Turks was killed, but it has not been confirmed. The battle was renewed on the 7th, with equal success to the Turkish arms. On the morning of the 8th, however, a series of bloody conflicts took place, which ended in the total defeat of the Russians, who, in their own account, admit to have lost on this and the preceding days upwards of 1000 killed and 4000 wounded. Among the latter were Generals Aurep and Tuinot. On the 9th the battle was still raging; and the Turks, who had advanced beyond Citale, drove the Russians back to Krajova with immense loss, leaving four pieces of cannon and a great number of dead upon the field. On the 10th the Turks retired to Kalafat.

The Russians would not tolerate the circulation of any reports in the Principalities about the event, but gave out a lying statement that "they had held all their positions." The Russian hospitals were filling with the wounded, who, to avoid excitement, were brought into the town in the night. This precaution, however, only stimulated the imagination of the people.

The bayonet and the Minié rifle, were, as at Oltenitza, the weapons most in request; although the artillery did great execution on both sides. As at Oltenitza, also, the Russian officers suffered severely.

The frost had broken up, and the ice in the Danube having almost entirely disappeared, no further difficulty was experienced by the Turks at Kalafat in maintaining their communications with Widdin.

We have no further details of these important events, but have been favoured by a Military Correspondent, deriving his information from high official sources, with the plan of the battle-field, which we have engraved on the preceding page. To the right lies the Turkish town of Widdin, connected, by a bridge of boats over the Danube, with the important position of Kalafat, in Lesser Wallachia. Citale, the scene of the Russian defeat, is on the road between Kalafat and Krajova, at a distance of nine English miles from the former place. The forts numbered from 1 to 7 were constructed by the Turks to defend Kalafat, and were attacked by the Russians without success. The forts marked A, B, and C, were taken from the Russians, after a severe struggle.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

WIDDIN, Dec. 30th, 1853.

WHEN the forces were assembled, in the early part of October, for the purpose of resisting the Russians, it was determined by Saini Pacha Governor of Widdin, to form an entrenchment at Kalafat, opposite and above the town. Ismail Pacha, Commander of the troops, was the first to cross and reconnoitre. Ismail Pacha is well known as a man who is in the front rank in every engagement. He crossed from Widdin to the island opposite the town with five men, and finding no trace of Russians, he sent for two battalions, and then a third, with the help of which he threw up a few entrenchments. The three battalions then crossed over to the mainland, and in ten days had raised defences sufficient for such a body of men to cross as would resist a considerable force of Russians. Such was the commencement of the Turkish march into the Principalities. In the meanwhile Ismail Pacha was superseded in the chief command by Achmet Pacha. The force at Kalafat consists at present of 10,000 men. For ten days after the Danube was first crossed by Ismail Pacha, the communications with Servia, and for several miles on each side of Widdin, were stopped, by order of Saini Pacha; and it was only after a fortnight had elapsed that it was generally known what the real state of things had been; even the Austrian Consul here was prohibited from despatching messengers, and this notwithstanding his remonstrances and threats. Whilst the movements were thus kept a profound secret in Widdin, the inhabitants of Kalafat were moved from their houses, to which they have not since returned; but the peasantry of the surrounding villages carried to Krajova the exaggerated intelligence that 25,000 men had landed and were advancing into the interior of the country. There were at that moment about 4000 Russians in Krajova, who thought fit to retire upon hearing this intelligence; and there was nothing at that moment that could have prevented the Turks from marching with sufficient forces to Bucharest; but prudence restrained the commanders at Widdin, who, doubtless, thought it best to expend the little powder that remained of good weather in fortifying the position at Kalafat The whole army worked with good will at these defences, which, although they are considered to be less strong against comparative numbers than the works at Oltenitza, are stated by the Turks to be sufficiently effective to resist an attack of 50,000 Russians.

It is now daily expected that an attack will be made on Kalaat, which is supposed to be the necessary preliminary before the Russians proceed to cross the Danube; for it is scarcely probable that the Generals of the Czar will peril the existence of a corps crossing at any point between Widdin and Rutschuk, at the risk of a concentration against them from both sides of a Turkish force. It is necessary for them, before crossing, to force the position of Kalafat; and this it is expected daily that they will do. The Turkish forces are distributed as follows:—There are, besides the 10,000 men on the left bank of the Danube, whose outposts are as far advanced as Cef-zajul and Orsikutza; 10,000 men in the town and fortress of Widdin, 5,000 menquartered in the Bulgarian villages; and a reserve of more than 10,000 men advancing from Sophia. Regiments, however, are crossing daily to Kalafat, to reinforce the positions, and this may shortly alter the distribution of the forces; and it may be expected that, in case of a Russian attack, the defence on the left bank will be manned by twenty to twenty-five thousand men. There is no doubt of the intentions of the Russians to make this attack. Twenty-five thousand men are, it is said, at this moment in Krajova, and rumour goes so far as to say that they are commanded by Marshal Paskiewitch in person. I do not know whether it will be new to you to learn that a general movement was made by the Russian army to obtain Paskiewitsch as its General instead of Gortschakoff, and that the prayer of the troops has been heard by the Emperor, who dismissed the latter, and named the former in his stead. However well the Russians may fight under their veteran General, they will meet an enemy at Kalafat who has no alternative but death or victory. The Turkish soldiers know that if they flinch they are lost, and retreat is desperate. It is true a bridge, which joins the left bank with the island, is still open to them, but that is a forlorn hope. The Turks, however, are as confident of success as possible under the command of Achmet Pacha, a General of considerable skill in modern military tactics, Ismail Pacha, whose bravery is impetuous to a fault, and Skender Bey, who is covered with no less than fourteen wounds. There are, besides these, numerous young officers of note, all eager to distinguish themselves; and the whole of the administrations and superior arrangements are directed by Saini Pacha, than whom no man is more capable, by his experience and abilities to do all that can be done to ensure success.

Stores and provisions there are here in plenty. The soldiers are well fed with meat and bread daily; and, notwithstanding the existence of some cases of tertian fever, the troops are generally healthy. One scarcely expects, and one fails, to find in the Turkish regulars the military aspect of European soldiers: with their grey great coats and fez, their musket and sword, they have a look at variance with the spirit of Turkish habits, and Turkish costume. It need scarcely be said, however, that the men are all Turks, and that the Christian is no longer forced to serve, as he used to be, by surrendering himself, when young, to become a Muesulman, and a man of arms. The most picturesque of the Turkish troops are undoubtedly the Bashi Bozouks, literally "men without heads," who form a body of light cavalry of great utility; having the advantage of carrying with them their own arms, in the use of which they are considered and called by the Turks the scourge of the Cossack. It is well known, but may as well be repeated here that the Cossack of the Don is not exactly the same martial Cossack who fights against the Circassians. The latter description of men are not unlike the Bashi Bozouks, trained from their youth in the use of arms, and the management of the horse, which with them is almost as familiar, and stands in the same relation, as his steed to the Arab. But the Cossack of the Don is a man, who is drilled to be a Cossack in the same manner as the rank and file are made soldiers, namely by the knout or stick.

In the meantime, what is the state of feeling and of party amongst the people most concerned in the pending struggle. There are three nationalities at least in presence. The Sclavonians, who people Servia, Bulgaria, and numerous states besides, and who see in the present contest an opening for the assertion of a larger right, and a chance of change; the Roumans of Wallachia and Moldavia, whose language is spoken in Transylvania, Bessarabia, and the Bukowmi, and, finally, the Turks, who levy still from the Sclavons tribute, and who till recently were in receipt of tribute from the Rouman popula ion of Wallachia and Moldavia. The population of these Principalities were, it must be owned, so to speak, ready for use by Russia. Constituted, like Russia, having nobles in the shape of Boyards, who possess the rest of the population as slaves, it was obvious that the country must be an easy prey, if once the noblesse were bribed or brought over by other means to Russia. There may be a national feeling amongst the Roumans, but so long as they were serfs of nobles who were unwilling or too corrupt to have any but Russian tendencies, what could they, an ignorant, though industrious mass, do against intrigues such as Russia knows how to work. Yet the Boyards might well have felt more national pride, and have been stung into exertion by the losses which have successively fallen upon their country. Transylvania, which they once possessed, became the prey of Austria; Bessarabia, which was theirs, was taken by Russia; and the Bukowmi is also lost to them.

Yet all these countries speak the Wallachian tongue. In Wallachia proper there are 2,500,000 Roumans; in Moldavia, about 1,800,000; in Bessarabia, there is a population of 800,000 of the same language; and in the Bukowni, 400,000. Transylvania alone contains 1,700,000 Wallachians, all of whom are perforce Austrian subjects. Even on the Banat there are no less than 2,000 000 of Wallachians. It is true that in Transylvania the old hereditary policy of Austria has colonised the country between Hermannstadt and Cronstadt with about 200,000 Saxons, who speak the German tongue, and are supposed now to have no national element, save the Austrian, it is also certain that the same policy has planted 300 000 Hungarian Szeklers about the Moldavian frontier: nor that a feeble barrier was this against the assertion of nationality by the enormous majority of the Rouman population. A state created from this great element has no doubt been the wish and the desire of some Wallachians. One can scarcely explain the resistance of the Transylvanians against Hungary on the last revolution without supposing it. Nay, of its existence there is ample proof, on the commencement of a revolution which took place in 1848, against the Boyards and against Russia -a movement which was crushed by the entrance into the Principalities of a large Russian force. Turkey was unable to resist that time. The letter of past treaties was against her, and the Russians only retired, after disarming the population, and thus making sure of the futility of any subsequent revolution. The villagers on this occasion were even deprived of the axes necessary for cutting fuel, and one hatchet was left for the use of three families. Still, the occupation did not entirely decimate the country, and in 1853 there was still a large sum in public treasures and private purses, which served to keep up the Boyards and the noblesse. Now, however, Russia has taken everything—robbed the Principalities of fifty millions of francs, quartered her soldiers upon the people, and paid for their provisions in paper—and what paper! Is it extraordinary that, under these circumstances, the sufferers of 1848—the exiles who desired at that time to abolish serfdom and commence reform, and who since have been forced to live in foreign countries should think it probable that a national feeling may at last be raised in the Danubian Principalities; and that if the Rumans have made themselves odious by wrongs in the present and despotic administration in the future, the milder rule of the Turks, who ask only for tribute, and who will grant reforms as soon as they are successful, will be welcomed, at least as the more bearable of two sorts of yoke, in the absence of all chance of present independence. Had England at once declared when Russia threatened her invasion, that the occupation of these Principalities must be a *casus belli*, these struggles might have been avoided—public attention would have been directed as effectually to the wrongs of the Christian population of Turkey, and they would have been sooner redressed, and she would have had as good a chance of laying down with success the terms, without which even now her support of Turkey must be withheld, as at present, when all is left to the arbitration of the sword.

It is more than thirty years since Russia began seriously to intrigue against the Turks in the Danubian Principalities by disseminating agents throughout the country, who, working upon the feelings of the people chiefly on the point of religion, succeeded in rousing a considerable amount of hatred of the authority and creed of the Turks. The people then had had no such experience of Russian friendship as they now possess; and the intrigues of the agents of the Czar were thus tolerably successful. The same system of intrigue which at this moment pursued in Servia that was followed so long with success in Wallachia and Moldavia. Mr. de Fonton, the chief secretary of the Russian Embassy at Vienna, has been making the tour of Servia; and not only visited the chief towns of the Principality, but stopped in every village, speaking to the people, vaunting the power of his master, and intriguing to rouse the hatred of the Servians against the Porte. It must require more talent to persuade these people of the beneficence of Russian rule than was demanded of old to flatter the Roumans. With the example of the Danubian Principalities before their eyes, the Servians are not likely to be deceived by such specious arguments as Mr. de Fonton may have to bring forward. As far as religion is concerned, the Emperor of Russia has been declared the Protector of the Greek Faith in Servia; but the clergy of the Principality are really dependent on the Patriarch of Constantinople; and the present holder of that title is well known to be by no means friendly to Russia. But, even were the clergy to hold directly of the Czar as their spiritual head, they are not, in Servia, possessed of the faculties for domination which other churches possess. For instance, in Bosnia, where, out of a population of 1,500,000, there are 300,000 Roman Catholics, who have no less than five convents and a bishop appointed at Rome; together with an educational school at Vienna. The clergy of that denomination are the lever with which Austria intrigues; but, in Servia, the clergy has been refused the right which it claimed of educating the people. Education there is secular, the teachers being appointed by the state, and the priest only allowed to visit on Sunday, when some species of religious instruction is thus inculcated.

As regards the political state of Servia, it is needless to enter into the history of its last constitution. A *berat*, or firman was forwarded by the Porte, which granted extraordinary privileges to the country; a French constitution with a double chamber was enacted, and it was supposed that such a system would last. The folly of such a thought was soon palpable. The Lower House was abolished about three years ago; and the Government is now carried on by a Senate, which renews itself, and a Prince who is dependent on that Senate. Servia, however, governs itself. Its parishes elect their own Mayors and officers; the only taxes are direct, the Porte levying half as tribute, without requiring the military contingent, which is obtained from Egypt. Yet in Servia every man is a soldier, and bound to serve. This is the only law that can possibly weigh upon him; but it really affects him but little at the present moment. In the vast forests which surround him he leaves the pigs, which are the staple of the country and the source of his wealth, and he hunts them up periodically, and fattens them for sale. One pig pays the tribute of many families. The ground which each bears and sustains from the forest is its property. It is rich beyond description—yielding cent per cent of wheat, maize, barley, and fruits, with apparently inexhaustible fertility. These men are thus free, martial, and lazy; and to fancy that they will abandon the mild rule of Turkey for the dread realities of Russian administration appears such a wild assumption, that one can scarce conceive it. Without any other thought than that of enjoying his present independence, the uneducated Servian is, therefore, likely to remain satisfied with his present lot, and unanxious to substitute the government of Russia for that of Turkey. The educated Servian is more ambitious, and for other causes will hold the same opinion. He hopes that, in course of years, the independence of his country being secure, it may be permitted to extend itself to comprise Bosnia, Montenegro, and the Herzegovine—all of which speak his language, and with whose inhabitants there is community of thought and nationality. Nay, he may be desirous of reuning in the Servian Voivodie, at present under Austrian rule, in the Sclavonian Banat, which extends to the Drave, the same sentiments of independence as animate himself. "The enfranchisement of Italy," said an intelligent Servian, once, at Turin, "will be conquered when Sclavonian independence once asserts itself." Austria feels this, and hence her anxiety to obtain Servia. She cannot forget that for twenty years she possessed that country, from which however, she was compelled to retire. She dreads the extension of her independence, which, indeed, would be a fatal blow to her commerce and she fears beyond all things a change by which the produce of Turkey, instead of making its way to the Adriatic at Trieste, would find a nearer port in the same sea, free from the heavy harbour duties, the transit dues, and vexatious delays, which she has invented to raise her revenue. How important, indeed, would it be for England to obtain an opening such as this—a port where her manufactures can enter free, and her produce fill the Sclavonian territories, under a tariff of from 3 to 5 per cent *ad valorem*, uncurbed by the prohibitive customs of Austria. What an opening there for the corn trade, which by entering the nearer sea, would be freed from the necessity of being carried on exclusively in distant markets like those of the Black Sea. All the efforts of Russia and of Austria have been directed to close these countries, and prohibit their having access to the Adriatic Sea. Turkey possessed one little strip of ground on the Adriatic—and, at the moment of the Bosnian war, such was Austria's anxiety lest she should open a trade communication there, that she sent Prince Leiningen to Constantinople to remonstrate in pretty much as audacious a manner as Prince Menschikoff did. Turkey, on this occasion, yielded, which was a pity; but ought not England to have seen the importance of this question? Bessarabia was only conquered by Russia that she might close the Black Sea to the trade of the Roumans, and possess herself of the mouths of the Danube. That such ideas as these exist amongst the Sclavonian population there is no doubt, and the questions which they involve are, without contest, of the highest interest to England. Napoleon once said, I believe, "Cette vieille Europe m'ennuie," and doubtless the people of Great Britain—occupied by their enormous relations with the two American continents, with Australia, China, and India—do not feel as much interest in the comparatively small results that may accrue from countries nearer to them; but neglect at the present moment may involve enormous losses.

PRINCE ALBERT.

Mr. C. C. Greville, Clerk of the Privy Council, has written the following letter to the *Times*, in reply to the statements of a writer, who dates from the Carlton Club, and whose object is to show that Prince Albert is legally incapable of being a Privy Councillor. Mr. Greville's explanation will settle the point in dispute:

SIR,—Some member of the Carlton Club has put forth a laboured argument to prove that his Royal Highness Prince Albert is legally incapable of being a Privy Councillor; and he further seems to lay some stress on the fact that the Prince was never *sworn*. As I happen to know something of these matters, I wish to prevent any misconception, on this point at least, from taking root in the public mind. An attentive examination of the quotations from different statutes brought forward by the Carlthonian critic, will satisfy any one that they prove the case against himself: I will endeavour, nevertheless, to make it still more clear. The Acts for Naturalising Prince Albert were copied word for word from those for naturalising Prince Leopold, when the latter married the late Princess Charlotte, in virtue of which he was made a Privy Councillor on the 1st of July, 1816, with the sanction of Lord Eldon, then Lord Chancellor. By the 1st Geo. I. it is enacted that no person shall be naturalised unless in the bill for that purpose a clause is inserted declaring that such person shall not thereby be enabled to be of the Privy Council, or [illegible] and Prince Albert, [illegible] Acts for their Naturalisation, [illegible] Parliament [illegible] Council, [illegible] Prince Leopold, when he

"THE HIMALAYA" STEAM-SHIP.

a man's arm, which held her, as if it had been a piece of packthread. Such a ship would cut down a man-of-war to the water's edge. According to the mail contract, she would be bound, in case of war, to carry guns for her defence. But this would be quite unnecessary. She would run away from, or run over any enemy's ship. The largest and most heavily-mounted privateer would be too glad to get out of her way. Her successful performance of the trial trip of 3000 miles to Alexandria will mark an epoch in the history of steam navigation, which will have an important influence on the interest of commerce and the world, for it will show the practicability of again reducing the space between the most distant parts of the earth, and of abolishing almost all the discomforts of a lengthened sea voyage.

The *Himalaya* was constructed by Mr. T. Waterman, jun., at the building-yard of Messrs. C. Mare and Co., of Blackwall; and is fitted with engines of 700-horse power, by the Messrs. Penn and Co. A View of the launch of this vessel, with further particulars, appeared in our Journal of May 28, 1853.

IRON COALING STATION AT THE CAPE OF GOOD HOPE.

The great want of a good Coaling Station at Table Bay, has long been felt; and the importance of this provision is very great, not only to the colony itself, but to the owners of steam-vessels touching at Cape Town; while it is a matter in which a great portion of the mercantile community of England are greatly interested. Accordingly, Messrs. Walton and Bushell, merchants, of the Cape, have had a large iron building erected at the end of the Central Jetty, intended to hold 2500 tons of coals. The Government, seeing the great benefit likely to arise from such a dépôt, have given Messrs. Walton and Bushell every assistance in the erection of the building, by (we believe) a grant of the land on which it stands. Iron tramways have been laid down direct from the interior of the building to the end of the jetty, so that steam-ships can now be coaled in Table Bay, with almost as great facility as in London. The coal is packed in sacks, ready at a moment's notice to be put on board. As an instance of the rapidity with which steam-vessels are coaled, Messrs. Walton and Bushell lately shipped 750 tons on board the Australian Royal Mail Steam Navigation Company's steamer *Sydney* in somewhat less than two days. This is the quickest coaling ever known at the Cape; and would, a short time since, have occupied five or six days at least.

The Coaling Station has been constructed by Mr. Walker, of Millwall It is of corrugated iron plates, fastened by iron tie-rods of great strength with strong girders outside to support the building. The dimensions are 150 long by 50 feet broad; and it is considered one of the completest iron buildings yet sent to the colonies. The cost, including the erection was about £1200.

The Illustration shows the new Station, with Table Bay, from the Central Jetty; the Australian Royal Mail steam-vessel *Sydney* lying at anchor.

IRON COALING STATION FOR STEAMERS, AT CAPE TOWN.

THE FLEET.—SKETCHED NEAR HAMPSTEAD.

THE FLEET SEWER.

THE passenger who rolls smoothly over the well-paved roadway, or hurriedly elbows his way through the dense mass of human beings which throng the foot-pavements of this huge metropolis, rarely thinks of the vast reticulation of subterranean channels by which are removed the liquid refuse of the millions inhabiting the banks of the Thames. Yet, when it is considered that, during dry weather, the aggregate liquid refuse of the metropolitan population, contributed by hundreds of thousands of inlets and minute drains, amounting to about 14,000,000 cubic feet, or 87,000,000 gallons daily, is discharged by sewers, and, for the most part, without inconvenience of any kind, their importance becomes at once apparent.

But this is their dry weather discharge. In times of rain, the utility of the sewers, although, perhaps, not greater, is more striking. The area of the metropolis, according to the boundary of the Registrar-General, is about 112 square miles—the more closely-populated portion may, perhaps, be taken at about 60 square miles; and, if we assume a rain of about half an inch in depth equally over the whole of the latter area in twenty-four hours (a rate of fall not unusual), then, during a considerable portion of the time, in addition to the sewage from the houses, a quantity of water of about 18,000,000 gallons per hour, is discharged by the London sewers. Storms even of half an inch of rain during the hour are of yearly occurrence; and even of two inches in an hour, are within the memory of most men; yet the water of the severest storms is, for the most part, received and carried off by the sewers without injury or inconvenience, and, with exceptional cases, almost immediately; and, at the furthest, within half an hour afterwards, but slight traces of the storms are left. When the great length, the inevitable intricacy of this vast system of subterranean channels is considered, the Sewers of London, which have been plentifully abused of late years, must, with all their faults, take their place among the wonders of this leviathan city; and fully justify the assertion made by the most eminent engineers, that London is the best-drained city in the world.

One of the oldest Sewers, if not actually the oldest, in the metropolis, is the Fleet; once an open river, which, as Stow tells us, "had been of such breadth and depth, that ten or twelve ships' navies at once, with merchandise, were wont to come to the aforesaid bridge of Fleet"—is still a river, although hidden from sight; the waters of the Highgate and Hampstead hills still run through it; the old Bourne (now also a sewer) still delivers its waters into it; but, in addition to this, from running through a dense population, it probably receives and discharges more sewage water than any other sewer in the metropolis.

The Corporation of London early saw the propriety of covering over the open water-courses, which, in the process of time, had become open ditches or sewers. The Fleet north of Fleet-bridge, was covered in when Fleet-market was built; the portion north of Holborn was covered in about eighteen years ago, it being the last open sewer within the City boundary: above the City, the Fleet is, however, in portions still open.

The sizes of this vast arterial drain are as follows:—Near Blackfriars-bridge, it is about 16 feet high and 12 feet wide; in Farringdon-street, the sewer is divided into two branches, each being about 11 feet 6 inches high and 6 feet wide, which join at Holborn-bridge, and connect with a sewer about 12 feet high and 11 feet 6 inches wide.

That portion of the Fleet Sewer which lies south of Fleet-street is now under repair. Our Sketch will give some idea of the extent of the work, and the extreme mechanical difficulties that have to be contended with in carrying it on in such a situation; the only opening to it, as was reported by the engineer to the City Commissioners of Sewers, being but three feet square, and the sewer itself always running vast quantities of water, subject to tidal influence; and, in times of rain, its current being swollen to a vast torrent, capable of carrying almost everything before it; the rain-water of between seven and eight square miles being carried off by this sewer.

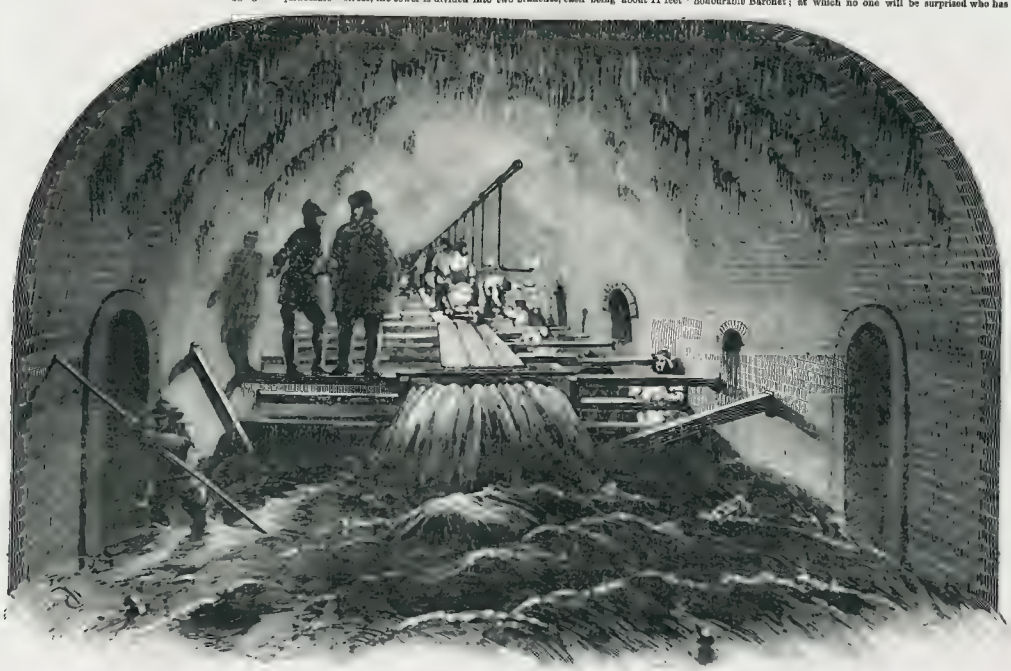
The works are being executed under the direction of Mr. W. Haywood, the Engineer to the Commission; Messrs. Thomas Crook and Son, being the contractors for the work.

We subjoin a few details of the Fleet, as a river:—The small, rapid stream Fleet, which has given name to the prison and street, and the portion of the City Wall ditch from Holborn to the Thames, has its origin in a nursery-ground on the eastern ridge of Hampstead-hill. Here it becomes a sewer; after which it issues from the side of a bank below Well-walk; and then flows down a small valley of gardens and orchards to near the reservoir of the Hampstead water-heads, to feed which the springs of the Fleet were collected in 1689, and were afterwards leased out by the City of London. From Hampstead the Fleet may be traced to the upper part of Kentish-town: after which it is diverted from its original course for the sewage of Camden-town; but its ancient channel may be traced at the back of the Castle Tavern, Kentish-town, and next in the King's-road, near Pancras Workhouse; and about 1825 the Fleet was conspicuous all along the Bagnigge-wells-road, but is now covered over. Its further course is under the walls of the House of Correction, in Clerkenwell-fields, thence to the workhouse in Coppice-row, under Eyre-street (formerly Hockley-in-the-Hole), having here been originally joined by "the River of the Wells," formed by Clerken, Skinners', and other wells; and thus to the bottom of Holborn. Here it received the waters of the Old Bourne, which rose near Middle-row, and the channel of which forms the sewer of Holborn-hill to this day. Thence the united stream flowed beneath what is now called Farringdon-street into the Thames.

SIR ROBERT HARRY INGLIS, BART.

THE announcement that Sir Robert Inglis retires from the representation of the University of Oxford, implies that he has terminated his public life. Declining health is alleged as the cause of this resolve of the honourable Baronet; at which no one will be surprised who has been

SIR ROBERT HARRY INGLIS, BART., LATE M.P. FOR THE UNIVERSITY OF OXFORD.—FROM A DAGUERREOTYPE BY BEARD.



REPAIR OF THE FLEET SEWER.

habituated to observe of late years this old servant of the Church of England, when fulfilling his public duties. If his friends and admirers could see no diminution of the zeal and fortitude with which he was accustomed to discharge his duties as champion of the "or hodox" party in Oxford University, they could not have been blind to the fact that time had, at least, begun to do his work. The flower he wore on his breast might be as fresh and as bright as ever, but the tint on his reddish cheek was less ruddy, and his portly frame had shrunk from its wonted amplitude. We subjoin a few particulars of the leading incidents of his life

Sir Robert was born on the 12th January, 1788, and is son and heir of Hugh Inglis, Bart., thirteenth and youngest child, and eventually representative of the male line of Robert Inglis of Edinburgh, by ... only daughter and heiress of James Russell, Esq. Her mother was daughter and heiress of Robert Wightman, Esq., of Mauldeslie, Rohs Inglis, Esq., grandfather of Sir Hugh, was member for Edinburgh in the last Parliament for Scotland. Sir Hugh sailed for India in 1762 His father died young, but his mother lived long enough to ... see on his return home in 1775, when he commenced a career ... of unfailing success in England. For many years he was a Director of the East India Company; thrice filled the office of Chairman, and thrice that of Deputy-Chairman. He was created a baronet in June, 1801.

Sir Robert Inglis married at the early age of one-and-twenty; the lady of his choice being Mary, eldest daughter of Joseph Seymour Briscoe, Esq., of Pendhill, Surrey. He had already entered himself as student of Lincoln's Inn; and on the 8th June, 1809, he was called to the bar. He succeeded to the Baronetcy on the death of his father, on the 1st of August, 1820. He first entered Parliament as M.P. for Dundalk in 1824. From 1826 to 1828 he sat for Ripon. On Sir R. Peel's change of opinion as to Catholic Emancipation, Sir R. Inglis was chosen by the clergy and the opponents of Roman Catholic Emancipation to contest the representation of Oxford University with their late member. Sir Robert Peel was defeated by a large majority. Upon entering the House of Commons Sir Robert Inglis became a by no means inactive opposition member, although his principal speeches about this period were in opposition to the recently proposed Roman Catholic Relief Bill. At this early period of his life, his opinions on the subject of Papal encroachment were as decided as at the most recent period; and many of his speeches evinced that thorough Catholic Emancipation to contest

afford more time for the preparation by the Council of State of the various measures which are to be brought forward; and, next, to allow something definitive to be affirmed relative to the Eastern question

M. Thiers lately remarked that the Emperor Nicholas at present finds that Russia has in face of her a far more difficult affair than he had ever anticipated, but that, notwithstanding the difficulty of his position, he is not the man to give way: that, in addition he is subjected to the religious pressure of the old Muscovite party—as by ordinary we are constrained in a certain measure by the Ulemas and the old Ottoman party. M. Guizot is likewise convinced that the Czar will not abandon an iota of his pretensions.

The preparations making in all parts of France show that, as far as the Government is concerned, there is little, if any, hope of the maintenance of peace. The agents for the purchase of cavalry horses have received orders to provide 60 horses per regiment for the present season, instead of 120, which is the number provided for the ordinary service of the year. An order has also been issued by the Minister of Marine, dated the 14th inst., for the arming of twelve additional ships of the line. Besides this, the following ships are at the present moment getting ready for sea at Brest:—*Vis*, the *Trajan* and the *Jemappes*, ships of the line of the second rank; and the *Breslau* and the *Inflexible*, ships of the line of the third rank. The extraordinary levy of sailors for the manning of the navy, ordered in the ports of Brittany, has caused great confusion among the merchantmen of those ports. Remonstrances have already been made to the Government on the subject, by the parties interested in the cod fishing, who complain that they cannot find men sufficient to man their vessels. The Minister of Marine has replied to these remonstrances, that in the present circumstances the service of the country must be provided for before every private interest. General Pelissier, of the army of Africa, is at present at Paris, and stands exceedingly high, it is believed, in the opinion of the head of the State. It is thought that he will certainly be one of the principal commanders of any expedition of French troops to the East; or, should Marshal de St. Arnaud be in sufficiently good health to assume the chief command (as some persons suppose), many think that General Pelissier will then be appointed Minister of War.

An order has arrived at St. Malo to make a levy of all the seamen of from twenty to forty years of age, who have not passed through four years of service. The only exception to this measure is to be such men as have been dismissed from the service within the space of a year. Much disquietude has been spread through the country at this news. The same will be the case at Granville and in the Bay of St. Brieuc. The Chambers of Commerce are about to make a representation to the Minister of the deplorable state in which all the district of the coast of France which is engaged in the cod fishery at Newfoundland will be placed, should a sufficient number of men not be reserved for these expeditions, which constitute the very existence of that part of the country.

The *Courrier du Havre* says:—"The levy of sailors of from twenty to forty years of age, who have not served four years, has commenced at St. Valery. This measure has spread consternation among the boatmen who carry goods from that town into the interior. They are mostly married men, and with their savings have purchased the boats in which they carry on their business, and in which they reside with all their families, like the mariners of the north. These families, deprived of their chiefs, will be thrown into great distress for want of being able to turn the boats to account during the absence of their owners in the service."

Judgment was pronounced on Monday in the sixth chamber of Correctional Police, in the case of the forty-six persons accused of having belonged to a secret society in Paris, whose trial had been going on for the whole of the past week. Another charge against several of the prisoners was that they had had a clandestine printing press. All the prisoners, except four, namely, Schrind, Lebouille, Laurent, and Regnier, were found guilty. Bratiano, Francois, and Furet were condemned to three years' imprisonment, and 500f. fine; whilst all the others were sentenced to one year's imprisonment, and 100f. fine.

SPAIN.

The latest accounts from Madrid state that the Queen was much better, and would be soon well enough to transact business. She had been informed of the death of her child, and was much affected by it. The body of the infant princess had been conveyed to the Escurial with great ceremony. Immediately after the recovery of the Queen, the ministers intend to submit to her measures relative to the press, the electoral and municipal régime, and other important subjects. The Marquis de Turgot had so far recovered on the 11th inst., that his medical attendants had permitted to leave his bed.

There is now a rumour touching affairs at Madrid, the substance of which is, that owing to the prodigacy of the Spanish Court, a party is forming with the view of uniting the Crowns of Spain and Portugal on the head of a son of Don Pedro. The rumour most of course be taken with reserve; but it must be said, on the other hand, that such conduct as that which has lately marked the Spanish Court and Government cannot go on much longer, except at the hazard of some violent reaction.

The *Gazette* publishes a Royal decree instituting a biennial exhibition of the fine arts at Madrid, in the month of May. The works of all artists, both Spanish and foreign, are to form part of that exhibition, but those of the latter must have been executed in Spain.

ITALY.

Government is rendering itself perfectly ridiculous by its persecution of all those whose speak in favour of Turkey. Two boys were arrested some days since for having given an Oriental salute, by crossing their arms on their breast and bending their head. The word "Turkish" has been erased from the signboard of the Turkish Coffeehouse, the word "Coffeehouse" remains. Crowds assemble frequently before the house and hoot it moderately. Several children amuse themselves with wearing a crescent on their breast to annoy the police.

The police authorities in Milan are becoming every day more arbitrary. The inhabitants are forbidden to quit their houses or walk the streets without a pass from the prefect of police: otherwise they are imprisoned and fed on bread and water. There is a special carriage attached to every railway train, which is exclusively reserved for the police, that they may examine everybody who travels. The same vigilance is exercised at the theatres.

An important bill concerning the Jews has been presented to the Piedmontese Chambers by the Government. The Israelite population of the kingdom, now divided into the Universities of Piedmont, Montferrato, Alessandria, and Nice, are authorised to exercise self government in matters relating to their religion and worship, divided into twenty electoral circles, each of which is to elect a representative to a General Assembly, to meet at Turin every third year, or whenever the Minister of the Interior shall convoke it. The General Assembly fixes the duties of the rabbis, the taxes for the use of public worship, the general budget, the stipend of Grand Rabbi, &c. One half of the General Assembly is renewed every three years. The General Assembly appoints a central direction of five members, whose duties consist in executing the deliberations of the Assembly, exercising vigilance over all the Hebrew communities of the kingdom, suspending rabbis, &c. Every University elects a Council of Administration, composed of five members, for the superintendence of local interests and worship.

A letter from the Romagna of the 7th, in the *Patrie*, states that that province is in great consternation owing to the increase of brigandage. People are afraid of being out late at night, and at Faenza the theatre is quite deserted. At the market-place, Indian corn is sold at 58f. 50c. per sack of one hectolitre and 16 litres. At Lugo corn-dealers are forced by the police to sell corn at 8 scudi (42fr. 80c.) per sack. The local authorities at Faenza have forbidden the exportation of corn from their territory.

GERMANY.

On the evening of the 12th a ministerial council was held at Vienna, at which the Emperor presided. It is understood that military preparations were the subject of deliberation. The mobilisation of a corps of from 30,000 to 40,000 men to be sent to the frontier, was again projected, and Field Marshal Coronini and General Schlick were each spoken of as its probable commander.

The *Vienna Presse* declares itself in favour of non-intervention in the Eastern question on the part of Austria, assigning as a reason the state of Hungary, Italy, and her crippled finances. The journal even tenders its advice to the Government against sending a corps of observation to the Danube, "lest Russia might take it ill." It confesses, however, with a very bad grace, that the idea of a war against Russia has become very popular in Austria

The *Cologne Gazette* announces that, on the 14th inst., on the terminat on of a conference with General Count Nostiz, Prussian Minister at Hanover, and one of the relics of Blucher's army, M. Mantuffel, the President of the Council at Berlin, had another conference of extraordinary duration with the French Minister at the Prussian Court.

The *Correspondance* of Berlin announces that, on the representations of the Prussian Government, the interdiction to export articles of food from the kingdom of Poland has undergone an exception in favour of wheat.

THE ILLUSTRATED LONDON NEWS

TURKEY.

Telegraphic despatches from Constantinople to the 8th inst. bring news of the fleets from the Black Sea. The British and French ships have been seen in the direction of Sinope, but some have been detached and have gone towards Sebastopol. Some of the Turkish vessels had gone to Varna. The Russians had shown themselves by sea before Batoum. Another despatch announces that a division of three Russian men-of-war had appeared in sight off Trebizond on the 31st ult., in the morning, where they made a *reconnoissance*; and that two other ships had been cruising the very day before off Soukoom Kali.

The *Moniteur* of Monday announced officially that the combined fleets, under Admirals Dundas and Hamelin, entered the Black Sea on the 3rd of January. Despatches from Constantinople of the 5th, state that the English, French, and Turkish fleets were in the Black Sea at that date. The Turkish troops and ammunition destined for Trebizond and Batoum, were conveyed in five Turkish war steamers. The following is the list of vessels now in the Black Sea:—

English: Britannia, Queen, Bellerophon, Rodney, Albion, Vengeance, Londonderry, Agamemnon (screw), Sanspareil (screw), Terrible, Retribution, Furious, Tiger, Firebrand—steamers.

Turkish: Taif, Feizi Bahri, Medjidié, Chaiki Chadi, Muhbri Surumsteamers. These convey ten thousand troops and warlike stores under cover of our ships.

French: Ville de Paris, Friedland, Jéna, Jupiter, Jemappes, Henri IV., Charlemagne (screw); Gomer, Mogador, Sané, Magellan, Descartes—steamers.

The correspondent of the *Lloyd* writes from Constantinople, under date Jan. 2, that large stores of coal have been purchased, and Turkish vessels hired to transport them to Sinope, where a dépôt for the French fleet is to be formed.

The following is a translation of Lord Redcliffe's and M. Baraguay d'Hilliers's message to the Governor of Sebastopol:—

Conformably with the orders of my Government, the British [French] squadron, in concert with that of France [England], is on the point of entering the Black Sea. The object of this movement is to protect the Ottoman territory from all aggression of hostile act. I apprise your Excellency thereof with a view to prevent all collision tending to disturb the amicable relations existing between our Governments, which I am desirous of preserving, and which, no doubt your Excellency is equally anxious to maintain.

To this end, I should feel happy to learn that your Excellency, animated by the same intentions, had deemed it expedient to give the requisite instructions to the Admiral commanding the Russian forces in the Black Sea, so as to obviate any occurrence calculated to endanger peace.

RECLIFFE,
[BARAGUAY D'HILLIERS].

The letters of both Ambassadors were precisely in these terms, and with the last word underlined as above. The *Retribution* conveyed them to Sebastopol, with a French officer in charge of his own Ambassador's despatch.

A letter from Constantinople, in the *Cologne Gazette*, states that the French Ambassador, in a private audience, had handed to the Sultan an autograph of the Emperor Napoleon, which expressed in the warmest terms of sympathy his regret respecting the massacre at Sinope. The Emperor declared in it anew that no violation of Turkey's integrity should take place; and he expressed the hope that the Emperor of Russia would show himself more conciliatory, being now enabled to convince himself of the union existing between France and England.

Lord Dudley Stuart left Constantinople on the 27th ult., and proceeded to Schumla. Several distinguished Englishmen accompanied him.

THE WAR IN ASIA.

A private letter from Trebizond of the 18th ult. furnishes some new and interesting particulars of the situation of affairs in Asia, which show what opportunities have been unimproved by Abdi Pacha, but which still offer themselves to his successor, to whom the Porte has just sent a reinforcement of ten thousand men. Schamyl (says the writer) having been disappointed of quarters at Vidis through the want of energy of the Turkish commander (Abdi Pacha), is once more in Daghestan, mustering forces for a new expedition, as he has done many a time before. From this point he extends his operations into all the countries between the Black and Caspian Seas The Abasians, who have hitherto maintained their independence against Russia, have come to an understanding with him, and will follow his plan of the campaign. The Poles who Russia had foolishly condemned to serve in the Caucasus, have joined him, furnishing him thus with some excellent officers, and the arms which he has obtained from Constantinople, have enabled him to arm a corps of fifty to 60,000 strong, compose for the most part of Polish deserters, excellent soldiers, ready at their weapons, the enemies of Russia, and in every way well able to render great service in the mountains. He has also constituted regular reserves of soldiers, arms, and ammunition; and thus, to the advantages previously at his command for a special war, he has added that of a more regular organisation. We may shortly expect to hear that things in Asia have taken a new turn.

It is stated in some of the foreign journals that the Polish and Hungarian officers who had been waiting for months at Constantinople to be employed, had at last been taken into service. Gen. Kmety is off to the army of Asia in the Turkish vessels which sailed on the 2nd. The chiefs of their chiefs had been created Pachas, and nominated Generals of brigade. General Klapka had declined to go to Asia, saying that he preferred serving in Europe.

A Mecklenburg captain, who met the Russian fleet, as it was returning from Sinope to Sebastopol, relates that two of the ships of the line were so much damaged, that although all the guns had been removed, they were in great danger of sinking. The Russians had lost one of their trophies of war. One of the crew of the Turkish steamer which was taken some time ago by the *Bessarabia*, had been left on board. One day the man found an opportunity of getting into the hold, and succeeded in scuttling the vessel. The water poured in so fast that she went down, with everything that was on board her.

The news from Batoum is looked for with interest, as it was thought that an attack might possibly be made on the vessels lying there. On the 2nd information was forwarded from Constantinople to the *Osservatore Triestino*, that a considerable number of Russian vessels were blockading Batoum; and the *Hamburger Nachrichten* learns, from St. Petersburg, that the Turks are much alarmed about five ships-of-war which they have lying in the port of Batoum. This looks as if mischief were in the wind in that quarter.

RUSSIA.

The St. Petersburg *Court Gazette* of the 9th inst. publishes a most violent article against England. Great Britain, it is said, is the moving cause of all European commotions, and the mischievous tone of meddler who has filled the barren fancy of the Turk with an absurd idea of "national honour," "independence." M. de Reinst and the "note" had not reached St. Petersburg on the 9th.

Letters from St. Petersburg to the 7th reflect the uncertainty and hesitation reigning in the Russian capital on the all-absorbing question at that date. According to some the enthusiasm for war had much subsided. One letter mentions a rumour that Count Nesselrode had ventured to suggest to the Emperor that it would be prudent to receive the propositions of the Conference in a friendly spirit, and that the nobility generally at St. Petersburg are anxious for a settlement of the Eastern question, in order to prevent the possibility of war in Europe Another writer despairs of peace, and points to the extraordinary preparations for war which were notoriously carried on throughout the year 1852 and 1853 as a proof that any pacific considerations presented to the Emperor's mind would have to contend with a long cherished contrary design.

The inspections of the fleet, frequently made in 1852 (says this correspondent) as well as those of the army, and the busy activity of commissariat commissions were very significant as to the intentions of the Government; and, as persons about the Court expressed it, an "important" move was about to be made. Against whom? that was the secret of the Cabinet. The late alterations in the Council of Ministers, out of which the grey-headed members retired to make way for younger and more energetic successors, were used as points of combination for the conjectures of many, who found their suppositions often confirmed subsequently by facts. As soon as the last inspections of the army were over, Menchikoff began, and not till then went from Odessa to Constantinople. Prince Gortschakoff, Governor of Poland, was summoned to St. Petersburg; and not till the absence of the High Admiral had failed at Constantinople was the former Prince appointed to the command of a corps and a half, destined for the occupation of the Principalities. In proportion as the Eastern question became more embroiled, the Russian Government proceeded to take the measures required to meet all eventualities. The Emperor reviewed once again the three divisions of the Baltic fleet, and a part of Lüders' corps (13th division) was sent by sea to Asia Minor, as a reinforcement to the troops already there. The militia was called out at the Caucasus. Then the corps of Osten-Sacken was ordered off to the Principalities; the Russian provinces contiguous to the theatre of war declared to be under martial law, and placed under the controul of the respective generals; the recruiting, that is a regular annual occurrence, was renewed by a special ukase, for it was only in Poland that the conscription was no longer last year than usual. Lastly, General Tchodojeff received orders to mobilise the active army, by raising each and every branch of it to its full complement of men. It was in the month of November last year that the General had carried out this command, for the zealous performance of which he was rewarded in an extraordinary manner by the Emperor. From all this it is concluded that the Czar's resolution is not a thing of yesterday, to be changed with the varying temper of any other Cabinet or State

THE SULTAN PROCEEDING TO MOSQUE, AT CONSTANTINOPLE.—(SEE PRECEDING PAGE.)

THE EMPEROR NICHOLAS, THE GRAND DUKE ALEXANDER, AND STAFF, AT ST. PETERSBURG.—(SEE NEXT PAGE.)

THE EMPEROR NICHOLAS, AND THE HOUSE OF ROMANOFF

[illegible] precedents could, in some measure, operate as salutary lessons [illegible] to those whom chance has invested with arbitrary [illegible] the people we propose offering to our readers of the [illegible] vicissitudes which have within the last hundred years [illegible] the Imperial dynasty of Russia, would fully prove the instability of thrones, and show how easily conspiracies, involving loss of crowns and life, may be concocted in those barbarous regions.

From the time of Peter the Great down to the present Autocrat, not one Emperor of all the line (with the exception of Alexander) has died even his dissolution at Taganrog—a small town on the banks of the Black Sea—has been the subject of various versions) has quietly breathed his last in an Imperial Palace.

Between the [illegible] of the Empress Elizabeth, Iwan Iwanowitch, the rightful heir to the throne and a lineal descendant from Peter the Great, was [illegible] and a foul conspiracy among the nobles, was cruelly incarcerated, as an idiot, in a dungeon (something like the Maison de Fer in the time of Louis XIV.), where, after lingering many years in fearful sufferings, he died at last miserably.

On the accession of Peter the Third, his successor—consort to that demoralized and voluptuous woman, Catherine II., whom, in some flatterers have wrongfully designated as the [illegible]—and [illegible], at the instigation of the wife, was fomented by several courtiers, at the head of which was Alexis Orloff and his brothers, to dethrone and murder the unfortunate Czar, and place Catherine at the head of Government. Accordingly, upon a given signal, the unsuspecting monarch was violently seized in one of his palaces, and simultaneously attacked by his assailants; and, after a stout and heroic resistance, at length overpowered; and, *sans cérémonie*, strangled in the most barbarous and dastardly manner. Thus perished Peter III., by the instrumentality of an ambitious and criminal woman—a real Messalina. After the perpetration of the foul deed, Catherine was immediately proclaimed Empress; and on the assassins, particularly the family of the Orloffs, wealth and titles were profusely lavished.

As far as the character of Peter is known, he is represented as having been of a mild and generous disposition, and likely to have conferred many benefits on the Russian people, had he been allowed to live.

We now come to the Emperor Paul I., son of Peter III. and Catherine, and father of the late Emperor Alexander; of Nicholas, the present reigning one; of Constantine, deceased; of the Grand Duke Michel; and of the present Queen Dowager of Holland.

As the melancholy end of the misguided Sovereign may probably still be within the recollection of a few of our readers, our notice of his boisterous career shall be brief, and merely relate to a few incidents in connection with his short reign of four years—from 1796 to 1800.

Paul, though exhibiting from his early youth symptoms of great eccentricity, irritability, and unbounded despotism, which his mother (Catherine) tried in vain to curb, had, nevertheless, at times, moments of a kind disposition, which the following anecdote will fully illustrate:—

Scarcely had he arrived at power, when his attention was drawn to the fate of the brave but unfortunate Kosciusko, the illustrious Polish hero, who, at the last struggle for the independence of his country, had been made prisoner, sent to Russia, and, by order of Catherine, was strictly confined at Schlisselburg, an isolated castle on the banks of the Ladoga Sea, suffering from a number of wounds received in battle. Paul repaired to his dungeon in person, and, after staying with him for a considerable time, in the most graceful manner (reports state that he even shed tears), restored the Polish veteran—the friend of Washington and Lafayette—to liberty, with permission to proceed wherever he liked. Kosciusko returned to the United States, the first field of his glory, where he remained a few years, but subsequently repressed the Atlantic, and took up his final abode at Soleure in Switzerland, where he was visited by the late Emperor Alexander, and there closed his eventful career at an advanced age.

The politics of Paul were as inconsistent as his general conduct was eccentric. To the French Revolution of 1789 he manifested the most decided abhorrence: none excited his anger in a greater degree than the doctrine of the Jacobins. He fancied he could discover a member of that association in dress, gesture, speech, and general behaviour. So intense was his impression in this respect, and so fearful was he of contagion, that hardly a day passed in St. Petersburg during his reign, but some unfortunate individual was dragged into prison, sub-tantially knouted; was, often sent to Siberia, for the mere offence of wearing cropped hair, light pantaloons, a coat cut *à la Provençale*, a hat of a Republican shape, or sharp-pointed boots. These, and an infinity of other rifles, were considered as sure signs of Jacobinism, and incurred severe punishments. Whenever the Emperor was perceived, even at a great distance, it was instantly known to every one, male and female, and however inclement the weather, to prostrate themselves in the dirt, on pain of being immediately arrested, and receiving a due proportion of knout. The public at length got so terrorstricken, that few ventured into the streets, and a deep depression to get rid of the tyrant, was now the order of the day. It was secretly whispered that his intellect was impaired; that leaving arbitrary power in such hands was to run the risk of existence every moment; and that the only remedy was the immediate sacrifice of his life, and to place Alexander, his eldest son, on the throne.

It has been said, but we do not warrant the truth of the assertion, that the latter was perfectly privy to the plan, and that he gave his unqualified assent, with the reserve only, that the person of his father should not be in the least hurt. The promise was given, but how far it was kept will be seen in the sequel.

Seeing the storm gather round him, and fearing that an explosion might sooner or later take place, the Emperor Paul determined to guard against the danger of surprise as far as he could. With this view, he built, in the heart of St. Petersburg, near the Fontanka, a branch of the Neva, a splendid palace, surrounded by water on all sides. He caused the strongest fortifications to be erected, and mounted them with ordnance. It was occupied by a formidable body of troops, commanded, as he conceived, by faithful officers. Everything was calculated to make a stout resistance, in the event of an attack. Within the precincts of this fortress, the Czar, at the moment of the counter-revolutionary movement in his capital, intended to retire and defend himself to the last extremity. But the walls which were intended as his protection became his grave. The name of this palace was, and is, Michaeli-wsky, for it still stands, as a monument of folly and imprudence.

The plan of acting having been duly matured by the conspirators, some of the most resolute—among which may be mentioned Zouboff, Panin, Beningsen, &c.—fixed on the day when their design was to be carried into effect. Armed cap-à-pie, they repaired, one morning in the spring of the year 1800, to the Michaelowsky palace, demanding to see the Emperor. Admittance was refused, as strict orders had been given to let nobody pass unless properly authorised. Upon which Zouboff, seizing the larger dagger, laid the guard prostrate at his feet in like manner they killed several others on their passage to the Emperor's apartments, and before any alarm could be given. Paul, on seeing these grim faces enter, all of whom he knew to be his sworn enemies, with an energy, and action, inquired what had brought them into his presence, what they wanted, and by whose authority they ventured to make their appearance.

Without taking the trouble of satisfying his curiosity, the conspirators, in the most insolent and peremptory manner, replied that they were come to insist on the abdicating the crown; that the nation was completely tired of his misrule; and that he had better submit to his fate with resignation, instead of attempting any resistance, which would be unavailing. Paul was of an athletic figure, possessed of herculean strength, and by no means deficient in courage. He listened to their proposal in silence; and, after a pause—whether inspired by the dignity of his position, or conceiving that his bodily strength was equal to [illegible] thwarting any violence that might be offered to his person—he, with the most determined accent, declared that, so far from resigning his authority, he would severely punish all those who had the temerity to propose it. At the same time he commanded them to withdraw, and attend to their respective stations, as a traitorous scheme, [illegible] by means of which he intended to join his guards. But even in this he was foiled by the conspirators, who, with daggers in their hands, told him to do so at the peril of immediate death.

This conversation, or rather altercation, which has been recorded, did not, however, discourage Count Zouboff, Panin, or any of the other conspirators. They resumed that he must, *bongre, malgré*, abdicate; and that they would have recourse to force if he persevered in his refusal. High words and abuse ensued: at last it came to blows. [illegible] by his muscular power, felled several of the assailants, and, for a time, the issue of the struggle appeared [illegible] Zouboff, [illegible] a man of the most powerful physique, having taken hold of the Emperor by the throat, threw him to the ground, and, hastily drawing a pocket-handkerchief from his pocket, strangled him after the most determined resistance.

Such was the melancholy fate of Paul I., Emperor of All the Russias. Detested among all classes of his subjects, on account of his cruelty, tyranny, and despotic rule, little or no sympathy was felt for his untimely end; on the contrary, it was looked upon as an act of grace rather than as a crime. On the following day his death was announced as having been produced by a fit of apoplexy, and Alexander was proclaimed Emperor. As in the case of the murder of Peter III., none of the assassins of Paul were punished, but rewards heaped upon them.

With regard to the foreign policy of the late Emperor Paul, as we have before observed, it was as inconsistent as eccentric. Wishing to curb the power of England, he concluded treaties, under the denomination of "Armed Neutrality," with the Courts of Denmark and Sweden, the object of which was to secure the inviolability of their flag against the encroachment of Great Britain, establishing the principle that their colours should protect ship and cargo. The treaties, moreover, enacted that in the event of England objecting to these stipulations, the Sound and all the Baltic ports should be closed against her shipping.

The British Ministry, far from approving a coalition which so materially affected English commerce lost no time in dissolving this unexpected alliance. They despatched without delay Admiral Lord Nelson with a con-iderable fleet to fit out a powerful armament, and, in the month of April, 1801, fought before Copenhagen one of the hardest battles in which he had ever been engaged. From that day the Northern Confederacy was put an end to.

We have before remarked that the progress of the French Revolution of '89 was a source of continued uneasiness and ill-humour to the mind of the Emperor Paul. He had given an asylum to Louis XVIII.; he now fancied that he had the power, and was destined, to restore the Bourbons to the throne of France. Impressed with this idea, he formed a formidable army of 80,000 or 90,000 men, headed by the celebrated Souwaroff, known to Europe by his sanguinary proceedings in Poland, and by his relentless slaughter of the Turks, to march into Italy, then occupied by the French. His orders were, moreover, that, having scoured, or rather re-conquered, that country, he should forthwith enter France, and, supported by the combinations of the Royalist party, effect a counter revolution, occupy Paris, annihilate every vestige of Jacobinism, and seat the Bourbons on the throne of their ancestors. Such were the instructions confided to the hitherto invincible Souwaroff.

The Russian commander, *alias* the "savage"—a cognomen by which he went—after many forced marches, reached Italy at last, with a well-equipped army, the chief of [illegible]. In every battle which he fought with the French, he was triumphant, particularly at that of Novi, where Joubert, General-in-Chief of the Republicans, was slain, and nearly the whole of the French army destroyed. Discouraged by so many defeats, the Republicans fled in every direction, which Souwaroff pursued his victorious career with unrelaxing activity. By so many consecutive successes, the whole of Italy was at length cleared of the enemy, and the Russian commander now contemplated the invasion of France, in obedience to his instructions.

He chose, as the preferable point, the Passage of St. Gothard, with a view of attacking Massena, one of the greatest captains of the age, who occupied a strong—almost impregnable—position in the neighbourhood of Zurich. But here good fortune forsook the Russian chieftain, Souwaroff and his Russians were completely beaten. Heart-broken, and unable to bear up against a defeat, he fled precipitately and in despair into Germany, ordering his remains in arms to bury him where, but none would obey. With the sorry remnants of his legions he returned to Russia, where not long after he closed his extraordinary career in disgrace.

Having now given, as succinctly as we could, a narrative of the deplorable end of the three Emperors—Ivan, Peter, and Paul—(in the course of which we could not avoid introducing a few incidents in connection with their reigns), which we hope have not been unacceptable to the reader, we now pause. We have purposely abstained from touching on the various political crimes committed by Catherine and Alexander, such as the partition of Poland, the clandestine and treacherous invasion of Finland, and an infinity of others, on which public opinion has already passed condemnatory sentences. Perhaps the day of retribution is not far distant.

Upon the preceding page we give an Engraving representing the Emperor Nicholas and the Grand Duke Alexander surrounded by their suite, as they appear on the occasion of military reviews in St. Petersburg. The Portraits and equipments are all from authentic sources.

THE DUCHESS OF ORLEANS AND THE FUSIONISTS.

The Duchess of Orleans, who was said to have given her sanction to the foolish, unprincipled "Fusion" movement, has met the rumour to that appeal with a most distinct contradiction, by the publication of a letter to the Duke de Nemours, of which the following is a translation:

Eisenach, Dec. 19, 1853.

My Royal and Dear Brother-in-law—I have received your last despatch, by which you engage me again to enter frankly into the [illegible] which you have concluded by your visit at Frohsdorff.

If I enter it at all, I should surely enter it frankly, and I would, by the principle of peace, which is one of the Christian religion, advance at once with the proposition which you make me this time with so much earnestness: but the same motives which have hindered my consent which that relation was declared to be one of our saint and dear sister in Caremont, must again engage me to persist in my reflections, and thus to retard my entry, or rather that of my sons, into this union.

I will again submit them myself.

I well know that you, my dear brother-in-law, as well as others, will tax me with obstinacy. If I and the family peace were the only questions here I should at once consent; I have not sworn disunion, and it would therefore be easy to me to co-operate for peace. But here the question is that of the sacred rights of my sons, they are orphans, they have only myself for their maintenance; and, in defending their rights as much as possible, I defend in them the principle of elective Royalty, which took its birth in the Revolution of 1830—a principle, which was the salvation of Portugal, my poor husband, whose memory will always be dear to me, and by the maintenance of which he knew, as well as by his natural affability, to conciliate the opinions of the great majority of Frenchmen.

To enter into this union—into this *political pact*—is nothing else but an acknowledgment in fact and entire, of Legitimacy; and whatever respect I may individually feel even, on my birth, profess for that principle, it is impossible that, consequent with myself, I can forget the circumstances under the influence of which your father became King, and under which also, I, a woman, ventured, in bearing the dangers of a momentary insurrection, to present myself in the midst of the Chamber of Deputies, to claim there the crown which I dreamt of for my son, and what do I say? which I dreamt of for Henri, my poor husband, whose miserable Providence shows, after the time of trial, its wise and eternal justice at the day marked in advance on its golden pages. I have sustained without any fault of ours, &c.

(Signed) HELENE, Duchesse D'ORLEANS.

WILLS.

Special letters of administration with the will and codicils of the Right Hon. Countess of Newburgh, Heath of Hassop-hall, Derby, wife of Colonel Leslie, have been granted to the Colonel, as sole executor, and, as the husband, being entitled to all property over which she had a disposing power. The will is dated July 30, 1853, devising her real estate in the counties of Sussex, Gloucester, and Northumberland, to Colonel Leslie; the estates in Derby, to the Hon. George Fraser, third son of Lord Lovat, and to Lady Fraser her daughter at Paris; and her home Colonel Leslie to obtain the Royal license to use, take, and bear the names and arms of Radclyffe and Eyre, and the devisees of the Derby estates the name of Radclyffe only: legacies to the residuary real and personal to Colonel Leslie. The two codicils were made on the day of her decease, the 23rd November, 1853, bequeathing £2000 for the benefit of Hassop Chapel, the surplus for the charity schools there; and any other charities to be attended to as the Colonel might judge fit, to be given in her name, and bequeathing to his Steward and Hassop, with all their properties and everything she possessed. (Signed) DOROTHY, Countess of Newburgh.

The will of Sir Richard Kellett, Bart., of Mespil Parade, Dublin, has been proved in Dublin by the only executrix in the residuary real and personal there being £2000 personalty in this country and within the province of Canterbury. Probate was granted to the son, Sir William Henry Kellett, Bart., the sole executor. To his widow, Lucy Kellett, he leaves the interest of his Long Annuities for life, and £2000 absolutely, together with the furniture, the residue, real and personal, to his son, Sir William.

Miss Margaret Creak, late of the city of Norwich, died possessed of funded and personal property to the amount of £5,000; leaving also other estates and effects, which are to be applied for building an hospital for destitute foreigners, men and women, under sixty-eight years of age; they are to be provided with a peculiar dress—the men to wear blue coats and black buttons and the women purple stuff, shot with orange, checked aprons and handkerchiefs.

The late Mr William Maltby, Librarian to the London Institution, who died on the 5th inst., at the age of ninety, has bequeathed a legacy of 300 guineas to the said institution, to which he was also honorary secretary.

Putney Mein, Esq., formerly surgeon in the 73rd Foot, and late of North Britain, has died, leaving personal property in this country amounting to £150,000.

COTTON IN INDIA.

The fear has been often expressed that a war with an empire so vast as Russia, extending from Germany to the frontiers of China, may possibly bring us into collision with it in Asia as well as in Europe. There is no room to doubt that whenever disaffection has been excited against our rule on our Indian frontier, Russian emissaries have had something to do with it. As yet, however, all the efforts of Russia to endanger our dominion in the East have proved abortive. But we may be sure that a Government whose policy is so deep rooted, is not to be finally deterred by small difficulties or by repeated failures. Its plans of aggrandisement and aspiration have long been formed, and steadily pursued. For 150 years it has been watching Constantinople, eager for the arrival of the favourable moment which should allow it to take possession of the rich and coveted prize. For thirty years it has been regarding the British empire in India, with motives quite as sinister, and with a policy as pernicious. It behoves us, therefore, to be prepared on all points when we have to face so wily an enemy. Not that we imagine there is much danger. The Allies upon whom the Czar might be supposed to reckon are not to be trusted. They may dislike England much, but they dislike Russia more. The Mahometan Princes of India do not look upon England as the enemy of their faith, but the war which the Czar has declared against the Sultan has a religious character impressed upon it by the Czar himself, of which the Mahometan States in our Indian possessions, and on our frontiers, are quite aware, and which they are far more likely to resent and to combat than to approve. Besides, they are not at all convinced that Russia is not a more formidable enemy to their political independence and existence than England. Even Persia has, upon second thoughts, deemed it more prudent to remain the friend of England than to become the ally of Russia. It will, for many reasons, be no easy matter even to assail us in that quarter. But a wise Government ought not to rely too much upon the difficulties which may beset an ambitious or revengeful assailant; neither should it rely exclusively upon its own might in the battle-field, to maintain its power in a conquered country. The possible revolt of the native population and the hostile inroads of dissatisfied or greedy neighbours, may be guarded against by other means than standing armies. Hitherto we have maintained ourselves in India by the strong arm; but it is beginning to be recognised by the inhabitants of India that our Government has, upon the whole, been beneficial to their country, and that a movement has at last been made for the development of its material resources, which it would be vain for them to expect, if the English were driven out of India, and a native or alien government established in their stead. In a country so vast and so fertile, it is impossible to predict what great summit of prosperity may not be attained during the next twelve or twenty years, if railroads are constructed, as in all probability they will be, to connect all the principal towns and cities, and if its great agricultural wealth shall thereby be transmitted with cheapness and regularity from province to province, and from every part of the interior to the sea-coast. Long before the present difficulty arose between Russia and the Porte, the busy but thoughtful men of Manchester were of opinion that much and lasting benefit would accrue both to England and to India, if we could draw a portion, if not the whole, of our supplies of cotton from that magnificent dependency. If India supplied us annually with only half as much cotton as we now import from the United States, we should have a security for the permanency of our power quite as valid, and far more profitable, than the armies that we have hitherto been obliged to maintain. But, can India grow cotton enough for us? British India grew cotton before America was discovered, and vastly excelled Europe in the arts of spinning and weaving. The beautiful products of Hindostan were chiefly consumed in England—a trade which excited the bitter condemnation of Daniel De Foe, who wrote in favour of protection to our own woollens and silks. But about the year 1821, English cotton twist invaded the markets of India, and its manufactures speedily declined.

Desirous, for purposes of their own, to ascertain whether India could supply this country with a sufficient quantity of cotton—and what circumstances, political or social, or merely physical, prevented the possible supply from being raised, and if raised, from being transported from the interior to the coast—the late Mr. Alexander Mackay was appointed by the Chambers of Commerce of Manchester, Liverpool, Blackburn, and Glasgow, to visit India, and there collect information. "He was instructed," says Mr. Bazley, in the introduction to a recently published volume,* "to elicit the truth without fear or favour, and to send to this country only such reports on the condition of India as could be implicitly relied on." Of his fitness for this mission, Mr. Bazley speaks in the highest terms. "To the personal merits of Mr. Mackay, to his truthfulness and untiring industry, a higher tribute of praise is due, than could with propriety be introduced into a work of commercial and political elucidation." This appears to us an over-strained forbearance in the writer of the preface, more especially as the author is dead. We have read the work through carefully, and bear willing testimony to its varied excellence. Mr. Mackay was not only a laborious collector of facts, but he weighed them cautiously, and his discrimination was equal to his diligence. He was eminently cautious in examining witnesses; and avoided the too frequent error of drawing general conclusions from particular statements. His descriptions of the various systems of landed tenure prevalent in India are full of learning and research. He points out, with great clearness, the defective state of the roads, and the imperfect modes of irrigation, and suggests remedial measures. The volume is illustrated by diagrams, maps, and statistical tables, and may be studied with advantage by the merchant and the legislator. Mr. Mackay's premature death was not only a sad affliction to his friends, but a loss to society; and Mr. Bazley, than whom no one is more competent to form a correct judgment, has observed "that his reports afford ample evidence that he faithfully discharged his duty; and from their tone and contents it is most probable that if he could have been spared, to have entirely completed all his intended in-

* "Western India," by the late Alexander Mackay, Esq. Edited by James Robertson, Esq., with a Preface by Thomas Bazley, Esq. Nathaniel Cooke.

vestigations, there would have resulted from his labours revelations beyond the anticipation of his employers."

Mr. Mackay's inquiries were principally directed to British Guzerat, comprising the four collectorates of Surat, Broach, Kaira, and Ahmedabad; but he also investigated the agricultural and revenue system of the Southern Mahratta country, and has given some account of his researches on what is called "The New Survey." The view that he took of his mission will be best stated in his own words:—

I have been sent hither (writes Mr. Mackay) to inquire into the obstacles which prevent an increased growth of cotton in India. The capabilities of the country for increased production here taken for granted, the only question is, why is such production checked? But a demand exists in England, and why is it not supplied? A demand, then, exists on the part of England, and the means as well as the resources for the supply of production existing in a large part of India, to a greater extent than are brought into action, why do not the capabilities of the one meet the wants of the other? In this inquiry, as regards cotton, resolves itself into two questions for consideration, the capacity of India to produce, and her ability to export those produce cotton in greater quantities than she can consume, or than she now produces? If no, why are not her exports greater than at present? If she has productive powers, which have not hitherto been called into play, why do they lie dormant? Is the cause to be attributed to the intervention of circumstances remediable, or the reverse? and if so, what are the circumstances which intervene?

With the single exception of the salt tax, the revenues of the East India Company are derived from the rent of land, and the subsidies paid to it by tributary princes. The Company is the territorial proprietor of the soil, the sole landlord of every acre within its dominions. There is no race of really free cultivators; but a disguised system of serfdom, under a nominal liberty. The rents are high, the tenure is uncertain—two conditions fatal to agriculture. No inducements are held out to improved tillage, for no man is stimulated by the prospect of accumulation. If he render his holding more productive, the benefit is not enjoyed by himself, but is transferred to the Company, in the form of augmented rent. Thus, the reward of the cultivator is never allowed to exceed the barest means of subsistence. He is always indebted to the money-lender of the village for the means of purchasing seed; his growing crops are security for repayment of the loan, for which he is often charged an interest from forty to fifty per cent. Till very lately—only just before the renewal of the late Charter—the mode of collecting the land-tax was most oppressive.

Of the excessive exactions of the Company in the shape of rent, Mr. Mackay gives the following summary, after having minutely submitted all the details to a critical examination:—

I have shown that the Government rent does not always indicate the full amount which the ryot has to pay for his lands that the average Government rental of the British collectorates is 62 per cent of the produce; that the average Government rental of Broach is 50 per cent, and that of Kaira is about 50 per cent, and that of Surat about 75 per cent, and that that of the actually cotton producing lands of Broach is 43 per cent. I have shown the additional sums paid by the cultivators to the Bhagdars and other upon the average assessment; still further, I have shown that the larger rent charged upon the alienated lands brings up the average rental of the collectorates to about 67 per cent, and that upon the cotton-growing lands of Broach to about 50 per cent. And, in addition to all this, taking a still wider range, and embracing the native as well as the *British* districts—the high rent of the former being maintained by the high standard at which those of the latter remain. I have shown that the average rental of the whole province is about 60 per cent of its gross produce. I have likewise explained, taking Broach as an example, how the farmer realises scarcely more than the wages of a labourer in an average year; how the land has no saleable value the evils incident to a system requiring constant remissions; and how, in most years, maximums fixed at scarcely attainable points, are but an imperfect protection to the ryots against the ignorance, recklessness, or indiscretion of a collector.

One of the most delicate and difficult points in Mr. Mackay's inquiry is the competition of America, where the quality of cotton is decidedly superior. Mr. Mackay devoted much labour to elucidate this branch of the problem; and, in his fourth chapter, the reader will find elaborate statistics, of which we can only condense the substance. Some of the richest soils of Mississippi and Alabama excepted, the lowest average remunerating price to the American planter at the port of shipment is computed at 3½d. sterling per lb.; but Guzerat cotton at the port of shipment must realise 3¼d. The selling price of American cotton at Liverpool, merely to cover expenses, is put down at 4¼d.; that of Indian at 4d. So far the difference is only ¼d., or scarcely six per cent; but the difference of value, as determined by the relative qualities of the two cottons, is generally estimated at 25 per cent.

To enable Guzerat cotton (says Mr. Mackay) to sell at its cost price—that is, merely to cover expenses—American cotton must be selling at from 18 to 20 per cent above its cost price; in other words, realising a profit. When the price of American cotton is beyond this, that of Guzerat cotton rises to a profit-paying point, but when, on the other hand, the price of American cotton is below this, that of Guzerat cotton necessarily falls below the point at which it will cover expenses; and, again, when American sinks to its cost price, the importer of Guzerat cotton is losing from 18 to 20 per cent upon the article.

With these facts before us, it is evident that the main point to determine is whether the cost of producing Indian cotton can be reduced? and Mr. Mackay gives his reasons why that can be accomplished. He considers that the cost per pound at Bombay, the shipping port, may be lowered to 2d., but we must refer to the volume for the details of the calculation. At Liverpool, then, the cost of Guzerat cotton would be 2¾d. instead of 4d.: so that, compared with the price of American cotton at the same place, the difference in the relative prices would be 35 per cent. But the quality of the latter still remaining 25 per cent superior—which must, of course, be taken into account—the difference in price still remains 10 per cent in favour of India. This effected, Mr. Mackay is decidedly of opinion that the quality would be rapidly and greatly improved, and the consumption in England greatly increased.

In taking leave of this highly instructive volume, we can cordially recommend it to our manufacturers, and indeed to all who feel an interest in British India, the brightest jewel in the English Crown. There need be no fear for British rule in India if justice be done to the native population. Already they enjoy more freedom than they could expect under a Government of their own, or under that of any other which could be substituted for that of Great Britain. The development of their vast agricultural, mineral, and trading resources, is the one thing needed to secure our dominion. The mere threat of a Russian attack will not prove useless, if it lead to a more earnest attention to the subject than it has hitherto received. With railroads constructed by British capital and skill, and cotton produced in all the cotton districts of that noble Empire, we may bid defiance to Russia and rest secure of the attachment of the Indian population.

LITERATURE.

A SKETCHER'S TOUR ROUND THE WORLD. By ROBERT ELWES. Hurst and Blackett.

This is a clever and a remarkable book. Mr. Elwes was as erratic, though not so short, as *Puck* proposed to be; and really circumvented the globe (from March, 1848), in two years and a quarter, travelling 36,000 miles in that elongation of the sprite's forty minutes. In his preface he states that his travels were undertaken for no purpose but his own amusement. But Mr. Elwes was in earnest nevertheless. He started for Madeira, and ran on via Tenerife, to the Brazils; and, after that, it seems to have mattered little to him which way the first ship that sailed was going: he sailed in her, and went wherever she went, however the vessel happened to be directed or driven. Thus, at Honolulu, he tells us, "I here were two or three schooners in harbour, one a nice-looking craft, of about 100 tons, bound to Tahiti; so, thinking I might just as well go there, I went on board, looked at the accommodation, and saw the captain." She was from California and was on her way to Hobart-town, "probably calling at New Zealand;" and as this suited our author very well, he took his passage accordingly. It was the same throughout his whole journey. He was ready to go anywhere and everywhere; for he was sure there must be something to sketch wherever he went.

His principal points may be thus enumerated. Rio Janeiro, an excursion into the interior, Bahia, the mission, Monte Video, Buenos Ayres, passage à la Head across the Pampas, cross-ing the Andes, Santiago, Lima, the Sandwich Islands, Australia, Hobart Town, Melbourne, &c.; Manilla, Hong-Kong, Macao, Shanghai, Singapore, Sumatra, Ceylon, Aden, Cairo, Malta, Sicily, Italy, Switzerland, Holland, home. The remarks upon most of these "sights" are natural and easy. There is no fine or laboured writing, and no scientific profusions, and, except when a grand landscape, striking sea-view, or splendid waterfall occurs to be drawn, very little enthusiasm. All else is described like every-day work; and, but for the novelty of some of the places visited, and a sprinkling of anecdotes and incidents connected with them, we could have fancied going round the world resembled going to Hampstead, Erith, or Sydenham, where the Crystal Palace is.

The twenty-one sketches present beautiful scenery remarkable scenes, and add a chief interest to the handsome volume of the literary contents of which we shall select a few specimens of the briefest and most popular charac-ter, leaving the travel at large to be perused in *loco*. In the forests of Brazil, Felix, the writer's guide, is described as knowing the properties of the different trees: "One with leaves something like an oak, and a smooth bark (supposed to be a sort of *Jatropha*) stung like a nettle. Another (*cagoo*) was announced to be good for tanning, another for making ropes, another for curing the bites of poisonous snakes; and it is said that the Armadillo, when wounded by fighting with snakes, runs to this tree, and eating some of the leaves, renders the bite harmless; but no other animal can possess this important knowledge. Commerce will probably not be long in ascertaining the qualities of the Brazil nut trees, and turning them to good account; as for our traveller, his toils and researches were rewarded by the magnificent Falls of Paulo Affonso, of which we owe to the pencil an excellent representation

The Amazon River, as is well known, traverses a region on which another new world of men may be planted and supported. But we must quit its vast expanse of waters for the vast expanse of land, the Pampas, over which Mr. Elwes rode as if his life depended on ease and speed. "As we proceeded (he tells) we found the country was a perfect sea of thistles, and from a slight elevation you could see over their tops for miles. The wind whistled mournfully through them, and eddied the downy seed like snow across the road. They had had notice to quit; the powerful November sun had scorched them up, and they were waiting to be swept down by the first *pampero*. Their height was not more than six feet; so that you could generally see people riding in them, but not catch in some places were many biscacho holes, with their attendant owls, which stared and bowed at us as we rode past, or rose, screeching, perpendicularly in the air, if we came close, whilst the biscacho dived into the ground."

Scotland's famous thistle-land must yield the palm to the Pampas, as its mountains must yield to the giant Andes; and the mind of man must almost sink in the contemplation of these enormous features of inanimate nature. How small the most concentrated atom of humanity would appear on the interminable expanse of plain; how insignificant in climbing, pismire-like, the prodigious chain that stems the Pacific Ocean from his sight! Mr. Elwes's journey is into enemy throughout; and his subsequent voyage to and trip among the Sandwich Islands, yet more curious and novel. The American missionaries are much censured and ridiculed:—

We lived (he says) very well at Kailua (a village on the sea shore) We generally sat down about sixteen to dinner, the king sitting at the head of the table—on his right hand, the Prince on the left. Our dinners were partly in the native style, comprising a good many dishes of different sorts of fish some cooked, some dried, and some raw; pork dressed in several ways, and, what in Hawaii is considered a great delicacy, a large dish of dog. This was dressed in the native way, wrapped in leaves, and put in the ground with a fire over it, and then served up in a large calabash. I generally ate some of it, and found it very good. It was fat, and tasted something like pork. The dogs bred up for the purpose are fed on nothing but poi, potatoes, cocoa-nut, and vegetable substances; so there is no reason why they should not be good.

Yet no other dog (says Mr. Elwes) will taste it. This latter fact is curious, if true.

But Mr. Elwes's track is too long for us to follow it out, even with the most prudential reticence, and we must only mention a few matters which may be new to readers. For example, that eating a raw onion is the best cure for the effects of rarity of air at great elevations (let all future Cockney excursionists to Mont Blanc try it), and that the fruit of the passion-flower is extremely pleasant. In Rio, Mr. Elwes saw a beggar who had two slaves to carry him to his regular begging place, where they left him all day and returned for him in the evening. There are curious stories of strolling actors and their troupes—horse and foot, as well as of the famed jugglers of the East, with an anecdote relating to whom we shall conclude:—

In Canton one day some Englishmen saw two men quarrelling; and, at last, one, overcome with rage, rushed at the other, and cut his throat. The blood gushed forth in torrents, and the man fell down as if dead. A large crowd had collected at the spot, but no one interfered; and the Englishmen, struck with horror, were debating whether they should seize the murderer, when, to their astonishment, the man who had his throat cut, jumped up, with a grin on his face, and went round with a plate to collect money.

Other performances are even more wonderful, but our tale is told, and we have only to recommend Mr. Elwes's "Tour Round the World" as one of the most amusing and instructive books ever brought under our notice.

LETTERS OF LAURA D'AUVERNE AND OTHER POEMS. By CHARLES SWAIN. Longman and Co.

Poetry and Manchester! A votary of Apollo, a votantary denizen of the city of smoke and steam? A dreamer of Arcadia, content to dwell beneath the grim shadows of gigantic chimneys, and amid the whirl of ceaseless wheels? A bard among money-makers? Music, and sweet music, too, soaring heavenward above the din of machinery, and the clamours of the market-place? Even so. And wherefore not? Is the poet so dependent upon outward things that he must needs tabernacle among "hills which look eternal," beside "streams that lucid flow for ever," and under skies which utter a starry "thus far and no farther" to the "Lo, ... witness is at hand. Stand forth, Charles Swain, of Manchester, and make our assertion good: a witness, truly, who had before spoken in those "Dramatic Chapters" and "English Melodies" of his, which the discerning world has already learned to honour by, and who now speaks again, not less potently, in his "Laura D'Auverne," and lyrics of peculiar grace and sweetness. Question him, reader, examine him again and again, and we know the result must be a confession that even Manchester may nurture poets for Charles Swain is one.

Very heartily do we commend Mr. Swain's latest publication to all true lovers of his art. The letters of "Laura" develop an interesting domestic history, in stanzas, at once remarkable for their harmony and passion. The story is simply and earnestly told, and is something more than a mere strain of pleasing melody or strong emotion. There is an object in it beyond its music. The poet teaches while he sings. Laura's fate, however, occupies little more than a fourth of the book. The remainder is made up of "Poems and Songs." Most agreeably so, for Mr. Swain's power is eminently lyric; and this volume contains some of his choicest efforts. Quotation would only mangle them; they must be read in their entirety to be appreciated. "Work," "Faith," and "When the Heart is Young," occur to us, as we write, as among the most notable: but all of them are excellent. Nor must we forget to give our author one praise especially his due. He has avoided the besetting sin of modern times. He is no mystic. He perpetrates no affectations of language, and is guilty of no tricks of art. He does not make himself obscure in order that he may be thought to be profound. He is neither conceited nor oracular. He indulges in no morbid fancies or sickly humanitarianisms. He does all like a man, full of genuine impulses and high imaginings tempered and toned by sound common sense and a practical moral purpose.

DOD'S PEERAGE, BARONETAGE, AND KNIGHTAGE OF GREAT BRITAIN AND IRELAND, FOR 1854. Whittaker and Co.

The new edition for 1854 of this valuable work sustains its ancient reputation. It contains an account, arranged in alphabetical order, of all the peers, peeresses, bishops, baronets, knights, and Scottish judges. It adds to these a list of the widows of the nobility of all grades—from dukes to knights, of the sons, daughters, &c., of peers, bearing courtesy titles; a brief view of titular distinctions and terms relating to ranks, paragraphs on the formal modes of addressing letters to persons of title; and lists of the members of the various orders of knighthood and the Privy Council. It is, besides, embellished with twenty-four illustrations, including the insignia of the various orders of nobility, introduced by an interesting essay on precedence. Mr. Dod's notices of the several individuals who figure in her work are so many biographies. The similar task which equals it. But "Dod" is a household word—now a-days. To be accurate as Hansard, is small, of any praise—as Mr. Macaulay can testify; but to be correct as "Dod" is something to be proud of.

FINE ARTS.

CAPTURE OF THE SAN JOSEF. By T. J. BARKER.

Mr. Barker, the painter of the large picture entitled "A Lesson of Humanity," illustrative of a striking episode in the career of the great Napoleon, has just completed a work of equal magnitude, embodying one of Nelson's most dashing achievements, the boarding of the Spanish Admiral's ship, *San Josef*, at the Battle of St. Vincent; or rather his receiving the swords of the vanquished officers on the quarter-deck of that ship, after its surrender, Feb 14, 1797. The story of this memorable event is one of the brightest in the annals of our great naval hero. He had already taken the *Minerva*, and was preparing to board the *St. Josef*, when a Spanish officer looked over the quarter deck rail, and said they had surrendered. The rest shall be told in Nelson's own words:—

From this mest we come intelligence it was not long before I was on the quarter-deck, where the Spanish captain, with a bow, presented me his sword, and said the Admiral was dying of his wounds. I asked him, on his honour, if the ship was surrendered; he declared she was; on which I gave him my hand and desired him to call on his officers and company and tell them of it: which he did: *and I then, on the quarter-deck of a Spanish first-rate, extravagant as the story may seem, did I receive the swords of vanquished Spaniards which, as I received, I gave to William Fearney, one of my boat-keepers, who put them, with the greatest* sang froid, *under his arm*. I was surrounded by Captain Berry, Lieutenant Pierson of the 69th Regiment, John Sykes, John Thompson, Francis Cooke, al. old *Agamemnons*, and several other brave men, seamen, and soldiers. Thus fell these ships.

The artist, in his treatment of this subject, has evinced an admirable appreciation of the diverse passions which the event would excite in the bosom of the various actors—the self-possessed dignity of Nelson, the *nonchalant*, seaman-like, buff demeanour of William Fearney, and the boisterous enthusiasm of the other old *Agamemnons*, contrasting well with the subdued, but gentlemanly bearing of the vanquished Spanish officers, one of whom is suffering severely from a wound in the arm. In more than one of the pictures we still more painfully realise the duties of a hot, though brief engagement, as are represented with wonderful effect. The figure of the sailor in the agonies of death, over whom a priest holds a crucifix, is, indeed, a striking study. We may add that all the details of rigging, armament, costume, &c., are strictly accurate, and represented with remarkable textural truth; and that the general tone, and especially that dependent upon atmospheric influences, is most satisfactory. This fine picture is on view at messrs. Leggatts and Co's, Cornhill, and we look to produce a large sized engraving of it, to be executed by C. G. Lewis, in his finest manner.

THE MEETING OF WELLINGTON AND BLUCHER AT WATERLOO. By T. J. BARKER.

This is another work from the same hand, which, though the painting was, we believe, completed some time back, has only been published in the course of the last few months. It favourably illustrates the artist's intelligence for equestrian subjects; and by the interest attaching to the individuals represented, claims honourable mention from us, as an addition to our long list of "Wellington Portraits and Historical Pictures," which we published shortly after the Great Captain's death. The meeting of the Prussian and Prussian heroes took place at the farm of the Belle Alliance just after the eventful struggle was over The meeting was sudden and unexpected by both; and it has been described by the few persons who happened to be present at it as a most affecting scene; Blucher rushing forward and embracing the Duke; or, as Wellington himself states—"When Blucher met me, he brought up his horse alongside as close as he could, and put his arms round me and kissed my cheek." Mr. Barker has not attempted to realise the more impassioned circumstances of the incident;—probably he was afraid they might be dangerous on cold canvass; but he has, perhaps, gone a little too far into the opposite extreme, giving the group somewhat of the formal character of a general officer surrounded by his aides-de-camps. The unrivalled fame of Wellington, to some extent, marks the peculiar circumstances of the case; but his figure, as well as that of his horse, is stiff and wooden. Still, in other respects, this picture is a very successful realisation of a most interesting historical event.

ROYAL WINDSOR THEATRICALS.—Sir E. B. Lytton's comedy of "Money" was performed at the Castle on Thursday week; on which occasion four managers of as many theatres sustained principal parts:—Mr. Wigan, *Captain Dudley Smooth*; Mr Kean, *Evelyn*; Mr. Webster, *Graves*; and Mr. Buckstone, *Stout*

THE MARYLEBONE FREE LIBRARY.—At the meeting of the Marylebone vestry, on Saturday last, Mr. Grote made the following statement with regard to the Marylebone Free Library, which was opened in the public rooms, on Monday, the 9th of January. On Monday there were 92 readers, viz., 91 males, and 1 female, and the number of books used was 92. On Tuesday there were 102 readers, 100 being males, and 2 females, and 100 books used. On Wednesday in there were 148 readers of 139 books, 130 being males and 9 females. On Thursday the number of readers reached 173, all males, and the books used were 184. On Friday there were 171 readers, 162 being males and 8 females. There having been in the five days 667 readers, 655 being males, and 14 being females, or an average of 133 daily. He was happy to state also that the number of readers being a total of 667 books. In all those there was not gratifying; and, seeing the advantages which must result from such an institution, he hoped that these statistics would go forth to the public, and that they should have the aid of benevolent individuals desirous of improving the moral and social condition of their fellow-creatures. On Friday evening the number in the room, reading at one time was 66.

HORSE'S REVENGE.—A farmer, of Requista, near Rodez, was in the habit of cruelly ill-treating his horse. A few days ago the animal, being at liberty, rushed on him, threw him down, trampled on him, and bit him severely. He uttered loud cries, but it was some time before they were heard, and when at length some persons ran to his assistance he was quite dead.

OPENING OF THE CANADA GREAT WESTERN RAILWAY.—LONDON STATION.

CANADA GREAT WESTERN RAILWAY.

THE opening of the Central Section of the Great Western Railway of Canada, which took place at London, Canada West, on the 15th December, was hailed by the inhabitants with an expression of popular gratification suited to an event which is calculated to exercise an important influence on their town and the adjacent district.

Not many years have elapsed since the site on which the town of London now stands was a wilderness, and it is not more than ten years since it was little more than a village; but in the general impetus which has been given to the progress of Canada within the last few years, London has received its full share: handsome brick buildings are rapidly displacing the wooden shanties of the original settlers: and, by the event just mentioned, the town is put in connection, by railway, not only with the shores of Lake Ontario, but also with the Atlantic.

In England, even previous to the time at which railways were first brought into operation, the travelling was comparatively good: but in Canada, although the road from Hamilton to London, eighty miles distant, is esteemed one of the best in the province, travellers, at certain seasons of the year, must make up their minds to be twenty hours in performing that distance by the stage, besides running the risk of being upset, perhaps more than once, by the way. Under such circumstances it is little to be wondered at that the opening of a railway in that province should be an event of general rejoicing.

After the arrival of the train, the Directors were entertained at a public dinner. The Mayor of the town—who is also a Director—and has taken a very active part in pushing forward the undertaking—presided. Numerous appropriate toasts were drunk. The health of her Majesty was received with great enthusiasm; but the festivities of the evening were not more remarkable for anything than the very good feeling expressed towards the mother-country by the American gentlemen who were present. General Clarke from the States, in responding to the health of the President, expressed his sentiments to the effect that if any nation should lift a finger against the parent country, her children from this side of the Atlantic, would be seen flying to her relief.

It would not be doing justice to the Great Western Railway, were these remarks on that great work to be limited to the benefits which it is likely to confer on the London district: the unfinished portion of the line from London to Detroit, opposite Windsor, which will very shortly be completed, will there connect with the Railways through the Western States of America, and in continuation of some one or other of those lines westward, as far as the Pacific—a gigantic undertaking, which many people, now living, may see completed: there is therefore nothing extravagant in assuming as a probability, that at no very distant date, trains from the Atlantic and the Pacific may meet on the railway which has just been opened through the town of London.

The Sketch represents the Train passing the Company's Engine-house and Workshops, and approaching the Passenger Station. The Engine-house, next the square building, partly lighted from the top, on the left of the Sketch, is well arranged, and capable of containing seventeen locomotives.

THE BREAD RIOTS AT EXETER.

IN the Exeter riots of 1847, as well as in those of last week, in the same place—of which we gave an account in our last Publication—the most active portion of the mob seems to have consisted of women, several of whom were of mature years, and the mothers of large families. Had the military not arrived promptly, the amount of damage by the rioters would have been much greater. Fortunately, their violence did not extend much further than destroying the shops of a number of bakers, hurling flint stones through the windows of obnoxious individuals, and smashing everything they could reach.

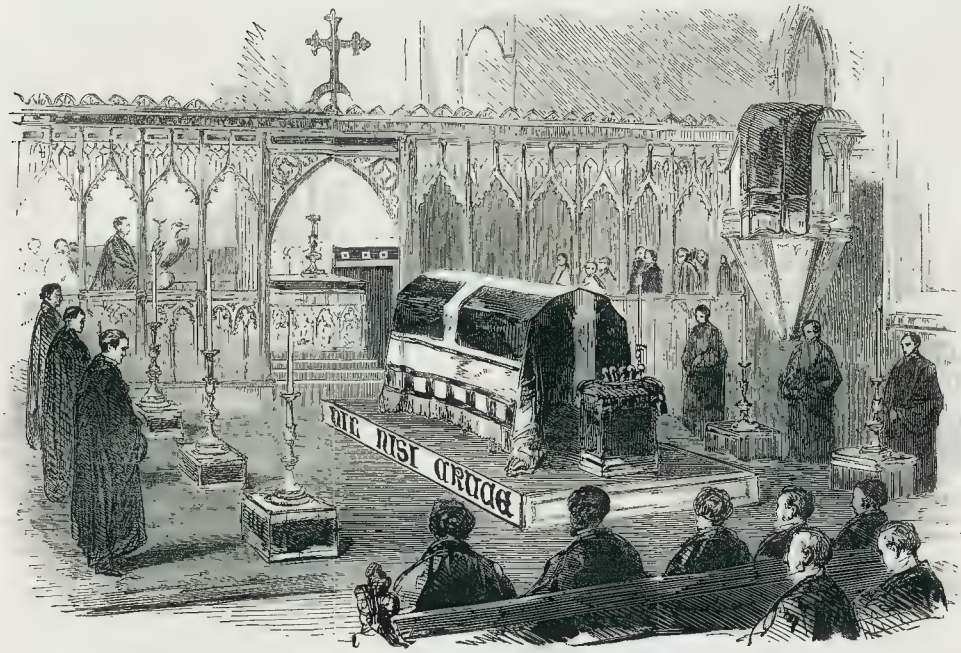
At the commencement of the riot the police made an attempt to disperse the mob, but it was all in vain. When they were turned away from one place, they made their way through back streets to some other baker's shop at a distance, and instantly began to pillage it. The Mayor, finding that the disturbance was becoming serious, proceeded to the barracks, and obtained the assistance of a troop of the 3rd Light Dragoons, by whom it was speedily put down. The soldiers proceeded to the Guildhall at once, in front of which a portion of them remained to protect the building from any attack, while the rest of them went in pursuit of the rioters, who had gone to Alphington and Exminster, two villages in the neighbourhood. At the latter place the mob broke into one or two houses, drank a quantity of cider, and were threatening to set fire to the premises, when the military arrived, and took two of them prisoners, and dispersed the crowd.

Lord Palmerston has written to the Mayor of Exeter inquiring as to the accuracy of the reports which have been published respecting the riots. His Lordship also requests to be furnished with the particulars of the outbreak, and the result of the investigations which have been going on before the local magistrates. A similar communication has been addressed by his Lordship to Mr. M. B. Bere, a county magistrate, who accompanied the troops from the boundaries of the city into the county, and rendered so much assistance in quelling the outbreak, and in apprehending the rioters. In both instances the noble Lord's request has been promptly complied with. The business at the Exeter Spring Assizes is likely to be more heavy than has been known for years, in consequence of the large number of prisoners who have been committed for trial for being concerned in the late riots. In Exeter and the vicinity alone there have been no less than forty-four convictions; while arrests have been made at Crediton and other towns in the north of Devon. The vigorous manner in which the authorities acted has prevented the repetition of any similar outbreak; and the change in the weather has enabled the men to return to their work.

SPURIOUS GOLD-DUST.—Persons are attempting to dispose of spurious gold-dust, by offering it to money-changers in London. It consists of small pieces of some hard kind of earth electrotyped so as not to be discoverable by chemical tests. A parcel was taken on Tuesday to Messrs Spielmann, in Lombard-street, which was completely undistinguishable from genuine gold-dust, except by its friability and want of weight.

BUYING STEAM-VESSELS.—A report has been prevalent that the French Government have purchased six vessels belonging to the fleet of the General Screw Steam Navigation Company, and three of the Australian Mail Company, but it is incorrect. A purchase of the kind is, however, understood to be in negotiation by the French company for establishing a Transatlantic line of mail steamers.

"BREAD RIOT" AT EXETER.



FUNERAL OF VISCOUNT BERESFORD, IN KILNDOWN CHURCH.—(SEE NEXT PAGE.)

CONSECRATION OF ST. ANDREW'S CHURCH, ISLINGTON.

PROBABLY, neither of our metropolitan suburbs exhibits more gratifying evidence of public improvement than the locality, but a few years since, known as "the Caledonian Fields" and "Barnsbury Fields," now the district parish of the Holy Trinity, Islington. Scarcely more than a dozen years since the site was little better than a mere waste, dotted with cottages and huts, as stunted in their proportions as the majority of their inmates were in moral character. The "Fields" were notorious as the scene of brutalising sports, and the habits of the population were generally of that low cast which is common upon the borders of an overgrown city. As if to scare such evil-doers, the Model Prison rose in terrible extent. A more direct clearance, however followed; the cottages and huts were swept away, and houses for the respectable classes were built upon the sites of wretched rurality. These improvements necessitated provision for the spiritual welfare of the newcomers; and, accordingly, a church has been built here, which was consecrated on Monday last. The new edifice, which is dedicated to St. Andrew, is situated in Thornhill-square, on the east side of the Caledonian-road, and is one of the largest churches lately built in the suburbs. Hard by is the new City Cattle-market, now in course of erection.

NEW CHURCH OF ST. ANDREW, THORNHILL-SQUARE CALEDONIAN-ROAD, ISLINGTON.

The Lord Mayor, Mr. Alderman and Sheriff Wire, with the Under Sheriffs, attended the ceremony in state; the Rev. D. Wilson, Vicar, the Rev. W. Vincent (in whose district the Church is situated, and to whose exertions and those of an active lay committee its erection is mainly due), and a large number of the parochial clergy, being likewise present.

The usual consecration service having been gone through—in which the Bishop of London was assisted by his chaplain, the Rev. T. H. Greene, and Dr. Shepherd, the Registrar—the prayers were read by the Rev. S. J. Altmann, the Incumbent of the new Church, and an impressive and eloquent sermon was preached by the Bishop, his Lordship taking his text from St. Matthew, ix., 37: "The harvest truly is plenteous, but the labourers are few; pray ye, therefore, the Lord of the harvest, that he will send forth labourers into his harvest."

At the close of the consecration service, the Rev. Thomas Huntley Greene, M.A., the Bishop's chaplain, read the Offertory sentences, and a collection was made on behalf of the Building Fund.

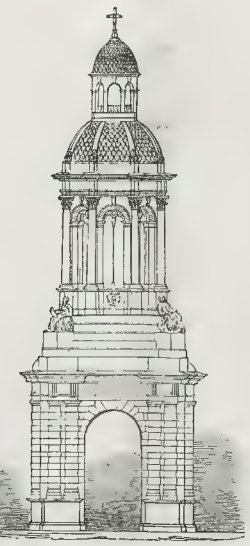
The Bishop, the Lord Mayor, the Sheriffs, and a large number of persons, afterwards partook of luncheon at the vicarage.

St. Andrew's Church is cruciform in plan, being that best adapted for a large congregation. It is built of Kentish rag and Bath stone, and is of the middle pointed period of Gothic architecture. It consists of nave and aisles, chancel and aisles, north and south transepts, with a tower and spire at the west end of the south aisle. The large number of persons for whom accommodation was required, rendered galleries necessary; but these, by being confined to the transepts and west end, are so managed as to interfere but little with the church-like character of the interior. The pulpit, of Caen stone, is correctly placed, adjacent to one of the piers of the chancel arch, and sufficiently advanced westward for the purposes of sound; and we are enabled to state, that not a word uttered by the Bishop at the Consecration, either at the altar or pulpit, was lost in any part of the Church, notwithstanding its large size.

The foundation-stone of the building was laid by the Bishop of London, in October, 1852. It accommodates upwards of 1600 persons; and has been executed, at a cost of £6000, by Messrs. Francis B. Newman and John Johnson, architects; Messrs. Dove, of Islington, being the builders.

The Church has been erected by subscription—the Bishop of London, Lord Robert Grosvenor, M.P., the Rev. Daniel Wilson, the Rev. Wm. Vincent, Sir James Tyler, Mr. W. Dennis, Mr. Cubitt, and the late Mr. Thornhill, M.P., being the principal contributors. Mr. Thornhill also gave the site.

The Bishop of London, in his consecration sermon, on Monday, remarked that police measures, sanitary arrangements, poor laws, and all attempts to better the condition of the labouring classes, important as all these undoubtedly were, would be of no advantage unless immediate measures were taken to extend the influence of the Church. As this was the surest way to reform the population, so in the end it would be found to be the cheapest. He spoke in high terms of praise of the architectural beauty of the Church, and expressed the gratification he felt in consecrating another building in the parish which approximated very closely to the perfection of the parochial system, and which was an example to the diocese at large. His Lordship concluded with an eloquent appeal for a liberal subscription towards paying off a heavy debt of £2,250, which still remained upon the Church.



NEW CAMPANILE, TRINITY COLLEGE, DUBLIN.—(SEE NEXT PAGE.)

THE LATE M. VISCONTI.

M. VISCONTI, the architect of the Louvre, who has been so suddenly taken away from the profession in which he had achieved for himself so distinguished a name, was the son of an eminent Italian antiquary, Ennius-Quirinus Visconti, his father, having been obliged to leave Italy by the political events of 1799, took refuge in France, where he found

THE LATE M. VISCONTI.

a new country, and was soon afterwards appointed Conservator of the Antiquities of the Louvre, and Member of the Institute. It was in the midst of that sanctuary, then enriched with the precious spoils carried off from Italy, that the young artist spent his early years. In the extensive knowledge of his father he had every encouragement to devote himself to the study of archæology, the hereditary glory of his family; but his vocation led him to architecture, and in that art he studied under the illustrious M. Percier, of whom he became one of the most distinguished pupils.

While under the tuition of M. Percier, young Visconti received five medals at the School of Architecture, in addition to the Department prize in 1814, and the second prize for the plan of a library. When

twenty-six years old he left l'Ecole des Beaux-Arts, and was employed for some time as an Inspector of Public Buildings. He then became architect-surveyor of the third and eighth arrondissements, the duties of which office he performed for twenty-two years. In 1839 he was appointed architect of the Grande Bibliothèque; and, returning to those studies, which had witnessed his earliest successes, he devised no less than twenty-nine plans for making that edifice in harmony with its importance. At one time he thought that he should be at last entrusted with the fulfilment of that noble task. That hope, though dispelled then, had been revived of late years, and he had it still at heart as much as ever; because there, at least, in an independent design, he would have been able to inscribe his thoughts, to display his invention and his taste unshackled; whereas, in the completion of the Louvre he was obliged to bring himself down to the level of gene al data—to adopt even the details devised by others. Death has rendered him from seeing the completion of the Louvre, but the plan which he has traced will be followed. All the parts of that vast structure are now above ground, and that portion of it which runs along the Rue de Rivoli, with its façade at right angles, is already completed to its full height. The plan of M. Visconti has the merit of simplicity in a matter which has given birth to many extravagant projects. He has succeeded in combining the difference of level between the two corridors. In remedying the defect of parallelism between the two palaces, it can hardly be expected that the same success will be attained.

Among the great works with which the name of M. Visconti has been associated, the tomb of Napoleon stands most prominent. The grandeur advanced to the architect during the performance of this task provoked the attention of those members of the Chamber who are accustomed to maintain the credit of France in discussions on the Budget. As to covering for the coffin Visconti procured from Finland an enormous block of porphyry, of which the French nation will long tell the name. Many persons took pains to show that far finer stone for the purpose could have been obtained in France at much less trouble and expense But, although hindered by such opposition, the work was accomplished at last.

M. Visconti was also the architect of various funeral monuments to Generals of the Empire. For example:—those of Marshals Lannes, Sa nt Cyr, Suchet, Soult, &c. In temporary structures erected for public fêtes, his marvellous fertility of invention was a constant subject of admiration. His faculty of conception and his great activity enabled him to accomplish all those public works, without neglecting those of his numerous patrons. Numerous hotels and palaces were constructed from his plans. Among the various monuments which he erected, those which attract most attention by their elegance, and which will be preser ed as the best proof of his taste, and the versatility of his talents, are he three fountains—Gaillon, Molière, and De la Paix Louvo s. In the fountain in the square of saint Sulpice, the sole architect, as we have before been less happily inspired, and not to have impressed upon the work that character of majesty and dignity which the monument of Servandoni deserved.

M. Visconti was an officer of the Legion of Honour, President of the *Société des Architectes*, member of the *Conseil des Bâtimens Civils*, and of many foreign learned and artistic societies. At the Institute he belonged to the section of Architecture, which consisted of only eight members, five of whom died in 1853. Visconti was seized, on the 29th of December, with an attack of apoplexy, caused, apparently, by overworking, from which two previous attacks, and the remonstrances of his medical advisers, had been unable to restrain him. His funeral took place on the 3rd inst., at the Church of Saint Philippe du Roule, and was attended by a crowd of eminent men, many of whom he had numbered among his friends.

TRINITY COLLEGE, DUBLIN.

THE Campanile, which our Engraving represents, is in course of construction in the spacious quadrangle of Trinity College, Dublin. It is intended for a bell-tower, of which the College stands in great need; for it possesses a very fine bell, but has no suitable structure for its proper suspension. The Archbishop of Armagh, the Primate of all Ireland, and Chancellor of the University, has liberally furnished the funds for the construction of the Tower, the estimated cost of which amounts to £4000—a liberal donation to his *alma mater*.

The extreme height of the Campanile will be about 95 feet, and the style of the architecture corresponds with the adjoining buildings of the quadrangle. The two most prominent features in the structure are the Corin hian portico es, which harmonize with the Examination-hall and Chapel, and the four figures which represent Law, Medicine, Science, and Divinity, placed at each angle of its base. The remainder of the tower is truly classical in proportion, in character of ornamentation, and in chasteness of design. The basement is composed of granite, and the superstructure of that fine oolite, the Portland stone.

The architect is Mr. C. Lanyon, of Belfast. The four colossal symbolic figures are executed by Mr. Joseph Kirk, a sculptor of Irish origin.

FUNERAL OF LORD BERESFORD.

(Abridged from the Morning Chronicle.)

ON Tuesday the mortal remains of Lord Viscount Beresford were committed to the tomb. One of the most distinguished of the many captains who were trained to arms and glory under the Duke of Wellington, the man in whom he trusted most, and whom he emphatically designated his successor in case of any accident befalling himself—he has not been long in following his chief to the grave.

Lord Beresford sheathed his sword at the close of a war which he had materially con ributed to bring to a triumphant close; and, after a comparatively short experience of public employment, ultimately retired to the quiet scenes of country life and domestic repose became the foremost in agricultural improvement, and the most beneficent of his district—and sought his highest pleasures in contributing to the moral and social elevation of the peasantry around him. The appropriate close of such a life was, that his remains should be laid amid the rural scenes which he loved so well, beside the humble villagers in whose welfare he had been so interested.

The church of Kilndown, where the remains of Lord Beresford were entombed, is a distinct church, severed from the old parish of Goudhurst, and was built by subscription in 1839, Lord Beresford being the principal subscribers. Soon after the erection of the edifice Mr. A. J. Beresford Hope munificently presented to the church a set of windows, in richly-stained glass, made at the Royal factory of Bavaria. The chief screen is a beautiful piece, of high Gothic design; and is as well as the pulpit—which is designed from an old pulpit in Beaulieu Abbey, by Mr. Carpenter, the architect, to whose designs the church generally is indebted for most of its ornamentation, and who directed the details connected with the funeral.

It had been arranged that the body should lie in state in the boys' school-room, which closely adjoins the church, and which, with another school for girls, was built and endowed by the late Viscountess Beresford. The room was suitably decorated for the occasion, having been hung round with black cloth; the family motto—"Ni nisi crucem"—being repeated round the room, worked in white letters in the med æval character. In the centre was placed a dais for the reception of the coffin, with a pedestal for the ornament of the deceased, and lighted by six large wax candles, which threw a softened light over the whole, and contributed much to the general effect of the solemn scene.

Precisely at eight o'clock the funeral procession left Bedgebury-park, the seat of his Lordship, which is about a mile and a half from the church—two mutes preceding the *cortège*; then the Bedgebury tenantry, to the number of between twenty and thirty, on horseback; and these were followed by coaches with the servants, after whom came the hearse drawn by six horses. Another coach, containing Mr. A. J. Beresford Hope and Sir John Kirkland—the former chief mourner, and both executors of the will of the deceased. Other two mourning-coaches brought up the procession, which arrived at Kilndown about half-past eight; and the coffin was removed from the hearse and conveyed to the dais in the school-room, where Mr. Beresford Hope and Sir John Kirkland took their station as mourners at the head of the coffin, and where they remained during the whole time of the ing in state. The inhabitants of the district were admitted, as were also the servants and the tenantry.

At about half-past twelve the funeral procession to the church was formed. The way was led by two mutes, after which followed the body, preceded by the coronet of the deceased, borne on a cushion by James Dod, for many years the confidential valet to Lord Beresford.

The mourners were—Mr. Alex. J. Beresford Hope, chief mourner; Mr. Henry T. Hope, Lord John Beresford, Rev. J. R. Beresford, Capt. D. Packe, Earl Talbot, Mr. Lumbar, Lord E. Bruce, Baron de Cetto, Rev. A. Hammond, Right Hon. W. Beresford, Sir John Hamilton, Lord Cranborne, Sir John Kirkland, Mr. Adrian Hope, Mr. Beresford Peirse, Capt. Packe, Mr. D. Willoughby, Capt. Eden, Sir John Anson, Duke of Montrose, Rev. A. Armstrong, Col. Windham, Mr. Ladbroke, Mr. E. Johnson. Among the invited guests were Count de Lavradio, Count de Villa Real, Sir R. Harvey, Dr. Watson, Lord Hardinge, Lord Downes, Mr. Vanzeller, Sir John Herschel, Mr. Walton Roberts, &c. A large number of clergy were also present.

The procession, thus formed, moved off from the school-house, through the churchyard, to the west door of the church, were the funeral was met by the officiating clergy preceded by the chorister boys. The clergymen, in their robes, preceded the body into the church, where, as it was slowly borne up the aisle, the organ played the Dead March in "Saul." The clergy took their seats within the chancel, while the mourners and friends ranged themselves in the body of the church. Meantime the coffin was deposited in front of the chancel screen, about a fourth of the seats in the church having been removed for that purpose; and in their place a dais was erected for the reception of the bier, with a pedestal for the coronet. The entrance to the church, the chancel, and the walls round the dais, were all hung with black, ornamented with white borders, in medieval character. Tall standard candles were placed on each side of the bier, and the church was lighted with candles on the altar, coronas of lights over the screen, &c.

When the mourners and invited guests had taken their seats, as many of the inhabitants of the district were admitted as the church could possibly accommodate. Several ladies were also admitted to the organ-loft, at the west end of the church.

The Rev. Mr. Harrison read the Psalms and Lessons set apart for the burial of the dead; after which the procession was again formed, and moved out of the church, the organ pealing forth Mozart's "Dies Iræ."

The vault in which the remains of the deceased were deposited is on the south side, and immediately adjoining the church, and is surmounted by a mausoleum of singular beauty, and almost unique in its design—the only one like it being the tomb of the Scaglia family at Verona. It was erected by Lord Beresford on the death of his lady, a few years ago: it consists of two altar tombs,—both surmounted by a sort of canopy, borne by light columns of polished granite.

When the body was lowered into the receptacle thus prepared for it, the remaining prayers were read by Mr. Harrison, and the earth was sprinkled on the coffin by John Blunt, a veteran soldier, who fought under Lord Beresford's command at Albuera, and lost a leg on that fiercely-contested field, and who has resided for a long time past at the neighbouring village of Horsmonden. The prayers were then concluded, the mourners took their farewell look, and slowly retired; after which the people took a last look at the remains of him who had so long been moving about familiarly among them.

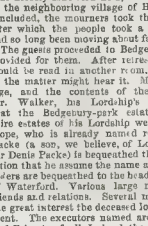
The guests proceeded to Bedgebury-park, where a luncheon had been provided for them. After refreshments, it was intimated that the will would be read in another room, and that those who felt an interest in the matter might hear it. Many availed themselves of this privilege, and the contents of the will were read over to them by Mr. Walker, his Lordship's solicitor, from which it appeared that the Bedgebury-park estate and the Staffordshire and Derbyshire estates of his Lordship were bequeathed to Mr. A. J. Beresford Hope, who is already named residuary legatee. To Captain Denis Packe (a son, we believe, of Lord Beresford's old companion-in-arms, Sir Denis Packe) is bequeathed the Carlow estates, on condition of his that he assume the name and arms of Beresford. His Lordship's orders are bequeathed to the head of the house of Beresford, the Marquis of Waterford. Various large money bequests are made to different friends and relations. Several memoranda attached to the will, show the great interest the deceased lord took in the servants of his establishment. The executors named are his Grace the Archbishop of Armagh and Primate of all Ireland, the Marquis of Waterford, Sir John Kirkland, Mr. A. J. Beresford Hope, and Mr. Drummond, banker.

The details of the funeral were executed by Mr. Banting, of St. James's-street (who had charge also of the funeral of the Duke of Wellington), under the direction of Mr. Carpenter, the architect.

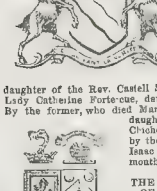
OBITUARY OF EMINENT PERSONS.

THE EARL OF PORTSMOUTH.

BRIEF, indeed, was his Lordship's enjoyment of the family honours. His brother, the third Earl, died only on the 14th of July last.



The deceased, whose death we record as having occurred on the 9th inst., was second son of John, second Earl of Portsmouth, by Ursula, his wife, daughter of Coulson Fellowes, Esq., of Eggesford, and assumed the surname of Fellowes on succeeding to Fellowes his Lordship sat for some time in Parliament as Knight of the Shire for Devon. He was born June 6, 1772, and married, first, January 30th, 1795, Frances, fourth daughter of the Rev. Castell Sherard; and secondly, June 21, 1820, Lady Catherine Forte-cue, daughter of Hugh, first Earl Fortescue. By the former, who died March 15, 1819, he leaves one surviving daughter, Henrietta-Caroline, wife of Joseph Chichester Nagle, Esq., of Calverleigh; and by the latter, three daughters and one son, Isaac Newton, present and fifth Earl of Portsmouth, who was born Jan. 11, 1825.



THE HON. JAMES HOPE-WALLACE, OF FEATHERSTONE CASTLE, NORTHUMBERLAND.

THIS gentleman, the uncle and heir-presumptive of the Earl of Hopetoun, died on the 7th inst. at Featherstone Castle. He was born 7th June, 1807, second son of the fourth Earl, and assumed the additional surname of Wallace on succeeding to the property of the late Lady Wallace, who had married his aunt. By the Lady Mary Frances, his wife, sister of the present Marquis of Westmeath, he leaves three sons and four daughters.

MAJOR-GENERAL TAYLOR, C.B., OF OGWELL, DEVON.

THE death of this gallant officer, Lieutenant-Governor of the Royal Military College, Sandhurst, and Colonel of the 17th Lancers, occurred on the 8th inst., at Hacnoture, Devon, the seat of his son-in-law, Sir Walter P. Carew, Bart. He had attained his 71st year.

General Taylor was actively engaged in the last war, and served at Waterloo. He was elder son of the late Pierce Joseph Taylor, Esq., of Ogwell and Denbury, Devon, by Charlotte, his wife, fifth daughter of the Rev. William Cooke, Dean of Ely, and great grandson of Joseph Taylor, Esq., of Denbury, M.P. for Ashburton, by Rebecca Whitrow, his wife, heiress of the Reynells of Ogwell, a very distinguished branch of the great Devonshire family of Reynell.

He married, 14th January, 1819, Anne Harvey, daughter of John Petrie, Esq., formerly of Gatton, Surrey; and by her had four sons and five daughters.

LOSSES FROM SHIPWRECK.—The late storms, which committed so much devastation on our own coasts, appear to have extended over a large surface of the Continent. Constantinople has been the great mart of a fleet of nearly 60 merchant vessels, the majority have sustained more or less injury to both ship and cargo. From Spain, Portugal, and France, the letters report damages; and from the United States and North Seotia, the accounts received give the particulars of many casualties. The most recent and severe losses sustained on our own coast, is that of the total destruction of the *John o'Gaunt* clipper, with a valuable cargo of tons from China. She went ashore near Holyhead, and a total wreck. In order to give some idea of the fearful loss of ship ping lately sustained, it may be here observed that there are accounts since the 1st inst. up to last Saturday of 10 ves sels (an 104 British and foreign vessels having been totally wrecked. This return does not include the still greater number on vessels which have been run on the coast, and have received serious damage, and which entail upon the shipowners a further fearful sacrifice of property.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Earl of Derby, as leader of the Protectionist party in the House of Lords, will give a dinner to a large party of his political friends on the 30th instant, preparatory to the meeting of Parliament.

General Prim has arrived in Paris from Marseilles. He intends shortly proceeding to Madrid, to render an account of his mission. He hopes to be able to return to the East in the spring, should political affairs continue of a warlike character.

A Government return has been issued describing the results, so far as they have yet been ascertained, of introducing Chinese immigrants to compete with Coolies and Africans as labourers in Guiana and Trinidad. The experiment is considered successful.

The Barmoore estate, late the property of the Duke of Hamilton, has found a purchaser in Mr. Alderman Thompson, M.P., for the sum of £58 000.

Part of the roof of the Church des Carmes, at Montpellier, fell in on Sunday week, just after evening service was concluded, but fortunately no person was injured.

Upwards of £400 has been received towards a fund for rewarding the four brave fishermen, the crew of the *Emerald Isle* fishing-boat, who so gallantly rescued the survivors of the *Ecos* steamer in the Irish Channel, a few days ago.

The herring fishery on the coast of Holland was unusually productive last season. In 1851 it produced 3,100 000 fish; in 1852, 3,500,000; and in 1853, 16,370,000 which is the greatest number that has been ever caught.

A man named Holdman has been committed for trial at Crowan, in Cornwall, for killing his wife with a hatchet.

Mr. J. T. Perkins (violinist), aged 18, of New York, has been recently admitted as a pupil at the Conservatoire Impériale, at Paris, over more than twenty "concurrants." This is the first instance of an American violinist being admitted.

The Earl of Durham has become a member of the Newcastle, Shields, and Gateshead Chamber of Commerce.

A person named imagined Australian feed; Count de Strzelecki and Mr. Clarke ascertained it by examination; Sir R. Murchison deduced it from theory; and Mr. Hargreaves re-discovered it, and gave it publicity and a practical form.

The Dunbarton borough police have adopted the moustache.

Abd-el-Kader has turned agriculturist at Broussa, and engaged a number of Arabs from Syria, Tripoli, and Tunis. He has also taken into his service several Polish and Wurtemburgian agricultural labourers.

Mr. Latrobe, M.P. for Worcester, has intimated his intention to devote £50 per week to the relief the destitute poor of that city during the severe weather.

The Academy of Fine Arts in Paris decided that the prize of M. Lepoitevin shall this year be awarded to M. Alex. Cabanel, author of a painting representing the "Death of Moses," which was noticed in one of the recent exhibitions.

Sir Robert Peel has consented to deliver in Birmingham and other towns in the Midland district, a lecture on "The Progress of Society, Social and Intellectual," on behalf of the Mid.and Counties Association of Mechanics' Institutes. The lecture will be first delivered on the 31st inst., in the Birmingham Town-hall.

On the 23rd ult., the roof of the barracks at Malaga, in Spain, fell in, killing and wounding twenty-four persons.

The *Cologne Gazette* states that the negotiations for commercial relations between Belgium and the Zollverein have been broken off.

The admirers of Sir Edward Bulwer Lytton are to entertain him at dinner during his approaching visit at Edinburgh.

The French Government has just ordered the necessary surveys and examination to be made for the construction of a railway from the confluence of Cramaux to Alby (Tarn).

The *Freeman's Journal* states that a "commission has been sitting for some weeks, under order, to prepare a report on the proposed transfer of the heads of the Irish Post-office department to London."

Dr. Sutherland, one of the medical inspectors attached to the Home Office, has been seriously indisposed from the effects of inhaling the gases proceeding from decaying corpses in a vault visited by him in the discharge of his official duties. Dr. Waller Lewis is also suffering from a similar cause.

A decree has been published at Parma, by which the Grand Duke grants to his Prime Minister, Baron Ward, the privilege of constructing a railway from Piacenza to the Mountain of Penna, partly for locomotives and partly for horses.

The Countess of the Duke and Duchess of Northumberland have this year been more than ordinarily munificent, on account of the inclemency of the wea ther. The deserving poor on their extensive estates, have received liberal supplies of clothing and food.

No less than 1,230,000 letters passed through the London district post on saturday last. This is the largest number ever known, even upon Valentine's day.

The *Correspondance* of Berlin announces that, on the representations of the Prussian Government, the interdict against the importation of articles of food from the kingdom of Poland, has undergone an exception in favour of wheat.

One of the *troupe* belonging to Isabel's circus was personating the character of the "Flying Indian" at Rotherham; and, while rapidly galloping round the arena, the horse stumbled, and threw its rider with such violence as to dislocate an left knee and elbow.

Letters from Berlin state that the marriage of Prince Frederick Charles of Prussia with the Princess of Anhalt-Dessau is decided on.

The following is the official return of the revenue of the port of Dublin for the last four years 1853, £242,750; 1852, £222,686; 1851, £204,250; 1850, £238,800; showing an annual increase of nearly £20,000.

Notwithstanding the thaw of last week, the ice on the upper part of the Serpentine became strong enough to bear again last Saturday morning, when several gentlemen ventured upon it in the course of the day.

Mr. Murray, the British Minister, has quitted Berne on leave of absence. The Secretary of Legation, Mr. Christie, has returned to take charge of the Legation.

In the tract distribution case, the Queen *v.* O'Brennan, the Court of Queen's Bench decided that the proceedings in the police-office and the judgment of Mr. Cuffe had been bound de novo into the Court.

The annual oration in honour of the memory of John Hunter is to be delivered in the theatre of the Royal College of Surgeons on Tuesday, Feb. 14.

The celebrated China trader *John o'Gaunt* was wrecked on Monday evening, off Holyhead. Her cargo (a most entirely of tea) was valued at about £30,000. The ship and cargo were both fully insured.

The price of corn continues to rise in Paris, and in all the departments of France. The high price is a veritable visitation in time of trade, and the movement reason, creates great suffering among the people; and it is feared disturbances will take place.

There are already, as appears by a Parliamentary document, 38 notices of motions in the order-book of the House of Commons for the ensuing session, commencing on Tuesday week, the 31st inst.

Lord Wrotesley, at his half yearly rent day, on the 6th inst., liberally returned to his tenantry 10 per cent upon their rental.

Letters from Australia state that Captain Sir Everard Home, of the *Calliope*, senior officer on the Australian station, was very ill. He had been on an exploring excursion to some unhealthy islands, contrary to advice.

The commercial advices from the United States show that the year has opened with every prospect of an improving money market, and an extension of trade even beyond that which was experienced in 1853.

Mr. John Brady, M.P. for Leitrim, has undertaken to move for leave to introduce a Medical Registration Bill into the House of Commons, at an early period of the approaching session.

The East India Company have forwarded to the Manchester Commercial Association, samples of some fibrous grasses grown in Assam and other districts of India. One of these samples is the same as the fibre known as China grass, and has been valued at £48 to £56 per ton.

A few nights since, a house in the village near Bexley (Moselle), fell to the ground, in consequence of the heavy weight of snow on its roof. A man and his two children were got out without injury, but his wife was killed.

The Duchess d'Aumale was confined on Thursday week of a second son, which received the title of Duke de Guise.

While the Town council of Elgin has unanimously resolved to petition for a Secretary of State for Scotland, the Town council of Inverness has, by a majority of twelve to four, refused to adopt a similar petition.

The elder Didot, the celebrated Parisian printer, has just died at the age of ninety-three.

It is computed that 20,000 of the Irish militia are to be enrolled.

A Frenchman has invented a kind of paper mache from gutta percha, which is considered to be superior to all other kinds for shoeing horses and carriages.

Among the lecturers announced for the year at the Manchester Athenæum, are the following members of Parliament:—Lord Stanley Mr. Napier, Mr. Walter, Mr. Keogh, Lord Goderich, Mr. Isaac Butt, and Mr. Monckton Milnes

THE THEATRES.

"THE HOPE OF THE FAMILY," AT THE HAYMARKET.

OUR Artist has chosen the most pathetic scene in Mr. Sterling Coyne's new drama—that in which *Penny* (Mrs Fitzwilliam) undertakes the instruction in elegant accomplishments of the quondam *Joe Wadd* (Mr. Buckstone), whose omnibus habits had not fitted him to shine in the drawing room. She has to adjust his neckcloth and to arrange his shirt-front, as well as to regulate his fashionable pose, all which the poor girl performs with a true artist instinct, until she converts her awkward protégé into a true and living "portrait of a gentleman." There he stands, fit to receive company and command attention, the one object of his faithful instructress's admiration. All this is done with exquisite feeling by Mrs. Fitzwilliam, who, by her admirable acting, awakens an answerable sympathy in the audience. One touch of nature like this is worth all the stage-artifice in the world; and the conception of the character does infinite credit to Mr. Sterling Coyne, as well as to its skilful representative. The play will, doubtless, do much to advance the fortunes of the Haymarket Theatre; and it is a gratifying circumstance to reflect upon, that it is not only a "new," but an "original" one. While some other theatres are living by translations of Continental pieces, Mr.

SCENE FROM THE NEW DRAMA OF "THE HOPE OF THE FAMILY," AT THE HAYMARKET THEATRE.

Buckstone pursues the more honourable and manly course of encouraging native talent, and fostering the dramatic genius of the country. Why should the English become a mere province of the French stage? Behold it, Shakespeare! and the long line of poets to Knowles and Talfourd. Let Mr. Buckstone follow faithfully out the course of management that he has successfully commenced, and he will win for himself a imperishable laurel.

The pantomime at this theatre, founded upon Southey's story of "The Three Bears," deservedly increases in popularity; for it is one of the most pleasing pieces of nursery literature ever placed upon the stage, and its humour must delight children of every growth.

PARIS PLAYS AND PLAY-GOERS.

Among the many differences which exist between English and French, etween London and Paris life, that which extends itself to all that relates to the theatre is not the least striking. There is no doubt but that e influence and position in the latter capital are infinitely stronger than ith us; and this fact, with its causes and effects, we will endeavour to emonstrate without offence to our nation and compatriots, assuring hem of our perfect impartiality in judging the matter, and declaring hat our sapient observations are founded on an experience of some ears, and that we do not take the question in hand in the spirit of the renchman who, writing a voluminous work on England, devoted to ave ten minutes' conversation with Lord Brougham, in order to make imself acquainted with the system of English legislation. The love of musement, the facility of being amused, the more excitable nature, the reater capabilities of the French as a people to lend themselves to and o comprehend what is addressed to the imagination, are doubtless the rimary causes of this fact. The sprightly turn of their wit, ith its disposition to ridicule and criticise, their love of *per-tinge*, eir quickness at repartee, with a peculiar grace and, if we may so use e word, flexibility of language, which lends so much expression to omparatively insignificant phrases, also go for much in the affair; while, aterially speaking, the mode of life, earlier hours, and somewhat wer prices, tend not a little to facilitate matters, as far as the audience e concerned.

There are in Paris far more grades of rank and importance in the eatres than in society, and each of the best known has its particular yle of literature, acting, and decoration—its *specialité*, as it is termed. Here is about the order in which the theatres stand—not as to excelnce (for, as we have just stated, nearly each has its peculiar style and der of merit) but as to position and importance:—Opéra, or Académie Musique, French operas and ballets; Théâtre Française, comedy, agedy, and drama; Opéra Comique, French operas and operettas; péra Italien; Odéon, same as Théâtre Française; Gymnase, comedy d vaudevilles; Théâtre Lyrique, operas and ballets; Vaudeville and riétés, vaudevilles; Palais Royal, comic light pieces; Porte St. Martin, drama, spectacle; Ambigu Comique, principally drama and melonama; Gaîté, drama and vaudeville; Cirque National, or Imperial litary drama; Folies Dramatiques, Délassemens Comiques, Luxemrg, and Beaumarchais, vaudevilles; Théâtre Comte, *féeries*, vaude-le (principally frequented by children); Funambules, vaudeville and ntomime; Théâtre Lazari, drama and vaudeville.

In addition to these, there are the spectacles, concerts, Robert Houdin, ntoccini, &c., and the Cirque Napoléon and the Hippodrome, for feats horsemanship, gymnastics &c.

The three Opéras, the Français, and the Gymnase boast, as a whole, eidedly the most aristocratic audience; the others are more mixed; d most of the Boulevard theatres, except the first-class ones, enjoy a ry extensive piece, are principally attended by inhabitants of their *arties*. To ladies in general we should decidedly say that the Français d the Gymnase were the best places for them. Possessing probably two best *troupes* or company in Paris, they have a certain *cachet* of tinction—an elegance, a tone of society, in addition to their unl histrionic merit, that claim the sympathies of a well-bred audience and make them feel at home. Not so the Palais Royal. Here ad farces, coarse jokes, and allusions, *double entendres* of the most ppearent order, render the presence of young women generally inadsible; but, when these are "left out by special desire"—as in some y pieces they are—the inimitable comic actors of this theatre, Ravel, assot, Sainville, Levassor, render it one of the most amusing in Paris.

The pieces in general are of so slight a character as to be merely a canvas which these irresistible comic players embroider with their jokes, expressions, gestures, and looks, which provoke peals of laughter, for which the spectator can render no account, and of which we can give neither description nor imitation. For the lovers of the horrible, the Ambigu Comique (strange misnomer) has the strongest charms. The amount of mimic atrocities committed within those walls; of fearful dangers and perils nightly encountered; of ghosts of murdered wives, mistresses, rightful heirs, and wrongful offspring; with the occasional intervention of ghouls vampyres, and other things that be not, is enough to give the whole *quartiers* a chronic nightmare. The Porte St. Martin possesses, after the Opéra, the best mise en scène of any of the Paris theatres, and is consequently in general the one where fairy pieces, and such as require a brilliant display of decoration, are most successful and effective. It has also a reputation for dramas and melodramas; and was long the scene of the triumphs of one of the greatest actors in Europe, Frederick Lemaître. The Cirque comes next, and is the *locale* (more especially within a couple of years) where all the glories of the *grande armée*, the *vieille garde*, the Consulate, and the Empire, have been restored, amid unlimited discharge of firearms, thundering of horses, and smothering of smoke, with the occasional diversion of the shrieks of a terrified child. The influence exercised by the representations of some of the Boulevard theatres, especially the dramas of the Ambigu and Porte St. Martin, among the *ouvriers*, who form the chief portion of the inhabitants of those quarters, is remarkable, as showing to what good or evil its effects may tend. We have been assured, by one who has made the study a business, that in the *ateliers* where these men are employed, the pieces at these theatres form the principal theme of their thoughts and conversation; that the plots and characters are dwelt on, studied, and discovered—not as may be imagined, in the light of literary productions—but as real events and real beings.

MUSIC.

THE performance of "The Messiah," by the Sacred Harmonic Society, on Friday the 13th, for the first time this season, attracted one of the greatest audiences ever assembled in Exeter-hall. Hundreds of persons, we understand, were unable to obtain tickets. The reception of the most sublime musical work that ever emanated from human genius, by a public to whom it has been rendered familiar by innumerable repetitions, is most honourable to the English people, by whom a one the greatness of Handel has been through years felt and appreciated. The oratorio was performed in the usual manner, both in respect to the principal singers and to the magnitude and strength of the orchestra and chorus. We are much inclined to think that the Sacred Harmonic Society have been gradually enlarging the numbers of their performers, till they have considerably exceeded the proper limit. Beyond a certain point, the accumulation of voices and instruments produces, not power, but weakness. An orchestra of 700 persons is an unwieldy machine, even supposing all its component parts to be unexceptionable; but when (as is known to be the case) many of the chorus-singers and instrumental performers are amateurs, imperfectly educated, and not very amenable to discipline, it is impossible for the ablest conductor in the world—and there is no abler conductor than Mr. Costa—to make such a machine move with steadiness and precision. Much as we are always pleased and impressed, on the whole, by the performances of the Sacred Harmonic Society, we are often (in common with many others) disappointed by the execution of the grandest choral passages. In the most striking fugal points, for instance, when all the singers of a part should strike the note as if they had but one voice and were animated with one soul, we hear them come lagging in, one behind another, as if they durst not hazard a sound till they heard it from their neighbours. And even when the passages are sung with tolerable precision, there is often a lack of the *chiaro oscuro*, the light and shade of music, the due contrasts between alternate force and delicacy. It is by such means—not by mere physical loudness of sound—that musical strength is manifest. Why will trained voices and practised performers not form five hundred good, bad, and indifferent; and, indeed, the advantages of these resemble those that is one of the *oft captanchum* devices of the day; the public being too apt to suppose that what is very *big* must necessarily be very powerful. We have heard that the society are contemplating some reforms in their choral band, by clearing it of incompetent singers, and insisting on regular attendance at rehearsals. We should be glad if they would, at the same time, diminish their chorus by above a hundred voices. Such a diminution of its number would be a real augmentation of its strength.

MR. AGUILAR, one of our most eminent composers and pianists, has commenced, at his own residence, a series of Chamber Concerts of classical and modern pianoforte music. The first took place on Saturday evening, when the rooms were crowded by a fashionable and musical assemblage. Mr. Aguilar, with Herr Janda and Signor Piatti, played a trio for the piano, violin, and violoncello, composed by himself—a masterly work, admirably executed, and warmly applauded. He also showed his powers as a pianist by performing a charming sonata by Clementi, Beethoven's famous sonata called "Les adieux, l'absence, et le retour;" and a selection from Mendelssohn's "Songs without words." Several elegant vocal pieces were sung by Mr. and Mdme. Ferrari.

THE CREATION was performed on Wednesday evening, at St. Martin's-hall, under the direction of Mr. John Hullah. This beautiful oratorio was got up in a very satisfactory manner. The solo parts were sustained by Miss Birch, Mr. Lockey, and Mr. Weiss; and the choristers were selected from the pupils of Mr. Hullah's singing classes. The performance, on the whole, was steady and correct, and the principal choruses—especially "The Heavens are telling," and "Achieved is the glorious work" were grand and impressive. The finest song in the piece, "In native worth," was admirably sung by Mr. Lockey, and loudly encored. The hall was crowded.

A NEW vocal entertainment, called "Songs and Sayings of Samuel Lover," was given at the Musical-hall, in Store street, on Monday evening. The performer was not Mr. Lover himself, but a young vocalist, Mr Hime, for whom Mr. Lover wrote the entertainment. It consists of songs and ballads, of which both the poetry and music are Mr. Lover's, set in a frame-work of recitation, in a light, gossiping strain; but very lively and agreeable. The songs, as might be expected from Mr. Lover's well known talent, are excellent—graceful and elegant verses united to sweet and expressive melodies. Mr. Hime acquitted himself exceedingly well. He has an uncommonly fine voice, and a pleasant style both of speaking and singing. The hall was full, and the entertainment was received with much favour.

HARMONIC UNION, EXETER-HALL.—Mendelssohn's "Elijah" will be performed on Monday next, when Signor Belleki will make his first appearance in London.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

A CURIOUS and in every respect valuable discovery has just been made among official papers—nothing more nor less than the accounts of Grinling Gibbons for the works executed by himself or his assistants at Windsor, Hampton Court, Kensington, and Whitehall. The accounts are especially valuable, inasmuch as they mention the particular apartments for which the work was, the precise nature of the work, the periods when executed, and the amounts paid. When Walpole sighed over the destruction of official papers, he had no idea of the existence of records of this nature. We shall now (for the accounts are too curious to be longer concealed from the public) be enabled to trace with exactness, as we walk through the stately apartments of Windsor and Hampton Court, the works which Gibbons actually executed, and shall be able to contrast the amounts paid with the present auction value of such works, and the market value of the labours of living carvers in wood.

Who, it is asked, now that Sir Robert Harry Inglis has retired from public life, will succeed to the British Museum duties, which he attended to in the House with so much zeal and assiduity. It will be in the remembrance of our readers that Sir Robert Peel was ever watchful of the votes for the British Museum. Whenever a question about the Museum was asked by Mr. Hume, or others, the reply was invariably made by Sir Robert Peel. When Peel died, Sir Harry Inglis succeeded to this duty. Now that Sir Harry has retired, who will undertake it? The duty—and it is an important one (to become still more important) must necessarily be entrusted to a trustee, and that trustee a person who takes an active interest in the Museum. If we examine the list of trustees with the list of the House of Commons, we shall find the only available men are Lord Seymour, Sir Philip Egerton, Mr. Macaulay, and Mr. Goulburn. The public would willingly entrust the duty to Mr. Macaulay; but Mr. Macaulay has other public duties, not inaptly described by himself "as the business and pleasure of his life," and it is not fair, therefore, to charge him with any duties that will withdraw him from his History. Of the other three we have our great misgivings. Lord Seymour has taken an interest in the Museum, and was an active member of the recent Committee of Inquiry; but his labours were directed rather to assist Mr. Panizzi than to advance the interests of the Museum. We have little confidence, therefore, in Lord Seymour. Sir Philip Egerton is in no way connected with literature; and Mr. Goulburn will shortly, no doubt, imitate Sir Harry himself, and retire from public life.

In electing a new member, the members of the University of Oxford should endeavour to bear in mind that the successor to Sir Harry Inglis should be a gentleman who can succeed to the many important duties performed by Sir Harry with that strict urbanity of manner, influence of character, and position among the members of his several learned professions, which Sir Harry exhibited and possessed in a very remarkable degree. They should seek to elect some one who can not only (and, in the first place) represent the University itself within its walls properly, but can represent it among literary, scientific, and artistic classes. Of the many candidates named as likely to succeed Sir Harry, no one, it appears to us, seems to possess such singular qualifications for the trust as Lord Mahon. His Lordship is not at present a member of the House, and he is at present a trustee of the British Museum. His literary abilities are undoubted; his business habits were recognised by Sir Robert Peel, in the literary trust he has entailed upon him, His suavity of manner, and other essential qualities for good government, are felt at the Society of Antiquaries, of which he is Pres dent; nay, he graduated at Oxford, and Oxford should return him to Parliament.

The bitter and perhaps unhandsome octave just published against Mr. Disraeli has met with two notices of moment; one in the *Press*, from the pen, it is understood, of Mr. Stafford O'Brien; and one in the *Times* of Tuesday last, from the writer of the "Essays from the *Times*," published by Mr. Murray. The *Press* article discloses some little anecdotes of moment in Mr. Disraeli's life, and is written with skill, though not with vigour. Of vigour, however, there is more than enough in the article in the *Times*. Mr. Disraeli's opponents exclaim, "Here is Junius again: of this article Johnson never could have said that 'it had more of the venom of the shaft than the vigour of the bow.'" Mr. Disraeli's friends declare it, on the other hand, to be all venom. It is, indeed, a masterpiece of invective.

One of the choicest of tiny cabinets of coins in the three kingdoms is about to pass under the hammer of Messrs. Sotheby and Wilkinson—that of the late Christopher Edmonds, a famous judge of coins, and one who was liberal with his purse when good things were to be procured. Of the nature of the collection some idea may be formed from one lot—a gold Mithridates, for which in 1838, at Mr. Stuart's sale, Mr. Edmonds gave £115!

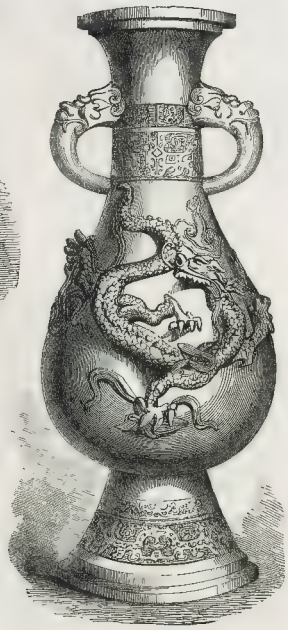
The only article of literary interest in the new number of the "Edinburgh Review" is that on Thackeray's works. It is by no means a pro ing article; the writer has read, and in some respects understands Mr. Thackeray's writings, but he does not analyse with a knowledge of human life, so essentially requisite to the due appreciation of an author like Thackeray. Yet the writer has had great experience in adjusting novels. His criticism in the "Edinburgh," on Thackeray, is from the pen of Mr. Senior, the writer in "The Quarterly" of many over-rated articles on the "Waverley Novels," as they appeared from time to time.

Literary conversation has taken a retrospective turn, through a discovery first made public by Mr. Bell, in his recent "Life of Dryden," though known to more than one literary antiquary. Mr. Macaulay, in his History, brings a foul charge against Dryden, of selling his conscience for a pension. A serious charge this; but then Dryden was the great satirist of Mr Macaulay's friends the Whigs. The accusation is founded by Mr. Macaulay on the grant of a pension made to the poet by James II. at the period of his conversion, and Mr. Bell's denial on the discovery of the grant of the same pension to the poet before his conversion, and by a different Sovereign. The grant of James II. was only a renewal of the grant of Charles II. Mr Bell founds his denial on an Exchequer document, dated in 1684; to which we may add that we have seen Dryden's own receipt for this very pension, dated June 18, 1680, for the quarter ended the Feast of the Annunciation, 1678-9. "Upon Lees," says Dryden, in a noble passage, "is the royalty and prerogative of every private man. He is absolute in his own breast, and accountable to no earthly power for that which passes only between God and him."

THE MUSEUM OF ORNAMENTAL ART.

GERMAN TANKARD.

VENETIAN GLASS.



HER MAJESTY'S BRONZE.

THE Museum of Ornamental Art, at Marlborough House, to which additions are occasionally being made, already comprises a numerous and varied collection of specimens in almost every department of ornamental manufacture—metals, pottery, glass, carving, and woven fabrics, of all periods and countries; which may be studied with advantage as illustrations of the history of various mechanical processes. In the present Sheet we engrave a few subjects which struck us, on a recent visit, as worthy of particular notice.

The *Chinese Bronze Vase*, exhibited by gracious permission of the Queen, forms part of the ornamental furniture of Buckingham Palace. It is noble in form, and an extremely fine specimen of metal-work; the principal device upon it, the favourite dragon of the Chinese, being represented as attached work.

The *German Tankard* is a curious example of the metal-work of the middle ages. The material is a composition of pewter and silver. The tankard stands nearly two feet high, and weighs as much as a strong man can well lift with one hand—full, it would certainly require two. It is supposed to have been one of the prize "cups" which used to be given by various cities on the Continent, at archery-matches, and other similar trials of skill. The arms engraved upon the shield in front are those of the city of Nuremberg. Round the rim and base are figures playing upon instruments of music, or engaged in agricultural pursuits.

The three subjects in Enamels which we have formed into a group, are curious, as illustrating the European and Oriental practices in this branch of production. The small Vase on the right is of Oriental (perhaps Japanese or Chinese) manufacture; and the only example in the Museum of this kind of enamelling executed in that part of the world; all the others being of the nature of Champleve's enamels. As a specimen of brilliant, and at the same time harmonious colouring, it is well deserving of commendation. The prevailing colours are blue and green, judiciously blended with rich yellow; and the pattern is small, and well intermixed. The large Ewer in the centre, is of Sèvres manufacture—porcelain enamelled upon copper—and is remarkable alike for the beauty of the form and for the artistic excellence of the subjects designed upon it: the prevailing colours are blue, grey, and white. The Vase on the left is also of French manufacture, being a specimen of enamelling in Sèvres porcelain upon common earthenware. This process is an extremely interesting and important one, as producing the most highly-finished results of ornamental art by the aid of base and comparatively economical materials.

The group of Venetian Glass is selected from a case near one of the windows, the contents of which many a virtuoso will gloat over, and, upon technical grounds, are extremely curious. The Venetians were

SÈVRES AND ORIENTAL ENAMELS.

ITALIAN CARVED PANEL.

JOHN WESLEY'S TEAPOT.

ITALIAN CARVED PANEL.

g celebrated throughout Europe for their manufactures in this material; and were the first who attempted the fabrication of crystal rrors, which they produced by blowing, and afterwards flattening. s of course very small affairs they were compared with the enormous ces now produced, which may be measured by acres instead of feet. t it was chiefly in drinking-glasses, and various ornamental objects the table that the Venetian glass-blower excelled; and so quaint and iginal were the forms and devices in which his fancy revelled, that scimens of such objects will always be collected with avidity, and be hly esteemed. In the midst of various-shaped drink ng-glasses shown our Engraving, is a flower-glass, for bulbous plants, very cunningly ingeniously contrived—the upper part being shaped to support the wer, whilst a second tube descends to the base for the purpose of sup ying the roots of the flower with air. Venetian glass was wonderly light; it was, however, not so clear and transparent as that of dern manufacture, owing to incomplete admixture of the constituent aterials.

Amongst other specimens in the fictile art is an extremely rich and ll-selected collection of the wares of our own incomparable Wedgood and of these, a tea-pot, with a portrait of the Rev. John Wesley on the side, and an acrostic to him on the other, may be pronounced a ritable curiosity. We engrave the portrait side. The acrostic runs follows:—

AN ACROSTIC.

Humbly Inscribed to the Rev. Mr.

J ehovah reigns—let saints, let men adore;
O bey, ye sinners, and proclaim His pow'r!
H ail! exalted Prophet, kindly stoop and hear,
N or money bring, nor price, nor doubt, nor fear.

W ide as creation—deep as sin's recess,
E xtend the merits of redeeming grace!
S o Wesley speaks—the wondering angels taught"
L ove, peace, good-will to all in Christ are brought.
E xalt-ired thousands hear the joyful word,
Y ield to conviction, and confess their Lord.

he portrait, acrostic, and other decorations are printed on the ware by e transferring process.

The two carved Oak Panels are, we think, undoubted specimens of the naissance period. The freedom of device, the fine sweep of outline, d the delicate undulations in the relief surfaces, show the hand and e feeling of a perfect artist.

Amongst the more gorgeous productions exhibited is a coffer which as presented by the French President to the Earl Granville, in recogtion of his eminent services in the management of the Great Exhibion of 1851. This magnificent article is made of ebony and ormolu, th tablets of Sèvres porcelain, richly painted; the subjects being ents in the life of Rubens. The largest picture—on the lid, and the ise of it—is a composition of many figures, representing the great tist painting the portrait of his illustrious patroness, Marie de Medicis, intr oduced in one of his numerous mythological designs illustrative of r career.

THE CORPORATION COMMISSION.

The Commissioners have been occupied this week in the examinaon of the various officials of the Corporation. Mr. Serjeant Merewether, own Clerk, gave some interesting evidence as to the claims of the Corporation to the conservancy and ownership of the Thames—a claim, however, which is contested by the Crown. As regards the police of London, e learned serjeant contended that there is a greater number of police to given area in the City than any other part of the metropolis; that the ount of valuable property is greater than in any other district, and yet at the cost is no higher, while the protection of property is very satisctory. There are some parishes, in London, where the people still maintain their own watchmen. In the Temple, which is extra-parochial, the nchers have private watchers of their own. The Temple is the only ce which does not admit the City police, but when a robbery takes ace there, the City police are appealed to.

Mr. Tyrell has held the office of City Remembrancer since 1832, when e succeeded his father in that office. His business is to watch the Parmentary proceedings affecting the interests of the Corporation in both uses of Parliament. The emoluments of his predecessors were about 6500: his average only about £1400 per annum. He conducted the position to the Smithfield Removal Bill, which cost the City about 2900 for getting up petitions against the bill, for counsellor's fees, witnesses, and other incidental expenses.

The Right Hon Mr. Stuart Wortley, Recorder of the City of London, ives an account of the duties of his situation, which he has held since 850. He is the principal legal adviser of the Corporation, he presides at sessions to the Crown, attends the Courts of Common Council and Alderen, advises the Lord Mayor, is a Commissioner under the Central riminal Court, and, in the absence of her Majesty's Judges, is considered the principal Judge, and has to charge the jury. For these serces, and many others, he receives £3000 a year. He entered at some ength into the dispute between the City and the Crown regarding the ght to the Thames.

Mr Charles Pearson, City Solicitor, with a net salary of about £1750 r annum, advises the Corporation on any question that arises in their ite and prosecutions, attends committees, and on all occasions gives em his best advice and assistance. There is no law officer of the orporation whose duty it is to conduct the whole of the legal business; e advice of the most eminent counsel is always taken before they ring or defend a suit. The Town Clerk and the Recorder are also nsulted in such cases, and he, as City Solicitor, considers himself bound state what the law is, leaving the policy of proceeding in the nds of the Corporation. As regards the dispute with Messrs. ow, Winchfield, and Company, he remembered that it began eighteen years ago, when the legal profession was more disposed to encouge litigation than it is now. There is, however, a negotiation now nding with the members of the corn trade to put the matter on a tisfactory footing.—At the close of Mr. Pearsons's examination, the quiry was adjourned till Thursday.

SOLDIERS' FEMALE ORPHANS.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Chatham, 18th Jan., 1854.

Sir,—Having read with much satisfaction, on several occasions, articles n the ILLUSTRATED LONDON NEWS warmly advocating the cause of the oldier's wife—and for which I think the married portion of the army ust ever feel your debtor—I trust, Sir, an old soldier, who has served his ountry at home and abroad many years, will not have presumed too far pon your kindness, and feel that in drawing your attention to the ircumstance of the recent arrival of H.M. steam-ship *Falcon*, with no ess than 135 soldiers' widows and children (mostly orphans), their parents nd victims to the yellow fever in the West Indies, it is unnecessary for me to remark on the foul, pestilential climate which the ritish soldier is called upon to serve; nor will I dwell upon the many ears of toil and anxiety passed by the soldier parent, who, after many ears of service in various climates, with the prospect of a long and honourable career before him, finds himself at an early age shrunk from the effects of service in various climates, with the ecessary addition of a large family—sometimes four-fourths of hem, perhaps, females—left totally unprovided for; destined (as in ase of the majority of the poor children above alluded to) to the care of he cold and in many cases, heartless keeping of Poor-law guardians, who so often care but little as to their moral culture or industrial education.

I hope I am not drawing too largely on your valuable time; but I would ain express with surprise that in a country like England, that owns so much f her exalted position to the exertions of her army, that no suitable establishment should exist for the reception of the soldier's female orphan. I feel that I am quite incompetent to place on the light that I would wish; but, should you, sir, be further disposed to raise your powerful oice in their behalf, I do think that it is a subject that cannot but find interest with all your lady readers; an institution wherein they may receive good moral teaching, together with suitable industrial training, itting them for domestic employment; or, should they feel disposed to enter the army, as a proper age, as the wives of soldiers, what more tting instruments, if properly instructed, to improve a rising generation, r to offer, by her rectitude of conduct and religious habits, a good exmple to those about her, and thus remove the sting too often justly cast pon the soldier's wife? And I feel assured, were such an establishment a existence, it would not lack the support of the army at large.

I am, Sir, &c., C. J. H. S.

A STILL IN A CHURCH.—Considerable sensation has been reated in the neighbourhood of Preston, by the discovery of still in uxton Church. A few weeks ago some workmen were employed in making some repairs in the church, when they discovered, concealed beneath the pulpit, a perfect still. The minister of the church, whose arsonage is adjoining, was apprised of the circumstances, and the still as removed from the pulpit into the vestry. The fact having become nown to the Board of Excise, Mr. Peacock and Mr. Bently, excise fficers of inland revenue, obtained a search-warrant from Captain Atterton, of Euxton-hall, and, proceeding to the parsonage first, found part of the still in the pantry, another portion was found in the coachouse, and, on searching the church, the remainder was found under a heap of other things in a cupboard in the vestry. The still, thus contested, was taken to Chorley, and the particulars of the seizure communicated to the Board of Excise.

CHESS.

TO CORRESPONDENTS.

PHILOS.—1. The annual subscription to the St. George's Chess-club is three guineas for town members, but a few grades for country members. 2. There is no entrance fee or other expenses of any description.

COUNTRY MEMBER.—Judging from the list sent us we should say that the St. George's Chess-club, with the advantages of its present situation, will this year number more members than any other society ever established.

R. V.—The splendid saloon formerly belonging to Crockford's Club-house, which is to open as Grand Chess and Smoking Divan, will be ready for the public, we are told, by the opening of Parliament. For further particulars you should apply to the superintendent of the establishment, Mr. Dyer, on the premises.

KARL.—1. Pawn at the first move may be played two steps; but, if the adversary (having a pawn on the third can take it) should he may take it in passing. See the "Chess-Player's Handbook," or any modern many treatise on the game.

B. G.—Our solution of Problem No. 512 is perfectly correct; and, as we remarked last week, checkmate can be given in one more move. We regret the solution, although we grudge the space.

K to Kt 8th 2. R to Q B 8th 3. B to Q R 2nd

Black has now three moves. If he

K to Q R 3rd K to Kt 4th

take the Kt or play his King to R 3rd, the Bishop mates; and if he play K to Q B 5th, it is Kt mates at Q 6th.

PERSIA.—It does not appear so; for the Chess Society of St. Petersburg already counts upwards of 600 members from the élite of Russian society.

S. H. Leamington.—Thanks; by no means.

ALPHA.—It has been in type for three months, but we could never spare room for it, the games of the Match engrossing so much space. Now we are less pressed, it shall appear.

DUBOITCH.—Certainly it can. Why do you not procure the "Hand-book?" published by Bohn, and learn the moves of the game?

A. L.—You can have two or more Queens in play on the board at once.

E. F. H. Newport.—The game should be drawn.

A THIRD-RATE MAN.—Look at the position again attentively, and you cannot help seeing that Black can win in a few moves.

R. N.—A gentleman of Edinburgh has written to us to say that he has a new and, as much is said in perplexity as can be gained in conclusions. A taste of the opening, very similar to the Evans gambit, was published three or four years ago, by the late Mr. Allardyce, of Edinburgh.

GUINEVER, Rome.—You should join the Richmond Chess-club, which is rapidly increasing in numbers, and is likely, in a year or two, to be one of the most influential chess societies out of London. The secretary is Mr. Harris, chemist and druggist, of Richmond, and from him you must procure the information required.

CASTLE. Accompanied are concluded, we understand, for a match by correspondence, between the Oxford and Cambridge Universities.

HORTA.—A Piece does not lose its castling power by being "pinned." In the position you send, White is, therefore, checkmated.

M. G. J. T.—No. Problem 516 cannot be solved in the way you suggest.

E. H.—I want problems you already! You give us more every week.

H. W. J. cannot possibly be solved in less than five moves. Your variations are both wrong.

C. E., Gravesend.—The lawyer have to do with "professional players" in the latter. There are many amateurs who will be glad to play you a game by correspondence on the terms you propose.

BRUTUS.—A player must not Castle after having once moved his King.

DRAMATICUS.—Middleton's political drama, called "A Game of Chess," was first acted in 1624, at the Globe Theatre, on the Bankside, and met with unprecedented success during the short time it was permitted to be played. After running nine days, in which period the players are said to have shared £1500 (!) among them, it was suddenly prohibited by Royal mandate, and the author and actors were summoned before the Privy Council. The cause of these extraordinary measures, as set forth by Mr. Secretary Conway, was, that "His Majesty hath received information from the Spanish Ambassador of a very scandalous remedy, acted publicly by the King's players, wherein they has him boldened and presumption, in a rude and dishonourable fashion, to represent on the stage the persons of his Majesty the King of Spain, the Conde de Gondomar, the Bishop of Spalato, &c." The upshot was that the play was interdicted, and the players bound in heavy penalties "never to act it again."

ARTHUR.—Such a style of criticism, from a confessed novice, on the productions of the most accomplished three Problem composers of the day, is not very becoming. A Problem, of course, is valueless if the Mate is not *forced*, and the difference between your Solution and the Author's of the position in question turns on that point: his forces the Mate within the stipulated number of moves; and yours permits Black to prolong the game.

SOLUTIONS OF PROBLEM No. 516.—Hollands, H. F. N., Walsall, W. R. of St. David's, Agnes Mrs. Pilfoddy, Tom Boddy, W. H. R. Liverpool, are correct.

SOLUTIONS OF PROBLEM No 517, by Deveron, J. P., J. M. of Sherborn, E. F. H., Jack of Worcester, Ajmeric, Kate B., Davenport, Hollands, P. S. of Streatham, J. Z. of Hanwerth, P. R. of B., H. F. N., J. D., J. K. B., T. T. Y., Annie, Manchester, M. F. V., Negs, Stubbs, G. P. of Pool, S. C., Mercator, Fabiliera, Signa, Humpty-Dumpty, L. R., Malvern, C. S. of Kent, A. B. H. T., Tynne Regis, are correct.

SOLUTIONS OF ENIGMAS BY F. L. G., F. P., R. S. J., MUS., F. R. S., Onyx, E. F. H., Deveron, ARGHARI, J. W. S. of H., are correct. All others are wrong.

SOLUTION OF PROBLEM No. 515.

WHITE.	BLACK.	WHITE.	BLACK.
1. Q to K 6th (ch)	K takes Q (best)	3. R to K 5th (ch)	P takes R
2. R to Q 5th (dis ch)	K takes B orinterposes	4. P to Q 5th (ch)—Mate.	

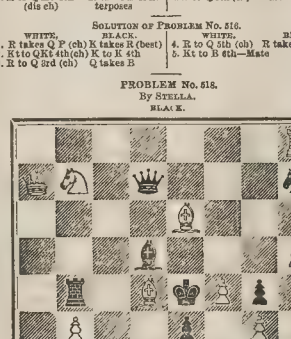
SOLUTION OF PROBLEM No. 516.

WHITE.	BLACK.	WHITE.	BLACK.
1. R takes Q P (ch)	K takes R (best)	4. R to Q 5th (ch)	R takes R
2. K to Q Kt 4th (ch)	K to K 4th	5. Kt to B 6th—Mate	
3. R to Q 3rd (ch)	Q takes B		

PROBLEM No. 518.

By STELLA.

BLACK.



WHITE.

White, moving first, to checkmate in five moves.

CHESS IN BELGIUM.

Game between Messrs. HEYDEBRAND and STAUNTON.

(Allgaier Gambit.)

BLACK (Mr. H.)	WHITE (Mr. S.)	BLACK (Mr. H.)	WHITE (Mr. S.)
1. P to K 4th	P to K 4th	16. P takes B	P to Q 2nd
2. P to Q 4th	P takes P	17. P to K B 4th	Kt to K 3rd
3. Kt to K B 3rd	P to K Kt 4th	18. P to Q 5th	Kt to K Kt 2nd
4. P to K R 4th	P to K Kt 5th		(c)
5. Kt to K 5th	P to Q 3rd	19 Kt to Q 4th	Castles Q side
6. Kt tks K Kt P	B to K 2nd.	20 K to K to K 4th	K to Kt sq
7. P to Q 4th	B tks K Kt P (ch)	21 B to Q 3rd	K to K to Kt sq
8. Kt to K B 2nd	Q to K Kt 4th	22. K to B 3rd (d)	K to K B 3rd
9. Q to K B 3rd	B to K Kt 6th	23 P to Q B 4th	Q R to K Kt sq
10. Kt to Q B 3rd	Kt to K B sq	24. Q Kt to K B sq (e)	Q R to K Kt 2nd
11. Kt to K 2nd (a)	B to K Kt 5th	25. B to K B 5th	R to K Kt sq
12. Q R takes P	B takes Q	26. Kt to K 2nd	R to K R sq
13. B takes Q	B tks K Kt (ch)	27. Kt to Q 4th	R to K Kt sq
14. K takes B	Kt tks K P (ch)	28. Kt to K 2nd	
15. K to K 3rd (b)	Kt takes B		

And, by mutual consent, the game was given up as a *remise*.

(a) The "Chess player's Hand-book" gives—11. B to Q 3rd, which seems the best move.
(b) Unexpected, and a better move than taking the Bishop with the King.
(c) White has a Pawn more than his adversary, but, to preserve it, he is driven to an abject and tedious defence.
(d) Taking the K R Pawn would have been highly imprudent.
(e) Mr. H. thought, afterwards, he should have played Q R to K sq.

THE MATCH BETWEEN MESSRS. STAUNTON AND HARRWITZ,

(To the Editor of the ILLUSTRATED LONDON NEWS.)

Sir,—I have been engaged in a correspondence, for the last five or six weeks, which has involved me in some half score of letters, with a view of bringing about the proposed Chess Match between Mr. Staunton and Mr. Harrwitz. It is, of course, impossible in your limited space, that you should find room for these productions, which are inclosed for your perusal. Suffice, however, ought to be made aware of the fact that Mr. Harrwitz, having originally accepted Mr. Staunton's challenge, now declines the encounter. The gentleman who acted as his representative (Captain Evans) has refused to continue the correspondence further; and the party with whom a deposit of £25 was made, as a guarantee of Mr. Harrwitz's good faith, has virtually declined (by not replying to a letter I have addressed to him for that purpose) to hand over the above sum, which has been fairly forfeited by the articles of agreement.

It is surely time, sir, that these public Chess challenges and public "acceptances" should cease, if they lead to such miserable disclosures as the accompanying correspondence exhibits.

I am, sir, your obedient servant,

Enfield, January 12, 1854. E. SHEPPARD.

RELIGIOUS WORSHIP.—CENSUS TABLES.

(Continued from page 44.)

It is obvious, from the great number of Dissenters' places of worship from which returns have been obtained—20,390 (nineteen-twentieths of which have come into existence since Wesley began to teach)—that the Dissenters have gone far and fast ahead of the Church, within the century, in providing places of religious worship. The whole number of places of worship returned in England and Wales is 24,427. To what denominations they belong is stated in the first table given in our last. Of the whole, 14,077 belong to the Church of England, which possessed 9,667 before the beginning of the century; 11,007 belong to the Wesleyans, which, a century ago, had hardly come into existence; 2244 to the Independents; and 2783 to the Baptists, which have been known as sects, though latterly increased, from the time of the Commonwealth; and the rest to sects which, except the Presbyterians, have come latterly into existence. Sittings are provided by the Church of England for 5,317,915 persons, or 29·7 of the population; by the Wesleyan Methodists, for 2,184,298 persons; by the Independents, for 1,067,760; and by the Baptists, for 752,245 persons. Including all the denominations, it is calculated that, on the whole, sittings are provided for 10,212,563 persons, or for 57 per cent of the population; and supposing, with Mr. Mann, that 58 per cent of the population should be able to attend religious worship, which is 10,338,013 persons, there are sittings provided for the whole, or church accommodation for all who can be expected to attend church, except for 125,450. But the sittings are not always where the population is; and in some places—as in North Wales, North Riding of Yorkshire, and Rutlandshire (where they are, in proportion to the population, respectively, 91·3, 91·7, and 84·5 per cent)—there are much more numerous than in others—as in Middlesex, Lancashire, and Warwickshire (where they are, in proportion to the population respectively as 29·3, 40·3, and 46 per cent). Thus, while there is nearly church and chapel room for all, it is not all equally within the reach of the people; and many churches and chapels must be comparatively deserted; while others, though crowded, cannot contain all who may wish to frequent them.

We must now copy from the Report two paragraphs, which describe the local distribution of Churchmen and Dissenters throughout the country:—

Dissenters most abound in Wales, Monmouthshire, Yorkshire, Cornwall, Cheshire, Lancashire, Derbyshire, Northumberland, Nottinghamshire, and Bedfordshire; in all which counties their sittings exceed in number those provided by the Church of England; while in Wales and Monmouthshire they are more than double. In all the other counties the Establishment has a proportion of more or less preponderance in Herefordshire, Sussex, and Oxfordshire, where the sittings of the Church are more than double those of the Dissenters. The two parties are very nearly balanced in Lincolnshire, Staffordshire, Leicestershire, Cumberland, and Cambridgeshire. On the whole of England and Wales, for every 100 sittings provided by the Church of England, Dissenters furnish 92.

The above paragraph shows the distribution of Dissenters in reference to Churchmen; the following shows their distribution in reference to one another:—

The Wesleyan Methodists are found in greatest force in Cornwall, Yorkshire, Lincolnshire, Derbyshire, Durham, and Nottinghamshire; their fewest numbers are in Middlesex, Surrey, Sussex, Essex, Warwickshire, and Herefordshire. The Independents flourish most in South Wales, North Wales, Essex, Dorsetshire, Monmouthshire, and Suffolk; least in Northumberland, Durham, Herefordshire, and Worcestershire. The Baptists are strongest in Monmouthshire, South Wales, Huntingdonshire, Bedfordshire, Northamptonshire, Leicestershire, and Buckinghamshire; weakest in Cumberland, Northumberland, Westmoreland, Cornwall, Staffordshire, and Lancashire.

Perhaps there is nothing in the first table given more surprising than the small number of congregations which in England acknowledge Cardinal Wiseman and the Pope. The whole number of places of Roman Catholic worship is 570, and the sittings in them are 186,111; but service in Catholic churches is much more frequent than service in other churches, and thus there may be participants in the service than sittings in proportion to other churches. This is, however, extremely doubtful; and it is far less the positive number of Roman Catholics that has of late excited attention than their increase. At the beginning of the century, the number of Roman Catholic chapels was somewhat more than 200; in 1824, 346 were enumerated; and in 1853, 616. Their chapels have increased, therefore, threefold since the beginning of the century; while the churches of the Church of England have augmented in the proportion of 9 to 14.

Another important matter is the extent to which the church and chapel accommodation, already provided, is used. Mr. Mann states, the attendances at public worship on the Sunday, when the census was taken, were—in the morning, 4,428,338; in the afternoon, 3,030,280; in the evening, 2,960,772: total attendances, 10,836,056. Of these, 5,292,551 were in the Established Church; 1,214,059 in Independent chapels; 980,190 in Baptist chapels; and 2,418,350 in Wesleyan Methodist chapels. The attendances—morning, afternoon, and evening—in the Roman Catholic chapels, was 383,630. The whole attendances at every variety of church and chapel, exclusive of the Church of England, was 5,603,515, or 1,064 more attendances at all other places of worship than in the Church of England. Each Dissenter, on the average, bestows 2½ hours; each Churchman 2½ hours on his public religious duties. Of all the Dissenters, the Wesleyan Reformers make the most use of their chapels; the Friends the least. The attendance of the former, in proportion to their sittings, having been 45 per cent; of the Friends, only 8. It may be mentioned, as illustrative of the habits of the different religious denominations, that the members of the Church prefer the morning service; the Dissenters prefer the evening for their worship. Of every 100 sittings, 48 are occupied in the morning by Churchmen, 36 in the afternoon, and only 16 in the evening; while of every 100 sittings amongst the Protestant Dissenters, 40 are occupied in the morning, 26 in the afternoon, and 34 in the evening. It is observed, however, that Sunday schools are held in the Dissenters' chapels, of an afternoon, which explains, in part, their absence from chapel at that time, and their attendance in the evening.

With reference to the general question of attendance on religious worship, Mr. Mann suppses that 58 per cent of the population, or 10,212,563, could attend on the Sabbath. But he estimates, allowing for persons attending more than once, that the number of *persons* present at religious worship on the Census Sunday was only 7,261,033. On this estimate there were 2 951 531 absent from religious worship, who ought to have attended. If we assume with him, that this, or even a much greater number, according to another calculation he makes, is in supposition to the number of persons who have a religious object to attend public worship, we shall not form a very high idea of the attendance at church of our people, as a whole. On the lower estimate, which we have adopted—the greater making the improperly absent amount to 3,802,294 persons—or that is, fourth, but less than a third of the persons capable of attending public worship neglect it. Remembering the number of services in the Roman Catholic Church—of feast days, and saint days, and holidays (each and all of which attract to the church different classes of votaries) we may venture to doubt—though in Catholic countries the Sabbath be less strictly observed than in England—whether in any of them such a large proportion of their population habitually, continually, and totally sever themselves entirely from religious worship.

We have only referred very briefly to a few of the curious facts contained in this elaborate Report. Many of them, however, are very minute, and can scarcely be comprehended, and certainly not appreciated, by the great mass of readers. By dint of close and long study, men come to see the bearings of such minute facts, just as a watchmaker sees all the bearings of the many little parts of the curious machine he puts together; but the uninitiated do not perceive, and cannot feel at once, the use of the little parts of the machine or all the minute facts of painstaking statisticians.

REFORM BANQUET AT SHEFFIELD.—A Reform banquet is to be held at Sheffield on Thursday evening, at which the following gentlemen have signified their intention of being present:—R. Cobden, M.P., Thomas White Ramsay, John Bright, M.P. for Manchester; Lord Goderich, M.P., Huddersfield; W. Brown, M.P., South Lancashire; L. Heyworth, M.P., Derby; E. Crossley, M.P., Halifax; I. Barnes, M.P., Bolton; G. Hadfield, M.P., Sheffield; S. Oliveira, M.P., Pontefract; J. Pilkington, M.P., Blackburn; J. Kershaw, M.P., Stockport; C. Hindley, M.P., Ashton-under-Lyne. Mr. J. A. Roebuck, in reply to an invitation, writes:—"Milton, Jan. 7, 1854. My Dear Sir,—The weather and the state of my health make a long journey dangerous to me at this time. I must, therefore, decline your kind invitation to Sheffield. I intend being present at the opening of Parliament, and am nursing myself for that labour—for a labour it will be to me—as, though I am much better, I am not well. Accept my best thanks for the hospitality you offer, and for your kind expressions as to myself.—Believe me to be yours very truly, JOHN ARTHUR ROEBUCK.—To Ald. H. E. Hoole."

Now ready, with upwards of 600 Engravings, price 21s.,
VOLUME XXIII. of
THE ILLUSTRATED LONDON NEWS,
elegantly bound in cloth, gilt edges, rich in Illustrations of the events of the last Six Months; together with a mass of useful and highly-interesting articles on Art, Literature, and Science.
The COVERS for VOLUME XXIII., with the New Design, price 2s. 6d. each, may be obtained, by order, of all Booksellers, &c., in the Kingdom; as also all the previous Volumes.

CALENDAR FOR THE WEEK.

SUNDAY, Jan. 22.—3rd Sunday after Epiphany. Lord Byron born, 1788.
MONDAY, 23.—William Pitt died, 1806. Duke of Kent died, 1820.
TUESDAY, 24.—Frederick the Great born, 1712.
WEDNESDAY, 25.—Conversion of St. Paul. Robert Burns born, 1759.
THURSDAY, 26.—Brazil discovered, 1496. Jenner died, 1823.
FRIDAY, 27.—Mozart born, 1756. Duke of Sussex born, 1773.
SATURDAY, 28.—Admiral Byng shot, 1757.

OPENING OF PARLIAMENT,
AND THE
WAR BETWEEN TURKEY AND RUSSIA.

On SATURDAY, FEBRUARY 4th, will be published, a Splendid
DOUBLE NUMBER
OF THE
ILLUSTRATED LONDON NEWS,
Containing Engravings of Scenes and Incidents in the War, received from Artists expressly despatched by this Journal, with Full and Accurate Description of the various Encounters of the Two Armies. Also, Reports of the Debates in the Houses of Parliament; the Queen's Speech, &c.; with a
LARGE PRINT
OF THE
INTERIOR OF THE HOUSE OF COMMONS;
representing the Ministerial and Treasury Benches, with Portraits of all the principal Members. This Engraving is expected to be the finest ever issued with the ILLUSTRATED LONDON NEWS.
Price of the Double Number ONE SHILLING, with Large Print Gratis. In order to secure copies, immediate orders must be given to Newsagents and Booksellers.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 21, 1854.

FOR the last four months it has been a matter of intense anxiety in every civilised country in our hemisphere, to know whether the war between Turkey and Russia were to become a general one, or to be put an end to. The best efforts of the foremost statesmen of four great nations have been steadily directed during that period to preserve the inestimable blessings of peace, and to extinguish the local conflagration that has unfortunately broken out. Diplomacy has been slow in its operations; but it has at last brought the various questions at issue to a point on which the Emperor of Russia must declare himself. He can no longer delay his decision. Peace or war remains in his hands. Further procrastination will neither serve his purposes nor those of Europe. Two intelligible issues are before him, upon either of which his declaration will be conclusive. The British and French fleets are in full possession of the Euxine, and their Admirals have notified in courteous, but imperative, terms to the Governor of the Russian naval station in the Crimea, that their object is to protect the Turkish territory from Russian aggression; and that, if Russia would avoid a collision, she must keep her fleet within the harbour of Sebastopol. The world will speedily be informed whether the Emperor has chosen to interpret this proceeding as an act of war. The Emperor has also received an official note declaratory of the terms which Turkey is willing to accord as the basis of a pacification. This important document has received the adhesion and the signature of the representatives of Great Britain, France, Austria, and Prussia. To this note the Emperor must give an immediate reply, or incur the penalties of a state of hostility. That reply is doubtless on its way to Western Europe at this moment. It is commonly believed that it will be warlike. The reason for this belief rests upon the fact that, throughout these unhappy transactions, the Emperor has never listened to reason and common sense; that he has played the part of a man rendered insane by the long possession of arbitrary power; by the fulsome, if not blasphemous, flattery of every person around him; by the prompting of a wild ambition, and by the uncontrollable lust of dominion. Were he a sane man, swayed by the ordinary motives that actuate the rest of mankind, he would long ago have paused. He would have weighed his chances of success; and, finding all Europe against him, he would have withdrawn, while he could do so with safety, and with the least possible loss of character and credit. Even if he had been ignorant of the temper and resolution of the four great kingdoms and empires whose sense of justice and whose interests forbid them to tolerate his projects of aggrandisement, he might have found, in the unexpected strength and resources displayed by Turkey, a sufficient reason for desiring peace, rather than war. That none of these considerations has hitherto acted upon his mind is quite sufficient to justify the belief so commonly entertained in all civilised countries that his pride and passion are stronger than his reason, and that the only means of dealing with him are the means which we employ towards the lunatic and the savage. Coercion by the strong arm—which is the course he adopted towards Turkey—is the course which in all probability Europe will have to employ against a potentate so unreasonable. If he should at the last moment awake to the conviction that the task upon which he has entered is too mighty for his powers, and that the result of his efforts to domineer over Europe may be the loss of the Crimea and all the Mahometan provinces of his empire, and perhaps the loss not only of his throne but of his life, it will be well that prudence has retained such wholesome mastery over him. But we must confess that we know nothing in the Emperor's history or character which can greatly justify such hope. Like other tyrants, he is a greater slave than any man in his dominions. He is the slave of those evil passions which tyranny invariably fosters in the hearts of tyrants. He is the slave, also, of the traditional policy of his family. He is the slave of Peter the Great and the Empress Catherine, and in his wildest pretensions acts upon a cunningly-contrived and pertinacious system derived from those Sovereigns. It is for Europe to show him that his system, and that of his predecessors, is a public nuisance; and to take the proper measures—after he shall have been defeated in the coming struggle, as he assuredly will be—to prevent any further outbreaks, either on his own part or that of his successors. We do not fear that the struggle will be a long one. If we must strike, let us strike heavily and effectually. In mercy even to the Czar, the war must not be protracted, if skill, energy, and determination to succeed can by any possibility make it short and decisive. War at this moment is distasteful to every one of the Allies. Each has its own reasons for desiring peace. There is no knowing to what mischiefs, if not dismemberments, a war might subject the German Powers; and Great Britain and France have suffered so much by previous wars, and have so many material interests to develop and strengthen, that they cannot but consider war as the greatest calamity that can befal them next to the loss of their national honour. It is because their national honour would be sacrificed if the Emperor of Russia were allowed to succeed in his projects, that the people of these great countries are ready to accept war, and to fight it out to the utmost.

THE largest state in the Old World is very likely to be foiled in its efforts to "annex" to itself the coveted territory of its neighbour. The largest state in the New World, which has always some project of annexation on hand, is likely to be successful in a similar design. The Governor and people of the United States seem as if they were determined never to rest until they have annexed the whole of Mexico. Texas is annexed, though not amalgamated, and Upper and Lower California have one after the other shared the same fate, if it be not more proper to call it the same honour. But these annexations, mighty as they are, do not satisfy the ambitious spirit of the Americans. The whole of the North American continent is considered by many of the most stirring spirits of the Union, as the eventual patrimony of the Anglo-Saxon race. To expel the people of Spanish blood from all territories between Panama and the wilds where the trappers of the Hudson's Bay Company hold a divided dominion with the Red Indians and the furry animals of the forest, is the "mission" which they openly advocate. Sooner or later it is likely that they will succeed to the extent of "annexing" Mexico. But by bit they will accomplish their end—or Brother Jonathan is not acute in business, or greedy of a bargain. The United States have so large a surplus of revenue over expenditure, that the Government does not know what to do with its money. In this *embarras de richesses*, it has bethought itself, and not for the first time, of purchasing dominions, which it would be unwise at present to attempt to subdue. The latest intelligence from Washington asserts that a bargain has been made with General Santa Anna for the cession of a large tract of country, by which the United States will acquire "the whole of Lower California and Sonora, and a practical route to the Pacific," for the sum of 50,000,000 dollars. Santa Anna is described by some authorities as having declared that he would rather "sacrifice fifty thousand lives—his own included," than agree to any such proposal; but those who know his character, and the urgent necessities of the Mexican Treasury, do not believe in this patriotic fervor. But this is not the only project of annexation that is ripening. What is called the Clayton-Bulwer treaty has been formally brought before Congress at Washington, and earnest debates have already ensued upon it. By this treaty it is pretended that Great Britain consented to abandon her rights and claims over the colony of Honduras, and all other portions of Central America. The United States are anxious to obtain exclusive possession of these territories, that they may thereby exercise exclusive control over the ship canal, or railway, that is to be made through them to connect the Atlantic and Pacific Oceans. The British Government, as we learn from the despatches of Lord Clarendon, and Sir J. D. Harding, the Queen's Advocate-General, resist this interpretation—especially as far as Honduras and Belize are concerned, and as regards the Protectorate which Great Britain exercises over the kingdom of Mosquitia. We do not expect, however, that the difference of opinion which has arisen will lead to any great difficulties. The rights of this country over her colonies are not likely to be assailed by the Government of the United States; and there is no reason why one of the grandest and most useful enterprises ever conceived—the junction of the Atlantic and the Pacific—should not be supported by every civilised state for the common advantage of the civilised world. As in the case of Mexico, the acute Yankees do not wish to trust entirely either to force or to diplomacy for the accomplishment of their views. The all-potent dollar is the weapon on which they most rely; and they have already purchased from the King of Mosquitia a tract of country covering several millions of acres, to which they have given the name of Nebraska, and which is to be forthwith colonised by the "Anglo-Saxon." Then there is the kindred project for the annexation of Cuba—a project that never will be dropped while Spain is a weak and the United States a strong Government.

We do not envy our brother Jonathan his prosperity; but we think he might with advantage show himself a little less grasping. There is danger in being too rich and too mighty; and the possession of an unsatisfied and insatiable spirit leads both men and nations into danger.

SIR STEPHEN LAKEMAN.—THE TURKISH WAR.

WE are glad to learn that Sir Stephen Lakeman, late the gallant commander of the Waterkloof Rangers, whose valuable public services were lately so highly approved of by the British Government, has left England for Constantinople, having accepted an important command of troops in Asia Minor. We have no doubt that the gallant officer will not only sustain, but augment, the high military reputation which he earned at the Cape of Good Hope. Owing to Sir Stephen's recommendations, a portion of the troops under his command will be armed with Dean and Adams's five-barrel revolving rifles. These destructive weapons, combined with Sir Stephen's system of warfare, as practised by him so advantageously in the late Kaffir struggle, will, no doubt, render his corps formidable adversaries to the Don Cossacks, or any other enemies of the Sultan, that may arise in that quarter. We look forward with much interest to the results that this gallant officer may produce in aid of the just cause in which he has so nobly volunteered his services.

It may not be uninteresting, in connection with this subject, to state that Messrs. Dean and Adams have been instructed to despatch a special agent to Constantinople to make arrangements for a general use of these formidable arms in the Turkish army.

WINE DUTIES.—We are informed that a public meeting, to consider the subject, is to be held on a very early day after the meeting of Parliament, and that the Right Hon. the Lord Mayor has consented to preside. The committee that has been formed to support Mr. Oliveira's motion for a reduced duty amount to more than 700 persons of different professions and commercial eminence; amongst them, about 100 members of Parliament; and we understand that, at the public meeting in question, the various questions of revenue, reciprocity, and moral considerations, will be carefully discussed.

THE COURT.

The favourable change in the weather has enabled her Majesty and the Prince Consort to enjoy their usual out-door exercise during the past week. The Queen has walked in the grounds adjoining the Castle almost daily, and his Royal Highness Prince Albert has generally gone out shooting.

The Queen and Prince, the Prince of Wales, the Princess Royal, Princess Alice, and the Duchess of Kent, the ladies and gentlemen of the Court, and the domestic household, attended Divine service on Sunday morning, in the private chapel of the Castle. Viscount Jocelyn was also at the service. The Hon. and Rev. G. Wellesley read the prayers, and the Rev. Dr. Philpott preached the sermon.

Her Royal Highness the Duchess of Kent dined with her Majesty on Monday. Col. the Hon. C. R. Phipps, and Capt. the Hon. Dudley and Lady Elizabeth Fitzgerald De Ros, had the honour of joining the Royal party.

On Wednesday, the following distinguished personages arrived at the Castle, on a visit:—The French Ambassador and the Countess Walewski, the Duke of Newcastle, the Marquis and Marchioness of Westminster and Lady Agnes Grosvenor, the Earl and Countess of Shaftesbury, the Earl and Countess Delaware and Lady Arabella Sackville West, Viscount Canning, Lord Ernest Bruce, the Right Hon. Sidney and Mrs. Herbert, the Right Hon. Spencer and Mrs. Walpole, and Major-General Wetherall.

Her Majesty intends keeping her wedding-day (Feb. 10) at Windsor Castle; and in a few days afterwards the Court will leave for Buckingham Palace.

On Thursday a dramatic performance took place at the Castle, which a distinguished circle were invited to witness. The pieces selected were Tobin's comedy (compressed into three acts) of "The Honeymoon," and the farce entitled "The Camp at Chobham."

Viscountess Canning has succeeded Viscountess Jocelyn as Lady in Waiting to her Majesty; and Lieut.-General Sir F. Stovin, Major-General Berkeley Drummond as Groom in Waiting. Colonel Wylde has succeeded Lord George Lennox in attendance on the Prince.

Lord John Russell has arrived in town from Pembroke-lodge, Richmond-park, with Lady John Russell and family, for the season. The noble Lord has issued cards for a grand Parliamentary banquet on the 30th of this month.

The Speaker and Mrs. Shaw Lefevre and family will arrive in town on the 27th inst., from Heckfield-place, Hants.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rural Dean:* The Rev. A. Bayley for Peterborough. *Rectories:* The Rev. H. A. Barrett to Chedgrave, Norfolk; Rev. B. G. Bridges to Blankney, near Sleaford: Rev. R. Goldham to Caldecote, Hertfordshire; Rev. G. Harrison to Suttcombe, Devonshire; Rev. J. B. Sparrow to Offton, with Little Bruett annexed; Rev. S. Revell to Clifton-upon-Dunsmore, Warwickshire; Rev. J. L. Prior to Papplewick, Nottingham; Rev. J. Rutherford to Egdean, near Petworth; Rev. G. M. Sykes to East Hartley, near Caxton; Rev. S. Gamlen to Grafton Underwood, Northamptom. *Vicarages:* The Rev. H. Nicholson to Weston-cum-Sutton, Northampton; Rev. S. Cooke to Fersfield, Norfolk; Rev. J. Gratrix to Kensworth, Hertfordshire; Rev. D. T. Hobson to Beckingham, near Gainsborough; Rev. S. B. Maughan to Widdrington, near Morpeth. *Incumbencies:* The Rev. W. Hooper to Mansfield, near Southampton; Rev. W. L. Morgan to Bradshaw, Yorkshire; Rev. R. S. Philpott to Christchurch, Epsom; Rev. W. E. Richardson to Lisalade, near Leighton Buzzard; Rev. W. Morton to Penkhull, near Newcastle-under-Lyne; Rev. J. Harvey to Trent Vale, Stoke-upon-Trent; Rev. C. J. Penny to Hunmanham, Warwickshire; Rev. J. Mitchell to St. Paul's Church, Newington; Rev. R. Allen to St. James's Church, Halifax; Rev. J. Anderson to Lea Marsten, Warwickshire; Rev W. Wilkinson to St. Mary's Church, Sheffield; Rev. J. Aldous to Wicker; Rev. J. Miller to Orcop, Herefordshire; Rev. W. Cumby to Beadnell, Northumberland; Rev. E. Mercer to Ecclesfield; Rev. R. Jones to Penmaen; Rev. T. Smith to Osmington, near Newark; Rev. J. Valpy to St. John the Baptist, Lenside, Nottingham; Rev. P. Somerville to Milton, near Ockington; Rev. J. Dennett to Aldershott, near Farnham; Rev. F. B Gourrier to Christchurch, Clapham; Rev. D. Aston to St. Silas, Lozells, near Birmingham; Rev. J. N. Vicland to Christchurch, Turnham-green. *Perpetual Curacy:* The Rev. J. W. Springett to Christchurch, Dunkirk Vale.

TESTIMONIAL.—The Rev. T. Owen, by members of his congregations at Rathby, Newton, Linford, and Groby: Rev. H. Thompson, by the parishioners of Wrington, on his quitting the curacy of that parish, after a residence of a quarter of a century.

THE DUCHESS OF ORLEANS.—A telegraphic message has been received in Paris from the Duke de Nemours, totally denying the authenticity of the letter recently published under the name of the Duchess of Orleans in reference to the fusion of the Bourbon family. We have the fullest reason to believe that the letter in question is an entire and absolute forgery.—*Morning Chronicle.*

OXFORD UNIVERSITY ELECTION.—Sir William Heathcote, Bart., has acceded to the wishes of the requisitionists, and consented to be nominated.

CAMBRIDGE UNIVERSITY.—Mr. Godfrey has been elected Esquire Bedell. Mr. Roberts polled 137, and Mr. Godfrey 155.

PLYMOUTH.—The *Thetis*, 42, Capt. Kuper, arrived on Thursday from Valparaiso and Rio. Her news has been anticipated.

HER MAJESTY AND H.R.H. PRINCE ALBERT have contributed £100 to the fund for the relief of the suffering poor at Windsor and the adjoining parish of Clewer, in consequence of the unusual severity of the season, and the high price of provisions and fuel. H.R.H. the Duchess of Kent has also contributed to the fund the sum of £10.

LONDON, BRIGHTON, AND SOUTH COAST RAILWAY.—On Thursday, the half-yearly report of this Company, to the 31st December, was issued. It states the total capital at £7 440,749. The amount expended during the past half-year has been £116,618; and notice has been given of a bill for the next session of Parliament to increase the capital to £7,600,000, which is considered sufficient to cover all expenditure at present foreseen to be necessary, including the £150,000 rendered necessary by the opening of the Crystal Palace. The gross revenue for the half-year has been £264,716; being an increase of £21,284 over the corresponding half of 1852. The expenditure for the past half-year amounted to £148,541, against £127,400 in the corresponding half-year, principally occasioned by the increased traffic and the rise in the rate of wages and price of materials. The dividend for the half year is fixed at £3 4s. per cent, making a total of 6 per cent for the year, leaving £3758 to be carried to the next account.

LONDON JOINT STOCK BANK.—On Thursday the half-yearly meeting of this Company was held at the Banking-house; Alderman Sir James Duke in the chair. The report stated that the accounts for the half year to the 31st ult. showed a net profit for the half year of £50,695 0s. 7d., which was to be added to £7546 2s., undivided profit of the previous half year—making a total of £58,235 2s. 7d. Of this sum the directors proposed to apply £24 000 for a dividend, at the rate of 8 per cent per annum, and £34,000 to a bonus of 11s. 6d. per £10 share; leaving £235 2s. 7d. to be carried to the reserve fund, which now amounts to £151,279 12s. 6d. The report was adopted, and the dividend and bonus (which together amount to 13½ per cent for the year) declared.

LATEST INTELLIGENCE.

THE WAR IN THE EAST.

A letter from Orsova brings the Turkish bulletin of the engagement of the 6th inst. Selim Pacha directed the movement. It states that the Russians, who were 18,000 strong, were completely routed by the Turks, and had suffered a loss of 3000 killed. The Turks have pushed forward by land, and their movements were supported by cannon-barges sent up the Danube. A combination of the Turkish forces had in this manner been effected near Citatæ.

Letters from Vienna state that it was reported in that city that the division of the Russian army under General Luders had passed the Danube at Braila, and was directing its march towards Schumla.

THE BLACK SEA.

The latest intelligence received relating to the movements of the allied fleets in the Black Sea is that the combined fleets, consisting of 34 sail (the English division being ten ships of the line, one frigate, and seven steamers), encountered a violent wind at the entrance of the Black Sea, and had been compelled to anchor. On the 4th they continued their cruise, under the command of Admiral Dundas. They were accompanied by twenty Turkish sail and five frigates, from which it was presumed that they were about to reinforce the garrison of Batoum.

The instructions to the Admirals of the French and English vessels are—To salute Russian vessels; to warn them to return to a Russian port; to accompany Turkish vessels to different Turkish ports; to cruise off the Turkish coasts; to avoid all collision with Russian vessels, and to prevent the same between the belligerents; not to approach the Russian coast; and, if attacked by Russians, to act simply on the defensive.

The *Prieste Zeitung* reports a Russian fleet of 24 sail to be before Batoum.

The reports from the Euxine are strongly indicative of early hostilities. The Russian fleet at Sebastopol, estimated at no less than forty in number, twenty of them line-of-battle ships, were said to have either actually put to sea, or to be making preparation to do so; and Admiral Dundas, whose first intention had been to disperse his fleet, had in consequence concentrated his force. The arrangement of the combined fleets, said to have been made, is, that one division will observe Sebastopol, another Sinope, and small detachments will serve to escort Turkish vessels along their own coast, or as near to them as the state of the weather shall permit. The obvious purpose of this arrangement is to secure the allies from any surprise, at the same time taking from the Russians any pretext for acting as if their vessels or their ports were menaced with an attack. The facilities for reinforcing the Ottoman armies in Asia thus secured, are rendered more important by the satisfactory accommodation of our late misunderstanding with Persia.

RUSSIA.

Advices have reached Paris from St. Petersburg, of the 19th January, which describe the position of affairs as affording little hope for the maintenance of peace. The Emperor is described by those who have an opportunity of observing his movements, as living in a state of religious exaltation, regarding himself as the chosen instrument under the hand of God, to drive the Moslem from Europe, and only regretting that he should have allowed so many years to pass by without fulfilling his destiny.

The populace at St. Petersburg have worked themselves up to the highest pitch of fanaticism, cheering the Emperor whenever he appears in public with the wildest enthusiasm, and denouncing as traitors all who dare to speak of peace.

The only Minister who is supposed to advocate a peaceful course is Count Nesselrode, and he has entirely lost his influence with his Imperial master. Count Orloff, on the other hand, who is the Emperor's dearest friend, is eager for war.

Letters of the same date we learn that M. de Reizet had arrived with the French categorical note. It was presented simultaneously with the English note of the same character. Sir Hamilton Seymour had received some days previously. The Council of Ministers was in deliberation on these notes, but had not determined on their answer. There seemed little doubt that the object of the fleets into the Black Sea would be regarded as a hostile act by the Emperor Russia, and the state of public feeling manifested great irritation against France and England.

FRANCE.

There was almost a panic on Thursday at the Bourse. The Three per Cents fell again 1 franc, and the shares on railroads, &c., were almost unsaleable. This was caused, no doubt, partly by an announcement by the Minister of Finance that he had raised its rate of discount to 5 per cent; but the political rumours were of a gloomy character. It was declared in the most positive way that the Government had received from its Ambassador at St. Petersburg information that the Emperor Nicholas had expressed a great anger at the notification about the fleets, and seemed disposed to set France and England at defiance. This rumour is declared by persons connected with the Government to be false; but it is admitted that the news from St. Petersburg is not satisfactory, and that some fear is entertained that Omer Pacha will not be able to resist the large force that is concentrating itself with a view to a general attack.

It is said that M. de Kisseleff has received despatches informing him that he must consider the entry of the fleets into the Black Sea as tantamount to a declaration of war. If so, his stay will not be long in this capital; and the French Ambassador at St. Petersburg will no doubt, be soon in Paris. About two o'clock on Thursday the Austrian Minister visited the Russian Ambassador. They remained some time together, and then proceeded to the Foreign-office, and after that to the Tuileries. They appeared, observes a person who saw them, to be in a state of agitation.

It is rumoured in the diplomatic circles that the Emperor of Austria has made another strong appeal to the Emperor of Russia, and that hopes are entertained of its being successful.

A Council of Ministers, held at the Tuileries on Wednesday, resolved on several measures necessary for the embarkation of troops for the East; but the details are not known.

Two private despatches from Vienna and Berlin to Paris, on Wednesday, announce that the Emperor of Russia has positively rejected the propositions as drawn up by the Vienna Conference, and if these be not accepted, there is much less chance of any modification that may have been made in them at Constantinople being found agreeable, and less still of the last communication as explained in the circular despatch of M. Drouyn de Lhuys. In addition to the despatches from Vienna and Berlin, a third, proceeding from Amsterdam, announces that a panic prevailed on Tuesday at that Bourse, in consequence of the receipt of the same unfavourable intelligence. It is now said in Paris that, in case of the rejection of the propositions being confirmed, the Russians will collect their utmost force and attempt the passage of the Danube, invade Bulgaria, and thus counterbalance the entry of the combined fleets into the Black Sea. In a word, the prospects are gloomy in the extreme.

SWITZERLAND.

The Executive Government of Switzerland, in consideration of the probable complications of the Eastern question, proposes to station a body of troops on the German frontier, and is about to demand a grant from the Federal Assembly with this object.

ITALY.

The *Parlamento* of Turin of the 12th announces that all the inhabitants of Brescia detained in the prisons of Mantua have been set at liberty.

RUSSIAN WAR STEAMERS BUILDING ON THE TYNE.—In consequence of information received, the Home Secretary addressed a circular to the Mayors in all the towns on the banks of the Tyne and Wear, inquiring whether it was within their knowledge that any war vessels were building in those waters for the Russian service. In the large ship-building town of Sunderland no such orders are executing, nor have any been received, but on the Tyne, the Mayor of Tynemouth, who is also Lloyd's surveyor, having made careful inquiries, has ascertained that two iron vessels, 140 feet each in the Russian house, but, it is surmised, for the Government of that country—and that Messrs. R. Stephenson and Co., of Newcastle-on-Tyne, are building up the engines for them. Lord Palmerston will be put in possession of the facts, and, no doubt, the whole matter will be inquired into.—*Times*.

THE OPENING OF PARLIAMENT.—The Queen will open Parliament in person. The usual preparations for her Majesty's reception are being made at the House of Lords.

A CABINET COUNCIL will be held at the Foreign-office at one o'clock this (Saturday) afternoon.

SIR JOHN FRANKLIN'S CREW.—The *Gazette* of last evening contains the following notice:—"Notice is hereby given, that if intelligence be not received before the 31st March next, of the officers and crews of Her Majesty's ship *Erebus* and *Terror* being alive, the names of the officers will be removed from the *Navy List*, and they and the crews of those ships will be considered as having died in her Majesty's service. Their pay and wages of the officers and crews of those ships will cease on the 31st day of March next; and all persons legally entitled, and qualifying themselves to claim the pay and wages then due, will be paid the same on application to the Accountant-General of her Majesty's Navy."

TROOPS FOR THE EAST.—The 39th Regiment is under orders for immediate embarkation from Dublin for the Mediterranean, and three other regiments there have received letters of readiness. The officers say they believe their destination is to be Constantinople, and are making their arrangements accordingly.

THE SHORTER TIME MOVEMENT.—The directors of the Bank of England have given notice, that on and after the 1st of March the business of the establishment will commence at ten a.m. and close at four p.m. The Transfer and Dividend-offices will be closed at three, as usual.

SIR E. B. LYTTON AT EDINBURGH.—On Wednesday evening Sir Edward Bulwer Lytton was inaugurated into the office of President of the Associated Societies of Edinburgh University, at a meeting assembled for the purpose in Queen-street-hall, of that city. The large hall was quite crowded on the occasion by ladies and gentlemen; and among the gentlemen on the platform were—the Lord Advocate, Lord Jeffrey, Lord Cockburn, Lord Curriehill, Sir Archibald Alison, Bart.; Mr. Stirling, of Keir, M.P.; Mr. Cowan, M.P.; the Professors of the University, and numerous well-known clergymen and gentlemen.

THE POOR-LAWS.—Mr. A Pellatt, the member for Southwark, has given notice of a bill for abolishing the law of settlement and removal of the poor; for establishing a uniform poor-rate in England and Wales, retaining the present mode of collecting and expending the funds through a central treasury in connection with the Poor-law Board; to amend the laws for the protection and comfort of aged and infirm paupers; and for the more just, efficient, and economical management of the poor.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, JAN. 19.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure from Mean Temperature. Average.	Degrees of Moisture. Saturation = 100.	Direction of Wind.	Melted Snow and Rain in Inches.

Note.—The sign + denotes above the average, and the sign — below the average.

The reading of the barometer increased from 29.70 inches at the beginning of the week, to 29.37 inches by the afternoon of the 14th; decreased to 29.38 inches by the morning of the 15th; increased to 30.24 inches by 11 a.m. on the 18th; decreased to 30.20 by 2 p.m., and increased to 30.92 inches by 7 p.m. on the same day; and decreased to 29.98 inches by the end of the week. The mean for the week was 29.882 inches.

The mean daily temperatures have varied from 0·3° below to 10.8° above their average values. The mean daily temperature of the 18th was 47°, and is the highest mean daily temperature recorded on that day since the year 1823, when it was 51.1°.

The mean temperature of the week was 40·8°, being 4·9° above the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 19·0°, being the difference between the lowest reading on the 14th, and the highest on the 18th.

The mean daily range of temperature during the week was 8°. The greatest was 14·2° on the 14th, and the least 4·8° on the 15th.

Rain fell four days during the week to the depth of rather more than one-tenth of an inch.

The weather on the 13th and 14th was fair, and the sky almost cloudless; from that time the weather has been dull, the sky almost wholly overcast, the air has been in gentle motion only, and fog was prevalent on the 19th.

Lewisham, 20th January, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—The number of births registered within the week ending January 14 was 1768, the largest number of any in the corresponding week of the preceding nine years; the number most nearly approaching to this was 1692, in 1851, when it was 1580. Of the births 893 were boys, and 875 were girls. The average number of the same week in nine years was 722 and 689 respectively. The number of deaths registered in the same period was 1497; in the ten corresponding weeks of the preceding ten years the average number was 1147, which, increased in proportion to the increase of population, becomes 1262; the excess, therefore, above the calculated amount, is 230.

TESTIMONIAL TO DANIEL WHITTLE HARVEY, ESQ.—The City Police have resolved to present their Commissioner with a piece of plate, as a testimonial to him for his late efforts in obtaining an increase of pay and for his general care of the force.

ENTERING LANDSMEN FOR THE NAVY.—By command of the Lords of the Admiralty, placards were extensively circulated on Tuesday throughout the metropolis, inviting landsmen to enter for the Royal Navy. The description of men to be entered is as follows:—"They must be between nineteen and twenty-four, active, stout, and able-bodied; five feet seven inches high, and in all respects healthy and fit for the naval service; the preference being given to those who have been used to boats. In addition to the Royal Naval Rendezvous on Tower-hill, and the *Crocodile*, moored off the Tower, men will be received and entered by their making application on board the flag-ships at any of the ports, or at the rendezvous at Liverpool and Bristol, and at the agents for transports at Leith." The ships now manning are the *Diamond, Botaneen, Juno, Princess Royal, Pique, Duke of Wellington, St. Jean d'Acre, Medea,* and *Cyclops*.

FURTHER ADVANCE IN THE PRICE OF BREAD.—The bakers of the metropolis made a further advance in the price of bread on Wednesday. Bread of the quartern loaf standard, which was 7d., and 10d. per 4 lb. loaf, cannot be obtained for less than 10d. and 11d. per 4 lb. loaf, respectively; country or household bread (unweighed), 8½d. to 9½d. per loaf. The League bakery increased the price of 10d per 4lb. loaf, and 9d. per loaf, of country bread, unweighed.

FRIGHTFUL ACCIDENT IN OLD BROAD-STREET.—Another accident, attended with loss of life, took place on Monday, on the premises in Old Broad-street formerly used as the Inland Revenue Office. About four o'clock in the afternoon, the people in that neighbourhood were alarmed by a noise resembling the discharge of a park of artillery, repeated three times in rapid succession. On rushing to the spot from which the noise proceeded, it was found that a great portion of the old Excise-office running parallel with Broad-street had fallen; and, as there were 200 workmen employed in the building, it was thought that a great loss of life must have taken place. The rumour was that fourteen persons had been killed, and twenty wounded: and so strong was the impression as to the extent of the damage to human life, that an extra ward was thrown up at St. Bartholomew's Hospital for the wounded. It turned out, however, that the statement on that head had been greatly exaggerated. Two persons were killed, and only five so severely injured as to require to be taken to the hospital. The accident is said to have been caused by the giving way of the supports of the flooring on the fourth story, the timbers of which were much decayed with the dry rot.

FIRE AND NARROW ESCAPE OF MANY PERSONS.—A fire took place on Wednesday night, between ten and eleven, on the premises of Mr. Feroy, hat manufacturer, New-street, Covent-garden, which jeopardised the lives of from twenty-five to thirty persons. When the fire was first discovered, a woman who occupied the second floor—the mother of the children—seeing the smoke rushing up the stairs, caught hold of the two that were nearest, and precipitated them to the ground, with the intention of going back for the other three; but the fire had become so strong that she could not. Fortunately, the Chandos-street engine came up at that moment; and Cooper, the sub-engineer, having learned from the poor woman that three of her children were still in the house, rushed up-stairs through the flame and smoke, laid hold of two children whom he found on the stairs—one under each arm—and was hurrying down with them, when he heard another child crying. He returned back a few steps, made the child jump on his back, and brought all three off in safety. Meryweather's fire-escape was then brought from Bow-street, and a number of persons in the higher part of the house were enabled by its aid to escape from a horrible death. The whole of Mr. Feroy's stock was destroyed, and considerable damage was done to the property of the different lodgers.

THE MEETING OF PARLIAMENT.—The following Ministerial circular has been issued:—"Chatham-place, JAN. 9.—SIR,—The meeting of Parliament having been fixed for Tuesday, the 31st inst., and the present situation of public affairs rendering a full attendance peculiarly desirable, I take the liberty of earnestly requesting your presence on that day.—I have the honour to be, sir, your faithful and obedient servant, J. RUSSELL."

THE SPEECH.—The Queen's Speech will be read by Lord Aberdeen at the State banquet, to be given by his Lordship on Monday week, to a party of Members of the Upper House, comprising all the officers of her Majesty's household that are Peers, the Cabinet Ministers having seats in the House of Lords, together with the mover and seconder of the Address. A Privy Council will be held previously the same day, at which the Queen's sanction of the Royal Speech will be obtained.

SOUTH SEA COMPANY.—On Thursday a meeting of this Company was held, to consider the bill proposed to be brought before Parliament in the ensuing session, for winding-up the affairs of the Company—in consequence of the measures of the Chancellor of the Exchequer—and converting it into an association for the management of trusts. The Sub-Governor, C. Franks, Esq., occupied the chair, and moved a resolution approving the bill. Some discussion took place, in which many of the shareholders expressed their opinion that the bill ought to be confined to the one purpose of authorising the winding-up of the Company. The Sub-Governor assured them that their best interests would be looked to by the Directors; and reminded them that those who wished it, might be paid off at £100 for every £100 stock. An amendment was proposed, confining the bill to the one purpose, which was negatived by 29 to 19—12 of the Directors voting in the majority. The original resolution was then declared to be carried.

TESTIMONIAL.—On Thursday week, Mr. J. Thwaites, of the borough of Southwark, was entertained at dinner, at the Bridge House Hotel, London-bridge, and presented with a purse of 280 sovereigns, and a tea-service for Mrs. Thwaites. The superb gift, which has been manufactured by Messrs. Benson, of Cornhill, is the result of a subscription originated by the Surrey Gas Association, as a testimonial for his valuable services in promoting the movement in favour of cheap gas. The meeting was presided over by Thomas Pocock, Esq.; and amongst the gentlemen present were Messrs. W. B. James, J. Wade, E. Kingsford, and Mr. ex-Sheriff Croll. The latter gentleman stated that the consumption of gas now, in one night, was equal to a week's consumption in 1847.

NAVAL AND MILITARY INTELLIGENCE.

PORTSMOUTH.—About 150 workmen are daily employed on the *Marlborough*, 131, new screw three-decker, and are making great progress. The keel of the *Shannon*, screw, 50, is nearly completed; but, from her extraordinary length (25 feet longer than the *Princess Royal*, 91), some alteration will be required in the slip and shed to enable the work to proceed. The new 80-gun sailing ship *Calcutta* is brought down, and placed in the fitting-basin, ready for docking. Sheds to be out and lengthened amidships, to adapt her for the screw. The *Leopard*, 12, paddle frigate, Capt. George Gifford, and the *Frolic*, 12, are at Spithead. The ships preparing, are the *Princess Royal*, 91; *Dauntless*, 24, screw-frigate, Captain Hunter; *Blenheim*, 60; *Basilisk*, 6, paddle-sloop, Commander the Hon. F. Egerton; and *Simoom*, 18, troop-ship, Captain Smith.

CHATHAM.—The *Euryalus*, 50, screw steam-frigate, Captain Ramsay, had her steam up on Tuesday, and worked her engines, of 400-horse power, for two hours, at her moorings. On Wednesday she left Chatham, for the purpose of being tried at the measured distance between the Nore and Mouse lights, and her speed was ascertained to exceed ten knots per hour, the engines working most admirably.

PORTSMOUTH.—The engineer department of this arsenal is engaged in deepening the moats of the fortifications of Gosport, on which side this harbour it is proposed to erect a new barrack for 1000 infantry, with the necessary complement of officers. The site pointed out for this additional garrison for Gosport is near the double gateway within the lines.

THE WESTERN SQUADRON.—Rear-Admiral Corry, in the *Prince Regent*, 90, Captain Hutton, was at Lisbon on the 9th, with the following forces:—*Prince of Wellington*, 120, screw; *Superveuse*, 51, screw; *Arrogant*, 47, screw; *Tribune*, 31, screw; *Desperade*, 8, screw; *Odin*, 16, paddle; *Valorous*, 16, paddle; and *Cruiser*, 16, screw. The *St. Jean D'Acre*, 101, screw, Captain Hon. H. Keppel, was to leave Lisbon to Vigo.

SIR CHARLES NAPIER had an interview with the Earl of Aberdeen on Wednesday, at his official residence in Downing-street.

THE Victualling Department has issued circulars applying for tenders for the supply of 3000 tierces of beef and 3000 tierces of pork, to be delivered within the 31st of May next.

GREAT FLOOD AT DONCASTER.

Owing to the rapid thawing of the snow, the inhabitants of the lower part of Doncaster, lying on the valley of the river Don, were surprised on Wednesday with one of the greatest floods that has occurred in that town for the last 60 years. The water in the river began to rise on Tuesday night; but it was not until Wednesday morning, at about four o'clock, that it began to encroach on the houses in Marshgate, which extends in a right angle to the course of the stream. The inhabitants of that street, mostly mariners and boarmen, then found it necessary to take measures for the safety of their household goods, while the owners of horses and cattle in sheds and pastures in the neighbourhood as promptly removed them. By 11 a.m. most of the houses in the street were flooded—a circumstance which has not occurred at any previous inundation within recollection. The water in some of the cottages was between two and three feet deep. All the inhabitants were in their upper chambers. Their furniture was floating about in the rooms below, or in the street, and communication could only be kept up by carts and waggons and ladders. At two o'clock the water was still rising; it rushed through the courts and alleys in the street with great impetuosity, overflowed the canal lock, against which a large mass of ice was lodged, and was only prevented from rising above the north bank of the river by a number of labourers piling up sods as fast as it rose. Mr. Carr, the resident engineer of the Great Northern Railway Company, had a staff of "navvies" employed in filling up the angles of the pile-bridge at the line over the floodgates, to prevent the water washing down the embankment of the railway. At three o'clock the flood had not begun to recede, though it was hoped the falling of the full tide which held up the stream at Sandal would admit of its passing off from the course of two or three hours. The weight of water above the town, however, was very considerable. In the field in Marshgate it was seven or eight feet deep at the least, and was bursting through the wall next the pavement in countless streams.

BREAD RIOT IN SOMERSETSHIRE.

The borough of Taunton was on Saturday last the scene of a most disgraceful tumult, occasioned by a large number of men and women parading the streets, armed with sticks and stones, and visiting the various bakers' houses for the avowed purpose of reducing the price of provisions. The movement originated among a few fellows, who emerged from a neighbouring beerhouse for the purpose of making a disturbance, which they expressed their determination of doing "like the Devonshire lads." About twelve o'clock they entered the corn-market, where they were joined by a number of women, who had assembled at the corners of the streets for the same high purpose of food. The mob collected round a farmer, who offered a quantity of wheat, of a very inferior description, at 6s. per bushel, and, as he refused to reduce the price for what they considered an extreme scarcity fit ware, they emptied the sacks and scattered the corn about the market. The police were now called upon, but they were totally unable to check the spirit of the rioters. The mob next proceeded to the butter-market, completely upset everything, and forced the market-women to sell their butter at 1s. per pound—reducing the price of from 4d. to 5d. on the original price. The butchers' shambles were also visited, and the greatest confusion prevailed; a number of a ones were thrown at the stalls, and the butchers commenced packing up as speedily as possible. The magistrates interfered, and no further disturbance took place. The women congregated in front of the bakers' shops, and assailed the proprietors with threatening language, but, a large number of special constables having been sworn in, they went with the magistrates to the spot and dispersed the mob.

THE LATE AWFUL GALES.—At the weekly meeting of the committee of the Sh pwrecked Mariners' Society, held on Friday, the 13th inst. the committee considered one hundred and thirty-one cases, consisting of the claims of widows and orphans and shipwrecked mariners applying for relief, on the ground of the loss of their husbands and fathers, and to help to restore their clothes lost in the late gales. Various sums were dispensed to the sufferers; and the secretary reporte t three or four crews a day arriving at the office from different points of the coast, whom he had despatched, and that the property on the society at this time was greater than it had been since it was instituted. Upwards of 36,000 mariners subscribe 2s. 6d. annually in aid of the society's funds.

DESTRUCTION OF THE CATHOLIC SCHOOLS AT TOTTENHAM.—A fire broke out in the Roman Catholic Schools, Lower Tottenham, on Wednesday forenoon, which ended in the complete destruction of the building. By the time the London fire-engines arrived, the flames had seized upon the next house, called Dawson's Academy, and it was with the utmost difficulty they succeeded in preventing it from being destroyed also. Even with all their exertions the roof was burned off the academy, and the rest of the building was considerably damaged. The origin of the fire is supposed to have been the overheating of a stove.

THE CITY CORPORATION.—ITS MARKETS.

Fresh air, pure water, and an abundance of wholesome food are generally considered as essential to human health: it may be a foolish prejudice or weak delusion, but it is, nevertheless, one that has taken possession of the public mind. A dozen different associations have been established, headed by a dozen, or more, of the leading men of the age—Dukes, earls, bishops, bankers, merchants, small tradesmen, and City missionaries, earnestly co-operate to forward what they feel to be necessary for human health and human happiness. Boards of Health, Sanatory Commissions, Dwellings for the Poor, Baths and Wash-houses, are so many indications of the vitality of the principle.

How the Corporation of London has encouraged the introduction of fresh air, is shown by its close streets and blind alleys. How it managed, or unmanaged, its water supply, is proved by its abandonment of all influence or authority over the New River Company; and by permitting, until within a few years, a part of the water supply of the City to be drawn from the Thames near London-bridge: it might as well have been drawn from Fleet-ditch, or any other common sewer of the metropolis. This abomination has, happily, ceased to exist. Our present purpose is to examine the several Markets of the city of London, with the view of ascertaining what provision is made for the supply of wholesome food; and as meat enters largely into an Englishman's notion of good diet, we shall first look at the market of Smithfield.

The historical associations of Smithfield are of the deepest interest; but we pass them over, and refer to it as a market. When the Smith's field, or the field where smiths carried on certain of their work (or the *smooth*-field, according to some writers), was first used as the general cattle-market of the metropolis, is not very clearly known; but it is quite certain that, in 1615, a considerable sum of money was expended there, in the hope that it might become the principal or only cattle-market for the supply of meat to the metropolis. Until then the cattle were indiscriminately taken to the several markets of Newgate, Cheap, or Leadenhall. This was found very inconvenient to those who were forced to traverse the streets; and, therefore, the new market or Smithfield was patronised for the sale of cattle; while Newgate and Leadenhall continued to receive the chief support forcaroases, because the cattle were generally slaughtered in those localities.

Our ancestors were wiser in their generation than we are in ours. They wisely resolved that dangerous oxen, or infuriated bulls, should be removed beyond the ordinary ways of men, to a spot where they could do no mischief, and excite no alarm. In the course of time, the market, which was placed in the outskirts, became the centre of the metropolis. For fifty years, or more, the question of removal was raised and excited considerable interest. All agitation was ineffectual, for after a few stormy meetings, the fever always subsided. How this was managed may be gathered from the evidence of Mr. B. Scott, the late clerk to the Chamberlain, as given on Thursday the 12th inst., when he informed the Royal Commission, that, in its late attempt to retain Smithfield, the City Corporation spent in canvassing, petitioning, newspapers, and the ready pens of literary men to support its cause £2750. But that amount, large as it may seem, falls far short of the sum actually expended. Happily, the pest is doomed, and a year at most will see the area cleared of all its pens, and bolts, and bars. We still suffer from its central position. To get the cattle there is no easy task. When there, what with the goads, the dogs, and flare of light, the animals became so heated with a fever of excitement, that, when killed, the meat will not *set*, and is useless for human food. The cattle are driven from Smithfield into Warwick-lane, Whitecbapel, or other districts, and there slaughtered; after which, the carcasse appear in Newgate or Leadenhall Market. There they are pulled about in a manner most unseemly, hoisted on and off pegs and hooks by greasy, dirty fellows, whose very appearance is loathsome; and, if others feel as we did, when, in the discharge of a public duty, we traversed those very odorous and stifling alleys; they will be unable to eat meat for a month afterwards.

Newgate Market is confined almost to the sale of meat. There are some poulterers, and cheese and butter dealers. But the great poultry market is Leadenhall, which, as all know, lies behind Gracechurch-street and between Fenchurch and Leadenhall-streets; and, excepting from Leadenhall-street, there is no direct entrance, so that anything like a free circulation of air is quite impossible. Both localities seem to have been chosen because of their exceeding inconvenience. Leadenhall Market is in some respects worse than Newgate Market, although, as a general rule, it is cleaner and more orderly.

On certain days of the week, Leadenhall receives into a portion of its area not only the hides produced in the neighbourhood, but also the great mass of skins and hides sent up from the country, for sale in London, to be tanned in Bermondsey. There, in the heat of summer, reeking with the most offensive exhalations, and almost creeping away by the assistance of the myriad legs apparently extemporised by the rays of the unclouded sun, are exhibited, in all their loathsomeness, hides in every stage of decomposition. One would imagine that the hide market at Bermondsey ought to be found the most convenient locality for such displays. Vested rights and ancient customs prevent the introduction of a rational system; and here, as in Smithfield, the powerful duction of a rational system; and here, as in Smithfield, the powerful duction of a rational system; and here, as in Smithfield, the powerful du

THE ILLUSTRATED LONDON NEWS

No. 665.—VOL. XXIV.] SATURDAY, JANUARY 28, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE MEETING OF PARLIAMENT.

THE British Parliament, of which the ordinary Session commences next week, will resume its labours under no ordinary circumstances. There is not a member of that august body, however lengthened may have been the period during which he has enjoyed the honour, that can recall to his mind the time when the Legislature assembled with so many and such mighty tasks before it. All other questions that for the last eight-and-thirty years have been submitted for its decision have been inferior to the great question of European war, which monopolises the attention of the world. It will throw into comparative insignificance many urgent questions of internal economy and administrative reform. There is, however, no reason to fear that it will cause their postponement for any lengthened period.

Happily, the nation is unanimous, and the unworthy trash uttered by "the Peace-at-all-Price Party," at Manchester, on Tuesday last, awakes no sympathy or approval in the public mind. The ambition of the Muscovite Emperor is too offensive and dangerous to all Europe, to be any longer tolerated. Even were Turkey as surely destined to fall as Mr. Cobden supposes, and Russia so respectable a nation as he asserts, the guilty ambition of the Czar would require to be restrained, if we expect to enjoy the inestimable blessings of national security and honour. No one can say that our love of peace has not been sufficiently shown, and that our forbearance has not been amply proved by many months of zealous and honest exertions to prevent a great calamity. If war is destined to be the result of the Czar's fanaticism, obstinacy, or lust of plunder, the British nation will enter into it with clean hands and a pure conscience. One uncompromising spirit of hostility to his pretensions animates the whole people; and the same spirit, with more or less of intensity, inspires every other nation in Europe, where public opinion exists. If Parliament have to vote increased taxation to supply the necessary funds, the burden, we have no doubt, will not only be patiently but cheerfully borne. A property and income-tax of three per cent is, as most people know, a sufficient nuisance in ordinary times; but, if it be necessary to increase it to five, or even to ten per cent, there is wealth enough in the country to afford the sacrifice, and patriotism more than sufficient to make it be considered a slight one. Much as this nation detests war, and the authors of war the common sense of the people sees many reasons for thinking it desirable that the Emperor of Russia should persevere in his wickedness a little longer, in order that punishment may more effectually overtake him. Actual war can scarcely do much greater injury than the dread of it has already occasioned. Were the "Lord Orthodox" to yield at the present moment, and to march his armies back again into his own territories, it would only be to renew his project for the dismemberment of Turkey at the first convenient opportunity. Possibly, and indeed most probably, his pretensions would be only allowed to slumber until the alliance of Great Britain and France was less firm and cordial, and until the great German States were less united in their dread and abhorrence of Russian domination; in which case war would again be inevitable, with fewer chances in favour of the rightful cause than there are at the present moment. It has become absolutely necessary that this barbarian encroachment should be chastised, and the task is infinitely more easy now than it is likely to be at any future period. Either in his own person or in those of his successors, the Emperor of Russia must be reduced to his proper level. The great commonwealth of civilised nations can endure no Gengis Khan or Tamerlane among them, for we will not do the memory of the first Napoleon the injustice of comparing him with such a fanatic as the Emperor Nicholas. The pretensions of this monarch are a nuisance, and must be forthwith abated, or Europe will suffer far more from the uncertainty of his future misdeeds than by the exertion necessary at the present time to put an end to them.

The meeting of Parliament, and the sturdy expression of its opinions which we expect, cannot fail to have the most wholesome influence in every part of Europe. By the usage of our constitutional system, the British Ministers have no available means of making known their sentiments in an authoritative manner when Parliament is not sitting; but, as surely as the month of February comes round, the full blaze of publicity streams upon their acts and opinions. After that time, they speak to the whole world. Ere many days shall elapse they will once again break their long silence; and declare not only the physical might of England, but the moral sentiment of the people, in language that we trust will be impossible for any potentate to misunderstand.

The meeting of Parliament will necessarily be the means of removing many false impressions, and of dissipating many errors. Among the very first of these, which a few words of truth will suffice to dispel, will be the mischievous rumours relative to the Prince Consort, which have of late excited so much attention. There is one statesman in the Ministry who, more than any other, seems called upon to declare whether these statements rest upon any foundation whatever, or are the mere calumnies of two extreme parties—intended not so much to injure the illustrious Prince himself, as to create dissensions in the Ministry. We anticipate that the task will be an easy one, and that Lord Palmerston will not allow the session to be two days old before he effectually demolishes the slanders in which his name and that of the husband of the Sovereign have been so unjustifiably intermingled. We do not imagine that the popularity of the Prince has been sensibly impaired by the gabble of the last few weeks; but if it have been, a word from Lord Palmerston will be sufficient to remove all possible pretext for any renewal of the insinuations.

ISMAIL PACHA. MAHOMET PACHA.

(SEE LETTER FROM WIDDIN, PAGE 72.)

No wise man attaches any particular value to mere popularity, dependant upon the changeful humours of a crowd, but every wise man desires to stand well in the enlightened opinion of his contemporaries. It has hitherto been the merit, as well as the good-fortune, of the Prince Consort, to have acquired something better than mob-favour. What he has acquired he will retain. Mob favour, which is often as generous as it is capricious, will again display itself on the side of justice and common sense, and the slanders of which the Prince's name has been the target will go the way of all other tittle-tattle, and cease to be remembered to any one's disadvantage, except to that of the factious politicians, leaders or followers, who encouraged it only that they might trade upon it.

The country has reaped so much benefit from the fiscal and commercial reform which preceded and followed the Repeal of the Corn-laws, that, notwithstanding the exigencies of war, it may still look for an extension of the principles of Free-trade. A war with Russia—which, notwithstanding Mr. Cobden's assertions to the contrary, carries on no very considerable trade with this country—will not materially interfere with our commerce. We have it in our power to trade thrice as much with France as ever we traded with Russia, and the principles of Free-trade show us how we may do so. And while Australia is what it is—and while the United States, and our vast Indian empire—to say nothing of the other portions of the civilised and semi-civilised world—continue to be our customers, the cessation of our trade with Russia will scarcely be felt.

The finances of the nation are in so flourishing a state, that further reductions of all the remaining taxes which impede commerce and industry—such, for instance, as the Excise duty upon paper—might safely be made, even in the face of an impending war. It would be a new and a great spectacle to offer to the world, to be able to reduce taxation and extend commerce at the very moment that we entered upon a war with one of the most formidable nations in Europe. Perhaps it will be found that an achievement so remarkable as this will not be too much for the energies of Great Britain.

The Reform question upon which the men of Manchester have set their hearts, is one that not even an anti-Russian war will throw entirely into abeyance. Reform has been promised by a statesman with whose high name and honourable career the question has become identified; and we see no reason why the destruction of Sebastopol or of Cronstadt should so entirely engross the mind of the nation as to allow a few rotten and decaying boroughs to continue to be as largely represented in the British Legislature as great and thriving cities like Manchester and Glasgow. We may strive to remove the plague-spots of bribary and corruption from our small constituencies, without running any risk of neglecting the mightier interests of the struggle in which we and the rest of Europe may become involved with a semi-barbarous power, that only needs to be boldly confronted to be signally defeated. We may, therefore, expect that the question of Parliamentary Reform will not be lost sight of.

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

The report was spread here on Saturday that M. de Kisseleff had received his recall, and was about immediately to take his departure. As may be supposed, this rumour—which, from the advanced state of the Oriental question, and the apparent determination of the Emperor Nicholas to resist all attempts at a pacific settlement of affairs, obtained more credit than it has done on former occasions—caused a lively sensation in all quarters. On Sunday, however, it was contradicted, and another momentary lull succeeded. Few of the Russian families residing in Paris, have taken their departure; but they have suspended, for the most part, their usual receptions and hospitalities, and preserve a discreet and complete silence on their ideas, opinions, wishes, and prospects with regard to the open rupture which has now apparently become inevitable. The authenticity of the letter attributed to the Duchesse d'Orléans being almost universally doubted here, it excited comparatively little interest. You have doubtless heard that the Duc de Nemours has explicitly denied its being genuine. There is no doubt, however, that the Duchesse d'Orléans entertains, and expresses the same sentiments as those contained in the letter in question, and remains wholly foreign to the movements of the fusion.

A measure long talked of, is at last likely to be carried into execution, and cannot fail to be highly popular, as tending greatly to diminish the price of meat. This is the establishment of a free commerce in butcher's meat, instead of the present system of a limited number of licenses being accorded —a system, which preventing, or at least greatly restricting, competition, tended to keep up prices, and to render the public much more dependant on the butchers than they will now be. The butchers, who, according to the existing law, have been compelled to lodge a certain sum as security in the *Caisse de Poissy* (the principal cattle-market for the supply of Paris), will have these sums restored to them, but are to obtain no indemnity for the loss of their privileges.

A ball took place at the Tuileries on Monday night. With the exception of the Court, and a certain number of official fêtes, the utmost dulness continues to reign here; the *corps diplomatique* keeps almost entirely in the background, as far as receptions go, excusing itself, on the ground of its grave preoccupations, and, as may be supposed, milliners and mercers, *coiffeurs* and *couturières*, not only complain loudly but take that occasion to send in an infinity of "little bills," accompanied sometimes by peremptory, sometimes by gently pressing appeals, alluding to "hardness of times," "disappointments," "payments to make," "stagnation of commerce"—all the pleas, genuine and spoonyphal, employed on occasions where money is to be demanded. It appears probable, from a notice addressed by M. de Persigny to the family of M. Armand Bertin, that the *gérance* of the *Journal des Débats* will be accorded to M. Edouard Bertin, brother of the late director; the *rédacteur in chef*, or principal editor, will probably be M. de Sacy.

The Commission, headed by the Prince Napoleon, for the direction of the arrangements of the Palais d'Industrie is actively employed in the exercise of its functions, and has already made one important discovery; namely, that the said Palais is wholly unfitted, from its construction and dimensions, for the purpose for which it is intended; that it is doubtful if the various plans proposed for its improvement and enlargement are likely to make matters much better, and that it is highly probable that it will be found necessary to choose another situation for it! The Champ de Mars is one of the sites suggested. It is to be hoped that if the change is decided upon, the Commission will begin its examination, and make its discoveries a little sooner.

Louis Napoleon has conceded to the town of Versailles the fifty *hectares* of wood bordering the hill-side of Satory, for the purpose of establishing a promenade overlooking the town. The landscape-gardener of Trianon is occupied in drawing a plan for an extensive park or garden, for which the extreme beauty of the site is admirably adapted, to be constructed on the ground in question. The Conseil Municipal of Versailles has voted 10,000 francs for the works.

A meeting of artists has taken place for the purpose of opening subscriptions for the erection of a monument to the memory of the late M. Visconti.

Several provincial journals have received *avertissemens* within the last few days. The *Echo de l'Aveyron* has been struck by a second, which leaves it in a highly critical position.

The Emperor and Empress have sent two magnificent lots for the lottery which has just been organised for the institution of the *Petites Incurables*, established under the patronage of the Princesse Mathilde.

A grand charity ball is to take place at the Italien Opera, on the 15th of February, for the poor of the eighth and twelfth arrondissemens, which are the poorest in Paris. It is expected that this ball will be extremely brilliant and well attended.

A singular spectacle presented itself a few days since to the public in the Champs Elysées. A man, with a contrivance consisting of a sort of network, containing some five or six hundred bladders, filled with hydrogen gas, attached by a band to his waist, descended the great avenue of the Champs Elysées, with an extraordinary celerity, running and bounding frequently a distance of fifteen and eighteen feet, at a time. As may be supposed, this aëronaut in the bud, attracted crowds which followed him in his descent and his course round the Palais d'Industrie; after having performed which, he returned to Beaujon, whence he and his machine had come.

MM. Celestin Nanteuil and August Lemoine, two of the most popular French artists, have taken their departure for Madrid, with the intention of making a collection of lithographic copies of the pictures of Velasquez, Ribera, and Murillo, in that capital.

Mdlle. Cruvelli has had an immense success at the Grand Opéra (for poor Lablache, Parliamentary who, with a Russian plenipotentiary, will finally regulate this affair, and settle the terms of an armistice, in any neutral town at the choice of the Allied Powers—as soon as intelligence is received that the Court of St. Petersburg has acquiesced in these decisions.

In consequence of the many and various relations existing between Turkey and the European States, the Sublime Porte considers itself in every respect entitled to be admitted as a member of the European federation, and conformably with this situation it will be requisite to confirm and complete the treaty of 1841, and this result. It awaits with entire confidence in the good offices and solicitude of the Great Powers.

Forty days ought to suffice to make known the decision of the Russian Cabinet, and the Sublime Porte solicits its august Allies to direct their attention to that object.

Finally, with a view of ensuring to all classes of his subjects the blessings of justice and security, his Majesty the Sultan is most anxious to see in full vigour the enactments of the *Tanzimat*—and to introduce into all departments of state the requisite reforms and ameliorations—and to this end, has deigned to issue orders for considering and completing that most important object. This circumstance I feel most happy to announce, and it will afford, no doubt, the highest satisfaction to the friends and well wishers of the Ottoman empire.

Rolleah, 20, 1270. (Signed) MUSTAPHA RESCHID.

Detachments of recruits were arriving every day at Constantinople, and the preparations of the Turkish Government to carry on the war with vigour were incessant. The Pacha of Egypt has recently sent troops to man four batteries of artillery, of which one will be horse artillery. He has also sent 20,000 muskets; and he holds an additional corps of 12,000 men in readiness, to be sent the moment the Turkish Government chooses to call for it.

On the 8th instant the Serasckier inspected the first battalion of Cossacks. They were to commence their march on Schumla on the following Wednesday, and from thence they will proceed to Dobrodjie, a place colonised by the Cossacks. Their commander, Sadik Pacha, is a Pole. He goes with them, and is to organise thirty squadrons of Cossack cavalry. In his suite is the Roumelian Prince Stourza, who has recently been nominated as a Pacha. He is for the present to remain at Schumla, as hitherto the efforts to call out the Roumelians have not been very successful. General Wysocki, with his two aides-de-camp, Bielenski and Ruzki, have arrived at Constantinople. The formation of the Polish legion is still postponed, and the decision of the Porte will depend on the answer of the Cabinet of St. Petersburg to the collective proposition.

A Constantinople letter of the 9th, in the *Lloyd* of Vienna, states that the Russian ships of war which had been cruising in the Black Sea had entered the port of Sebastopol.

THE FLEETS IN THE BLACK SEA.

Accounts from Constantinople up to the 8th inst. intimate that the news as to the movement of the fleets has not hitherto been very precise. It is known that they have gone in the direction of Trebizond. On the day the fleets entered the Black Sea, they met an Austrian steamer, which, having been examined according to usage by a French steamer, announced that it had seen some Russian ships of war going in the direction of Varna. On this information the French Admiral had detached a division, which he sent towards Varna. All the rest of the combined fleets pursued their route in the direction of Trebizond. This news cannot be of any great importance in respect to the probability of an engagement, for the Admirals of the combined fleets have considered it proper to send notice to the Russian Admiralty of their entry. That fact would appear to show that measures had been taken to avoid the possibility of a conflict. The latest news from the Black Sea states that the French and English fleets sail separately, and that in coasting the Turkish territory they were nearly opposite to Sebastopol; while the Turkish vessels had gone ahead, and had already reached Sinope. The disembarking of the troops is to take place at Batoum, where it is supposed that some Russian ships are cruising. It is feared that they may oppose the disembarkation, and that a collision may then take place. It is probable, however, that the Russians will take the hint given to them by the Admirals, and withdraw to Sebastopol before the arrival of the combined fleets

An Austrian despatch from Hermannstadt announces that Prince Gortschakoff had arrived at Radowan on the 21st. The concentration of General Aurep's corps was completed, and it was expected that a fresh movement against Kalafat would soon be made. The reported evacuation of the Russian lines between Giurgevo & Rent, Matchin, or Silestria, are as yet of little military importance. It is estimated that the capture of Kalafat (if captured, which seems doubtful) will cost the Russians at least 10,000 men. There is much discouragement among the troops in consequence.

A letter from Vienna of the 20th, to the *Cologne Gazette*, says:—

News has arrived here to-day to the effect that on the morning of the 13th, the Russians passed the Danube near Matchin, and engaged in a very brisk combat with the Turks. The result was not known at the departure of the courier at one in the afternoon. Matchin was said to be in flames, and the carnage terrible.

The *Priest Gazette* states that the restrictions imposed by Prince Gortschakoff on neutral vessels on the Lower Danub have rendered navigation there impossible, and that Austrian commerce will suffer more than any other nation.

Private letters from the coast o. the Black Sea announce that the Russians were making very significant dispositions at Sebastopol and along the whole south-eastern coast of Crimea. They were organising on the different strategetic points extensive works and coast batteries for supporting the sea; they had just altered the direction of the lighthouses erected for guiding ships through dangerous passes, and to secure anchorage. Finally, they had just given orders to those battalions which form the vanguard of the military colony, and which has the centre of organisation in the province, to enter the town as a reinforcement to the regular garrison, which had before acquired its complete war complement. The rumour of the last decisions adopted at Constantinople for the entrance of the squadrons has resulted in all the Russian ports in the Black Sea and the Sea of Azoff, where it has produced a regular panic. There are the best grounds for it, since Russia has lavished all her efforts on Sebastopol, and neglected the defence of the other points so eminently useful for her commercial interests.

A Russian war-schooner, surprised outside of the canal, whither it had been driven by stress of weather, was brought into the Bosphorus. It was in quest of the Russian fleet, which, the captain stated, must be somewhere off Batoum. This schooner had ammunition on board, and a crew of twenty-seven men. Either, then, the Russian fleet is separated into two divisions, or one of the two versions above given is incorrect. One thing is clear, that their fleet is at sea, and that the allied fleets will be sure to meet with it somewhere

The reinforcements which are on board the Turkish squadron are an-

TURKEY.

THE SULTAN'S REPLY TO THE NOTE OF THE FOUR POWERS.

The following is a copy of the reply of the Sublime Porte to the collective note of the Four Powers:—

TRANSLATION.

His Majesty the Sultan has perused with attention the British Ambassador's note of December 12, suggesting the bases proposed for a treaty of peace, and identical with those of his colleagues, the representatives of France, Austria, and Prussia, sent in collectively on the same day, and it results therefrom that his Majesty the Emperor of Russia manifests pacific intentions.

The Sublime Porte has waged war solely in its own defence—in defence of its sacred rights and sovereignty—and as there is nothing to affect them in this proposal, it has been deemed expedient to adopt it with a view to the restoration of peace—his Imperial Majesty, moreover, being actuated in this circumstance by the highest consideration for his august allies by an ardent desire of conforming to their wishes, and by implicit faith in their councils.

Accordingly, on resuming the negotiations, the first point to establish will be the evacuation of the Principalities within the shortest possible delay; and the second, the renewal of the treaties, to which the Sublime Porte assents, in deference to the advice of the Allied Powers, and in the unwavering spirit of moderation by which it has been guided throughout in these transactions.

With regard to the religious privileges and immunities of the various non-Mussulman communions, subject to the Ottoman Government, these have been accorded in ancient times by the illustrious ancestors of his Imperial Majesty, and reconfirmed by himself in virtue of a hatti-sheriff recently emanated to that effect. These grants and franchises, moreover, the Sublime Porte has been ever anxious to maintain—and will maintain perpetually—as has been long since solemnly proclaimed to all Europe by the publication of the *Tanzimat*. Moreover, should any one of those communions possess advantages unenjoyed by the others, and these desire to participate therein the Ottoman Government, animated by sentiments of justice and impartiality, will never refuse to dispense equal rights and equal privileges to all. Neither can there be the slightest objection to notify the sincerity and loyalty of these intentions to every Government in Europe, and to furnish each—and necessarily the Cabinet of St. Petersburg with a copy of the aforesaid firmans.

The project of settlement, concerning the measures required to complete the religious relative to the Holy Places, will be accepted definitively.

Hence the Sublime Porte is ready to conclude a treaty of peace, in the manner traced out by its august Allies—and consents, accordingly, to appoint a Plenipotentiary who, with a Russian plenipotentiary, will finally regulate this affair, and settle the terms of an armistice, in any neutral town at the choice of the Allied Powers—as soon as intelligence is received that the Court of St. Petersburg has acquiesced in these decisions.

In consequence of the many and various relations existing between Turkey and the European States, the Sublime Porte considers itself in every respect entitled to be admitted as a member of the European federation, and conformably with this situation it will be requisite to confirm and complete the treaty of 1841, and this result. It awaits with entire confidence in the good offices and solicitude of the Great Powers.

Forty days ought to suffice to make known the decision of the Russian Cabinet, and the Sublime Porte solicits its august Allies to direct their attention to that object.

Finally, with a view of ensuring to all classes of his subjects the blessings of justice and security, his Majesty the Sultan is most anxious to see in full vigour the enactments of the *Tanzimat*—and to introduce into all departments of state the requisite reforms and ameliorations—and to this end, has deigned to issue orders for considering and completing that most important object. This circumstance I feel most happy to announce, and it will afford, no doubt, the highest satisfaction to the friends and well wishers of the Ottoman empire.

A grand charity ball is to take place at the Italien Opera, on the 15th of February, for the poor of the eighth and twelfth arrondissemens, which are the poorest in Paris. It is expected that this ball will be extremely brilliant and well attended.

A singular spectacle presented itself a few days since to the public in the Champs Elysées. A man, with a contrivance consisting of a sort of network, containing some five or six hundred bladders, filled with hydrogen gas, attached by a band to his waist, descended the great avenue of the Champs Elysées, with an extraordinary celerity, running and bounding frequently a distance of fifteen and eighteen feet, at a time. As may be supposed, this aëronaut in the bud, attracted crowds which followed him in his descent and his course round the Palais d'Industrie; after having performed which, he returned to Beaujon, whence he and his machine had come.

MM. Celestin Nanteuil and August Lemoine, two of the most popular French artists, have taken their departure for Madrid, with the intention of making a collection of lithographic copies of the pictures of Velasquez, Ribera, and Murillo, in that capital.

Mdlle. Cruvelli has had an immense success at the Grand Opéra (for poor Lablache, Parliamentary who, with a Russian plenipotentiary, will finally regulate this affair, and settle the terms of an armistice, in any neutral town at the choice of the Allied Powers—as soon as intelligence is received that the Court of St. Petersburg has acquiesced in these decisions.

In consequence of the many and various relations existing between Turkey and the European States, the Sublime Porte considers itself in every respect entitled to be admitted as a member of the European federation, and conformably with this situation it will be requisite to confirm and complete the treaty of 1841, and this result. It awaits with entire confidence in the good offices and solicitude of the Great Powers.

Forty days ought to suffice to make known the decision of the Russian Cabinet, and the Sublime Porte solicits its august Allies to direct their attention to that object.

Finally, with a view of ensuring to all classes of his subjects the blessings of justice and security, his Majesty the Sultan is most anxious to see in full vigour the enactments of the *Tanzimat*—and to introduce into all departments of state the requisite reforms and ameliorations—and to this end, has deigned to issue orders for considering and completing that most important object. This circumstance I feel most happy to announce, and it will afford, no doubt, the highest satisfaction to the friends and well wishers of the Ottoman empire.

Rolleah, 20, 1270. (Signed) MUSTAPHA RESCHID.

Detachments of recruits were arriving every day at Constantinople, and the preparations of the Turkish Government to carry on the war with vigour were incessant. The Pacha of Egypt has recently sent troops to man four batteries of artillery, of which one will be horse artillery. He has also sent 20,000 muskets; and he holds an additional corps of 12,000 men in readiness, to be sent the moment the Turkish Government chooses to call for it.

On the 8th instant the Serasckier inspected the first battalion of Cossacks. They were to commence their march on Schumla on the following Wednesday, and from thence they will proceed to Dobrodjie, a place colonised by the Cossacks. Their commander, Sadik Pacha, is a Pole. He goes with them, and is to organise thirty squadrons of Cossack cavalry. In his suite is the Roumelian Prince Stourza, who has recently been nominated as a Pacha. He is for the present to remain at Schumla, as hitherto the efforts to call out the Roumelians have not been very successful. General Wysocki, with his two aides-de-camp, Bielenski and Ruzki, have arrived at Constantinople. The formation of the Polish legion is still postponed, and the decision of the Porte will depend on the answer of the Cabinet of St. Petersburg to the collective proposition.

A Constantinople letter of the 9th, in the *Lloyd* of Vienna, states that the Russian ships of war which had been cruising in the Black Sea had entered the port of Sebastopol.

THE FLEETS IN THE BLACK SEA.

Accounts from Constantinople up to the 8th inst. intimate that the news as to the movement of the fleets has not hitherto been very precise. It is known that they have gone in the direction of Trebizond. On the day the fleets entered the Black Sea, they met an Austrian steamer, which, having been examined according to usage by a French steamer, announced that it had seen some Russian ships of war going in the direction of Varna. On this information the French Admiral had detached a division, which he sent towards Varna. All the rest of the combined fleets pursued their route in the direction of Trebizond. This news cannot be of any great importance in respect to the probability of an engagement, for the Admirals of the combined fleets have considered it proper to send notice to the Russian Admiralty of their entry. That fact would appear to show that measures had been taken to avoid the possibility of a conflict. The latest news from the Black Sea states that the French and English fleets sail separately, and that in coasting the Turkish territory they were nearly opposite to Sebastopol; while the Turkish vessels had gone ahead, and had already reached Sinope. The disembarking of the troops is to take place at Batoum, where it is supposed that some Russian ships are cruising. It is feared that they may oppose the disembarkation, and that a collision may then take place. It is probable, however, that the Russians will take the hint given to them by the Admirals, and withdraw to Sebastopol before the arrival of the combined fleets

A telegraphic despatch from Hermannstadt announces that Prince Gortschakoff had arrived at Radowan on the 21st. The concentration of General Aurep's corps was completed, and it was expected that a fresh movement against Kalafat would soon be made. The reported evacuation of the Russian lines between Giurgevo & Rent, Matchin, or Silestria, are as yet of little military importance. It is estimated that the capture of Kalafat (if captured, which seems doubtful) will cost the Russians at least 10,000 men. There is much discouragement among the troops in consequence.

A letter from Vienna of the 20th, to the *Cologne Gazette*, says:—

News has arrived here to-day to the effect that on the morning of the 13th, the Russians passed the Danube near Matchin, and engaged in a very brisk combat with the Turks. The result was not known at the departure of the courier at one in the afternoon. Matchin was said to be in flames, and the carnage terrible.

The *Priest Gazette* states that the restrictions imposed by Prince Gortschakoff on neutral vessels on the Lower Danub have rendered navigation there impossible, and that Austrian commerce will suffer more than any other nation.

Private letters from the coast o. the Black Sea announce that the Russians were making very significant dispositions at Sebastopol and along the whole south-eastern coast of Crimea. They were organising on the different strategetic points extensive works and coast batteries for supporting the sea; they had just altered the direction of the lighthouses erected for guiding ships through dangerous passes, and to secure anchorage. Finally, they had just given orders to those battalions which form the vanguard of the military colony, and which has the centre of organisation in the province, to enter the town as a reinforcement to the regular garrison, which had before acquired its complete war complement. The rumour of the last decisions adopted at Constantinople for the entrance of the squadrons has resulted in all the Russian ports in the Black Sea and the Sea of Azoff, where it has produced a regular panic. There are the best grounds for it, since Russia has lavished all her efforts on Sebastopol, and neglected the defence of the other points so eminently useful for her commercial interests.

A Russian war-schooner, surprised outside of the canal, whither it had been driven by stress of weather, was brought into the Bosphorus. It was in quest of the Russian fleet, which, the captain stated, must be somewhere off Batoum. This schooner had ammunition on board, and a crew of twenty-seven men. Either, then, the Russian fleet is separated into two divisions, or one of the two versions above given is incorrect. One thing is clear, that their fleet is at sea, and that the allied fleets will be sure to meet with it somewhere

The reinforcements which are on board the Turkish squadron are an-

GERMANY.

The semi-official *Prussian Correspondance* publishes an article respecting the excitement of the Money-market. After denying the rumours respecting the recal of the Russian Ambassadors from London and Paris, it states that nothing justifies the supposition that the Cabinet of St. Petersburg had resolved to reject the proposition of arrangement transmitted from Vienna. On the contrary, it alleges that there is good reason for believing that the Czar, out of regard for the friendship and mutual confidence existing between himself and the great German Powers, will not refuse to take into just consideration the conciliatory representations which have just been addressed from Berlin and Vienna to the Court of Russia.

The Berlin *Correspondance* contradicts in the most formal manner, a report which had been current in the capital for some days, that the King intended to abdicate in favour of his brother, the Prince of Prussia.

It is said that the smaller states of the German Confederation have taken steps at Vienna and Berlin to induce Austria and Prussia to bring about a resolution of the Diet expressly confirming the neutrality of the Confederation on the Eastern question; it is even stated that the journey of M de Beust, the Saxon Minister of State, to Berlin, is connected with this affair.

The latest accounts from Berlin state that the Second Chamber had, in recent sitting, adopted the treaty concluded with Oldenburg for the cession of a territory situate on the banks of the Jahde, and destined for the establishment of a Prussian military port. Only the Polish deputies voted against the treaty. It is rumoured that Russia has protested against the establishment of this port.

SWEDEN.

The Royal Bill for reforming the Customs' Tariff was laid before the Diet on the 15th inst. The proposed modifications are in the direction of Free-trade, and have been well received in the Diet.

tended for the army of Asia, and particularly for the garrisons of Batoum and Cheftelli, which are threatened by the enemy. The latter fort, which was captured by the Turks at the commencement of hostilities, is now in great need of provisions and stores. Although it has hitherto victoriously repulsed all the attempts which the Russians have made to storm it, it has lost a part of its garrison in these combats, and consumed a great part of its provisions and ammunition. Open as it now is on the land side, in consequence of the reverses which the Turkish army of Asia has met with, and deprived of all hope of assistance on that side, it would be impatience for the arrival of the reinforcements which have been promised it by sea

A good deal has been said about the respective situation of the two fleets as far as regards the command. This situation is described by the French papers as very simple On ordinary occasions each squadron will retain its independence. In case of an action, the command in-chief belongs by right to the officer senior in rank. If we are well informed, Admiral Hamelin is seven years the senior in rank to Admiral Dundas, and if the squadrons are to engage the Russian fleet, it is the French flag that will have the honour of directing the blows.

The fleets, it is generally rumoured, will return to their stations at Beycos after a cruise of two or three weeks; but this, of course, is to Impossible to determine, and all will depend necessarily on the course of events. The Russian ships will scarcely dare any longer to venture out on their depredations; although, according to the reports of the Consuls at Trebizond, not later than ten days ago one of their steam-frigates entered and sounded the port of Kimisch-Hane (this information be correct, the massacre of Sinope, it would appear, has filled with apprehension and terror the whole coast populations.

It is said that the Governor of Sebastopol contented himself with answering to the notification of the entry of the fleets into the Black Sea, that he was astonished at so unforeseen a communication, that he could not understand what they wanted of him, Russia being at war only with Turkey; and that, consequently, he could not say what he meant to do under the circumstances.

Accounts from Sebastopol of the 10th, received through Bucharest, state that all the Russian ships are kept close in port. Small steamers keep the Russian Admiral well informed of the movements of the French and English fleets. On the 7th two steamers from the fleet brought an official message for the Russian Admiral. Since that date neither the French nor English flag had been seen. There was a violent storm on the 8th.

Letters from Odessa of the 12th state that no French or English war ships had been seen there.

THE WAR ON THE DANUBE.

There can be no doubt that the Russians have now regularly assumed the offensive along the whole line of operations. On the 13th, the day on which Prince Gortschakoff left Bucharest for Radovan, with two infantry regiments and several detachments of hussars and Cossacks, General Liders attacked Oltenitza and its two forts on several sides. The transport of heavy artillery to Giurgevo leads us to suppose that an attack is about to be made on Rustchuk. On the night of the 12th, the Turks made feigned attempts to cross the Danube at Kalarach, opposite Silistria, and at Hirsova, in the Dobrudscha. According to a letter of the 7th, from Giurgevo, the Russians have now two strong redoubts, armed with 12 36-pounders, on the dam leading to the town. For some time it was feared that the ice would become so thick as to allow of a sally on the part of the garrison of Rustchuk; but now even the floating ice has disappeared. A part of the battering train has been sent from Giurgevo to the west; and on the 5th, a steamer had towed two gunboats up the river It is probable that the Turks at Shtowo did not permit these vessels to pass unmolested, as a heavy cannonade was heard in that direction on the 6th. On the 10th, the whole of the garrison of Sophia left for Widdin. For the duration of the war, the provinces of Bessarabia, Cherson, and Tauris are to be divided into two Governments, separated by the Bug. Prince Menschikoff commands on the left bank of that river, and General Osten-Sacken on the right. Both Governments have been declared in a state of siege, and will be garrisoned during the war by two separate army-corps. It is believed here that the Russians fear that when war is declared, the Western Powers will land troops in the above-mentioned provinces.

The Turkish Government, on the recommendation of General Baraguey d'Hilliers, has decided on establishing a line of electric telegraph from Constantinople to Varna. It is also in contemplation to purchase in Europe a certain number of steam-vessels

The *Augsburg Gazette* contains what it is pleased to call an impartial account of the battle of Citate "in which," it believes, "the engagement is described as having terminated entirely in favour of the Russians; but the following imprudent remark spoils the whole:—

Unfortunately, the Russians have but 26,000 men in Lesser Wallachia, and the Turks, who are twice as strong, fight behind intrenchments backed by Widdin.

The *Vienna Lloyd* of the 17th publishes a letter from the Principalities, of the 10th inst. Its correspondent writes:—

The insurrection of the peasantry in Little Wallachia is at an end; but not without a previous melancholy catastrophe. Some Cossacks were sent to Saltaba, a place not far from Kalafat, to fetch away certain stores of hay and provender wanted for the Russian camp. The peasants, however, and the Wallachian militia (borderers), fired at them and drove them out of the village. Some companies of infantry, accompanied by some light horse, were instantly proceeded to the spot, where everything had been prepared for a serious resistance. the proximity of the Turkish army having been too much relied on. The village was surrounded and attacked. The unequal combat was terminated by the total destruction of the place, and the loss of 60 human lives. The peasants and militia that hastened from all parts to support their countrymen were easily routed and dispersed. After that the neighbouring village of Pojan, although deserted by its inhabitants, was destroyed.

RUSSIA.

Advices direct from St. Petersburg, of the 17th, state that a ukase has been issued calling the seamen of the Baltic fleet to rejoin the ships by the 15th of March. The concentrations are to take place at Cronstadt, Reval, and Sweaborg.

A bulletin published at St. Petersburg on the 17th inst., shows that the Russian troops in Asia are in winter quarters, within their own frontiers. and that at present no military operations are in progress

Letters from St. Petersburg state that it is intended to form a depôt of 150,000 soldiers at Moscow, to leave 100,000 in Poland, station another 100,000 in columns among the provinces of the Baltic and in Finland, and raise the army on the Danube to 200,000 and that of Asia to 100,000. The persons best acquainted with Russian statistics believe that these are merely figures of speech, and that Russia will have great difficulty in bringing together more than half the numbers here set down

The *Berlin Gazette* announces that the Emperor of Russia has demanded twenty-five millions from the Warsaw Bank for the eventualities of war.

The *Vossiche Zeitung* of Berlin is informed that the 50,000,000f. deposited in the Bank of France to the credit of Russia have been withdrawn.

Hamburg letters allude to reports that the Czar is about to issue paper money to the extent of sixty millions of paper roubles, to meet the war expenditure. The *Vienna Lloyd* of the 22nd confirms this statement.

A letter from St Petersburg, in the *Constitutionnel*, relates the reports which were current in political circles in that city as to the attitude of the Czar. On hearing of the entrance of the fleets into the Black Sea, he is said to have evinced the most perfect calmness. In the evening, when talking in his circle of courtiers, composed of the highest personages and superior officers, he is said to have remarked, after announcing to them the entrance of the fleets, "When battle is offered to Russia, she always accepts it: she can wear mourning for a fleet, but not for the national honour. I expected the resolution come to by France and Great Britain; I am not, therefore, taken by surprise: every order has been given beforehand in anticipation of such an act which, by battles, treaties, releases me from the obligations of them." It appears certain, in fact, that the Emperor asked Prince Menschikoff whether he could make head against the formidable squadrons, the movements of which he expected in the Black Sea? The Grand Admiral is said to have replied: "Conquer them? No. Fight and die to the last? Yes." This answer is too characteristic of that haughty personage to be at all doubted. The same letter from which we take these details adds, that the Emperor Nicholas, while showing his resolution not to yield, has testified his regrets at being in discord with the Sovereign who has saved Europe and civilisation from such great perils.

The *Cologne Gazette* publishes the following:—

PETERSBURG, Jan. 19.—Some days ago the Major-General Prince Tchernitcheff and Bogdanowitch, from Moscow, and Prince Woronzoff from Odessa, arrived here The presence of so many military strangers, especially that of the last named general, is supposed to hold some relation with deliberations that are being held daily in the highest quarters concerning the Turkish war. The circumstance of recent official intelligence from the seat of war has produced here a depressed feeling, and given rise to a host of rumours and surmises. People talk, of course with the greatest caution, of new combats, and they believe, since no details whatever are suffered to ooze out, that the issue of them has not been favourable for the Russian arms For the rest, every man here is convinced, that the last project of intermediation has not the remotest chance of being received here.

PERSIA.

The *Independance* of Brussels publishes a telegraphic despatch from Trieste, founded on intelligence brought by the Overland India Mail, in which it is said that the Persian port of Bushire is blockaded by a British corvette, and that a schooner and war-steamer have also been sent into the Persian Gulf.

DENMARK.

It is said that the answer of Russia on the declaration of neutrality arrived on the 16th inst. Russia refuses her consent to it, and demands that Denmark should side with one of the parties. The envoys of Austria and Prussia were sent for by the King. The Ministers of England and France had previously had an audience relative to the same matter

In the sitting of the Danish Folkething of the 17th, the Government announced that it intended adjourning to better times the presentation of the common constitution for the whole monarchy, in the hope that in the interim irritation and prejudices would have calmed down.

SPAIN.

A telegraphic despatch from Madrid, of the 18th inst., brought information of a *coup d'état* in that capital. Generals Concha and O'Donnell had been exiled to the Canaries, and the resignations of a number of generals had been accepted

The Minister of Finance was also said to have left the Cabinet.

These occurrences now banished were the head and front of the Opposition. and had signed their names first to a memorial to the Queen, which also bore the signatures of MM. Gonzales Bravo, Rios Rosas, and Generals Infante and Madon, representing the situation as full of danger, and demanding the immediate assembling of the Cortes.

A despatch on the 19th says:—"New organic measures, remodelling the Senate and the electoral law, are spoken of. A great reform, for good or evil, seems to be determined upon; yet nothing very definite appears to be settled."

AMERICA.

By the steamer *Africa* we have advices from New York to the 11th inst. There had been another large fire in New York on the 8th, by which the Metropolitan hall and Laffarge-house had been totally destroyed. The loss was estimated at £500,000.

A very destructive fire occurred, also, at Portland, Maine, on the 7th ult., the Custom-house, Post-office, and nearly half a million dollars' worth of property having been destroyed

The political news was not of much interest.

From Jamaica our advices are to the 27th ult. The news is not of much importance. There was scarcely any new feature in the political news of the colony, the Legislature having adjourned to the 17th of January. The members of the Legislature had determined to appoint two or three members from the House and one from the Council to form a Cabinet, or Executive Council. by whom were to be proposed all the important measures of finance and general policy.

From the Sandwich Islands advices by the same channel are to the 19th of November. The subject of annexation to the United States continued to be agitated. The mass of the people were favourable to it.

THE OVERLAND MAIL

The steamer *Bombay* arrived at half past eight a.m. on Monday, in 116 hours from Alexandria, which she left on the 17th January. The dates from India are to Calcutta, Dec. 20; Madras, Dec. 24; Bombay, Dec. 29; Hong-Kong, Dec. 11. The political news are of interest. The Resident at Bushire had reported that 60,000 Persians had reached that neighbourhood, with the object of invading the Pashalic of Bagdad. An expeditionary force, it is said, at once is being rapidly organised by the Bombay Government, to carry out any orders it may receive from England or from the Governor-General. The important territory of Herat has lapsed to the British Government by the death of its ruler without issue. The Governor-General of India left Calcutta on the 9th December, for Burmah. A conspiracy at Rangoon was frustrated on the 23rd November, by the foresight of the British authorities.

Perfect tranquillity prevails at Amoy, and the constituted authorities have been restored. The insurgent army had at the end of October reached Ginkee, about sixty miles from Pekin. Shanghai is still in the hands of the rebels.

AUSTRALIA.

By the *Hurricane*, which sailed from Melbourne on November 3rd, we have advices to that date.

The *Hurricane* has brought gold on freight amounting to 54,000 ounces in weight, irrespective of a large quantity in the hands of her passengers, who number fifty-all.

This vessel reports the arrival at Australia of the *Great Britain* and the *Hellespont* steam-ships. The gold-fields were still very prolific in yield. Provisions were very high in price and labour scarce, wages being as high as previously reported.

PROVINCIAL INTELLIGENCE.

RUSSIAN AGGRESSION.

A crowded and enthusiastic meeting was held in the Town-hall, Southampton, on Monday evening at which the Mayor presided—to "take into consideration the important question of the unprovoked aggression of the Emperor of Russia against Turkey." The first resolution was moved by Mr. T. Falver, who, in a long and able speech, reviewed the origin and progress of Russian policy in the East, and explained its probable future bearing, if unopposed, upon the commercial and political interests of this country. The four first resolutions, all of which appear to have passed without opposition, were to the following effect

That, in the opinion of this meeting, the insolent demands of the Emperor of Russia, to exercise a protectorate over the Christian subjects of the Sultan, are not only incompatible with the honour and integrity of the Turkish Empire, but opposed to the laws of nations and the just rights of independent States.

That the present war in the East has been caused solely by the Emperor of Russia, whose invasion of the Danubian Principalities, in violation of treaties and public law, was an outrage which the Sultan was fully justified in resisting by all the means in his power.

That the four great Powers of Europe—England, France, Austria, and Prussia—who were parties to the treaty of 1841, made for the special purpose of securing the independence of the Turkish empire, having called upon the Emperor of Russia to withdraw his armies from the Principalities, and he having decidedly refused to do so, those Powers are bound in honour and the interests of civilisation to aid the Sultan, if necessary, by force of arms in expelling him; to require that he should pay all the expenses of the war; and also, in entering into any new arrangements, to take measures for securing the future tranquillity of Europe by a well defined treaty, which shall have for one of its conditions the opening of the Black Sea at all times to the ships of all nations.

That the cordial union now existing between the English and French Governments, as well as between the people of those two great nations, affords us the most sincere satisfaction, and that we highly approve the decision by which the combined fleets are now cruising for the protection of Turkey in the Black Sea."

A fifth resolution was passed authorising the Mayor to embody the above resolutions in a memorial to her Majesty; and it was also agreed that copies of the resolutions should be forwarded to the Emperor of France, and to the Sublime Porte.

MEETING AT DERBY.—A public meeting took place in the Town-hall, Derby, on Wednesday, for the purpose of expressing admiration at the noble and determined resistance offered by the Turkish nation to the encroachment of Russia. There were upwards of 1000 persons in the room. Mr. T. Madeley, the Mayor, presided; and was supported by Mr. M. T. Wass, M.P. for Derby; Mr. J. Moss, ex-Mayor, and other influential gentlemen. Letters of apology were read from the county members and Mr. L. Heyworth, the other borough member, all of whom expressed their warm sympathy for the object of the meeting. The chairman, after expressing his belief in the iniquitous tendency of all wars, proceeded to observe that "no stone had been left unturned," to use a homely phrase, by the Governments of England and France to bring about a peaceful solution of this question. On the ground surely the Peace Society would have nothing to complain of. If the English and French fleets had entered the Black Sea when the Russians occupied the Principalities he believed that the massacre of Sinope would not have taken place (Cheers). Mr. Bates, in suitable terms, proposed the following resolution:—"That this meeting, in common with the great majority of the people of this country, has witnessed with feelings of indignation the lawless violence manifested by the Russian Autocrat in his unjust and aggressive attacks upon the rights and independence of our faithful ally, Turkey. That we consider this country bound by every principle of honour and of duty, no less than by an imperative sense of what is due to our own interests, to adopt active, energetic, and effective measures (in conjunction with France) to co-operate with the Turks in destroying the fleets, armies, and fortresses of the aggressor, allowing them to reimburse themselves at his expense for the cost of the war, and affording to those nations which have been, by his former treachery and violence, deprived of their nationality, an opportunity of recovering the same, and re-establishing themselves in kingdoms under their own national Governments. That any temporising policy carried on by the aid of secret diplomacy will tend to dishonour the British nation, be destructive of her material interests and injure the cause of liberty, justice, and humanity throughout Europe" (Cheers). Mr. Park ison, after dwelling upon the topics embraced in the above resolution, seconded it, and it was carried by acclamation. Mr. Bass, M.P., having addressed the meeting at some length, an address of sympathy to the Sultan was adopted; after which the meeting separated.

A FACTORY SNOWED UP.—On the night of the snow-storm, the mill hands of J. Smedley, Esq., Lea, in Derbyshire, left, or rather attempted to leave, at the usual time in the evening; but, owing to the bitterness of the night, the slippery state of the roads and paths that they had to traverse in the dark, and through the blinding snow, numbers turned back to ask shelter for the night. In this dilemma, their kind-hearted employer immediately resolved to scheme night accommodation for all whose homes were more than a mile distant, and to as many of the female hands and aged people as might think well to stop, live where they might, and two beds were immediately improvised under the superintendence of Mr. Smedley. One accommodated thirty men and lads, and the other forty women and girls. A wholesome and satisfying supper was provided for each lodger. On the following day a new difficulty presented itself in the discovery that the roads in some directions were completely blocked, and all communication with distant homes cut off, so that something further had to be devised in regard to the victualling department; and Mr. Smedley having an abundant supply of Scotch meal, kept two persons at work three days in baking oatcakes, which, together with soup and meat, formed the rations at dinner time, the copper and mash tub being in requisition morning and evening. On the fourth day most of the hands got home, but all expressed regret at leaving such cheery winter quarters.

STRIKES IN YORKSHIRE.—We regret to learn that there now exist several strikes in Yorkshire. The linen bleachers of Barnsley and neighbourhood strnck, on Tuesday last, for shorter hours and an advance of wages. The coalliers of Craigleanan have remained out, and those of Weston and Birstal are threatening to strike. At Keighley, the weavers, after a long and painful turn-out, have resumed work at their former wages

STRANGE SCENE IN A CHURCH.—On the publication of the banns of marriage on Sunday, at the village church of Halton, adjacent to the fashionable watering-place of Weston-super-Mare, near Bristol, between a young farmer of the parish and his intended bride, some consternation was created in the congregation by a gentleman rising, and in a quiet, but firm tone of voice, saying, "I enter my solemn protest against the contemplated marriage of the parties. The would-be bridegroom is under promise of marriage to another respectable young woman, who has a prior claim on him." It seems the young man had for some years courted the former schoolmistress of the village, but on her removal to another part of the county, he became so enamoured of the pretty face of her successor, that after a few months' attention he popped the question and was accepted. In addition to this public exposé thus recorded, it is said the faithless swain will shortly be subject to an action for breach of promise of marriage.

SHIPBUILDING IN SUNDERLAND AND NEW YORK.—The following figures show the number of ships built at Sunderland and New York during the past year: Sunderland: Ships, 163; tonnage, 68,736. New York: Ships, 881; tonnage, 46,679. The excess of vessels built at Sunderland over its Transatlantic rival is only sixty five vessels, and 22,256 tons of shipping, actually more than the entire ships built on the Wear in 1853.

A SHAM NOBLEMAN.—A person of gentlemanly exterior, visited Liverpool by the Terminus Hotel, Brighton, one day last week, and after running up an account for £1 3s. 6d., engaged a fly, proceeded in search of apartments in the Marine-parade, and gave orders to the railway officials to forward his horses and groom, upon their arrival from London, to the riding master's stables, upon whom he also called, and engaged a two-stall stable. He then visited the German-place Boarding-house, where he had some refreshment, ordered a private sitting and bed room, and fires to be lighted, and introduced himself as Baron Munes-ter. The housekeeper of the hotel having asked him for a reference, he gave her the name of the Countess of Muncaster, and wrote down the name of his agent, "J. Tear, Esq., 44, Hatton-garden, London," who, he said, had succeeded Messrs Cox and Son, the marine agents. He then borrowed £5 of the waiter for two or three minutes, and left the hotel. But, instead of remaining in Brighton, he went off to the railway and took a first-class ticket for London. He was followed, apprehended, and taken before the magistrates, when he was committed to be only a summoner. The plea of insanity was set up, and a long defence, written by the prisoner, was read, stating that his head became affected while he was serving in India as a Lieutenant, and that he had lost his wife and child within eighteen months. He begged to be allowed to settle with the prosecutor, alleging that if he was sent for trial his future hopes would be blasted; he should lose his commission, and a hundred and friendship would be lost to him for ever. The statement was signed "Lieutenant Pennington, R.T.L.M." An application to bail the prisoner was granted himself in £200, and two sureties of £100 each.

CHURCH STRUCK BY LIGHTNING.—On Friday week, during a terrific storm of thunder and lightning at Cockermouth, the electric fluid struck the tall spire of the new church, which replaces the ancient building destroyed by fire a few years ago, and on the point being opened for the purposes of divine worship. The huge cross and ornamental stonework which surmounted the pinnacle, were thrown through the roof of the edifice into the chancel below, which was decorated with encaustic tiles and sculptured stonework. The building has been so much injured that the necessary repairs will delay its opening for several months.

INTIMIDATION OF WORKMEN.—Symptoms of a lingering disposition among the lower class of artisans to resort to violence, and of the moral intimidation inseparable from trades' unions, are seen in the London police reports of the week. On Monday, at the magistrate at Bow-street had to decide a case arising out of the shoemakers' strike. Cornelius Sullivan was charged with a brutal assault on William Humphries Sullivan had been formerly in the employment of a Mr. Kendal, a shoemaker in Drury-lane, but had joined the strike for wages. Humphries had accepted the work in the old rate. It appeared from the evidence that seven men on strike regularly waylaid the new hands when returning from their work, for the purpose of assaulting them. The policeman called as a witness stated that he saw the prisoner knock down the complainant on Saturday night, several of the defendant's companions joining him in the attack. The prisoner was remanded, the magistrate refusing to deal with the case summarily. William Tanner, a stonesaman in the employment of a contracting firm at the Crystal Palace, Sydenham, was summoned on Saturday, for having used threats and intimidation, in order to compel a workman, named Woolcock, to leave off work at the Crystal Palace, and join the strike. Amongst the witnesses was the foreman of the masons, who was reproved by the magistrate for yielding to the intimidation of the union, and dismissing the complainant from employment.

FOREIGN SOAPS.—The Lords Commissioners of her Majesty's Treasury have directed the Commissioners of Customs to be acquainted that, in framing the Tariff of 1853, it was the intention of their Lordships that every sort of such high quality, and in such ornamental form, that it would be classed with perfumery, should be charged with the duty of 2d. the lb.; and that all other soap should be admitted at 4d. the cwt., and a general order has been issued to the several ports throughout the kingdom to that effect.

THE HOSPODARS OF MOLDAVIA AND WALLACHIA.

PRINCE BARBO BIBESCO STIRBEY, Hospodar of Wallachia, dethroned by the Russians a few months ago, is the elder brother of Prince George Bibesco, dethroned during the revolutions of 1848. The brothers are of comparatively obscure origin, their grandfather having been a horse-trainer. Their father entered at an early age into the service of one of the most considerable families in the country, where he soon distinguished himself by his industry and intelligence. Under the protection of influential persons in the state, he advanced rapidly in position, and ultimately succeeded in obtaining a government situation. Previous to the year 1816 the inhabitants of Wallachia received their education through the medium of the ancient Greek, as the Hungarians do through that of the Latin; but, as this practice, when too exclusive, is found to be essentially at variance with the proper development of the mental faculties, the brothers Bibesco were sent to Paris, to go through a course of studies more in accordance with the notions that prevail in other parts of Europe. On their return to their own country they were received with marked esteem, on account of their brilliant attainments, and were employed in the public service under Prince Ghika. They have been accused of taking advantage of this unlooked-for kindness, to betray their patrons, and sell their services to the

PRINCE STIRBEY, HOSPODAR OF WALLACHIA.

PRINCE GHIKA, HOSPODAR OF MOLDAVIA.

Russian Consulate-General. It was also asserted in Moldavia, at the time of the occupation of the Principalities in 1848, that it was chiefly through the instrumentality of Barbo Bibesco Stirbey that Russia was enabled to obtain possession of, and carry sway, the archives of the Principalities. However this may be, neither he nor his brother appears to have gained anything by the treachery of which they were accused, as they became successively the victims of Russian policy.

Prince Stirbey, on learning that the Emperor of Russia had accorded to him an annual pension of 1000 ducats on the ground that he had resigned, energetically protested against it; and he has repeated the terms of the letter which he addressed, at the moment of his departure, to the Administrative Council—a letter by which he formally declared that he only went away provisionally, and until he should receive new orders. At the present moment, the Russians treat Moldo Wallachia as a conquered province about to be annexed to their Empire, and exercise all the powers belonging to sovereign authority.

Prince Stirbey has now attained his sixtieth year. He is tall and slender, and in the enjoyment of robust health. His physiognomy bears the traces of a certain *finesse*; but he has not that refinement of manners which distinguishes high society in his native country. The Prince is, at present, a refugee in Vienna.

PRINCE GREGORY GHIKA is descended from twenty-two Royal ancestors, all Sovereigns of Moldavia and Wallachia. He was educated in Germany and France; and it was the liberal ideas which he there imbibed that brought him into collision with the Beys, or Pachas, whom the Porte, on the perfidious suggestion of Russia, had sought, in the "Phanar" of Constantinople, to impose as Governors on the Danubian provinces. In 1849, however, the Porte restored to the Principalities weary of the yoke of what were called the "Beys Phanariotes"—their ancient right of electing a Hospodar from among their native Princes. Gregory Ghika appeared to the Turkish Government the proper person to fill this high office, and the most capable of obliterating from the minds of the Moldavians the remembrance of the preceding Administrations. He was accordingly invested with the Hospodarate, on the detronement of Prince Michael Stourdza in consequence of the events in 1848. Among the other acts of patriotism which he performed, and which reflect so much glory on his administration, may be particularly cited, the establishment of national schools, with the view of reviving the ancient and not defunct spirit of Roumaic nationality. Animated by an ardent patriotism, and sustained by the purest motives, he had often to struggle against deeply-rooted abuses, which he was not always able to overcome. The ominous mission of Prince Menschikoff to Constantinople, and the unmistakeable signs that were the precursors of a Russian occupation of the Principalities, caused him great perplexity and annoyance. His health, at the same time, received a most alarming shock, which was attributed by his friends to the operation of a slow poison. He was forced to resign temporarily his high functions, and retire from the capital. A trial at law ensued, in which were implicated some of the most important personages in the Principality, and which raised a corner of the veil that had hitherto concealed the wounds of his unhappy country. Three months afterwards he returned to his estates, but it was to witness the entry of the Russian troops—an event which he had foreseen at the first outbreak of the differences provoked by Prince Menschikoff. This disguised invasion created insoluble difficulties to Prince Ghika, who, while the acknowledged vassal of the Porte, was forced to remain passive in the face of an armed invasion of the Muscovites. He finally, however, out of respect for the rights of the Sultan, quitted the soil which he could no longer defend. Prince Ghika is at present at Vienna, surrounded by his family and friends The Prince has been twice married His second wife was the daughter of one of those Boyards, who forestalling events by fifty years endeavoured to persuade Napoleon I. to emancipate Moldavia from the unwholesome, if not fatal, protection of the Czars.

Prince Ghika is fifty years of age. He is the very type of Moldavian elegance and courtesy. He dresses in the European style, in common with the principal Boyards of Moldavia and Wallachia. It is only twenty-five years since this custom was first introduced, when the long Oriental robes of the nobility were definitively replaced by military uniforms. Prince Ghika has worn both costumes with equal honour and distinction.

H.M. STEAM-FRIGATE "RETRIBUTION."

THE *Retribution* steam-frigate having been selected to proceed to Sebastopol to demand the release of the British engineers in the service of the Porte, captured by the Russians at the murderous battle of Sinope, is the first ship of the British squadron which may be said to have earned a historic reputation in the affairs now pending in the East. Nor are we surprised at the selection, the Captain, the Hon. J. R. Drummond, being a good linguist, and a man of conciliating manners and admirable tact. It was for these considerations, mainly, that during the summer after the arrival of the Anglo-French fleet at Besika Bay, the *Retribution* was forwarded to Constantinople, whence she afterwards proceeded to Therapia on the Bosphorus, where she remained until despatched on her present important mission.

We have been favoured, by Lieut. Montague O'Reilly, with a correct drawing of this vessel. The *Retribution* (ominous name for Russian ears) was designed by Sir William Symonds, and built at Chatham in 1844. She is about 1641 tons, and 400-horse power; mounts 28 guns of a very persuasive size, and has a crew of 300—officers, men, and boys included; who appear, like all the other ships under the judicious management of Admiral Dundas, desirous to "prove the mettle of their pasture"

H.M. STEAM-FRIGATE, "RETRIBUTION."

MOLLAHS PROCEEDING TO ATTEND A COUNCIL, AT CONSTANTINOPLE.

MOLLAHS PROCEEDING TO COUNCIL.

ULEMA is a collective name of the learned men in Turkey, who form a corporation, organised as early as the time of Mahomed II., the conqueror of Constantinople. Although, strictly, the term (wise men) is of very wide acceptation, including priests, jurists, and divines of all sorts, as well as the monks, in the sense of the organisation spoken of, it comprehends only the professors of divinity, of law, and of some other sciences, or, rather, of the Koran, which, with the Mahomedan, is the fountain of all knowledge. No one can become a professor (*mudterri*) or judge (*kadi*) except a member of the Ulema. The learned individuals comprising the Ulema are called *Mollahs*. The chief of the Ulema body is called the Mufti, or Cheik Islam, and his political power is very great—greater even than that of the Grand Vizier, inasmuch as a deliberative authority is superior to one merely administrative. No great measure of state policy can be undertaken without his sanction, which he gives as the head of the Council of the Ulema, which he assembles for the purpose of deliberation whenever he sees occasion, as has occurred once or twice during the important negotiations which have occupied the attention of the Divan during the last six or eight months.

SKETCH IN THE STREETS OF CONSTANTINOPLE.

AMONGST other sketches which we have recently received from our artist at Constantinople, is the spirited street-scene which we engrave. In the front are women shopping; on the left is a fair specimen of a small grocery, or tobacco-shop; and in the rear is a Pacha mounted on horseback, and near him a water-carrier plying lustily at his trade. The whole is a scene of bustling untidy confusion, which can be met with nowhere else than in an Oriental city.

The ladies being the prominent features in our present sketch, we will take the opportunity of making a few observations upon their *toilette de promenade*.

The dress of the Turkish females, when going abroad, is by no means becoming; indeed, it is not intended to be so—all the personal attractions of the fair creatures being reserved for home. When they do go forth to shop, or to mosque, or to the bath, they all wear one common shapeless costume; the chief component parts of which are a pair of full—immensely full—trousers, a jacket with large sleeves, a white muslin handkerchief round the throat; and over the back a square and scanty cloak, called the *feridjee*, so ingeniously constructed as entirely to conceal the figure of the wearer, making young and old look all shapeless alike. The colour of the cloak and trousers varies; but for the former, bright greens, oranges, browns, and russet reds, seem to prevail. The face, all but the eyes, is ingeniously concealed by means of a double veil of muslin—the *yashmac*—the upper part of which is bound across the forehead, the under part resting on the nose and under the chin. These muslin helmets are sometimes very thin—the old women very often sporting the thinnest—revealing the complexion and features through them. But the effect is always disagreeable: the nose being depressed and the mouth compressed in a way to distort and harden the expression. When the wearer wants to eat, drink, or smoke, the chin-covering is drawn down. Stockings being unknown here, the feet are invariably plunged into bright yellow shapeless boots, made without soles, which come loosely up a little above the ancles; and over these a sort of goloshe, consisting of a thick sole, with a small tip of yellow leather in front, to balance it on the toe: all this leads to that slovenly slip-shod gait which, to the eye of the European, is anything but agreeable. In very muddy times, such as that which prevailed when our artist took his sketch, a very high pair of pattens are worn, formed of wood, with loop of tin (not leather), to hold the foot: the same description of pattens are also used in the baths, to paddle about the wet floor in.

SKETCH IN THE STREETS OF CONSTANTINOPLE

ARMY CLOTHING.

A writer, signing himself "a Clothing Colonel," has objected to an article which appeared in the ILLUSTRATED LONDON NEWS of the 17th of December last, under the above head. He asserts that the statements therein made are incorrect; affirming that the profit accruing to colonels of regiments at home from "off-reckonings" is generally less than £600 per annum, instead of being £929. It may be remembered that the estimate published in this Journal had reference to a battalion consisting of eight hundred rank and file, with the due proportion of sergeants, buglers, or drummers. These furnished a total of nine hundred and four men. At the present period, the establishment is fixed at nine hundred and thirteen, being an increase of ten privates, and decrease of one bugler or drummer, thereby making an augmentation of nine soldiers to a corps. This addition gives the Colonel £932 4s. 10d., instead of £929 1s. 4d.

The previous article specified that the saving on clothing was not all clear gain. From that amount the accoutrements must be furnished, the cost being deducted from the emolument reaped by the issue of inferior coatees and trousers. Should the average cost of accoutrements and incidental expenses on the clothing amount to £132 4s. 10d. annually, which would be amply sufficient, there *must* be a saving of at least £800 to the General. Were the sum doubled in favour of the gallant officers who have devoted the greater part both of fortune and existence in the service of their country, they would be far from being too well remunerated. But such recompense should not be bestowed at the expense of the soldier's comfort. Misappropriation of money voted by Parliament for the specific purpose of clothing the British infantry, attaches a stigma to those whose political pusillanimity, when in office, negatives their probable wish to be just.

The clothing-warrant states, that when the articles are not issued, compensation in lieu thereof is to be paid. The sergeants receive £3; and other ranks, £1 13s. It is proverbially known throughout the army that, when given in kind, the cost does not exceed these sums respectively. The said clothing consists of boots, trousers, coatee, and shako. The two first are served out from the regimental store for *less* than compensation price; and the others, although not issued as store articles, can be obtained, if required, at the regulated sums: consequently, whether issued in kind, or paid for in compensation to the soldier, the cost is no greater to the colonel.

That the perquisites of army clothiers cannot be trivial may be surmised, when the names of between forty and fifty of that trade may be counted in the "London Directory." Should the colonel of a regiment offer the clothing of his battalion at the remunerative price of £1 for each private, exclusive of the other ranks, there is little doubt but that the proposal would readily be entertained; if, indeed, such an arrangement does not, in many instances, now exist. The whole system pursued, as respects the clothing of the British infantry of the line, is bad. The colonel engages a contractor, who employs a number of persons, principally women, to execute the work. All these must, of course, share in the profits, but the females less than any, while the non-commissioned officers and privates are the sufferers.

The Board of Ordnance clothe their branch of the service under better management. It is done on the principle of close contract. The colonels of the Royal Artillery and Royal Engineers in no degree interfere with the details; *that* duty devolves exclusively on the Board. The clothing is supplied direct by the Ordnance, without passing through any intermediate channel. The texture of the cloth, together with the sewing, is incomparably superior to that worn by the infantry of the line. A colonel of the Royal Engineers has a fixed pay of £1000; the officer of corresponding rank in the Royal Artillery, £1003, and the colonel commandant of the Brigade of Horse Artillery £1095. These statements are authenticated by the Blue Book on Ordnance Expenditure.

Why is not a general officer holding an appointment as colonel of a battalion of the line similarly placed?

As an instance of the superiority of Ordnance clothing—always excepting the great coats served out to the line—men joining the Royal Newfoundland Companies furnish an admirable case in point. This corps is recruited by volunteers serving in different battalions in the continental provinces of North America. On first joining, they, of course, appear in the dress of the regiments they have recently quitted. An opportunity thus offers for examining the quality of the material in which each man is clad. The inferiority of that worn by soldiers from the line is too palpably obvious to admit comparison with the regimentals of the Royal Artillery, and others not clothed by the colonels. The uniforms for colonial corps, not having colonel-commandants, are supplied by the Ordnance. The Admiralty furnish that of the Royal Marines; and it is more ample, and better in every respect than is the case with the line. The cloth of the infantry coatee is not inaptly designated by the soldiers as *bull's-wool*.

Much more could be advanced corroborative of the inefficiency of the costume now forced upon the infantry; but the limits of a newspaper prohibit a prolonged disquisition on the subject. It may, however, be hoped that sufficient has been pointed out, to banish all doubt as to the desirability of a speedy reform.

MURDER OF A BRITISH OFFICER.—The *Volcano* steam-vessel, commander Robert Coote, has brought home intelligence of the murder of Mr. Carr, a fine young officer, who was turned over from the *Prometheus* steam-sloop to the *Myrmidon* steam-vessel, still serving on the west coast of Africa. The murder was perpetrated on the 26th of November, at an island called Kanzabbe, one of the Bijoogs group. Mr. Carr had landed on some rocks, intending to spear fish. He had not been there ten minutes when he was fired at from the bush, upon which he either tumbled or jumped into the sea. The savages instantly made their appearance, and one of them ran down and stood on the rocks, where he watched till Carr rose, the impression on board the steamer being that he had dived, and the African then shot him through the head. The whole transaction occupied so short a time, that as a gun was fired from the ship the murderer retreated into the bush again. A boat was instantly sent to the rocks, but the tide had flowed so rapidly that no traces of Mr. Carr's body could be seen. On the following day the body was found, when it was ascertained that the first shot had hit him in the abdomen, and would of itself have caused death. The second shot went through the head. The officers and crew of the *Myrmidon* were burning for revenge for the foul and unmanned murder, but they could do nothing, as there are no towns near the sea, and to advance into a country thickly inhabited with armed men, was not warranted with the small disposable force serving in the *Myrmidon*.

The Polish General Wisowski has arrived at Constantinople. He commanded a Polish legion during the war in Hungary.

THE COMMAND OF THE ARMY.

(From a Military Correspondent.)

Lord Raglan is quoted as the probable successor to Viscount Hardinge. The distinguished services of the present Master-General of the Ordnance are well known; and his ready attention to all matters brought before him when Military Secretary are proverbial. Left to his own discretion, just and uncompromising decisions were invariably awarded. But, unfortunately, such power was withdrawn during the recent period of the Duke of Wellington's life. The late Commander-in-Chief scouted the possibility of a soldier becoming old; and, acting on that infatuation, nominated men to responsible posts in consequence of having known them when in the zenith of his unparalleled career.

The results of such hallucination are yet palpable. Bitter injury has been inflicted by obstinate pertinacity in checking inquiry into grievous wrongs. Adherence to prejudices which no argument could shake, cannot be laid to the discredit of others compelled to bow to unjustifiable dictation; yet many have real cause to lament such flagrant malversation of power.

From boyhood Lord Raglan has well served his country, both in the office and the field. Like the present chief of the British army, he has bled and suffered mutilation in an honourable cause; and all would rejoice at the announcement of benefit being awarded to so gallant a soldier. Energetic and inured to the fatigue of business, time, nevertheless, *will* assert his unconquerable right. Lapse of years, in the estimation of England's greatest captain, dwindled into nothingness as the vivid remembrance of heroism and daring cast their flickering gleams across the warrior's mind; but what human will can check abridgment either of mental or corporeal power after a prolonged sojourn upon earth? Honour to him whose grey hairs are surrounded with wreaths of unfading laurel; but wherefore oppress a green old age with cares and disquietude of office, when younger and competent commanders are available?

The Master-General of the Ordnance has himself promulgated a decision that no man is competent for the appointment of barrack-master when past the age of forty-five. Military men rully understand the routine of duty appertaining to that branch of the service! If the average rate of intellectual and physical power is justly computed, it may be asked, by what extraordinary devion from the laws of nature an officer sixty-six years old can perform the laborious functions of Master-General? In the former position superintendence is restricted to certain buildings within a limited district; the latter involves responsibility and command over upwards of 160 barrack-masters, above 80 storekeepers in charge; efficiency of the Royal Artillery in every branch and department; together with innumerable adjuncts—for all of which the Master-General is accountable. A thorough knowledge of such particular demands unceasing vigilance and attention. That to the uninitiated may appear inconsistent, but soldiers are soon made acquainted with such incongruities.

During the administration of his Royal Highness the late Duke of York, the British Army derived immense benefit by the untiring zeal and active beneficence prominent in every action of that illustrious Prince. As a member of the Royal family, the Duke possessed an influence which no subject of inferior rank could attain. Such command should ever be held by some individual allied by blood to the Sovereign of the realm. Happily, no impediment to so desirable an arrangement now exists, and the post thus filled becomes unfettered by importunities of relatives, from whose unceasing persecutions other commanders too frequently escape by ill-judged concession.

The Duke of Cambridge has made the profession of arms his study. His Royal Highness is devoted to the service, and has assiduously laboured to master all the details. The Duke's military knowledge is not confined to the showy evolutions of a field-day or review. At the commencement of his career he submitted to precisely the same routine of drill marked out for the private soldier. Instead of at once leaping to command, he practically learnt the first rudiments; and, in due course, passed through the various gradations, until competent to work a battalion, and from that a brigade and division. During the period alluded to, fortification and gunnery occupied much of his time. A similar course was afterwards pursued in the cavalry, and there are few, if any, general officers so conversant with the minutiæ of each branch of the service, as is the Duke of Cambridge. Nothing relating to the soldier's efficiency and comfort escapes his notice. His Royal Highness's inspection of corps is not a mere ceremony resulting in nothing. His intimate knowledge of even the most trivial matters has oftimes elicited the admiration of both officers and men. Zealous in the discharge of his military duties, unsurpassed in attention to business, courteous to all, highly popular with the army, and gifted with that rare blessing, sound common sense, the appointment of the Duke of Cambridge as General Commanding-in-Chief, would gladly be received by the nation.

The advantage of age over youth has been advanced in opposition to this desirable end. But, those who argue on such untenable ground, should bear in mind that the Duke of Wellington was one year younger than the Duke of Cambridge now is, when the battle of Assaye was won. Napoleon was not thirty-two at Marengo. The most distinguished chiefs who served in the Peninsula reaped their laurels when under forty.

Of the thirty-eight Generals whose achievements yet grace the "Army List," the junior entered the service in 1793; and among the Lieutenant-Generals, none—save an isolated instance—commenced a military career more recently than 1806.

Should her Majesty be pleased to confer the highest appointment in the British army, when next vacant, upon the Duke of Cambridge, the service may hope for speedy emancipation from the thraldom of "ancient custom," having nothing to recommend its perpetuity beyond a leaning towards what was once deemed good, before modern improvement pointed out the fallacy of error. Interminable hesitation would then give place to vigorous decision. Long cherished abuses would be rooted out, and in brief space the advantage of a thorough alteration in system would become manifest when compared with the vacillation of the present day.

ENLARGEMENT OF THE WELLINGTON BARRACKS.—A number of men are engaged in taking down several houses in the rear of the Wellington Barracks, St. James's park, for the purpose of extending its size, and of erecting additional commodious barracks. The necessity for a new barrack has arisen in consequence of the Government being compelled to give up the Portman Barracks, the property of Lord Portman, as the Lords-ship does not intend to renew the lease, which has recently expired, so that the guards which used to occupy it will be stationed at the Wellington Barracks.

THE MAINE LIQUOR LAW.—The Hon. Neal Dow, the originator of the Maine law, with reference to elections in America, in a recent letter says:—"We have recently had very important elections in this county, the point the Maine law, which resulted gloriously. In Baltimore, fourth city of the union, entire temperance ticket elected; in Philadelphia, second city, seven Maine-law men out of eleven, whole number; New York, first city, six Maine-law men; and through the state two to one. In Boston, third city, the rum party, hitherto invincible, has been beaten terribly suffering a net loss of 6000 votes! Everywhere our cause seems to be in the ascendant."

DO RATS LEAVE DANGEROUS PLACES?—A statement made by the mate of the schooner *Dreadnop*, of Whitby, which was wrecked at Arbroath on Wednesday week, would seem to answer the above question in the affirmative. He says that the vessel had for a long time been infested with thousands of rats; but on the night before they left Hartlepool, on the fatal voyage at the vermin disappeared, not a rat being seen where a day before they might have been counted by the dozen.—*Glasgow Mail.*

THE CORPORATION OF LONDON.—ITS DEFENCE.

The defence of the Corporation of London, as elaborated by its ingenious officers, and read by its able Recorder, is one of those documents which clever people occasionally produce, not for the purpose of elucidation, but with the desire to mystify the reader. Length is mistaken for learning, and obscurity for profound reasonings. Before referring to this extraordinary production, we thought it advisable to learn what the special points were which required the support of evidence to bring them more distinctly before the mental eye of the public. We have waded through the prolix statements and antiquarian evidence of Mr. Serjeant Merewether, the Town-clerk, without obtaining much information on the real question at issue. After his declaration that the Municipal Reform Bill was, in his judgment, one of the most unconstitutional measures ever sanctioned by Parliament, we could not expect any very satisfactory opinion to come from him. He wound up his day's examination by giving utterance to the extraordinary notion that, even in its numbers, the Corporation was almost perfect—from which we gather that the machine is so exquisitely balanced and arranged in all its parts that any addition to, or reduction in, its numbers would endanger the entire system. Mr. Pearson, the City Solicitor, who in former days was the foremost reformer of abuses, was expected to declare that he was the foremost reformer of abuses, was expected to declare that he was the foremost reformer of abuses, was expected to declare that he

evil remains. The great facts brought to view, in all their rugged proportions, stand up, in the sunlight of unimpeachable testimony, undisputed, and, we presume, indisputable. After the evidence given by Mr. Scott, the best course the Corporation could have taken would have been to throw up their defence and appeal to the tender mercies of the Commissioners; to acknowledge the *black mail* of the coal-tax, abolish their tolls, pull down Temple-bar, promise new streets and more bridges, and to cover themselves, like repentant sinners, in sackcloth and ashes. No antagonistic evidence has done them half the mischief which their friendly evidence has done: some admit certain slight defects; others can see no defect; while some throw light on matters "confidential," secret, dark, and midnight doings; and have so convinced the public mind of the mischievous tendency of corporate doings, that nothing but a thorough purification will satisfy the imperative demand for reform.

It is amusing to see how the defenders pounce upon a piece of well-doing which all acknowledge, and how much they make of it. What a flourish of trumpets there is in connection with the City School. That establishment has been highly commended, but they must also land it. There is an old proverb about "self praise" which applies here with more than ordinary force. It would have been more discreet in the Corporation to have confined itself to the accusations. When did it discover that the bequest of John Carpenter was not properly applied? Had Lord Brougham's inquiry into charities no moving influence? How long was the letter kept and the spirit broken? See, also, how the Corporation defenders take credit for the liberality and generous sympathy of others. The philanthropy of Mr. Beaufoy, the spirit of the *Times*, the generosity of Alderman Salomons—who have established scholarships in the City of London School—are introduced in the defence as reflecting credit on the Corporation. Such a school does reflect credit, and exercises a beneficial influence on the minds and morals of the youth of the City; but, as the possession of some virtues cannot be held as any excuse for the commission of many sins, neither can this single bright speck in the Corporation cover nor excuse the plague-spots that exist.

THE SUPPRESSED PAMPHLET.

In connection with the charges brought against Prince Albert, for alleged interference with the business of the Foreign office, frequent allusions have been made to a certain pamphlet, which was said to contain the most undeniable evidence of his Royal Highness's guilt. Mr. William Coningham, of Brighton, in a letter to a morning paper, which so taken the lead in filling the public mind with all kinds of rumours of the subject, described the pamphlet as containing "documentary evidence of the Prince's unconstitutional interference in the foreign affairs of Great Britain; and the statements contained in the celebrated letter signed M.P., are based upon it, or upon other equally incontrovertible data." The pamphlet was further said to have been written at the request of Lord Palmerston, who had furnished the materials on which it was founded. As this appeared to involve Lord Palmerston in the matter, a semi-official statement on the subject appeared in the *Morning Post* of Monday, giving the following explanation of his Lordship's connection with the affair:—

We believe the simple truth to have been that, shortly after Lord Palmerston's removal from office, in December, 1851, there were shown to him, while at his seat in Hampshire, the proof-sheets of a pamphlet written with friendly intentions towards him, and containing the writer's views on the subject of his Lordship's recent removal from office; and he was told that the pamphlet was to be published in London the next morning. We believe that he immediately, and without communication with any other person, expressed a wish that the pamphlet should not be published, as being desirous that the matters to which it related should stand over for discussion and explanation when Parliament met, and the pamphlet, accordingly, was not published. So far, Mr. Coningham has been rightly informed; but he has been entirely misinformed as to the supposed communication of documents by Lord Palmerston to a Brother, and by the bearer to the writer of the pamphlet. No such documents were communicated; for the most conclusive of reasons, namely, that none such existed.

The whole of the pamphlet entitled "Lord Palmerston, What Has He Done?" has been published in the *Times*, prefaced by the following letter from the author. So far from containing documentary evidence in proof of the charges, it consists entirely—or, at least, mainly—of an elaborate attack upon Lord John Russell, for having turned out Lord Palmerston to make room for Lord Granville, for the mere purpose of pleasing foreign Governments:—

TO THE EDITOR OF THE "TIMES."

SIR,—When Lord Palmerston suppressed the publication in 1852 of the accompanying pamphlet, he was desirous that the vindication of his conduct should be heard in the House of Commons from his own lips, and not out of doors from the pen of any of his friends. The reason for suppression no longer exists, and I therefore beg you to be good enough, in justice to Lord Palmerston, and to his Royal Highness Prince Albert, whose name has been most unwarrantably introduced in connexion with the pamphlet, to give at once insertion to the entire document in your columns.

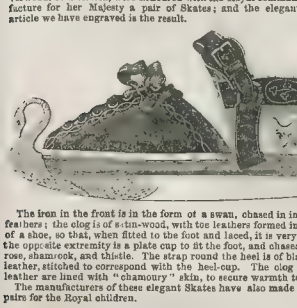
I am most desirous to say that the pamphlet was not written at the instigation of Lord Palmerston, and that his Lordship did not know of its existence until, on its completion, I thought it my duty to ask his permission for publication, when his Lordship at once begged that it might be suppressed. I am, sir, your obedient servant,

THE AUTHOR OF "PALMERSTON, WHAT HAS HE DONE?"

London, Jan. 23.

HER MAJESTY'S SKATES.

DURING the recent severe weather, Messrs. Marsden Brothers, and Silverwood, of Sheffield, were honoured with the Royal command to manufacture for her Majesty a pair of Skates; and the elegantly-finished article we have engraved is the result.



The iron in the front is in the form of a swan, chased in imitation of feathers; the clog is of satin-wood, with toe leathers formed in the shape of a shoe, so that, when fitted to the foot and laced, it is very firm. At the opposite extremity is a plate cup to fit the foot, and chased with the rose, shamrock, and thistle. The strap round the heel is of black patent leather, stitched to correspond with the heel-cup. The clog and front leather are lined with "chamoury" skin, to secure warmth to the foot.

The manufacturers of these elegant Skates have also made four other pairs for the Royal children.

LONDON SOCIETY FOR TEACHING THE BLIND TO READ.—On Tuesday a special general meeting of the friends of this charity was held at the asylum, Avenue-road, St. John's-wood, for the purpose of transacting the usual business of the school. The report stated that the friends of the society would rejoice to hear that their essential object—viz., the completion of the Bible on Lucas's system—had now been accomplished, and also that Mr. Wood, the master, had adapted the characters to musical notation. A wonderful proof of the facility with which Lucas's system can be read is afforded in the history of a clergyman, who having been, twelve years since, deprived of sight, attempted in vain to read by the common alphabetic characters; but, having acquired a knowledge of the stenographic system, now reads with such fluency as to perform his ministerial duties without any assistance—conducting two whole services every Sunday with the same ease and comfort as if he were not deprived of sight. The completion of the embossed Bible is to him a peculiar boon, not only by facilitating his private study, but also by enabling him to read in public the appropriate Church lessons throughout the year. The report concluded with an appeal to the public for support

REFORM MEETING AT MANCHESTER.

The annual meeting of Lancashire Liberals, comprising the members for the two divisions of the county, and most of those for the boroughs, with their influential supporters and friends, was held at the Albion Hotel, Manchester, on Tuesday evening. The ordinary rule has been to hold the annual meeting on a large scale, in the Free-trade Hall; but that building having been taken down, and no public demonstration was given up, and the meeting confined to 200 persons, instead of twenty times that number. Among those present were—Mr. Cobden, M.P.; the Right Hon. T. M. Gibson, M.P.; Mr. John Bright, M.P.; Mr. John Cheetham, M.P.; Mr. William Brown, M.P.; Mr. James Heywood, M.P.; Mr. T. Barnes, M.P.; Mr. Joseph Crook, M.P.; Mr. Pilkington, M.P.; Mr. Montague Fielden, M.P.; Mr. Miall, M.P.; Mr. James Kershaw, M.P.; Mr. George Hadfield, M.P.; Mr. F. Crossley, M.P.; Mr. Lawrence Heyworth, M.P.; and most of the active members of the late Anti-Corn-law League. The chief speakers were Mr. Milner Gibson, Mr. Cobden, and Mr. Bright; but the speech of the evening was that of Mr. Cobden. The first portion of it was devoted to an exposition of his views on the suffrage question. An attempt had been made to show that the working classes were not fit for the suffrage, because "a few thousands of lads and lasses have gone wrong on a question of political economy;" but, as he went on to show the blunder they had committed was not much greater than those which have been often made by the wealthier classes. He was in favour of an extension of the suffrage, but would not say to what extent. All he would say on that point was, that if the Government does not enlarge our electoral pale, their scheme will be received with dissatisfaction by the great body of the people. He was in favour of triennial Parliaments, and strongly in favour of the ballot. Having disposed of reform, he proceeded to the Eastern question. He referred to his first appearance as a pamphleteer in 1835, when Government increased our army 6000 men, in consequence of a cry for war with Russia. He held the fame opinions then as he does now, and yet he was not stigmatised then as an enemy to the interests of England. So far from that having been the case, "whatever notoriety he had acquired in the world not call it fame—was entirely founded on the production of those pamphlets." The sum and substance of what they contained, he went on to say, was simply this—

Those pamphlets, from beginning to end, were in this sense: don't go to war to maintain the independence and integrity of Turkey; America is the only rival you have to fear in England; barbarism won't overturn civilisation in these days. With the improvement in mechanics, and the discovery of gunpowder, there will never be another irruption of the Goths. My arguments went to try to show that Turkey was a decaying country for 150 years; and, by all the authorities that could be quoted, was pronounced a declining and a decaying country. Well, that crisis of the Eastern question blew over. Now we have precisely the same thing over again—here are the same instruments at work, the same arguments used. Now we are called on again, as we were in 1835, to maintain the integrity and independence of the Turkish empire; but we are called upon to do more—we are called upon especially to make war with Russia. But these are two distinct questions. Your hostility to Russia, and your determination to keep Russia within her present boundaries, is a distinct question from that whether you will maintain Turkey and the Mahometans as a permanent rule in Europe.

He could not see any just cause for going to war with Russia. There was no antagonism in England to Russia—indeed, there was no place in Europe where Englishmen exercised more social sway than they did there. Were he asked his opinion as to the aggression upon Turkey, he would admit that it was unjust and unwise; but if he were asked to go further, and interfere on behalf of Turkey, he must then turn round and ask why England is to be the policeman of the world. If we meddle with Russia for its aggression upon Turkey, why do we not meddle with other nations when they commit outrages upon their neighbours? We ought to follow some distinct principle; and, above all, looking to India, we ought to be sure that we have not done wrong ourselves.

But you are afraid that, if Russia goes to Turkey and gets possession of Constantinople, he will become a great maritime power, will absorb all the influence of the Mediterranean, and become dangerous to the influence of England. Very well; how will Russia, when she gets possession of Constantinople, get a fleet? Can any power in Constantinople itself will not give that power, or what have the Turks been doing for four hundred years there? How is it that, in possession of that which you say is so fine a site, the chosen seat of empire, that country has risen to no favourable decrepitude, not capable of protecting its own frontiers—not even able to defend itself against its own satraps. It is not by getting possession of Constantinople that Russia will become the world's rival in power and influence, and a great maritime power; but it is by improving her commerce that she will increase her power, and by that process maintain her industry. Ships will not sail ready built, and be launched, down the Volga and the Danube, because Russia possesses those territories. She must make a merchant navy, as all other countries have done—as the Venetians did, as the Dutch have done, as the English have done—by the prices of labour and industry; by the accumulation of wealth through commercial enterprise, and by the skill and intelligence of her artisans. Well, but before she has those she has ceased to be this barbarous power that you are afraid of, and I defy her to do this, to accumulate wealth, to accumulate power, because she has got possession of Constantinople; it must be by peaceful commercial relations with every other country of the world. How has America become a great maritime country? By being our greatest customer and rival, and because you find her ships in your ports more than any other—half as much almost as all the others. The same process must go on, and when Russia has arrived at this state of civilisation, she will have given bonds for a peaceable career, as America has. She will have something at home that will be a hostage to the civilised world of her peaceable intentions. Therefore, I put aside altogether the idea that a country is to become rich, and great, and powerful, and still remain a barbarous and warlike nation.

A great deal of nonsense had been written and spoken about this Eastern question. We were not bound by any treaty to fight for Turkey. Lord Aberdeen had said very emphatically in the House of Lords that we have no treaty to bind us to maintain the integrity of Turkey. The quarrel between Russia and that country was an old one, it had been going on for 150 years, and now we were asked to fight in future for the defence of Mahomedanism in Europe. In Turkey, in Servia, and the Principalities, he contended that the sympathies of the people are in favour of Russia.

As to the alliance between France and England, he was much afraid of it. No one would suppose that he wished to see an alienation between France and England, but he did not think such alliances were quite safe.

He concluded with a high eulogium on the conduct of the Earl of Aberdeen throughout the whole of the negotiations, the crowning motive of his life has been "to prevent this country from falling into a European war."

Lord Aberdeen remembers that act, that at the outbreak of the last great French war in 1793, we had every Government in Europe with us, or sympathising with us; and that ten years afterwards they were almost all against us. And he knows that the very attitudes which we assumed to our allies on the Continent, were converted into ammunition and accoutrements, and used in opposition to ourselves. Lord Aberdeen knows that when we have assisted for six or twelve months the only people who now cry out for war, will be the first to turn round and denounce him for having brought suffering and distress amongst them. He knows that if he fires a hostile shot against Russia, it ceases to be a war between two semi-barbarians in an almost inaccessible sea. The conflict assumes European dimensions, and you will have confusion, insurrection, and probably war, throughout a great part of Europe. To dispel these are the reflections which sway the mind of Lord Aberdeen, and I am sure there is no more honourable position that a man can be placed in than to be denounced and railed at, and caricatured, for having endeavoured to preserve this great country, and all its mighty influences, from the consequences of a war

Mr. Bright spoke also at great length against the anti-Russian feeling which prevails. According to him, the danger to this country, from the actual conquest of Constantinople, by Russia, is "of the most dim, vague, remote, and doubtful character." Had we not meddled in the matter, beyond counselling, advising, and remonstrating, he believed that Russia would have adopted a moderate course, "because great nations and absolute Governments do not like to be forced to do anything."

Before the meeting broke up, it was resolved that the Liberal members present should select a Committee, who should consider themselves a committee to secure a proper extension of the suffrage.

FALSE DATES IN WATERMARKS OF PAPERS.—Lately, in cutting up some paper for photographic purposes, I found in one and the same quire two sheets without any mark, two of the date 1851, nine bearing the date 1853, and the remaining eleven were 1854. I can imagine a case might occur in which the authenticity of a document might be much questioned were it dated 1853, when the paper would be presumed not to have been made until a year afterwards. I think this is worth making a note of, not only by lawyers, but those interested in historical documents. —From *Notes and Queries*.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

THE principal sale of the London season, as far as English pictures are concerned, will be that of the late Lord Charles Townshend. The sale, it is said, will not include the once famous Rainham Collection, containing the celebrated "Belisarius of Salvator Rosa," and the highly-interesting series of full-length portraits of English soldiers, who served in the Low Country wars under Sir Francis and Sir Horace Vere. We are glad to hear this, for the Rainham series is the earliest existing collection of English portraits made on the principle of the Waterloo Gallery at Windsor. The Rainham portraits are highly interesting, and though hung, as they are at present, in ill-lighted rooms, they carry the spectator back to times when the pike was trailed by English soldiers in the true spirit of chivalry. At Lord Charles's sale, the leading attractions will be the charming portrait of "Mrs. Braddyll," by Sir Joshua, so exquisitely engraved by Samuel Cousins; and the "Letter Writer," by Wilkie (the last great work of its painter, bought by Lord Charles, at the Wilkie sale (though unfinished), for £446 5s.

Critics of name differ (when do they not differ?) about the merits and proposed site of Marochetti's statue of Richard Cœur de Lion, recently—as the readers of our News will remember—temporarily erected in front of (in our time) the old entrance to Westminster hall. Some exclaim that the pedestal is too low; some, that the site is bad; some, that the hero hardly deserves a statue; some, that the statue itself is not artistic: while others assert (with equal loudness) that the site is excellent, the man essentially a hero, and the statue highly artistic. Cabmen who wait for fares in front of the statue are equally at variance about its merits. The four-wheelers, we observed, are against it, as too energetic; while the Hansoms are unanimous in its favour. Most of our readers will recollect the statue: it stood at the west end of the Great Exhibition Palace, in Hyde-park, as if courting admittance, and when there, seen against the clear blue sky, looked very well indeed. We confess, however, that now it is not seen to advantage. Its present must not be its permanent site. One old lady's remark struck us as particularly good. She had been at George the Fourth's coronation, and thought (not unnaturally) that the statue was put up in honour of Dymock, the King's champion. We must confess that the position of the statue leads naturally to such a notion. Richard seems challenging all deniers of some imaginary right. There is more of Scrivelsby than the Crusade about this, in other respects, clever statue.

Who would wish to be an architect? What father would apprentice his son to such a craft? Truly it is a money-making concern, but we are speaking of a father anxious for the after-reputation of his child. Paint a clever picture, and it must depend for European reputation on the engraver; build a fine house (even such as Mr. Ruskin will admire), and the love of change or Change-alley may, and will, before many years are over, doom it to destruction. Architects seem to be the most unfeeling set of Christians, one to another, that we can readily call to mind. How greedily they prey upon one another. Has not Sir Charles Barry, at the Treasury, re-faced and eclipsed Sir John Soane? has not Sydney Smirke, at the British Museum, thrown even his brother into the shade, to walk himself (not badly, we own)? and what do we now see? Here in the old Carlton Club, scarce a quarter of a century old, gutted at the present moment—a mere carcase—waiting for the magic wand of Sydney Smirke, assisted by his labourers to become a mere nothing. The Carlton front was long one of the well-known stuccoed faces of Pall-mall. It is no longer to be so. We are now to have Sansovina, and not Sir Robert Smirke—a new and elevated Carlton, instead of the old, dowdy, though not unhandsome, building.

What strange alterations have we not seen in sites!

Where's Troy? and where's the Maypole in the Strand? How unlike Pall-mall proper (of 1806, before Winsor lighted it with gas) is Pall-mall of 1854, with gas and clubs, and scarce a vestige of its former self remaining. The only attractive feature in Piccadilly is about to be removed. Who has not seen the advertisement announcing the sale of Burlington House? Yes—one of the finest buildings in London, standing on one of the first sites in London, is doomed to destruction. The temptation is too great—money is about to demolish the best example of the genius and munificence of the Earl to whom Pope addressed his noble epistle on "Taste." Pope had seen Canons rise and fall (a palace in a wilderness—a laboured quarry above ground), but how little did he foresee that the fine mansion in Piccadilly, which the then Vitruvius had erected, would, long before its stones were showing decay, or its bricks had become unset, be doomed to the hammer of the auctioneer. As much, we hear, as £180,000 have been refused for Burlington House, and as much as £250,000 are asked. Several amphitheatre managers are looking longingly at the site, and with their hands in their pockets; but the sum asked is too large. If London is thus marching westward, we shall have the Haymarket some day in clover; and "laughing Ceres" will reassume the ground on which Burlington House now stands, so enviably, and at so high a price.

The trustees of the British Museum have, we are told, just resorted to the nation a very desirable acquisition to its many manuscript treasures. We allude to the papers and correspondence of Sir Hudson Lowe during his service at St. Helena; Governor of that island, and the English officer in charge of Napoleon. The sons of Sir Hudson have been naturally most desirous to have their father's papers deposited in some safe and accessible quarter. Where, then, they are said to have asked themselves, could they be placed to greater advantage than in the British Museum? Large sums, we believe, have been offered for this series of papers by known and rich collectors; but to bury their father's papers has not been the object of the sons of Sir Hudson Lowe; and the "Lowe Papers" have, consequently, been secured to the nation on, as we understand, very reasonable terms. Sir Frederick Madden is not so un-alive to the advantage of securing contemporary papers as some clamourists would lead us to believe. The great secret of cheap buying is to buy in advance. Had some Sir Frederick Madden, of 1660, secured the papers of Cromwell or of Shakspeare, what treasures would he not have obtained for all ages! How many false readings would he not have overthrown? how many false readings would he not have stifled (to our advantage) in their first existence?

The Athenæum is still a literary club; and the Parthenon and the Erechtheum are said to be junior branches of the parent stock. The old tree still flourishes, but the limbs are not alive. The parent club has not vitality enough for two branches; so the two branches have concentrated their strength into, what we are told will be, a noble limb. On the 1st of February the Erechtheum ceases to exist, and what remains of her crew are carried over—not in distress, however—to the apartments of the Parthenon. The two clubs are to be rolled into one; but not without some stipulation on the part of the Erechtheum members they carry their cook with them. We do not regret the stipulation—it was in every respect a wise one.

Mr. Dickens is to commence his new story, or, at least, a new story in his highly-popular periodical, "Household Words." We are not sorry to hear this, though we should feel a great regret, in common with thousands, should Mr. Dickens allow the year to pass by without giving us some numbers of a new work between those two green leaves, for which we have been taught to look with a continued eagerness.

Men interested in literature are observing with pleasure that the *Quarterly Review* has recently resumed a more literary character; that it is more itself again. The present number supports its old literary feature. The article on Gray and his works is evidently written by one who is well-up in his subject, and, what is more, can write. How often is knowledge rendered comparatively useless from want of skill in setting it forth, and making it attractive?

SKETCHES FROM KALAFAT AND WIDDIN.

THE WAR ON THE DANUBE.

THE BATTLES OF KALAFAT AND CITATE.

(From our Special Correspondent)

WIDDIN, January 6, 1854.

THE turbid waters of the Danube were driving vast floes of ice on the 1st of January, 1854, as I obtained permission to leave the fortress of

HIS EXCELLENCY SAMI PACHA, GOVERNOR OF WIDDIN.

Widdin, and seek in a light bark the frozen and snow-clad hills of Kalafat. The roaring of the ice-fields, as they crunched together, and strove against each other in the tide; the noise they made, as they fringed their sides with heap on heap of icy fragments, rung sharp upon the ear; whilst the bubbling of the rushing water, compressed and hindered in its course, kept up a species of accompaniment to the fantastic rending of the glittering masses. The current of the Danube is so strong that the water cannot freeze; but the stream drives fields of ice from either shore. In their descent, these masses meet and rend each other; and, on the banks, they rear large blocks and strange festoons of icicles, which, as each field goes by, are added to and strengthened, till the stream is narrowed to its smallest limits. Then the ice-fields cease to flow upon the surface. They dive and rise again, and whirl in curious eddies till the stream is full, and then a pause takes place. The frozen pieces come together, and refuse to part; gradually the waters cease to bubble over, and the Danube then is frozen over.

In the midst of the eddying masses which I have described, the little bark that held me, manned and steered by olive-coloured Turks, was manfully launched; and, bumping here through one obstacle, steering round a second, I was landed upon the island fronting the old city of Widdin. There all was movement, bustle, and labour. Boats filled with stores of every sort were coming to the land; and, as they turned and turned their way amidst the fields of ice, they looked like things ingeniously put to other purposes than those for which they were designed. No water was visible, but the rough sides of the bark broke out in strong relief upon the cold and changing masses of the ice, as it wandered through them. The redif, with his grey great coat and hood, his legs encased in every sort of covering as protection from the cold, was shivering on the bank. The swarthy soldiers of the desert mixed here and there amongst the crowd, looking blacker from the frost; the variegated dresses of irregulars; and, passive in the midst, the long-haired Wallachs, with their coats of sheep-skin, and their strange and cone-like hats, imparted to the scene a wild and curious character. How strange, in truth, the chance that brings the dweller in the desert, who in his life before has seen no snow, in contact with the Wallach and Bulgarian, whose life is passed in striving half the year to keep out the cold, the other half to avoid the heat. This Danubian climate is inexorable. It is sometimes fifteen degrees of Reaumur below zero, at others the heat mounts up to 100 Fahrenheit. Such are the alternations of winter and summer. Leaving the landing-place, encumbered by bullock-carts and sledges, horses bearing burdens, and men compelling them to go, an extempore road beaten in the snow soon leads one to the river bank again. Here the Turks have built a bridge of boats, thus uniting main and island. At a distance of about a mile nestles on the side of a hill the village or town of Kalafat. In summer it may be a pretty place to look at, as the sun sets brightly on its houses, and throws long shadows from the masts and rigging of the shipping on the Danube; but the view in winter, when a cloak of snow encases all, has little of the picturesque. With the exception, indeed, of a very few houses, the habitations of a Wallachian village are only visible to a practised eye; and, as I cast my glances over the panorama which spread before me from above the bridge, I wondered where were the 17,000 or 20,000 men whom I knew to be enclosed within the bounds of the intrenchment. As I approached the place the signs of life and preparation for an enemy were numerous. Orderlies were dashing about the

LANDING-PLACE, AT KALAFAT.

trodden snow; soldiers leading horses laden with provisions; Wallachs with their sledges and their oxen, drawing wood; while here and there a working party might be seen starting on its way. The only khan or café of this place was crowded with inmates, drinking raki and coffee, and smoking; some even playing on an antiquated billiard-table. There were six rents, of about six inches each in divers portions of the cloth, and the pockets might have held the head of a Bashi-bozouk. It seemed to me that the rents in the cloth were only artificial difficulties, made, like the intrenchments of Kalafat, to prevent the approach of the balls to the pockets. With the exception of this khan, and about two dozen houses nastly whitewashed, there seemed to be nothing like habitations in Kalafat. It is true, the ground was here and there filled up by ancient maize-ricks and wicker-garners; pigs were moving in the straw; but the houses appertaining, it was vain to look for. Presently, however, I discovered, escaping from an opening in a mound covered with snow, a quantity of smoke; and then only it occured to my bewildered senses that Kalafat after all might be a very large important village, of which the inhabitants lived underground, and so it proved.

Achmet Pacha, who inhabits one of the few houses in the village, received me with great politeness. He is a burly soldier, still young

BLOCKHOUSE OF TEVIK BEY, KALAFAT.

SKETCHES FROM KALAFAT AND WIDDIN.

COOKING TENT, AT KALAFAT

and with the dark smooth skin of the Orientals. He was at that moment in the act of dining with Moustapha Pacha, Ferik, or Commandant of Cavalry, a soldier of the old Egyptian war, whose head is already turning to grey, but who preserves on his large person a considerable *embonpoint*. The two Generals' dinner appeared to consist of a gigantic *pillau* contained in an earthen vessel, into which they dipped their spoons alternately. There was a wooden bench for the use of guests, a wooden chest in a corner of the room, and a little book-case in which I could discover a "Manuel d'Artillerie" and a "Dictionnaire Turc-Français." A little box, labelled in French "*Savon ponce*," was handed round, containing cigarettes; and then the conversation commenced in German, which is the European language spoken by Achmet Pacha. After a few compliments had been exchanged, permission was granted to see the entrenchment, and the interview was at an end. One more formality still remained to be performed, namely, the delivery of a letter to an officer of Chasseurs, with whom it was my intention to examine the works. A chaousch of Achmet Pacha's guard led the way along the brow of a hill, covered sparsely with tents, and presently stopped at an aperture which seemed to lead into the bowels of the earth. Diving after the guide, it appeared that these were the quarters of Tefik Bey. On the left of the passage was a soldier at an earthen oven, cooking; a few kitchen utensils, sabres, muskets, and daggers, were lying about in confusion, together with the saucepans, and a military cloak. At the end of the passage a little door swung open, and a young and exceedingly European-looking officer appeared, who gave me the most cordial reception. Some friends were with him. I send you a Sketch of the interior. The mode of building houses in Kalafat, is this:—The ground-plan of the dwelling is drawn out upon the ground, and then the house is dug out of the earth, those portions remaining alone over this the earth is laid. In general, the only light within a Wallach room proceeds from the chimney, which, like that of Servian houses, is an important part of a domestic edifice; but this being the house of an officer, it boasted of three windows, two of which may be seen in the Sketch subjoined—their frames being stretched with oiled paper, which is by no means a good substitute for glass. The sides of the wall were covered with matting, under which at night the field mice made an incessant noise, and at the end was a slightly elevated part adorned with carpets, on which we sat. Here the daylight passed away, and the night came on in the midst of chat and smoking; and pipes as well as politics made us forget for a moment that Kalafat was a camp, on the attack of which was bent a powerful enemy, and where, within a week or less, a fierce engagement and sanguinary contest might take place. The evening gun had warned the troops that the camp was closed, when an excellent dinner was produced and heartily partaken of. One closing sight, it seemed, that I was destined to be greeted with—namely, a night inspection of the troops within the barracks. Preceded by a lantern, we left the hospitable roof of our host, and marched amidst the snow until we came in sight of a sentry. No call was made, and none of the precautions in use in garrisons appeared to be in practice. The soldier presented arms, and we dived into a passage similar to that above described. But the sight within was curious. Standing up in double rank within this subterranean room were about 200 men all under arms. In front of them were soldiers who held aloft long candles, whose vacillating light brought sparks at times from the barrels of

BARRACK TENTS AND REDOUBT, KALAFAT.

untouched, that are to serve as party walls. A sloping way is made into the hole when it attains a depth of about seven feet. A pole is placed along the length of the aperture on the upper level. Other poles are thrown across, which form a roof. Mats are set upon the poles, and

ARRIVAL AT KALAFAT OF THE WOUNDED FROM CITATE.

the muskets, and dimly showed the forms and olive faces of the men, as they went through the manual exercise. The dimness of the light, the smoke of the candles, and the hoarse call of the drill-sergeants, together with the clank of the sabre of the commanding officer, gave the scene the aspect of a meeting of military conspirators. This dark and hidden drilling and manœuvring in the night is a thing unlearnt or untold in books, as far, at least, as the unmilitary are concerned. It must be owned, however, that the scene was calculated to give a high idea of the cleanliness and discipline of the Turkish soldiers, who went through their exercise with great precision and spirit, and with a determination in their eye which one does not meet with in the drowsy-looking soldier of Austria, or even in our own military barracks.

Sleeping on mats promotes early rising, and the morning gun had hardly shaken with its loud report the walls of our dwelling and aroused the echoes of the hills, before we were on horseback and riding through the works. The village of Kalafat is on the side of the Danube, on a declivity sloping to the bank. The ground upon its sides, as well as in its rear, is hilly, and there the Turks have made their lines. Kalafat is the central point, and in front of it is a long intrenchment. This intrenchment is a ditch and parapet, which, in its course, forms salient angles in front of the enemy, the apex being broken and divided, like the cone of a volcano, by way of giving a flanking defence. The ditch and parapet abut on the right and left upon the Danube, and are defended by forts which line the *enceinte continue*. A second and interior line of forts likewise defends the works and commands the ground in front of the intrenchments. The bridge upon the island is defended also by a work, and the island itself is fortified. It must be remembered that the relative positions of Kalafat and Widdin are incorrect in all the maps, which gene. ally place the two as fronting each other on separate banks of the Danube. Kalafat, in reality, is a mile higher up the river than Widdin. Such, in general terms, is the present position of the Turks. In this intrenchment, which is amply provided with guns and ammunition, a portion only of the Turkish force at present remains, a part being in the villages which form the outposts, and the names of which have already been sent you. Here there have been some slight engagements, and hand-to-hand conflicts of little consequence. The Russians, who were marching out of Krajova, as my last letter informed you, are now at Radowan, Protura, and Karaul. Their numbers are uncertain. It is probable that they left Krajova, which is a town of about 70,000 souls, to make room for a body of 25,000 men, which, we are positively assured, left Bucharest on the 15th of last month. The distance by the road to Krajova is twelve posts of four hours each. It is impossible for troops to march more than one post per diem, one post being about six or seven hours' walk. The vanguard of this force may thus have reached Krajova on the 27th ult., and the rear about the 3rd inst. Under these circumstances, the Turks expect an attack, if not immediately, at least shortly. Three Russian battalions, which were at Czernetz, near Orsova, and which form a body of nearly 3000 men, have advanced to Citate, within five hours' march of Kalafat. Deceived by wrong information, the Turks, on the 1st inst., sent out a squadron of cavalry, which drove off a small number of Cossacks that were with the Russian infantry: but the latter had intrenched themselves with four guns, and the Turks retired with the loss of one man and a horse only. The Russians fired no less than eighty-five rounds, and their cannonade was heard during the day at Widdin, but what they fired at is uncertain, as the only Turk who was killed was shot by a Cossack. The force at Citate is part Russian and part forced Wallach levies. The Danube is still pouring down its ice-fields, but the weather since yesterday is milder, and the floes are smaller. The Danube will probably, therefore, not freeze upon its lower course this year.

P.S. The forces in Little Wallachia which are opposed to the Turks are commanded by General Fisbach, who has under him, it is said, Generals Engelhardt and Bellegarde. General Prince Vasilitchkoff commands the cavalry. Nothing lately has been heard of Osten Sacken's reserve corps, but it is improbable that Bucharest could be *départé* of 25,000 men, unless these troops had already arrived to fill up the gap. The corps of Osten Sacken is stated here to be composed of 40,000 men; that of Lüders, already in the Principalities, at 30,000—a portion of it, to the amount of 10,000 men, having been detached, it is supposed, to the Caucasus. With the remaining army corps, which first entered under Gortschakoff, the total of Russian force in the Principalities would thus be 110,000 to 120 000 men. But a considerable reduction must be made for sick, which are in its proportion of 20 to 25 per cent, and for small detachments, left here and there in Bessarabia, and other places where a feeling not exactly favorable to Russia has shown itself. The available force of the Russians in the Principalities, at present, may thus be calculated at 75,000 men, of which it is possible that at this moment there may be 30,000 in Little Wallachia.

The Turkish force has been strengthened since my last by 3000 men, from Lom, a small fortress below Widdin, on the Danube. The reserves are still on their way between Sofia and this point. The Russian force at Citate is now entrenched with eight guns. It seems a strange war, in which the invader intrenches himself to attack the invaded. In a case like the present, where the invading forces march forward, it is generally supposed that the opposite outposts fall back, in order that the whole of the disposable troops may be available in the trenches.

Jan. 7.

Before daybreak on the morning of yesterday a column of 10,000 men, consisting of Turkish regulars and chasseurs, under the command of Achmet Pacha and Ismail Pacha, 4000 cavalry under the orders of Mustapha Pacha, and 1000 Bashi-bozouks, or irregular cavalry, under Skender Bey, and fifteen guns, moved out of the intrenchments of Kalafat, taking the road which leads through Roman, Golontza Purkuri, Moglavit, Gunia, and Funtura, to Citate. At the same time, in order not to leave the intrenchment of Kalafat too bare of troops, 3000 men had crossed before daybreak from Widdin to the opposite side of the Danube. The Turkish force, under Achmet Pacha, reached Citate at about nine, and immediately attacked the village, which was held by 3000 Russian infantry and some cavalry, who were fortified in the streets with four guns. The village thus occupied by the Russians, and attacked by the Turks, is situated on a declivity, and surrounded almost by trees. Behind, and on the height, was a regular intrenchment, into which the enemy might retire if the village were forced. The Turks boldly attacked the village, which, after they had entered it, and been twice repulsed, they successfully carried, driving the Russian infantry into the trenches behind. Three hours were expended in the struggle, and a vigorous cannonade was commenced against the intrenchment. This second engagement had scarcely commenced, however, when a reinforcement from Karaul was discovered to be approaching to the rescue of the Russians. This reinforcement, which is variously stated at from 5000 to 10 000 men, had marched from Karaul, along the road which intersects the way between Kalafat and Citate at Funtina. It came up at a little after noon, but was not permitted to do much in favour of those who it came to relieve. Whilst the attack on the intrenchment was maintained, and the diminished force within it kept fully occupied, the reinforcement was attacked by the Turks, and, after an hour's combat, completely put to flight, leaving upwards of 250 men upon the field; the ground remaining strewed with muskets, which were dropped loaded on the ground, and meal, which forms the food of the Russian soldier. The intrenchment was then attacked with renewed vigour by the Turks, and carried, with the loss to the Russians of 2000 men, four guns, and a considerable quantity of ammunition and provisions. At half past three the forces of the Sultan were masters of the field, and the main body were distributed in the villages for the night. Ismail Pacha, Tefik Bey, Ali Bey, and Skender Bey, are noted as having gallantly conducted themselves. Ismail Pacha had two horses killed under him, and a bullet cut some curious figures upon his left arm. The loss of the Turks in killed and wounded I am unable to state at present. A few of the latter came into Kalafat about three o'clock in the afternoon. The day had been a splendid one. A change having taken place in the weather, it had rained in the night, and the sun rose splendidly upon a cloudless sky, shining all day with a warmth quite oppressive after so much cold, and laying bare for the first time to view the noble mountains that skirt the Danube below Widdin. It was really a noble sight to see these poor fellows, wounded as they were, make their way still upright on their horses to the landing-place. One poor fellow, a Bashi-bozouk, of about fifty, was lifted off his horse, in presence of Sami Pacha—who was present, and indefatigable in his exertions—and showed three bullet wounds. His shoulder had been shot through, as well as one of his arms, in two places; yet he had ridden from the field, and did not even faint as he was taken off his horse. Other more serious cases soon came up, the poor fellows being stretched on sledges, drawn by bullocks to the landing. Many of them had with them trophies from the field, such as Cossack lances, muskets still loaded, and swords.

The consequences of this victory, at the present juncture, it is not possible for me to appreciate fully; but they cannot but have considerable effect upon the course of pending negotiations.

Jan. 9.

The battle of Citate (and not Citale, as erroneously stated in the first account), is a remarkable instance of bravery displayed without any positive aim in view; and a proof, if any were required, that the Turks are quite equal to cope with a superior enemy in an open field. One great point is clear from the engagement, namely, that the less disciplined courage of the Turks, and the passive and low-spirited steadiness of the Russians, are not what in mechanics are called "two forces exactly equal and opposite." It is necessary for the full comprehension of this encounter that it should be related in some detail; and the facts which I sent you in the first flush of victory, although they may require some slight alteration, will be found to have been correct.

It was on Christmas morning (old style), and at the moment when the Russians and the Christian population of the Principalities, were preparing for a solemn religious festival, that ten battalions of Turkish infantry, partly regiments of the line, and partly *chasseurs*, left the intrenchments of Kalafat, and took the road to Citate. They were accompanied by four regiments of cavalry, under the command of Mustapha Pacha, Ferik, having under him Skender Bey, and 500 or 600 Bashi-bozouks, or irregular cavalry. Two batteries of six guns accompanied the infantry. Two battalions of light field-pieces followed the cavalry, and there were, beside, two howitzers. The road from Kalafat is a continuous ascent, and rises with various gradients to the summit of the hill, on the side of which is Citate. That village itself is a long and straggling one, consisting of a main street of a mile and a half in length, with a church in the centre, and various streets intersecting it. At the lower end of the main street, which was occupied by 3000 men, supported by some cavalry, the Russians had erected a battery; and at the upper end, a distance of two miles, they occupied a large redoubt with 1000 men and four guns. An inland lake, formed by the Danube, which skirts the village on the left, prevented any approach from that side

The Turks, having left a battalion and a squadron of irregulars at Moglavitz, and a similar force at Gunia, to keep their communication open with Kalafat, appeared before Citate at seven in the morning; attacked the battery which defended the lower end of the street, with five battalions; whilst the cavalry made a circuit to the right, to cut off the retreat of the enemy. Achmet Pacha remained a little in the right with a reserve of three battalions and some cavalry, holding a good position on a hill that slopes down to a road leading from Resptsch to Citate. Ismail Pacha, who commanded the infantry against the village, and Tefik Bey, at the head of his regiment of Chasseurs, entered the main street after the Russians had been dislodged from their battery. The latter, however, had recovered by this time from their surprise; and, although many of the men, and even some of the officers, were fighting without their pantaloons, and others without their jackets, they disputed every inch of the ground. The description which I have given you of Kalafat, with its underground style of houses, and mass of maize ricks, will give you also an idea of what is Citate. Concealed in these houses, in holes and corners, and behind the haycricks, they kept up a galling fire, whilst their artillery played down the street. The Turks, however, steadily advanced, and a dreadful *mêlée* soon commenced, the order of the Turkish battalions was broken; every man seemed to fight for himself, and on they went pell-mell, driving back the Russians, who gradually retired and concentrated their shattered force behind the church. At that moment the cavalry, which had moved to the right, commenced firing from a cross street that led direct to the church, with a battery of field-pieces. The Russians finding the place too hot for them, retired further along the main street; and the troops, under Ismail Pacha, continuing their onward course, the same system of defence amidst house and haycrick, was pursued by the enemy. A body of Bashi-bozouks kept charging in the cross streets, and killed a number of men. The battery which had been playing on the church being no longer useful, as the Russians were dislodged, four guns were moved on the right of the village, and directed against the intrenchment which the cavalry entered, and with its guns, held for a time. A battalion of infantry at this point would have enabled them to hold the position, and to destroy the Russians; but the latter, now hard pushed in the main street, cleared the intrenchment of the Turkish cavalry, and then commenced a galling fire of grape and shells, under which the Turks suffered considerably. It was at this moment, when the Ottomans were struggling against an intrenchment, where the Russians had the advantage of commanding the whole of the ground below it, that a Russian reinforcement of three regiments—one the regiment of Odessa, it is said, 3000 strong, and two of the 10th division, 6000 strong—together with 600 cavalry and nine guns, made its appearance on the road which leads from Resptsch to Citate, where, as has been previously stated, stood Achmet Pacha with the reserve. This reserve, meanwhile, had been reinforced by the two battalions from Gunia and Moglavitz. Three battalions were in front, supported by cavalry and a battery at each side, and two battalions remained in the rear, forming a reserve. The position of the Turks was thus critical to an extreme degree; the intrenchment keeping up a tremendous fire, whilst the Russian reinforcement threatened them on the other side. On came the fresh troops to the assault, at first by an attack of cavalry; whilst the Russian and Turkish but exiles exchanged fire. The Cossacks did but little however, and were put immediately to flight, with considerable loss. The Russian infantry then rushed on to the attack, in column; but, seeing some of the guns of the Turks dismounted, and in the act of being removed, they charged in battalions. The Turks, however, so far from having any intention of retiring, met the Russians, and repulsed them, and in a short time the whole of the latter were to be seen flying in every direction, strewing the field with dead, leaving two guns behind them, 700 muskets, and numbers of carts with provisions and ammunition.

The village of Citate had been completely carried at the same time that the troops under Achmet Pacha obtained this victory; but there remained still the intrenchment to take. The Turks, however, feared lest additional reinforcements might come up and cut off their communication with Kalafat. They retired, leaving two guns behind them, which they lost in the retreat of their cavalry from the intrenchment. The Russian provisions and ammunition, which they strewed about, from inability to carry it; and the muskets, of which they broke the locks on the field, to render them useless. Most of the troops bivouacked in the villages between Citate and Kalafat; and at noon, on the 7th, the Turks had returned to their trenches: the Russians, on their side, merely stopping in Citate to bury their dead and carry away what remained fit to remove of their provisions and ammunition. Military men, more skilled in their profession than the Turks, will find much to blame in the proceedings of the day; and doubtless the Ottoman General did not show on this occasion any considerable skill as regards purpose or plan; but the fact still remains a great and glorious one for Achmet Pacha and his troops, that they forced double their number of Russians in an open field, and reduced them to an ignominious flight.

It is a curious circumstance, and one which leads to considerable reflection, that two prisoners only are the result of this engagement. And from the well-known habit of the Turkish irregulars not to spare a living enemy, it is to be feared that many men were massacred in cold blood after they had surrendered. The loss of the Russians in killed is estimated at 1000, and 2000 wounded; that of the Turks is 400 killed, and 700 wounded.

[Sami Pacha, the present Governor of Widdin (whose portrait we have Engraved from our Correspondent's Sketch), is well known in the circles of London and Paris as a man of refined courtesy and gentlemanly bearing, who, having been long the right hand man of Mohammed Ali, is now (Redschid Pacha always excepted) one of the shiest of the Turkish statesmen. The administration of the Pachalic of Widdin is no common task even in the most tranquil times. The Pacha requires to be perfectly informed of what is passing among the Bulgarians, and to act accordingly. He must also be an experienced and punctual man of business, so as to deal with the multifarious military and civil persons crowded here, and manipulate the vast *materiel* converging to this base of communication. In these respects the ability of Sami Pacha is not to be disputed. Sami Pacha was recently described as wearing in divan a sable pelisse of that gorgeous old Oriental amplitude which, in the eyes of the Ulema, is of much more pleasing than the starved scanty Frank cut introduced by Sultan Mahmoud, and so much more suitable to the environs of the Danube and the Balkan. Ismail Pacha was present, a Turk of the old school, but looking what he is every inch of him, a fearless captain.]

WARLIKE INDICATIONS.

THE war-steamer *Banshee* arrived at Lisbon, on the 17th, with despatches for the British Admiral, and immediately afterwards the British squadron was under orders for sea. The destination of Admiral Corry's squadron was unknown.

THE seamen belonging to the *Theseus* were "paid down" on Monday, when they were informed that they shall have their pay and six weeks' leave of absence; and, on their return, if matters wear a peaceful aspect, they will be paid off. Before the seamen left, "all hands" were piped on the quarter deck. In a few minutes Admiral Dundas appeared, and thus addressed the assembled crew:—"My men, I have come down, by request of the Board of Admiralty, to make known to you that we are on the eve of a war, and that war with Russia. My object, therefore, in addressing you is to assure you, by order of their Lordships, is to prepare you for such event; and I am sure you will receive this announcement as becomes Englishmen and British sailors. It is my duty to inform you that the country cannot dispense with your services, however hard it may appear after your having been away for so long a period; yet, the exigencies of the service must be paramount to all other considerations. Instead, therefore, of your being paid off, you will at be paid down. You shall have a few weeks' run, after which I feel assured that you will act as British seamen ever have done in defence of their country. I trust you will receive this communication in the right and proper light, and I make this known to you thus early to prevent any feelings of disappointment. I have earnestly to hope that the evil may yet pass away, but we must be prepared for any and every emergency. 'Pipe down.'"

THE PEACE SOCIETY AND THE EMPEROR OF RUSSIA.—The *Times* states that a deputation from the Peace Society has just left England for St. Petersburg, to endeavour to induce the Czar to come to an amicable with Turkey. The deputation consists of Mr. Henry Pease, of Darlington; Mr. Joseph Sturge, of Birmingham; and a gentleman from Bristol. The secretary of the Peace Society states that the gentlemen named have gone as a deputation from the Society of Friends.

CABINET COUNCIL.—A Cabinet Council was held at the Foreign Office, Downing street, on Tuesday afternoon. The Ministers present were the Earl of Aberdeen, Lord John Russell, the Lord Chancellor, Earl Granville, the Duke of Argyll, Viscount Palmerston, the Earl of Clarendon, the Duke of Newcastle, the Chancellor of the Exchequer, Sir James Graham, Sir Charles Wood, the Right Hon. Sidney Herbert, and Sir Wm. Molesworth. The Council sat four hours. A second Council was held on Thursday, and a third yesterday (Friday).

ATTENDANCE OF COUNSEL IN CHANCERY.—A very useful arrangement has been come to among her Majesty's counsel, attending the various branches of the Court of Chancery, by which much loss of time will be avoided. Hitherto, many of the gentlemen within the bar have practised in more than one of the inferior courts, and, in some instances, in more than two. Now, however, they have agreed that they will divide themselves into four bodies, to supply a distinct inner bar for the Rolls' Court and the three Courts of the Vice-Chancellors. The effect of this will be obviously very advantageous to the suitors of the Court of Chancery, for the difficulty and delay constantly arising in the hearing of causes from counsel being called on, in consequence of the absence of counsel, had become oppressive. Now, however, the only claim upon the attention of Queen's counsel, away from their several courts, will be the duty of attending before the Lord Chancellor or Lords Justices, on appeals from the interior branches of the Court. The choice among the assigned counsel is understood to be as follows:—Before the Master of the Rolls: Messrs. Bethell, Roupell, Rolt, Kindersley, and Follett. Before Vice-Chancellor Kindersley:—Messrs. Swanston, Cooper, Teed, Campbell, Bailey, and Glasse. Before Vice Chancellor Stuart: Messrs. Walker, Wigram, Bacon, Hall, Craig, and Craig; and before Vice-Chancellor Wood. Messrs. Rolt, Chandless, Willcock, Daniel, and W. M. James. Messrs Lee, Temple, J. Russell, Read an, and Anderson are understood not to have yet made their election of particular courts.

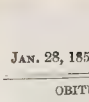
LONDON ORPHAN ASYLUM.—The annual court of this institution, founded in 1813, for the reception, maintenance, and education of destitute orphans, particularly those descended from respectable parents, was held at the London Tavern on Monday. From the report of the board of management, for the year ending the 31st of December, 1853, it appears that there were then 398 children in the asylum, and that it was intended to elect thirty children by ballot, making the whole number of inmates 428. The total number of children admitted since 1813 was 2111, of whom upwards of 1600 completed their course of education, and were afterwards capable of obtaining an honourable livelihood. The total receipts of the charity from all sources during the past year amounted to £11,328 17s. 1d. The expenditure during the same period exceeded that of 1852, in consequence of the high price of provisions, and amounted to £11 340 9s. 6d., leaving due to the treasurer £301 2s. 8d. The average charge for each child for the year was £28 9s. 7d. The legacies received during the past year amounted to £1872. The report was adopted, and the Earl of Harrowby was elected one of the vice-presidents. In the course of the day thirty children were admitted to the institution by ballot.

ESCAPE OF TWO CONVICTED PRISONERS.—Thomas Richardson and John Clark, two convicted prisoners, contrived to escape from the prison-van on Penge Common, on a very singular manner, on Tuesday. Both prisoners were tried at the December sessions for Surrey, and convicted for robberies with violence. Richardson was sentenced to six years' and Clark to two years' penal servitude. The two prisoners so convicted are employed in the prison, chiefly in cutting wood, and tying it up in bundles for sale among the shopkeepers. At present the van, which the turnkeys were about to start for the London prison, was covered over with mats, the rear of the latter being open, and secured in making their escape. They had by some means contrived to make a hole with pieces of spunyarn and wood. A turnkey, one was placed in each end, and Brown over the van, where it was attached to the coach-box. The prisoners have been conducted, for the purpose, to their work. They were four in van, and

OBITUARY OF EMINENT PERSONS.

THE HON. ROBERT HENRY CLIVE, M.P.

THE death of this gentleman, M.P. for South Shropshire, a Lieut.-Colonel in the army, and Colonel of the Worcestershire Yeomanry, occurred on the 20th inst. He was second son of Edward, 1st Earl of Powis, and grandson of the renowned military commander, Robert, Lord Clive. Through his mother, Henrietta Antonia, daughter of Henry Arthur Earl Powis, Colonel Clive descended from the Herberts, the former inheritors of that illustrious title.

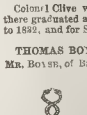


He was born 15th January, 1789, and married, 19th June, 1818, Lady Harriet Windsor, daughter of Other Hickman, 5th Earl of Plymouth, and by her Ladyship (who is co-heir of the Barony of Windsor) has left three sons and three surviving daughters. Of the former, the eldest, Robert Clive, Esq., M.P., is married to Lady Mary Sarah Louisa Bridgeman, daughter of the Earl of Bradford.

Colonel Clive was educated at St. John's College, Cambridge, and there graduated as LL.D. He sat in Parliament for Ludlow from 1818 to 1832, and for South Shropshire since the latter year.

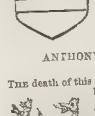
THOMAS BOYSE, ESQ., OF BANNOW, COUNTY WEXFORD.

MR. BOYSE, of Bannow, died at Roebuck House, on the 14th inst., aged seventy-two. He was eldest son of the late Samuel Boyse, Esq., of Bannow, by Dorothy, his wife, daughter of Robert Shapland Carew, Esq., of Castleborough, county Wexford. His next brother, Lieutenant-Colonel Shapland Boyse, C.B., commanded the 13th Light Dragoons at Waterloo. Mr. Boyse, although of late years he took no very prominent part in politics, was, at all times, a firm advocate of Liberal opinions, and of just Government for Ireland. Of Thomas Moore he was one of the most cherished personal friends; and the poet's visit to Bannow, with the popular rejoicings it occasioned, formed an interesting and well-remembered incident in the bard's life. Several members of the Boyse family represented Bannow in the Irish Parliament.



ANTHONY GEORGE WRIGHT BIDDULPH, ESQ., OF BURTON PARK, SUSSEX.

THE death of this country gentleman, the representative of the great house of Biddulph of Biddulph, and formerly one of the co-heirs of the barony of Camoys, occurred at Tunbridge-wells on the 14th inst., after a long protracted illness.



Mr. Wright Biddulph (brother of Mr. John Wright, the banker) was eldest son of Anthony Wright, Esq., by Lucy, his wife, daughter of Edmund Plowden, Esq., and grandson of Anthony Wright, Esq., of Wealside, Essex, by Anne, his wife, daughter and co-heir of John Biddulph, Esq., of Biddulph and Burton, whose mother, Anne, daughter and heir of Sir Henry Goring, Bart., of Burton, was lineally descended from Margaret, sister and co-heir of Hugh, Lord Camoys.

"The Biddulphs do derive themselves," says Erdeswick, "from one Ormus le Guidon, son of Ricardus Forestarius, of Norman race, who held, as appears by Domesday-book, ten Lordships in Staffordshire, which were conferred on him in reward of his services."

The chief line of the Biddulphs was that represented by Mr. Wright Biddulph, of the younger branches the principal are the Biddulphs of Birdingbury, Baroness, the Biddulphs of Ledbury, and Chirk Castle, &c.

The gentleman whose death we record succeeded to the family estates at the decease, unmarried, of his kinsman, the late John Biddulph, Esq., of Biddulph, 2nd August, 1835; and assumed, in consequence, the additional surname and arms of Biddulph. He was born 23rd April, 1785, and married, 15th January, 1827, Catherine Dorothy, eldest daughter of the Rt. S. T. Scrope, Esq., of Danby, by whom he leaves, besides daughters, a son—Anthony John, now of Burton-park.

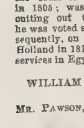
WILLIAM RICKFORD, ESQ., LATE M.P. FOR AYLESBURY.

THIS venerable gentleman died on the 14th inst., at his house, in Green-end, Aylesbury, aged eighty-five. He was a magistrate and deputy lieutenant for the county of Bucks, and represented the borough of Aylesbury in eight successive Parliaments—from 1818 to the close of the session of 1841—when he retired.

He was born Nov. 30, 1768, the only son of the late William Rickford, Esq.; and married, Sept. 28, 1791, Mary Vanderheim, by whom he leaves an only surviving daughter, Harriet, wife of Sir Astley Paston Cooper, Bart., of Gadesbridge Park, Herts.

COLONEL MURTON

COLONEL MURTON, who died on the 6th inst., at Brompton, served in the North Sea and Helder expedition, in 1799; in the Egyptian expedition, in the East Indies, in 1801; and in the West Indies in 1804. He was engaged on the coast of France, and with the enemy's flotilla and batteries, in 1805; was in the Mediterranean in 1806; and took part in cutting out the enemy's vessels from under batteries, for which he was voted a sword from the Patriotic Fund in 1809. He served, subsequently, on the coast of Spain, along the Guerillas; and was in Holland in 1813. He had a medal, as well as a silver war medal for services in Egypt.



WILLIAM PAWSON, ESQ., OF SHAWDON, NORTHUMBERLAND.

MR. PAWSON, who died at Edinburgh, on the 5th instant, deeply lamented, entered the Royal Navy at the time of action of Camperdown as midshipman, on board *The Venerable*. Flag-ship of Admiral Duncan, and subsequently served in her, under his uncle, Admiral Sir George Fairfax. He continued to be actively employed until the peace of 1815, in the Channel, Mediterranean, and West Indian Squadrons; serving in the *Courageux*, *Chesapeake*, and other ships. He was wrecked on the coast of Holland, during the French occupation of that country, and was detained, a prisoner of war, until exchanged into the *Desirée* frigate, and sent home, as acting Prize Master, in a vessel she had taken. On the passage across to Yarmouth, the prisoners attempted to recapture the ship, when Mr. Pawson, by his energetic measures, and with his small crew of a single midshipman and six seamen, succeeded in subduing the outbreak, and brought the prize safe into port.

The Pawsons, a family of great antiquity in Yorkshire, are first mentioned in the reign of Henry IV., anno 1403.

The gallant officer, the subject of this notice, was born in May, 1780, and married, in 1817, Mary-Anne, daughter of the Rev. R. Trotter, of Morpeth, by whom he leaves a son and heir, William John Pawson, Esq., now of Shawdon. In the year of his marriage (1817) Mr. Pawson, by the death of his brother, George Pawson Hargrave, Esq., became possessed of the Shawdon estates; and in 1826, served as High Sheriff of Northumberland.

WILLS.—The late Mrs. Frances Dorothy Hoare, widow of the banker, died possessed of £80,000 stock and effects held to the National school at Dagnall, £500, to the Lying-in and Lock-up Dispensary, £200; and to the Blind Asylum, Exeter, £500, all to be paid by her sole executrix Mrs. Frances Campbell, who is beneficially interested under the will.——The following wills and codicils have also been admitted to proof:—The late Mrs. Louisa Selina Culling Smith, sister of Sir Culling Eardley Smith, has left personal property amounting to £25,000. Mr. John Constable, of Balham-hill, wholesale druggist, personal estate valued at £30,000, which he has bequeathed amongst his family.

CHESS.

TO CORRESPONDENTS.

RICARDO.—I No; certainly not. Such a collection, if made at all, must be made by the proprietor of the paper to whom the games, &c., belong. 2 What do you imply by a "substitute"? The challenge was open to any one without exception. 3. The Problem shall have attention.

W. C. S.—They will probably be so published, but we cannot say when. 2 The "Simpleton Chess Man," if we mistake not, may now be procured from Lee or ten guineas the set.

3. Yes: the first edition is very faulty, owing to the haste with which it was brought out.

SIGMA.—Your Problem admits of an easy solution in four moves.

R. D. M.—The game shall be examined. As to the solution, that is palpable failure.

P. F., of Manchester.—Imperious, though somewhat too easy. Tureen.

SENIOR A.—Play shall be reported on next week.

NO NOTICE OF PROBLEM No. 516, by Ernest, Coton, Jack of Worcester, J. K. B., F. R., of B., are correct.

(a) We should like to see this defence fairly tested in a long series of games between these two accomplished players.

(b) The attack on his own side, and the counter-attack on the other, now render the game very animated and amusing.

(c) Well played. Had he taken the Kt, it is needless to say he must have lost the battle.

(d) Well played again. From this moment White has the game in his hands.

Another entertaining Game between the same players.

(Bishop's Gambit.)

WHITE (Mr. J.)	BLACK (Prince O.)	WHITE (Mr. J.)	BLACK (Prince O.)
1. P to K 4th	P to K 4th	15. K to K sq	Q to K 4th
2. P to K B 4th	P takes P	16. Q to K sq	Q to K Kt 3rd
3. B to Q B 4th	Q to K R 5th (ch)	17. P takes P	P takes P
4. K to B sq	P to K Kt 4th	18. R takes R (ch)	B takes R
5. Kt to Q B 3rd	B to K Kt 2nd	19. Kt to K 4th	B takes Kt
6. P to Q 4th	P to Q 3rd	20. Q takes B	B to Q 2nd
7. Kt to K B 3rd	Q to K R 4th	21. B to Q 2nd	Kt to Q B 3rd
8. P to K 5th	P takes P	22. Q to R 8th (ch)	B to K sq
9. Q Kt to Q 5th	P to K Kt 5th (a)	23. Kt to R sq	Kt to K 2nd
10. Q to K sq	K to Q sq	24. P to K 6th	Q to K R 4th
11. Q takes K P	Q Kt to Q B 3rd (b)	25. Q to K B 6th	Q to K R 2nd
12. P to Q B 3rd	K Kt to K 2nd	26. Q takes K Kt P	Q to K B 2nd (c)
13. Kt takes K t	Kt takes Kt	27. Q to Q 6th (ch)	P takes K
14. P to K R 4th	P to K R 3rd	28. B takes Q and wins.	

(a) This, according to Mr. Jaenisch (who, probably knows the Bishop's Gambit in all its multitudinous varieties better than any player living), is a better move of defence than the generally accepted one of K to Q sq. See the admirable articles on the subject by this distinguished player in the *Chess Player's Chronicle* of last year.

(b) In case, for P to Q B 3rd, followed, after the retirement of White's Kt, by Kt to K 2nd, &c.

(c) An overnight, we presume; but his game was irretrievably gone, play what he could.

CHESS ENIGMAS.

A NEW CART.—A Lyons journal states that a new plan of building carts and other vehicles has been discovered, by which a horse can be made to draw a load one-half heavier than by carts as at present constructed. The new vehicle has four wheels, and when the horse is harnessed the foremost pair come to about the middle of his body. The weight is thrown on the axles, and the vehicle is constructed in such a way that part of it covers the horse up to the neck.

A DEVOUT QUEEN.—As Queen Maria Christina was passing along the Calle de Atocha, says a Madrid paper, she met a priest carrying the sacrament to a poor sick man. Her Majesty immediately got out of her carriage, made the priest enter it, and followed the vehicle, with a wax candle in her hand, through the dirty streets to the sick man's residence; after which she proceeded on foot to the parish church.

LAWYERS IN GERMANY.—The *Weimar Cabinet* warns parents and guardians to discuade their sons and wards from the study of law, if they do not possess private means of subsistence, there being now more than one hundred distinguished graduates in the profession who have not the least prospect of getting a place.

NOVEL MODE OF LIGHTING FLEET-STREET.—A scene of a somewhat novel character occurred opposite the establishment of Messrs. G. W. Lees and Co., Fleet-street, between six and seven o'clock on Monday evening. A waggon-load of coke, belonging to Mr. Thompson, of Crown-street, Soho, ignited into flame; and, but for the timely and valuable assistance of Messrs. G. W. Lees and their assistants, the damage would have been considerable. They readily supplied the men with water in buckets passed from one another, which, happily, extinguished the fire before the arrival of the engines.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Mr. Bromley, Secretary to the Audit Board, and Mr. Stephenson of the Treasury, are engaged upon a Commission of Inquiry into the present state of the Board of Works and Poor-law Commission Offices in Ireland.

Letters from Brussels state that an immediate advance in the rate of discount is expected to be announced by the National Bank of Belgium. Up to the present time it has been as low as two per cent.

The wife of an Irish farmer, named Farrelly, being ill, sent for her sister to visit her; the latter, on her arrival, found her sister breathing her last. The shock killed her; and both were interred in the same grave on the same day.

The committee of the Royal Free Hospital, at its weekly meeting, elected Mr. Thomas Weedon Cooke, of Upper Berkeley-street, Portman-square, to the post of surgeon in that institution, vacant by the dismissal of Mr. Gay.

On Monday Mr. Besley was elected a Common Councilman for the ward of A detegate; and Mr. Stowman was duly elected in the same capacity for the ward of Bishopsgate.

The Emperor Francis Joseph will leave for Munich in the course of next month, on a short visit to his royal relations there.

Lieutenant-Colonel Vickers, and three other engineer officers, have been ordered by the British Government to attend the British squadron in the Black Sea.

In Birmingham, from the 1st January to the 31st Dec., 1853, there was an increase of 2,784 houses, exclusive of warehouses, manufactories, and multitudes of other buildings, springing up on every side and invading the agricultural precincts of Warwickshire, Worcestershire, and Staffordshire.

Mr. E. T. Smith, of Drury-lane, is about to build a new large theatre on the site of the Shadwell workhouse.

Sir Cusack Roney, the active secretary of the directing committee of the Dublin Exhibition, is on a visit to Brussels.

The East Indian Railway is attracting many native chiefs from the interior to Bombay. Among others, the young Holkar has been there; and a Rajpoot, said to be descended from the Porus of classic story.

Should the Russian Ambassadors in Paris and London be obliged to quit their respective courts, they will retire to the Hague, where they will wait for further orders.

Robert Stephenson, Esq., M.P. for Whitby, has distributed coal-tickets among the poor, through the medium of his committee, to the value of £100.

The betrothal of Prince Friedrich Carl Nicolaus, the son of Prince Carl of Prussia, with Princess Maria Anna of Anhalt, took place on the 15th inst., at the Ducal Palace in Dessau.

The barque *Tancred*, of Liverpool, bound for Smyrna, with a cargo of coals, has been lost off Arklow Head; the captain and all hands saved.

The Californian newspapers, in their announcements of births, add to the sex of the child its weight!

Her Majesty's Commissioners of Emigration require four more ships: two for Victoria, and two for Geelong: one to be ready on the 7th, and the other on the 10th March.

The Missouri Legislature (U.S.) has before it a bill providing that no married man shall be allowed to endorse a note without the consent of his wife, and that no endorsement shall be valid in law without such consent.

The Lords of the Treasury have, for the present, refused the application for establishing bonded warehouses in the Isle of Man.

M. Bardi, engraver to the Grand Duke of Tuscany, and justly celebrated in his art, died at Florence on the 15th, in his 70th year.

At the end of 1852, the tonnage of vessels registered as belonging to the British empire was 34,338,000. To navigate this immense marine, 248,812 men and boys are constantly required.

Philip E. Wodehouse, Esq., formerly of Ceylon, and now Superintendent at Honduras, is to succeed Sir Henry Barkly in the government of British Guiana.

Stephen Rice, Esq., has been appointed Treasurer for Prince Edward Island.

In 1852, 6740 boxes and bags of foreign mails were despatched by the Marseilles line. Indo, Brazil, Peninsular, and Alexandrian packets. In 1853, there were 8851 boxes and bags of mails despatched for those packets, the increase being 1021 bags and boxes.

According to the *Impartial de Smyrne*, the Governor of Smyrna is taking energetic measures to prevent further excesses against the Christians.

Twenty-two shipwrights have given notice for leaving Devonport, Sheerness, and Chatham, for the purpose of joining Mr. Mare's yard at Blackwall, where they are to have 6s. per day, and constant work for three years, being an increase of about 10s. per week.

The *Cologne Gazette* states that the dispute between the Government of Baden and the clergy has been brought to a final and friendly arrangement.

The imports of the precious metals last week were large, amounting to about £375,000 according to one authority, and £540,000 by another, which nearly was what we deliver. The exports were £400,000.

Three Polish Generals have been received into the Turkish service, and have been named Arslan Pacha, Shahin Pacha, and Toufan Pacha. They have accepted these denominations without abjuring the Christian faith.

The following notice has been issued by the Postmaster-General:—Australia. The next mails for New South Wales, Victoria, South Australia, and Van Diemen's Land, will be despatched from Southampton by the steamer *Bosphorus* on the 4th proximo.

The fine screw-ship *Colombo*, built by Napier, for the Peninsular and Oriental Company, having received some slight damage to her main shaft, will leave Southampton for the building premises of her constructors in Scotland.

On Tuesday last, the imports of precious metals amounted to £467,326—the *Roxburgh Castle*, from Melbourne, bringing £287,328; and the *Africa*, from America, about £180,000.

The *New York Tribune* announces the receipt of private letters from M. Kossuth, stating his intention of leaving on the 23rd ult., for Constantinople.

Mr. Colquhoun, British Consul-General for Wallachia, has arrived from Bucharest, being recalled from that post at Constantinople.

The late Mr. Peter Cooper, of New York, has left nearly half a million of dollars to found an institution for the diffusion of education.

The Cambridge Town-council are about to petition the House of Commons to adopt stringent measures for the more effectual suppression of electoral corruption.

The celebrated swordsman, Corporal Newton (1st Life Guards), who had exhibited his dexterity before the Queen and Prince Albert, and the Court, was buried at Clewer on Tuesday, with the usual military honours.

The extensive flour-mills at Ballycliough, near Limerick, have been destroyed by fire. They had been insured for £200 only a fortnight before.

Advices from Havannah report that five vessels were fitting out there for the slave-trade. It was also reported that a cargo of slaves had been landed on the coast.

The whole amount of insured property in this country is £900,000,000, while the amount insurable, but not insured, is valued at £270,000,000.

According to the advices from Berlin, the Russian Government are said to have resolved upon an increase of 60,000 men in their paper circulation, to meet the costs of the armaments in progress.

Lord Campbell has decided, in the case of the Queen *v.* the Russel Institution, that a society whose chief feature is a new paper reading-machine is not a society for the cultivation of literature, science, and the arts; and, therefore, not entitled to exemption from rates.

Silvio Pellico, the well-known author of "Le Mie Prigioni," is dangerously ill. Since his liberation in 1830 he has led a retired life, and has not taken any part in politics.

In a lecture delivered at Dudley, last week, Mr. S. H. Blackwell, F.G.S., estimated the present annual production of iron in this country at 3,000,000 tons.

An immense railway club, or hotel, is proposed to be formed at Paris, where travelers will find everything they require.

The Post-office, and the whole of the offices of the *Times*, are arranged with cannel-gas, partied on the premises, under Mr. Leslie's patent. The Post-office is now consuming 125,000 cubic feet less per week than before the alteration.

On the 20th, the Piedmontese Chamber of Deputies passed the bill for repealing the impost duties on corn.

The large landed proprietors of Prussia have presented M. Wagner, ex editor of the *New Prussian Gazette*, with 100,000 thalers (£15,000), to indemnify him for the annoyances to which he had been subjected by his devotedness to their cause.

Twenty-two recruiting parties left the garrison at Woolwich, on Friday and Saturday last, and seventeen additional recruiting parties left on Monday—making a total of thirty-nine recruiting parties sent into the country on three successive week days to enlist young men for that branch of her Majesty's service.

SHOEMAKERS' WORKSHOP.

THE LONDON REFORMATORY INSTITUTION,
GREAT SMITH-STREET, WESTMINSTER.

SOME fourteen years ago the attention of Mr. Nash (now the Governor and Corresponding Secretary of this Institution) was turned to the state of our criminal population; and, after much careful investigation, he concluded that, in numberless instances, the pressure of outward circumstances, rather than the inward evil propensity, led to a violation of the law. His attention was especially directed to those who had been already imprisoned, and whose character and circumstances, imprisonment had rendered trebly wretched. In the great majority of instances, the discharged prisoner is without friends as well as pecuniary resources. If he have friends, they have not sufficient influence to help him forward; or, if they be respectable and influential, they generally feel themselves disgraced by his crimes, and abandon him to their consequences. Thus it is that the discharged prisoner seeks the association of his former wicked companions, and is led on, step by step, in folly and crime. In many instances resolutions of amendment are formed; but the individual can rarely place himself in a position favourable for carrying out such resolutions. His character is lost; and without a respectable recommendation he cannot obtain an honest employment.

Mr. Nash is not one of those theorists who propound schemes of benevolence from the desk or study, and leave the performance of them to the public. His benevolence has more of the practical than the ideal. He could not write and make speeches, while his fellow-men were starving; while their present position was becoming utterly wretched, and their future destiny hopeless and irretrievable. But he determined upon a plan, and he immediately and successfully reduced it to practice, by opening a Reformatory Institution for Adult Male Criminals, in 1846, the first establishment either in this country, or the Continent—the first, in fact, of which we have any notice. The prospect of success, at first, seemed very doubtful. Nash's means were limited, so much so, that he has been obliged to pawn his coat, sometimes his only one, to supply the objects of his benevolence with daily food. Some persons averred that his life was in danger, that the reckless and lawless inmates of his dwelling would first rob, and then assassinate him. But he was alike heedless of the suggestions of the fearful and the sceptical. He brought the criminal into contact with the highest and best moral influences. His little household, for it was at first very limited, soon became enlightened, and in their general deportment gave the most satisfactory evidence that a great moral change was working within them.

We have alluded to the early embarrassment of Mr. Nash, but he "lived by faith." He knew his principle was a good one, and he felt persuaded that in time the Christian public would enable him to develop his plans more fully. Among the earliest supporters of the Institution, we find Lord Ashley (now the Earl of Shaftesbury), Samuel Gurney, Esq; Mrs. Schwabbe, of Manchester; Miss Howell, Rev. D. H. Battersby, M.A.; Mrs. Gladwell, Joseph Payne, Esq.; George Hitchcock, Esq.; the late Mr. Merishaw, Lord de Mauley, the late Lord Bishop of Llandaff, H. R. H. the late Duke of Cambridge, Lieut.-Col Douglas, Ernest Bunsen, Esq.; Lord Bishop of Durham, Right Hon. Fox Maule (now Lord Panmure); Lieut. Brickmore, J. E. Willis, Esq; Earl of Carlisle, Lady Radstock, the Ladies Greville, Lady H Russell, Lord Palmerston, the Bishop of Manchester, Miss Portal, Giles Redmayne, the Earl of Ellesmere, &c

For the first two years after the Institution was founded, it was conducted, without a committee, through many struggles and much privation. However, a committee was formed, with the Earl of Shaftesbury as President. The committee is composed of clergymen of the Church of England, of Dissenting Ministers, and of professional and private gentlemen.

The great aim of the Reformatory is not merely to *reform*, but to *regenerate*. Mr. Nash holds two religious services each day, in which he expounds the Scriptures, dwelling chiefly on the love of God as exhibited in the gift of his Son. On Sundays the inmates attend two services in a public place of worship, in addition to the religious exercises of the Institution. The Sunday-School is also held morning and evening; and kind and pious teachers attend, under the able superintendence of Mr. Taylor.

In addition to the moral and religious training, the inmates are taught printing, shoemaking, tailoring, and carpentering; so that when they leave the Institution they can earn an honest living either at home or abroad. Since the establishment of the Institution there have been, of the inmates—

Sent out as emigrants ..	100
Sent to situations	46
Restored to their friends ..	26
Failed [illegible]	31
[illegible] ..	3
Deceased ..	1
Left [illegible]	75
Now in the institution ..	103
	405

Making a total of 405 redeemed from crime and degradation.

The average applications for admission are about 80 per week, or somewhat more than 4000 per year. The want of funds necessarily obliges Mr. Nash to reject a great many applicants, whom he would otherwise receive.

In every instance the application must be voluntary; and, as a proof of the applicant's sincerity, he undergoes a fortnight's voluntary and solitary confinement in his probation-room, on bread and water. This test insures the sincerity of the applicant, and affords an effectual check to impostures.

Letters are being constantly received from former inmates; and these letters are confirmed in their statements by other unquestionable information. The emigrants speak most gratefully of the Institution and its supporters; many address Mr. Nash as "dear Father;" and express their determination, with God's assistance, to persevere in the right way, and to practise the lessons which they first learned from his lips.

The annual expenses of the Reformatory exceed £2500. The annual cost of each inmate is £15, and of his emigration £10—making a total of £25 per annum.

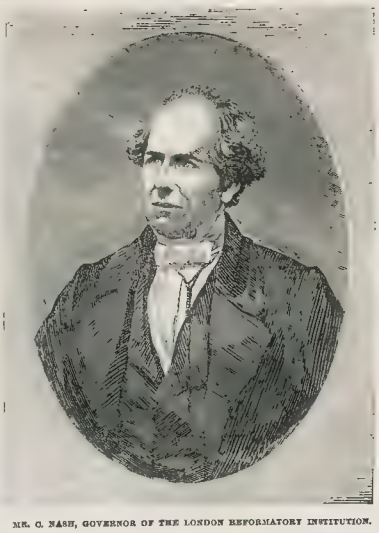
It has been estimated that each criminal, on each conviction, costs the public £63. Therefore, as a pure question of economy in our public expenditure, the Reformatory Institution is entitled to support.

We regret to learn that the Institution is in debt, and appeals to Christian sympathy and help—a call that will, we hope, be liberally responded to.

We may refer our readers to a volume, by the Rev. Samuel Martin, entitled "A Place of Repentance," for a full and interesting account of the origin and progress of the work of reformation so successfully carried out by Mr. Nash.

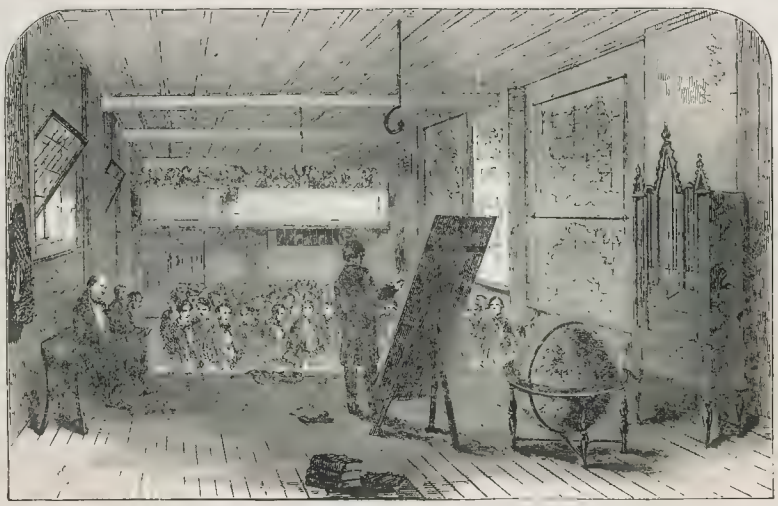
The claims of the Institution are tangible and satisfactory They are based upon the unquestionable success which has hitherto attended its labours. Its supporters can point to its fruits in Australia, America, and England, to demonstrate that much good has already been accomplished—that the lawless and depraved have been won by kindly influences, and moralised and reformed by the Gospel, restored to society, and made useful in their day and generation.

Mr. Charles Nash is a native of Bristol, and is now about forty-two years of age. Some twenty years ago he came to London for the purpose of engaging in commercial pursuits. His attention was early directed to Ragged Schools, and the condition of our criminal population. He became a voluntary teacher at the Ragged School, Justin-street, at a similar institution in the Mint, and in various other parts of the metropolis. He was also for five years a teacher in the Castle-yard Sunday-school, in connection with Surrey Chapel. He next entered the British and Foreign Training School, Borough road, under the able superintendence of Dr. Cornwall. His heart was still with the Ragged Schools; and, on leaving the Borough-road, he was engaged as teacher of the New Pye-street School, supported by Miss Howell. While here, in the very centre of a criminal population, he became deeply impressed with the necessity of making some effort for the reformation of the fallen. You might see him at nine o'clock in the morning with a train of miserable boys and young men whom he had gathered from various quarters on his way to school. He found that he must separate them entirely from their wicked companions, in order to accomplish any good. He accordingly rented a room, and commenced with two boys, who soon increased to [illegible]. Such was the commencement of the present Institution in Smith-street.



MR. C. NASH, GOVERNOR OF THE LONDON REFORMATORY INSTITUTION.

PROBATION-ROOM.



LECTURE ROOM — THE INMATES RECEIVING RELIGIOUS INSTRUCTION IN THE GOSPEL HISTORY TAUGHT ACCORDING TO THE MIMPRISS' "GRADUATED SIMULTANEOUS SYSTEM"

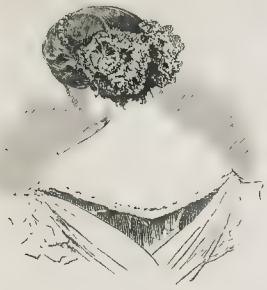
JUVENILE DELINQUENCY.—The annual meeting of the Birmingham Reformatory Institution, established only twelve months ago, was held at the establishment at Saltley on Tuesday, Lord Calthorpe presided, and was supported by Mr. Adderley, M.P.; Captain Stuart, Mr. C. Sturge, Mr. Morgan, and other influential persons of the neighbourhood. A committee of ladies was appointed to take measures for the erection of a girls' reformatory school. Several munificent donations have been made in favour of it, including one of £1000 and a subscription of £100 per annum from Mr. Jonah Mason, and donations of 100 guineas each from Miss Burdett Coutts and Mr. W. Chance.

In digging for a well in the coal mines near Prague, the workmen met with a bed of yellow amber, apparently of great extent. Pieces weighing from 2 lb. to 3 lb. have been extracted.

PARIS FASHIONS FOR FEBRUARY.

The principal, and almost exclusive, topic of conversation in the drawing-rooms of Paris is the recent Reception at the Tuileries, which every one is agreed was much more characterised by its splendour than by its

gaiety and liveliness. Every lady was so much occupied with the long train attached to her dress, and to which all were unaccustomed, that little attention could be given to any thing else. The scene has been pretty freely talked of. The Empress wore a dress composed of one of



those magnificent tissues which were presented to her by the city of Lyons; it was cloth-of-gold, besprinkled with flowers of cherry-coloured velvet. The Princess Mathilde wore a cherry-coloured cloak, very deeply bordered with gold. Madame de Persigny wore a cloak, which is spoken of in Paris as having cost thirteen thousand francs. Several of these cloaks were made of a tissue; but the greater number were simply composed of tissues of which dresses might afterwards be made—the same quantity of stuff serving for both garments. This distinction in the nature of the materials was very remarkable, and made a very costly display. There are only two receptions of this kind to be held each year, and a lady cannot, with propriety, appear a second time in a cloak which has once caused a sensation.

The two dancing-masters most in vogue in Paris are MM. Laborde and Cellarius; and they are considered to be the best instructors for teaching the most graceful manner of wearing the Court mantle. The material most worn for balls on account of the increasing rage for volants, is taffetas. The petticoats are extremely full, and it would be impossible to augment their amplitude, unless hoops such as were worn in the time of Louis XV., should be introduced. This taste is the more difficult to account for, considering that the apartments of our houses of the present day are not particularly spacious; and that it is customary to assemble a considerable number of persons at evening parties and balls.

Head-dresses in gold and silver, recently so much in vogue, are becoming somewhat less fashionable; flowers are increasing in favour, as also feathers: for the Court balls, they are placed very low at the back of the head, in such a manner that the ends fall down on the neck and even on the shoulders. The materials for the dresses of ladies who do not dance, are the same as previously worn. Cloth of gold and silver is much worn, with patterns either of a single colour on the ground, or bunches of flowers of varied colours. Very charming silk gauzes are made, interwoven with garlands of flowers, of the same colour, the fibres of the leaves and the leaves of the flowers being in silver: this material, in white, makes delightful dresses for young ladies: they have three volants, bordered, and the body has also a special pattern for itself. A novel shape for dresses is named a "godet," and which recalls the form of the *tuniques*, which were formerly in fashion.

BRONZE BOWL, FROM NIMROUD.

times it is plain, or ornamented, with a few small flowers towards the lower end; and, in some instances, powdered with pearls, as may be seen in the accompanying head-dresses. The flowers are disposed either in bunches or garlands; the latter are, however, becoming displaced by

gold and silver, and coloured silk ribbons: they are placed far back on the head, and they fall down very low on the shoulders.

At the theatres many head-dresses of velvet are seen, having "toreades" of jet, coral, pearls, or diamonds. Long ends of lace, mixed with flowers, are much worn, and form a very becoming head-dress.

PARIS FASHIONS FOR FEBRUARY.

THE ILLUSTRATIONS.

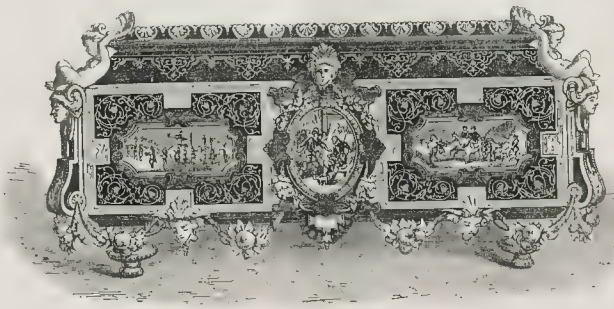
Dress of taffetas, with embroidery for the volants; the mantle, or wrapper, worn on quitting the ball-room for the carriage, in white cachmere, having cherry-coloured silk embroidery, besprinkled with gold. The shape is that of the mantles of last year: it is the most convenient form, and flattens or crushes the dress the least: it has a hood adapted to it.

Head-dress of flowers, thrown backwards, having a ribbon, which loses itself in the band of puffing: this ribbon is this year added to almost every head-dress, of whatever description it may be—sometimes it is plain, or ornamented, with a few small flowers towards the lower end; and, in some instances, powdered with pearls, as may be seen in the accompanying head-dresses. The flowers are disposed either in bunches or garlands; the latter are, however, becoming displaced by gold and silver, and coloured silk ribbons: they are placed far back on the head, and they fall down very low on the shoulders.

At the theatres many head-dresses of velvet are seen, having "toreades" of jet, coral, pearls, or diamonds. Long ends of lace, mixed with flowers, are much worn, and form a very becoming head-dress.

CASKET PRESENTED TO EARL GRANVILLE BY THE FRENCH GOVERNMENT.

Amongst the numerous specimens of ornamental art exhibited at Marlborough-house, the Casket presented by the French Government to Earl Granville, in acknowledgment of his eminent services as one of the Commissioners of the Great Exhibition of 1851, is one of the most remarkable, both for the magnificent character of the object itself and the circumstances under which it reached this country. It is of large dimensions, and is composed of ebony, richly decorated with or moulu, and inlaid with painted tablets of Sèvres china, representing subjects in the history of the great painter, Rubens. The shape of the casket is very elegant.



CASKET PRESENTED BY THE FRENCH GOVERNMENT TO EARL GRANVILLE.

THE BRITISH MUSEUM.

The very interesting collection of Nimroud Antiquities in the British Museum has lately received two accessions of a peculiar character—a bronze Patera, and two Assyrian Bowls, which we have engraved both were procured by Mr. Layard, at Nimroud. These Bowls have been selected as most characteristic of the style of art. They have been made by being punched or beaten up from their outside, so as to produce the figures in relief within. That to the left exhibits a lion-hunt. The one to the right, a lion, sphinxes, and other animals. The Bowl in the centre, which is much flatter, has winged griffins, human figures, and other ornaments; and resembles, in general style Egyptian works of late age, and certain silver vases found in Italy.

BRONZE PATERA, FROM NIMROUD.

BRONZE BOWL, FROM NIMROUD.

Lumley *v.* Gye.—This action, which has been pending for some time, is now drawing towards a conclusion. It will be remembered that, in the present term, the Court of Queen's Bench granted a rule for a new commission, directed to the Royal Court of Berlin, to examine Mdlle. Wagner and others, at the instance of the defendant. The condition precedent of the new commission was the payment of the costs of the former, which terminated in consequence of the parties refusing to give evidence. The rule for the new commission was to have been drawn up within four days, but it was not done; and the result is, that the parties will proceed to trial without the evidence by a commission. Notice of trial has been given by Messrs. Lewis and Lewis for the sittings after term at Guildhall, and the cause is expected to be tried about the 20th of February, before a special jury.

LITERATURE.

THE POETICAL WORKS OF DRYDEN.

THE "revival of poetry" manifests itself at present in various ways. Bookseller vies with bookseller; not, we must say, in the publication of new poetry, nor new poetry, worthy of the name, is rare; but in the republication of standard works, stamped with the approbation of five or six generations. We have not only selections from the writings of all the standard poets, but we have editions of more or less elegance and completeness, of particular favourites—such as Gray, Goldsmith, Pope, and the writers of the last generation—the copyright of whose works has expired. In the growing demand for cheap literature, the magnates of the publishing business naturally love to speculate on the works of the class of writers, who, being in their graves, cannot make any claim upon them for a share of profits. Among the multitude of republications of this kind, which have been lately announced "the annotated edition of the English Poets, edited by Robert Bell," is the most important. This series promises to be a valuable acquisition to our literature. The editor is admirably qualified for his task. He writes like a scholar and a gentleman, like a poet, and like a man of the world. He has a keen spirit of appreciation, and knows, as well as any living writer, that art is difficult, and ordinary criticism easy: but that the true and exalted critic is second only to the poet or "maker." If we search the long and illustrious roll of British writers, we shall find that critics of the highest grade have but seldom appeared in the literary republic: and that, when they did appear, they were always men who had won their own golden spurs in the glorious lists of literature before they took it upon themselves to act as arbiters on the merits of others, or umpires of the public decision. Mr. Bell has commenced his labours with the "Life and Works of Dryden." The reader may not unreasonably ask—were there no poets before "glorious John," that he should thus be thrust into the place of honour? Mr. Bell, in explaining his own design, supplies an answer to the question:—

> An introductory volume (he says) will present a succinct account of English poetry from the earliest times down to a period which will connect it with the series of the poets, through whose lives the history of our poetical literature will be continued to the present time. Occasional volumes will be introduced, in which specimens, with connecting notices and commentaries, will be given of those poets whose works are not of sufficient interest to be reproduced entire. The important materials gathered from previously unexplored sources by the researches of the last quarter of a century will be embodied wherever they may be available in the general design; and, by these means, it is hoped that the collection will be more complete than any that has been hitherto attempted, and that it will be rendered additionally acceptable as comprising in its course a continuous History of English Poetry.
>
> By the arrangements that will be adopted, the works of the principal poets may be purchased separately and independently of the rest. The occasional volumes—containing, according to circumstances, poetry of a particular class or period; collections illustrative of customs, manners, and historical events; or specimens, with critical annotations, of the minor poets—will also be complete in themselves.
>
> As the works of each poet, when completed, will be independent of the rest, although ultimately falling into their places in the series, they will be issued irrespective of chronological sequence. This arrangement will present a greater choice and variety in the selection, from month to month, of poets of different styles and periods, and at the same time enable the editor to take advantage of all new sources of information that may be opened to him in the progress of publication.

Mr. Bell further states that the edition now proposed will be distinguished from all preceding editions in many important respects. It will include the works of several poets entirely omitted from previous collections, especially those stores of lyrical and ballad poetry in which our literature is richer than that of any other country; and which, independently of their poetical claims, are peculiarly interesting as illustrations of historical events and national customs.

There is, therefore, no other reason for commencing the series with Dryden than the good-will and pleasure of Mr. Bell. It suited his taste or his convenience; and, with a plan so unobjectionable and so certain to be made chronologically and historically correct in the sequel, the reason is sufficient. Perhaps, an additional reason might be found in the fact that an edition of Dryden has long been wanted, and that his works are, in reality, scarcer than the e of any other English poet of equal note. To have begun with Gower and Chaucer might have seared a host of readers, who, members of the Society of Antiquaries, have neither relish for nor comprehension of the vernacular language in its uncouth orthography of four hundred years ago. To have come further down the stream of Time, and, to have commenced with Spenser, would have been to risk the popularity of the venture, for Spenser, though deserving of all respect and honour, is not, and never can be, a general favourite; and, to have come nearer still to the age when English literature began to assume its present shape and spirit, and to have issued the poems of Shakspeare and Milton, would have been to run the risk of over-stocking the market with works with which every reader is familiar. But to Dryden no such literary or trade objections applied. He is an author known more to the present generation by his great reputation, than by his works. His unrevailed ode to St. Cecilia, and his translation of "Virgil," are, perhaps, the only compositions with which the bulk of the reading public can be said to be acquainted; and even that limited amount of knowledge is derived from school lessons, rather than from actual study and enjoyment at a later period of life. His plays are dead, beyond all possibility of revival—his occasional writings have passed out of remembrance; but his satirical and other poems will never die, unless the English language precede them in the grave. Mr. Bell's cheap and elegant edition will introduce this patriarch of literature to a larger class of readers, while his judicious and eloquent life of the poet will make them familiar with the characteristics of an age of which no Englishman is ever tired of reading—the age immediately preceding that of Pope and Addison; and forming, in conjunction with it, by far the most brilliant and remarkable period in the annals of English literature.

But though Dryden has to some extent fallen into neglect of late years, he has never lacked enthusiastic admirers. The late Lord Holland is said to have carried his reverence for him so far, as never to use a word, either in speaking or writing, that was not to be found in the pages of his favourite. All the great masters of the English tongue, whether they have written in prose or verse, have been under obligations to him. He was so terse and vigorous, so thoroughly English, so determined to make the right words fall in the right places, that no one who wishes to learn the secret of a good style can peruse his poems without advantage. That he was a great poet we cannot take it upon ourselves to assert. He lacked imagination, though he exhibited fancy; he was deficient in tenderness and grace, but he possessed fire and vigour; and our language and literature owe him a debt of gratitude which it would be unjust either to deny or to depreciate. Whatever he felt he felt strongly; and whenever it suited his purpose to say what he felt, the strength and the earnestness of his expression showed him to be both a master of thoughts and of language. Everything which he wrote was to the purpose, and, to use the words of one of his contemporaries, was "full of mighty sense."

Mr. Bell has been fortunate enough to obtain some original letters of Dryden, which throw new light upon his life. The greatest, it not the only, reproach upon his character was that he changed his religion for a pension. Mr. Bell proves for the first time that the stigma was undeserved. We commend the volumes in this as well as in every other respect to the attention of those who desire to have not only a correct edition of the work, but a correct biography of a great writer.

THE PARABLES OF FREDERICK ADOLPHUS KRUMMACHER. Translated from the Seventh German Edition. With Forty Illustrations, drawn by J. R. Clayton; engraved by the Brothers Dalziel. Nathaniel Cooke.

The great charm and the great power of simplicity are not, as some imagine, a merely negative result; they come from more than the absence of faults, including even the absence of the most displeasing of faults—affectation. Yet such an immunity would itself be of immense importance, and of the highest practical value. But it is not sufficiently remembered that simplicity insures unity of effect. All the conventional parade of writing, its jewels, whether genuine or spurious, cannot furnish an equivalent for the real disfigurement entailed by them, where they happen to distract or to divide attention from the one principal truth or the principal impression, which it may be the end of any work of art (in each particular portion respectively), to bring home.

In these German Parables we find a union of the two advantages, which are distinct from each other, and which are not always certain to result simultaneously from even the merit of simplicity. There is freedom from pretension, from bombast, and from even the risk or possibility of these or any other vices of literary composition. But as the work has good sense, has good feeling, has many truths to tell, many old, homely, and useful lessons to inculcate in new, and often very in genuinating lights,—in fine as the book has an effect to produce, the simplicity with which the author writes, possesses a positive additional value, giving both power and charm, where nothing else could give them. We need but add, on this head, that the translation does justice to the original.

It was at Duisburg, and in the year 1805, that Krummacher's "Parables" first appeared. For the last fifty years their success has been great, and it has been progressive. Fifty years! a long time to maintain popularity—a prodigious time for turning what is ephemeral into what is. After such a test, it will be conceived that the author holds a place among the standard luminaries of German literature. He is still living. This English version is from the seventh German edition (six large editions having been sold); and it contains a few prefatory remarks from Krummacher himself, in lieu of the longer, and perhaps needlessly apologetic, or explanatory, introduction, which had stood at the beginning of the book in the German. It closes with these words:—

> To what purpose, indeed, is a long preface on the construction of parables, when they themselves are unveiled in array? It were better to conclude with an axiom from the Goldon A B C of dear Claudius [surely this ought to be Claudian]:—
>
> The Parables are fair and good;
> But then they must be understood.

Herder may be said, in a sense, to have preceded Krummacher in this branch of literature; but it is as Heslod preceded Homer. Krummacher has made "parables" his own throughout Germany, where his name is so completely identified with them, and where they are so popular, that there is not a class-book in which several of them have not been incorporated.

The following is the parable of Polycarp; it is one of the longest in the collection, where everything is so pregnant and condensed:—

POLYCARP: OR, THE KINGDOM OF TRUTH.

The excellent Polycarp, Bishop of Smyrna, was obliged to quit the city in consequence of the increasing persecutions; he went with his faithful disciple Crescens to the region in the vicinity of Smyrna.

And in the cool of the evening the Bishop was walking under the shade of the magnificent trees which stood in front of his rural abode. Here he found Crescens leaning sorrowfully on a cedar tree, leaning his head on his hand and weeping. Then the old man said, "My son, why we sat thou?" Crescens lifted up his head and said, "Shall I not mourn and weep, when I think on the kingdom of truth on earth? Tempests and storms are gathering round, and will destroy it in its beginning. Many of its adherents have become apostates, and have denied and abused the truth, proving that on earth men may confess with their lips, though their heart is far from it. This fills my soul with sorrow, and my eyes with tears." Thus replied Crescens.

Then Polycarp smiled, and answered, "My dear son, the kingdom of Divine truth is like unto a tree that a countryman reared in his garden. He set the seed secretly and quietly in the ground, and left it; the seed put forth leaves, and the husbandman grew no strong weeds and thorns. Soon the tree reared itself above them, and the weeds died, because the shadow of the branches overcame them. The tree grew, and the winds blew on it and shook it; but its roots clung firmer and firmer in the ground, taking hold of the rocks downwards, and its branches reached unto heaven. Thus the tempest served to increase the firmness and strength of the tree. When it grew up higher, and its shadow spread further, then the thorns and the weeds grew again around the tree, but it heeded them not in its loftiness; there it stood in calm, peaceful grandeur —a tree of God." Thus said the pious Bishop; then stretching out his hand to his disciple, he continued smiling: "When thou art lifting up thy eyes to the summit of the tree, wilt thou regard the weeds that cling about its roots? Think on Him who planted it."

Then Crescens arose, and his heart was gladdened; for the venerable father walked by his side. Bent was he with years; but his spirit and his countenance were as those of a youth.

One more sample:—

THE TEARS.

On a moonlight night Hillel was walking with his disciple Sadi in the garden of his ancestors.

Then Sadi said, "Behold yonder man in the rays of the moon; what is he doing?"

Hillel said, "It is Zadok; he sits by the grave of his son, and weeps."

"Can Zadok not moderate his grief?" asked the youth. "Men call him the wise and the just."

Hillel said: "Is that a reason why he should not feel pain?"

"But," asked Sadi, "what advantage has the wise man over the foolish one?"

Then the master answered: "Behold, the bitter tear of his eye sinks to the ground; but his countenance is raised to heaven."

We may safely say that these are very poor specimens of the merits of the Parables of Krummacher. But we have quoted a comparatively long fable to show how short those must be which are shorter in comparison; and then a brief and terse instance, that it may be understood how light and easy the general reading must be which is less exacting than that.

It is right, however, to signalise, before we close our brief notice, some of the really superior parables. "The Apple," "The Magnetic Needle," "The Painter and his Master," "The Le-son," and "The Imbecile Child," are full of beauties, though the moral of the last is not logical. The "Sacred Pictures" is truly sublime.

If such be the merits of this work, we have only to add that it is so superbly printed and bound, that it is, in every sense, his "money's worth" to the purchaser.

WALTER EVELYN; or, the Long Minority. In 3 volumes. Bentley.

A broken kaleidoscope, a tangle of bright threads, flowers tossed into a heap, or the Babel of a fashionable reception, stimulated with crowd upon the mind after a perusal of this novel. With a thorough knowledge of life, derived from correct and keen observation of it, considerable literary power, much wisdom, occasional eloquence, and not a little humour, the author of "Walter Evelyn" has given us the rarest and highest literary qualification, patience, to be able to paint a more truthful and amusing picture of modern high life than any author we can at present name. Thoroughly intimate with the manners and characters he portrays, he has succeeded in presenting a dramatic harmony in "Walter Evelyn" which only require to have been well guided through the plot, to have made it a novel of the highest class. His puppets are admirably costumed, they act with remarkable ease and naturalness; but they are tossed about hither and thither with so much confusion, their strings are pulled with so little regard to coherence, that the interest of the reader is wound up and let down with provoking unceremoniousness. He is, however, always amused, and sometimes instructed.

Walter Evelyn is the grandson of a septuagenarian peer, who had a "chirping voice, cheerful and kindly, such as a good-natured sparrow might rejoice in, if he could tell a fat story," and who, "though not very wise, or very generous, or very good in any way (being on the whole as selfish, heartless, and improper an elderly gentleman as lived in the neighbourhood), was not a whit worse, or more heartless, or more selfish, than some others who put a grave face upon matters, and do their naughty things with much self so much good humour and usefulness." Walter Evelyn's father is a sporting, gambling, good hearted, thriftless, unprincipled nobleman, who began life as a spendthrift and pagoon, and ended it as a systematic duper of younger spendthrifts and pigeons. Walter Evelyn's uncle is a stately placeman of the old implacable school, who "had none of the *prens* chivalry which sometimes makes leaders of adverse parties in public very good friends in private life. He used more solid hard words than any member of the House; his weapon of offence was not a foil, glittering while it wounds, but a bludgeon. No wit, no light play of fancy, no brilliant essay ever came from that heavy, stolid mind." Walter Evelyn's guardian, the Earl of Wimmington, is an elderly debau[illegible]al satiric service, who runs every body, except himself, by his intense selfishness, who gets a character for being a profound musician by hiring composers to write music to be published as his own; who keeps an opera-dancer, and neglects his domestic and public duties, and who is preserved from the consequences of his innate silliness by his coronet and extraordinary good fortune.

The history of a long minority passed under such auspices is necessarily eventful. At eight years old the little heir is the messenger between his father in the Queen's Bench and his mother in lodgings in the "rules."

It was a touching thing to see the wives, and mothers, and sisters of these "gay dogs" come in to see them. Elegant and lovely women, upon whose cheeks the very winds of heaven had been never before suffered to blow too rudely—who had ridden in coroneted carriages till they had almost forgotten how to walk—used to come tripping down on their errand of love, through rain and rough weather, and often many a good mile on foot, to bring but one extra guinea to those thankless prodigals, or save ever so little from the wreck at home. I knew one dear lady, one of the best and brightest who ever gladdened the home of a worthless husband —she afterwards wore the coronet of an Irish marchioness; but then she used to bring the Honourable Theodo (her husband), little veal patties of her own making, thinking (bless her innocence!) that he had no dinner. Running into their room, too, one day, I saw her stealthily mending his stockings. I know she kept no servant; and she lived in a quiet, obscure street in Lambeth, full of journeymen cabinet-makers and musicians, where she had a little lodging at seven or eight shillings a week; while the Honourable Phenix had never had so much money in his life as he was then making (to lose it again) by a run of luck at the scoured table.

After Harrow, the hero becomes, for a time, his uncle the Minister's private secretary. Here is an account of the beleaguering army that lays constant siege to Downing-street:—

> Thus, independently of all sorts of private claims, hard to be refused though often made on behalf of unqualified people enough, one man would write to ask for a pension, on the ground of his grandfather's second cousin, he believed, had been coachman to Queen Anne; but, as he was not sure about it, he enclosed his certificate of baptism, with the marriage-register of his father and grandfather, hoping that they might, at least, satisfy "Her Majesty's Government in Parliament assembled" (such words as these were always well spelt, because copied from the newspapers), and "prayeuse him a penaun, chof never so smal."
>
> The letters, however, were the lightest part of my duties, for I was obliged to receive all kinds of people who thought proper to make personal application on subjects equally extraordinary. I remember one foreign Jew who, after looking round the room in a mysterious manner to ascertain that we were alone, made an impudent attempt to bribe me to get him a contract for supplying the Navy with lucifer matches; and another who came all the way from the interior of Russia, with a dirty money bag in his bosom, to endeavour to obtain the removal of the obstructions at the mouth of the Danube by the talismanic influence of its contents. The Government were thought able to do anything, from obtaining a ukase from the monarch of the Tartars to building a bridge from London to New York. I remember too that many foreigners succeeded to obtain their object by some direct or indirect species of bribery, and my wonder soon ceased at my uncle's dislike to presents. This kind of visitors seemed to have no idea of political honesty at all. They would take out their pocket-books and finger the contents whilst talking to you, and looked upon your indignation only as a hint that the bribe was not large enough, or that you wanted gold instead of bank-notes, to escape detection.
>
> The ladies, too! What wonderful schemes they did hit upon, to be sure! One, a piquante little woman, of some six-and-twenty summers, came first to my uncle's house on pretence of buying cast-off clothes from his valet, and then bribed that officer to be shewn up to his master. This being accomplished, and my Lord, who was busy in arranging his speech on the Sugar question, to be delivered that night, having left me to see what she wanted, she opened proceedings by offering me, what she called a very beautiful cabinet picture, if I would only stand aside a minute or two—any thing, in fact, for me. In vain I told her I had no power or means of doing anything; there was no getting rid of her. For two mortal hours she tried the whole battery of her charms upon me; she railed me, piqued me, flattered me (most impudently), laughed at me; and at last, finding every thing useless (though, indeed, I would have made her husband Lord Chancellor to get her to go away), she threw herself in a paroxysm of tears at my feet, and repeated a whole poem of prayers to me to do what was simply impossible.
>
> It preyed upon my health at last. I grew afraid to shake hands with people lest they should attempt to leave a pocket-book with me.

Observation, nicely-discriminated character, tenderness, and healthy sentiment abound in "Walter Evelyn," sufficiently to enrich a half a dozen better-constructed novels. The author seems to have written under a sense of extreme pressure; as if he were performing a literary match against time. Yet, despite several minor mistakes into which his hurry plunges him, he communicates a strong impulse to the reader, who goes on to the end puzzling out the plot, and devouring the incidents in breathless haste. Strangely enough, a subordinate character in "Walter Evelyn" lays down the soundest laws for novel-writing: one of which is, "do not hurry your book; a good novel cannot be written quickly; you should be always thinking about it, and ripening the subjects in your mind."

THE POSITIVE PHILOSOPHY OF AUGUSTE COMTE. Freely translated and condensed, by HARRIET MARTINEAU. Two vols. Chapman.

M. Comte, like M. Fourrier—some of whose works have been noticed in our Journal—is the author of a new science of society; and, like him, was a disciple of St. Simon, if we may not rather say that the opinions of all three, and many other social reformers in France were the natural growth of the extraordinary political circumstances of that country. M. Comte was born in 1797; educated, therefore, chiefly during the supremacy of Bonaparte, and before it had come to an end, was impressed with an idea that a scientific as well as a social reform was needed. After St. Simonism fell into disrepute, and after M. Comte had ceased to be one of St. Simon's most active disciples, he became a teacher of mathematics and a professor at the celebrated Polytechnic School. There, however, he fell into disputes with most of his brother professors, and in the end was dismissed; having no other resource than those of an unpensioned, unplaced, mere literary man, which, in France, are even more scanty than in England. He has passed a very active literary life; teaching and lecturing with great enthusiasm, and almost without intermission, in order to make his opinions known. From continued active exertions of this kind, his works—which were principally delivered as lectures—are more voluminous than terse and correct. He has wanted time and leisure to prune and polish them; and their enormous mass would almost deter any but the hardest students from reading them, and much more from the task of translating them. His collected works amount to twelve thick volumes; and his "Positive Philosophy," the work now condensed into two volumes of 435 and 500 pages, by Miss Martineau, fills six volumes, each of which contains, on the average, upwards of 900 pages. Some of his speculations, like those of Fourier—and from the same cause, a yearning after social improvement—have been very favourably received, though by men of a very different station in society and of a very different degree of mental cultivation, unplaced, unpensioned Fourier. Men of high mark and great literary repute have announced Comte to the world as the greatest living thinker. Miss Martineau shares their opinions. She believes a knowledge of Comte's writings to be needed in England, and hence she has undertaken and has well performed the arduous task of studying them and of condensing—so that nothing of importance is omitted—his six large volumes into two volumes, half as large, of very readable English. Her reputation, and her known mastery of style, make it unnecessary further to eulogise her performance; as a piece of philosophic writing it is worthy of all praise. But her late connection with mesmerism has weakened our confidence in the soundness of her judgment; and the more M. Comte's philosophy is lauded by her and others, the more do we feel ourselves called on, before giving it currency, to subject it to a rigid examination.

The present work, the original of which was published in Paris between 1830 and 1842, contains his whole system, and consists of two parts, to each of which a volume is appropriated. In the first, his plan of classifying all the sciences according to their relations to one another, beginning with those which are supposed to be the most simple and most general, is explained; Mathematics, Astronomy, Physics, Chemistry, &c., are treated of; and the history of the progress of each science is sketched in a very superior way. The whole of this volume relates to abstract and abstruse subjects, which can only be treated in an abstruse manner. Some of his principles of classification are worthy of being followed; but only those who are ignorant of what has been done by some eminent men in different parts of Europe, can adopt the opinion that it was left for M. Comte to assert theoretically, or to show practically, that mental science and the science of organised beings must be studied in precisely the same manner—by observing and comparing facts, and by instituting experiments, and watching the results—as is employed in investigating unorganised and material bodies. In Miss Martineau's pages, M. Comte appears as an eloquent, but not always a correct, expounder (as some notes in her book testify) of the leading principles of the best-known sciences; but personally he has made no discoveries, and he is rated much too high when he is classed with the greatest men of the world for suggesting a doubtful and slight improvement in the classification of knowledge.

The second volume is entirely occupied with M. Comte's science of society, according to the principles of the positive philosophy, or a new science called "Sociology." He shows the short-comings of several other systems; he justly appreciates the perversion of Smith's "Wealth of Nations" into modern political economy; and is not wrong in ascribing to the principles of Smith's work, properly carried out, an antagonism to existing governments. He traces with considerable sagacity the natural progress of humanity, from barbarism to civilisation, but whenever he attempts to expound what is to supply the place of the science of wealth, and of existing social regulations, we are more frequently reminded of Forwier's rambling, confused, unintelligible communications, than of the neat, clear logic of J. B. Say, or the unmistakeable precision of M. Bastiat, or the massive writing of Proudhon. But that M. Comte borrows a phrase from Mr. Mill, to stigmatise pedantocracy, we should suppose that he meant to hand over government to the learned, to men of literature and science. His discursive remarks on the influence of science, of ideas, and of the domestic relations, would lead us to infer that he meant only to place society, as it is now actually placed, under the dominion of public opinion. But M. Comte is an opponent of the private opinion, which alone can build up free and sound public opinion: particularly he is an opponent of that free public judgment in matters of religion which prevails in Protestant countries; and he would have a Government take ahead attempt to remedy all the evils of society, and should provide it with a uniform faith. His system is rather the union of despotism with an infallible Church, than freedom of political and religious opinions: such as exists in England and the United States. From the influence of M. Comte's system, now displayed in engaging language though it have found favour with many clever men amongst us, and recommends itself to all those who dread democracy more than despots, and have more reverence for thepast, than hope in the future—we pray that our people may be saved.

BALDER. Part the First. By the Author of "The Roman." Smith, Elder, and Co.

The failure of a man of genius, when it occurs, is more complete, as well as much more conspicuous in its manner, and much more painful in its effects, than the failure of a person who was merely inadequate to the undertaking which we assume either to attempt. More painful, we say: and this not always to him alone who has failed, or to his personal friends. We should, indeed, be sorry and ashamed if the mortifications, misadventures, and checks of a bright and aspiring intelligence, full of unquenchable emanations of some divine spirit, were shed in pabulum of malicious exultation to mediocrity, and produced no result but that. Few things are more easily travestied, burlesqued, or lampooned, than what contain some noble quality. Ridicule lives on its opposite; and—the talents of the two competing authors being supposed equal—he would back the man who took the "Parad se Lost" for the subject of a pantomime, against the man who selected Mr. Montgomery's "Satan" for the same purpose.

We observe that a morning contemporary has made great fun of "Balder." If the critic has never yet thought of the experiment, we assure him that he will be quite surprised at the probable results which he will realise, by merely placing before him one of the longer poems which have already won a standard place in public estimation, and bringing to an analysis of it, or even to a cursory survey of its parts, the same sportive, reckless animal spirits, and the same fleering, implike nimbleness of flippant sarcasm, which he has levelled so adroitly against passages of this new effusion. Of course, however successful the mock-criticism might be, its author would not wish to publish it now as an exposition of his serious opinions or impressions concerning some work of established repute. But, had the experiment been made immediately after the first appearance of such a work, and before time had had delivered its verdict, would he then have scrupled to record his commentary? Such things have been done—generally with more effect upon the poet himself, and upon his future productions, than upon the particular profusion which may have already appeared. It happened thus to Byron: neither depressing his early fugitive pieces below the tide-mark of fame (for they had never reached it), nor much exalting, nor, indeed, much altering, the value in which they were held; for they had no great merit; and were often, and have not since been, very severely extraordinary in any sense. The result was slight, so far as concerned those poems; but there was a very important result so far as concerned the poet. A similar welcome attended Keats. To Keats this appears to have occurred up some considerable, but it was of no consequence at all to "Endymion," except to make many persons express their admiration with indignant fervour who would have expressed it calmly when occasion arose, or never have felt it necessary to express it at all.

Criticism is powerful, but, like all powerful agents, it has its duties, which are not de-regarded with impunity. Unjust judgments impair the veneration which "hedges in" the Bench; and rash or malignant criticism recoils upon the authority of the "*censores morum et artium*" as a body, and in their entire protective, calling, and functions. For that authority is no chartered right or statutable privilege, but purely moral; and, like all influences laboriously acquired "by many acts," is easily shaken "by one." There is no optional function in the office of the herald who does not come forward to characterise the pretensions of any new competitor in the great *champ clos* of literature. It is a sacred obligation of honour and trust that he should give a fair description, or none; and a full description, where it must be unfair if not full. The reader may easily and rationally conceive that in a long poem, an ingenious mind can generally discover ample materials for ridiculous travesty, by mere selection, or, if that fails, by skilful juxtaposition. And it is, perhaps, allowable enough to make merry thus with the amusing phases of an anxious and prosaic ed labour, provided justice be done, at the same time, to the real merits and real beauties it may possess. But, we have said enough on this head, and more particularly with reference to the poem of "Balder."

We honestly confess that we have seldom looked into an effusion which would lend itself more easily or more liberally to the purposes of any merely depreciatory, or rather derisory, criticism. We are not only confident that the author's most ardent friends would in candour admit the fact, and that they must, at all events, perceive in their own minds the full truth of our remark; but we are sure that the author himself cannot help *feeling* it. We must also add that we are greatly mistaken if the writer be not just the kind of genius to whom a little castigation will do no harm; and were we not anxious to record our appreciation of those poet c powers which he truly possesses, but of which he avails himself with the most egregious want of judgment and of skill, we certainly could divert and entertain our readers far more than we at all hope to do our present observations. The author of "Balder" has already, however, seen a portion of his extravagances rather pungently exposed in other quarters, without any acknowledgment whatever of his claims to compensatory treatment. Partly for that reason, and partly for the considerations just mentioned, we abstain from making a new shaft into the rich mine of ridicule and fun in which he almost seems to challenge the lovers of sarcasm "to come and find." If, indeed, hewer again prove so unfaithful to his own talents and inspiration as to publish another work with the patent, salient blemishes of "Balder," we shall de-pair of him. "Part the Second" is to come: we shall see whether this be a threat or a promise.

In the first place, then, "Balder" is a poem which belongs to no recognised division of poetry. It is not an epic, it is not a drama, it is not a collection of smaller pieces,—each perfect as to its kind, it is not a rhapsody of description, narrative, allusion, and reflection, moving with intelligible plan, in harmon ous orbit, with regularity of measure, and a certain self-consistent unity of character and style. Or rather "Childe Harold," to which (besides the deplorable differences in the very nature of the design, as well as in style and outure execution), it is so stark ugly and immensely inferior in poetical afflatus, that we could easily select many lines from what are considered the worst passages of "The Pilgrimage" for which we should in vain seek any parallel throughout this new poem. Not belonging to any class of poetry, which either the arbitrary rules of convention, or a well-regulated view of what is intrinsically and generally consonant with "the harmony of the spheres," can give us for the array and marshalling of the various kinds of song, "Balder," refusing, we say, all recognised classification, must be accounted and accepted as a "*medley*." We regret to add that it is a chaotic medley. Of its plan, its materials, it is not merely impossible to give any clear statement whatever. Such being the general character, we are reduced for an estimate of its merits, to examine particular passages, and even individual lines. Now, it is not to be denied that it contains many lines which are torrid, absurd, forced, wild, and often (to make a clean breast of it) exceedingly disgusting. There are some, again, of which it is labour thrown away, to try to make any meaning or any sense at all. This will be found to be the fact by every attentive and conscientious reader; and this is not all, for there are lines, which are worse for the meaning they have than they would be if they had none. We allude to some bursts of mingled bathos and profanity, of which one part may be described as consisting of words without significance, and the other of words which ought so to speak, to cry to the hills to cover them.

Yet, with all these special faults, and with a certain pervading arrogance, more resembling insanity than a "fine frenzy;" with all these abatements, we are forced, in common justice and fairness, to acknowledge that there are also in this strange effusion passages of rare and exquisite beauty of idea, contained in most felicitous and powerful verses.

"Balder" never will be popular: that is utterly hopeless: it is out of the question. And, while it never will be popular, its defects, or rather its positive blemishes, are so numerous and so flagrant, that it will never have its right place; or, more correctly, the place which a poem by a man so gifted ought to achieve—even in the estimation of the discriminating few.

We counsel the author earnestly to chastise his own wayward and overwhelming spirit; to select some literary design, full of human interest, however sublime; and to condescend to be popular. Even Dante condescended to charm the earth, and "to witch the world with noble" *poesy*.

MUSIC.

AN addition has just been made to the numerous societies established within these few years, for the purpose of giving musical performances on a great scale, an improvement on the practice which formerly prevailed of such performances being given by individual professors on their own accounts, and for their own benefit. This new association calls itself the "London Orchestra." It appears to have been set on foot in opposition to, or in competition with, a society of precisely the same description which was formed two seasons ago, the Orchestral Union. Each of them consists of a body of instrumentalists, under an able conductor—Mr. Alfred Melson being at the head of the one, and Mr. Frank Mori at the head of the other. Each society proposes not only to give concerts on its own account, but to furnish its services to parties who give great concerts either in London or in the provinces. Both societies may probably do a great deal of good; and the rivalry which must exist between them is calculated to stimulate their exertions. The London Orchestra gave its first concert at the Hanover-square Rooms on Thursday (last week). The band appeared to be about forty strong, and included many eminent performers, among whom were Thirwall, Lovell, Phillips, Baumann, Lazarus, Barret, Prospère, Rowland, and Chipp. The mention of these names reminds us that the Orchestral Union consists entirely of "native talent," while no such exclusive principle has been adopted by the London Orchestra. The concert was exceedingly good. Its great features were Mendelsohn's Symphony in A minor, called the "Scottish Symphony," and the same composer's pianoforte concerto in D minor, in which the principal part was sustained by Miss Arabella Goddard. There was also a trio for the pianoforte, violin, and violoncello, composed by Mr. Ferdinand Praeger, and played by himself, M. Sainton, and Mr. Lovell Phillips—a very pleasing composition, admirably executed. Some vocal pieces, of a superior order, were performed by Madame Amedei, Signor and Madame F. Lablache, Mr. and Mrs. Weiss, and Mr. Land.

THE HARMONIC UNION gave a performance of "Elijah" on Monday evening, at Exeter-hall. Mr. Benedict having returned from Germany (after having superintended the triumphant production at Munh h of his opera of the "Crusaders"), resumed his place as conductor. Much interest was excited by the appearance of Signor Belletti, who on this occasion made his first essay in sacred music, and in the English language. He acquitted himself, on the whole, in a manner not unworthy of his high reputation; though he certainly did one thing which was not worthy of it. In place of sustaining the principal character in this sublime musical drama, he sang only a part of the music belonging to it, leaving the remainder—including some of the finest and most dramatic passages—to be sung by another person. Mr Lefler. This strange and unprecedented proceeding so much surprised us that we inquired into the matter, and were informed that Signor Belletti had refused to sing the whole part, and had persisted in it, actually, notwithstanding the remonstrances of the committee. *Why* he should have done such a thing passes our comprehension. It was injurious to himself, as well as fatal to the dramatic character of the oratorio. His excessively foreign accent and pronunciation, which enough to betray ignorance of the meaning of the words he was attempting to speak, also formed a great drawback on the effect of his performance; and though the beauty of his voice and the high finish of his execution were often conspicuous in its application to her art. On the occasion she manifested not only much intelligence and feeling, but a very considerable degree of vocal power. The choruses were, without exception, performed in a manner which did great honour to the singers, and to their conductor, Mr. Hullah. The audience was very large.

THE WEDNESDAY EVENING CONCERT of this week calls for small notice. It contained a little that was good, much that was bad, and still more that was indifferent. The good was Benedict's fine Pianoforte Concerto in C, extremely well executed by Mdlle. Gräver a young pianist of talent, and Beethoven's noble Overture to "Egmont;" to which, however, the orchestra did not do justice. Among the bad were were Flotow's Overture to "Stradella"—a poor imitation of the weak modern Italian style; an interminable duet on the violin and violoncello, played by Messrs Collins—a mere piece of fiddling, full of unmeaning difficulties; and the insipid quartet, "Mild as the moonbeams," interpolated by the elder Braham into the opera of "Artaxerxes," and very popular with the gods of Drury forty years ago, but far behind the taste of the most ordinary audience now-a-days. It was introduced on Wednesday night for the last, no doubt, of Mr. Augustus Braham, who, however, failed to give it any effect. The rest of the concert was made up of songs and ballads, some of them pretty enough, and agreeably sung by Mrs. Alexander Newton, Miss Poole, Miss Alleyne, Mr. Augustus Braham, and other popular vocalists; but all of them worn threadbare by constant repetition.

MUSICAL PUBLICATIONS.

NINE QUARTETS for two Violins, Viola, and Violoncello By J. L. ELLERTON. Schott and Co.

This is a complete edition, in score, of Mr. Lodge Ellerton's quartets, which have already been published separately, at various times, in this country, and are known and highly appreciated in our best musical circles. Mr. Ellerton is a gentleman of family and fortune, gifted by nature with great musical genius, and enabled by his position and circumstances to cultivate his genius by the highest resources of art. He is one of a daily increasing number of amateurs in this country who do not yield, in extent of attainment, to the most accomplished of our professed artists, and he has distinguished himself by many works of merit in the highest walks of vocal and instrumental composition.

Of all the classes of composition, the chamber quartet or quintet, for stringed instruments, is the most arduous, and demands the largest amount of inventive power and of technical acquirement. This form, accordingly, has been chosen by the most illustrious masters—Haydn, Mozart, Beethoven, Spohr, and Mendelssohn—for the embodiment of their profoundest and most beautiful conceptions. It has been repeatedly essayed by our own composers; but we cannot name a single English musician who has gained celebrity as a quartet-writer; nor can we name any English composer whose works of this class are either so numerous or so worthy of distinction as those of Mr. Ellerton. From a careful examination of the scores before us, we are led to conclude that Mr. Ellerton has formed his style more upon the older writers than those of a later day—more upon Haydn, Mozart, and Beethoven than upon Spohr and Mendelssohn. But there is no servile adherence to any school. There is great freshness and originality in his ideas, as well as novelty and ingenuity in their treatment. Mr. Ellerton is thoroughly acquainted with the instruments for which he writes, and knows how to turn their powers to account, either singly or in combination. In the slow movements, his melodies are often exceedingly vocal and expressive; and his harmonies, even in the most complicated passages, are pure, clear, and unembarrassed. Among these masterly pieces we scarcely know which to prefer; but we may specify the quartet in E flat, No. 2, of the first set; that in B flat, No 1, of the second set; and that in G minor, No. 2, of the third set, as being preeminently beautiful, and worthy of companionship with the works of the greatest masters.

TWO SONGS: "Spring is Coming" and "Summer." Composed by JOSEPH ROBINSON.—DUET "In dreams when sleep falls o'er me." By the Same. Chappell.

These are compositions of very superior merit, though by no means free from faults. In the two songs the melodies are sweet, flowing, expressive, and varied by smooth and happy modulations. Their instrumental accompaniments, too, are ingenious; but Mr. Robinson is much addicted to the ultra modern harmony, and sometimes sacrifices pure and natural chords for far-fetched crudities. In "Spring is Coming," for instance, we may mention in bar 4, page 2, the excessively harsh succession from the major common chord of D to the diminished seventh upon B natural, involving a *false relation* embarrassing to the voice. The beauty of the duet, too, is impaired by similar attempts at singularity. The modulation is so restless that it is difficult to discover the predominant key. It is meant to be G minor; but the very opening bars of the melody are really in B flat major, and the G minor harmony given to them is quite forced and unnatural. There are some crude intervals, too, in the vocal parts, particularly the leap, downwards, by a seventh, from D to E flat, which deviates sadly from the line of beauty, without any compensating meaning. The conclusion, in unison, on the fourth below the key-note, is a German affectation, sanctioned by the fashion of the day.

THE FIRESIDE OF OUR HOME: a two-part Song for Christmas time. The Poetry by F. W. EDWARDS. The Music by W. R. BRAIN. Cramer, Beale and Co.

This is a seasonable song. Both the poetry and the music are simple and unpretending; but the poetry speaks the home feelings which belong to the Christmas fireside, and the music is well fitted to sing them. It is to be sung by two solo voices, with a chorus in four-part harmony and, so performed, its effect will be found very pleasing.

THE HONEYMOON POLKA and HONEYMOON WALTZES. Composed by P. A. BLOCKSLEY. Addison and Holber.

THE BIRKBECK POLKA. Composed by V. MEDHURST. J. Duncombe

Waltzes and Polkas do not belong to a high class of musical composition. But, when good of their kind, they are not to be despised; for they may possess considerable intrinsic segno, independently of their effect in enliven ng a social evening. Such are the Waltzes and Polkas above named; they are pretty, lively, and well adapted for dancing.

THE THEATRES, &c.

HAYMARKET.

The long-announced re-appearance of Miss Cushman at this theatre took place on Monday. The character assumed was that of *Bianca*, in Milman's painful tragedy of "Fazio." Miss Cushman has lost none of her intensity of action—none of the energy of conception by which she was first distinguished. Her *Bianca* is a part of great power and of unparalleled pathos. We are constrained to pity, where we cannot approve. Her violence of her jealousy, and the suddenness of her revenge, leave her without excuse, or adequate motive, save in the unconstitutional vehemence of her feelings: her emotion is left to be its own justification. Here it is that Miss Cushman triumphs. She gives to it a reality which she feels herself, and makes us feel also. She manifestly suffers what she expresses—the exclusiveness of her love, the whirlwind of the passions, whether of hatred or revenge, and the utter prostration of sense and soul, when the result of her conduct presses upon her in the loss of all she had loved or to secure by it. Never was such humiliation, such despair, as those with which she approaches *Maddalo* when pleading for her husband's life. Nor is this intense gloom relieved by her manner entry on the gay ball-room of the courtezan. Still the same monotonous pale—still the same dull, dead melancholy; scarcely the exposure of her rival affords a gleam of satisfaction, and her heart breaks from the pressure of an unmitigable burthen. All this is wrought out with a consistency of purpose, and a natural expression which testify to the sterling genius. We welcome most heartily this re-appearance of Miss Cushman, with powers evidently not diminished; but, as it strikes us, increased. Mr. Howe was the *Fazio*, and acted with much energy, and great natural expression; Mrs. Stephens made a gorgeous *Maddalia*, though she wanted depth of purpose, and lustrious strength to give due expression to the complex phases of the character. Mr. Chippendale, on the other hand, idealized the brief part of old *Bartolo*, and shed a light on the first act which it has seldom, we think, hitherto received. The scenery and dresses were all in good taste; and, as now acted, the drama of "Fazio" bids fair to be better appreciated than it generally falls to its lot to be.

THE ROYAL WINDSOR THEATRICALS, on Thursday week, were assisted by Mr. Wigan, who was suddenly sent for, and the Olympic Theatre consequently closed for the evening. The indisposition of Mrs. Kean, which was the immediate occasion of the telegraphic message, was attended, we understand, with alarming symptoms, which, we are glad to hear, have now subsided; and hopes are confidently entertained of her recovery.

EGYPTIAN HALL.—MOVING DIORAMA OF CONSTANTINOPLE.—*Apropos* of the state of affairs in the East, a series of pictures have been produced under the above title, accompanied with an explanatory lecture, written by Mr. Albert Smith and Mr. Shirley Brooks, and delivered by Mr. Charles Kenney. That it was both well written and well delivered will be readily credited. The jests told with special effect, and the descriptions were extremely lucid. Indeed, a full practical knowledge of the subject was displayed in a pleasant, off-hand and easy style. The principal scene of the first part was the approach to Constantinople from the Sea of Marmora, by Seraglio Point, with the Golden Horn, and view of Stamboul, Pera, and Galata. There were also the interior of the Mosque of St. Sophia and of the Great Bazaar, which were appropriately grand. The second part was not without interest; the Slave-market; subterranean Cisterns; the Hosphorus, with its various points of association; and the final set-scene (painted by William Beverley), of a Fire in Constantinople, are each and all striking scenes, the last in particular. As the juncture of public affairs, it is to be hoped we should think, will prove attractive and instructive. The sketches were made on the spot, by Mr. Allom, assisted in the subsequent painting by Mr. Desvignes and Mr. Gordon.

PRESENTATION OF VALUABLE PIECE OF PLATE.—We alluded, in a recent Number of our Journal, to the detection and arrest of a fraudulent bankrupt—who had returned from Australia for a short time—by the vigilant exertions of Mr. J. B. Walker (of the firm of Messrs. J. and G. Boyd and Co. of Friday-street, Cheapside). We have now the pleasing duty of recording the fact that many of the leading firms of the wholesale houses of London having decided on offering a splendid present to Mr. Walker, for his services, a meeting was held at the Guildhall Coffee house, at which Mr Foster (of the house of Foster, Porter, and Co.) was chairman, and a very handsome testimonial was presented to the former gentleman, consisting of two silver vases, placed on a centre ornament of six lights and a basket for flowers, and a pair of candelabra *en suite*: the centre stands upon a massive plateau, very richly ornamented with vine and grapes; and upon the base are three figures emblematical of Perseverance, Wisdom, and Justice. The lower part is embellished with Mr. Walker's coat of arms, and bears a characteristic and suitable inscription. The sum Mr. Walker, for his services, received by voluntary subscriptions; and the whole affair displayed a generous feeling on the part of the creditors benefited; and of courage, ability, and perseverance on the part of the recipient—by both of which parties honourable.

IRISH FISHERIES.—The long-neglected fisheries of the west of Ireland appear to be at length in a fair way of being rendered available. Captain Symonds, R.N., has been recently at Clifden and Westport, for the purpose of ascertaining the most proper place of fixing a fishing station, and it is rumoured that Clew Bay is considered most eligible. The *Daily Express* says that "two large new steamers are on the stocks, constructing so as to carry in each the fish alive to market; and at the same time take cattle, corn, butter, or any goods that may offer, to Liverpool. There can be no doubt that in either way this speculation must pay, if properly worked."

THE FLOOD AT DONCASTER.—INUNDATION OF MARSH-GATE.

THE KING OF PORTUGAL.

The young King of Portugal, Pedro V., had barely attained his sixteenth year when the melancholy death of his mother opened to him the nominal sovereignty of the kingdom—the actual powers being intermediately wielded by his father, the King Regent. Dom Pedro is the eldest born of a large family. His mother resembled our own Queen in the care she bestowed on the education of her children—a duty too often neglected by Portuguese mothers. He has been carefully instructed in all the knowledge and accomplishments befitting his station; and he has already attracted towards himself the regards of his subjects by the suavity of his manners and his acquirements, which are above the average of those of Monarchs. Of a person so young there are no facts to record: his life is in the future. But he comes of a good stock. His mother, notwithstanding some faults of character, which did not prevent her being respected by her subjects, was an upright, courageous, and patriotic woman, who set her son the example of personal good conduct, and, in affairs of State, of a firm resistance to the intriguers who abound in the impure moral and political atmosphere of southern countries. It is understood that the young King inherits less of the faults than of the virtues of his deceased mother, and that he possesses all her patriotism, without her overbearing pride. Even had he not had the advantage of so careful a mother, from his father he would have inherited royal virtues. The King Consort, himself a highly-educated man, and coming from a stock which has given to Europe a race of astute Sovereigns and virtuous and accomplished Princesses, has watched over the education of the youthful King, and prepared him for the part he has to play in his country. This may be a more difficult one than might be predicted from the external tranquillity of Portugal. The Miguelite faction is not there extinct; and the chief guarantee of the future stability of the dynasty will be in the personal virtues and conduct of this the first male Sovereign since the throne was conveyed through the female line. The King Regent, who discharges the functions of Government until the coming of age of the Sovereign, is, as our readers are aware, first cousin of Prince Albert, being the son of Duke Ferdinand, who was uncle of the present Duke of Saxe-Coburg, and of our own Prince Consort. The brother of the King Regent is married to a daughter of the late King Louis Philippe. The Regent, who has never pretended to take an active share in state affairs, has the reputation of being an extremely good man as a private individual. As a husband he resembled the Coburgs generally, in setting an example to his subjects. He steered clear of politics; and, although holding a high military command, he avowedly has no taste for a martial life. On the occasion of the last revolution in Portugal he was, much against his will and his better sense, forced by the Queen to command the troops sent against the Duke of Saldanha. His reluctance was justified by the result, for all his men deserted him for the enemy's ranks, and he was obliged to return by stealth to the palace, accompanied by only a few officers. Since he became King Consort, he has devoted himself to the encouragement of the arts and sciences in Portugal. His income, derived from the State, he has applied to the improvement of the roads, especially about Cintra. The Pena Convent in the latter place he has bought, and converted into a palace, with plantations, drives, &c. He resembles Prince Albert in the face; has expressive blue eyes, and a fair complexion, and is rather tall. He is very fond of music and painting; and, in his general conduct, is respected and beloved by all. The best character we can give of the young King is, that he resembles the King Regent in the qualities for which he is most admired. From the evidences he has already given of capacity, the best expectations are entertained of his future conduct. In this respect, he resembles the young Duke of Brabant, whose position and fortunes are so much like his own.

DOM PEDRO V., KING OF PORTUGAL.

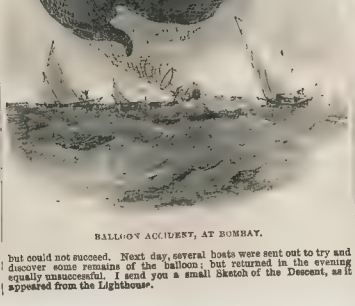
PHOTOLITHOGRAPHIC PROCESS.—In a recent sitting of the Société d'Encouragement pour l'Industrie Nationale, it was stated that a photolithographic process, which has so long been desired, has at length been discovered. It was thus described:—An ordinary lithographic stone is taken, and a solution of *bitume de Judée* (Jew's pitch) is placed on it. A negative photographic proof is then put on it, and is pressed on the stone for a period which may vary from ten minutes to four or five hours. The stone is then washed with pure ether, which soon evaporates. The figure is then found properly marked with its lights and shades; and it may be inked and drawn off as in ordinary lithographs. In the same sitting it was announced that a deaf and dumb man had discovered the means of painting photographic designs with a perfection not hitherto attained.

BALLOONING AT BOMBAY.

The idle taste for witnessing Balloon Ascent, appears to have reached Bombay; and to have induced an aëronaut to peril his life, and it is feared, add to the list of fatal catastrophes. A Correspondent writes from Bombay, Dec. 14, as follows:—

BOMBAY, Dec. 14, 1853.

Mr. Kight, a distinguished aëronaut (distinguished by his former failures), has made an ascent from the Grant-road, in the presence of a large concourse of natives, amongst whom was the Rajah of Dar, who promised Mr. Kight 2000 rupees if he went up and *came down again*, of which the Rajah seemed to entertain great doubts. At half-past three, p.m., all being ready, Mr. Kight stepped into the car; immediately the balloon rose slowly amidst the cheers of the assembled multitude. When about 800 yards up the balloon seemed to enter another current of air; it rose rapidly, and travelled in a north-westerly direction—straight out to sea; about five it had reached its greatest elevation (3000 feet), when it was observed to collapse, and descend at a frightful rate into the sea, about two miles off the Lighthouse. Several native fishing-boats were close by; but they were so terrified that they made the best of their way on shore, and left the poor aëronaut to perish, if he was not already dead, which in all probability was the case. The Commander-in-Chief of the Indian Navy used every exertion to arrive at the spot before dark,



BALLOON ACCIDENT, AT BOMBAY.

but could not succeed. Next day, several boats were sent out to try and discover some remains of the balloon; but returned in the evening equally unsuccessful. I send you a small Sketch of the Descent, as it appeared from the Lighthouse.

PLATE PRESENTED TO THE HON. HENRY BOYLE BERNARD.

At Bandon, on Tuesday, the 17th inst., a deputation from the Bandon tenantry presented to the Hon. H. B. Bernard a splendid Candelabrum, in testimony of his exertions for their benefit on all occasions, and particularly for his kindness to them during years of famine and distress.

The Candelabrum, manufactured by Mr. Hacket, of Cork, is three-and-a-half feet high, and of solid silver. The stems, of olive, pomegranate and fig-trees, support a basket for flowers and six candlesticks. Three dancing bacchante figures surround the stems, supporting a wreath of vines. At the base are three figures, representing Industry, Plenty, and Peace. Above the base are the inscription and two coats of arms.

An address having been read by G. C. Harris, Esq., on behalf of the servants, the party, to the number of fifty, favoured Mr. and Mrs. Bernard by their company at a déjeûner. The company invited to meet the tenantry included the Earl and Countess of Bandon and Lady Harriet

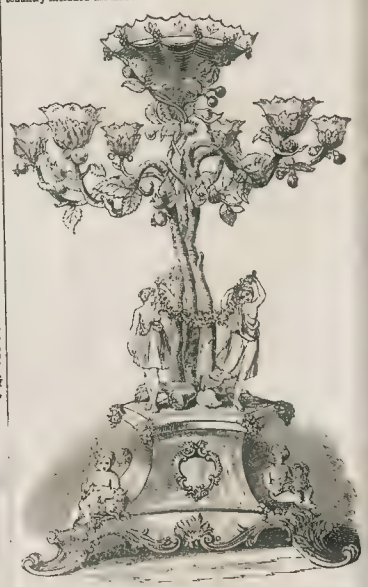


PLATE PRESENTED TO THE HON. HENRY BOYLE BERNARD

Bernard, Viscount Bernard, Col. Turner, Esq., Hon. C. B. and Mrs. Bernard (Kilbrogan), R. W. Doherty, Esq., the Rev. G. S. Swinney, &c. The Engraving is from a drawing by Mr. Stopford, of Cork.

THE FLOOD AT DONCASTER.

In our last Number we narrated the overflow of the river at Doncaster, and the fearful state of the part of the town known as the Marsh-gate. We now give some further particulars of this shocking inundation. As regarded this portion of the town, it may be said, that never was witnessed, on the part of the hundreds of spectators, so deep a feeling of commiseration. It had been previously known that the flood on Mexbro' Ings, about seven miles up the river, was three feet higher than it had ever been known before; and, as the water kept rapidly rising, great fears were entertained that it would be a considerable time before it would subside. This conviction rendered the situation in which the poor people in Marsh-gate were placed, almost overflowed, still more pitiable—a condition still more deplorable by the high price of coals and provisions. Still the waters kept rising, and in consequence of the height to which they had reached in the street, the Mayor gave orders for cabs to be constantly plying along the whole of Marsh-gate, in order to convey passengers to and from the town—a ferry of a very novel and unprecedented character. Fears were likewise entertained that the Mill-bridge would be blown up by the force of the current, which seemed to in-

m impetuosity. This, in all probability, would have been the
ghe thick ice with which the river was bound had not previously
up with little disturbance. Had it been otherwise, the weight
ream and pressure of large blocks of ice would have doomed the
dge to inevitable destruction—perhaps, swept it away altogether.
the Great Northern Railway, crossing to the residence of Mr.
ard, farmer, the road was crowded with spectators, and the
nxiety aroused to be manifested for the occupiers of Marsh-
Vehicles of every description were brought into use, and many
rals were carried through the turbulent stream in carts, on the
t of a penny. The whole of the property in this unfortunate
was under water. It was truly piteous to behold the occupiers
from their fire sides to take shelter in their upper rooms. All
nication was almost entirely cut off from them, as no one van-
nto the yards of the lower parts of Marsh-gate.
ard's lord the people were greatly alarmed, in consequence of
nt rapidity in the rise of the water in so short a time, and all had
refuge on the second floors, without being able to carry with
y fuel and the necessaries of life. Tables, chairs, and other
were floating about in the lower rooms, and sometimes came in
a with the framework of the windows. From Gray Friar's-
ge to the Marsh gate-bridge the road was one sheet of water, and
ble of the houses were inundated to an extent hitherto unknown.
y last morning (Thursday) the Marsh-gate was still impassable.
possible to give an adequate idea of the destruction to property
t has occasioned. During the night the water gradually subsided,
n some places, and less in others, but there was no indication of
ntial subsidence of the water until about eight o'clock this morn-
ten the Bentley bank burst, and the water rushed with fearful im-
ty on the Bentley Ings, and on the lands on each side of the
turnpike, as far as Bentley and Arksey. The circumstance
d an outlet for the water in Marsh-gate, and consequently, from
he above-named, the flood became gradually less. Two large
of railway sleepers, which had been washed down the river, were
up at the Marsh-gate lock; the water also forced its way into Mr.
's, the New River Tavern, and the approach to it was impassable.
the field behind the New River Tavern the water continued
n as furiously as ever over the turnpike and into the Falcon

whole neighbourhood bore marks of the devastating flood; and
privation which the poor people in Marsh-gate experienced was
mentable. From an early hour on Thursday morning vehicles of
description were plying from Grey-Friars-buildings to the Mill,
the inundation being confined within those two points. The water
ral of the courts and yards was as high as the window sills, and all
abitants were house-bound. In the evening fears began to be
ined as to the difficulty of lighting the public lamps in this
; but a small boat was procured, and rowed by two men under-
he gas lamps when one of the men climbed the wall and lighted
No communication whatever could be made with the inha-
s, except by means of ladders, which enabled some of them to
provisions, &c., for immediate wants. Others were quite unable
in anything, either in the shape of food or fuel.
flood has been more disastrous in its effects than any other yet
. The poor people have been deprived of their domestic comforts
ily labour, and their articles of furniture have been damaged and
estroyed. During Thursday and the evening the water in Marsh-
ad so far subsided as to admit of persons walking from one end
treet to the other, and the inhabitants were actively engaged in
rging the water from their respective houses. The banks of the
t Barnby Dun were burst, and the neighbourhood was fearfully
ted; but the waters have since much subsided.
accompanying view of the Marsh-gate, during the flood, is from a
by Mr. H. Tilbury, of Doncaster.

THE LATE REMARKABLE WEATHER.

he last meeting of the British Meteorological Society, January 24, a
was read, "On the Meteorology of the Past Quarter, in connection
Fall of Snow at the Beginning of the Year 54," by James Glaisher,
F.R.S. In commencement, Mr. Glaisher spoke of the value of
ation as afforded by the society, to the members of which he was
indebted for the observations upon which his paper was based.
fferent elements of investigation were treated singly, that the best-
esult upon the other might be clearly shown. "For," observed Mr.
er, "it is correctness of the data and results that in nature's own phe-
on is isolated was never better illustrated than at a time when the
s of the barometer and thermometer, the dense fogs, the heavy
and the protracted east wind formed a combination—one scarcely
abnormal in its departure from the average than the rest."
October, between Jersey and the Lizard, the mean temperature declined
ween lat. 51° and 58°, there was no difference. In November
of lat. 51° and north of lat. 53° it declined about 6°; but between
parallels to 9°, forming a band of cold the greatest that was ob-
ed, and which held its ground during the long period of two
s. Fog was one of the most remarkable features during the
. From November fogs frequently occurred, but not to the same
me, and were of great density. "They chiefly occupied the band of
etween lat. 51° and 53° before mentioned.
ember. A snow took place in the neighbourhood of Chester, in
ber. After Dec. 15, it fell at nearly every place; but more fre-
y between lat. 51° and 59° than elsewhere. On Dec. 16 it was, in
ces, 6 inches deep as at Shrewsbury, the following day, the tempera-
as registered at Manchester, was as low as 6°, but the maximum
or the season took place on the night common to Dec. 28 and 29,
ere recorded as far as meteorological stations, from Jersey to
ath, in the North of Scotland. The extreme severity of Jan. 3rd
ot at all le t south of the parallel of Uckfield, in Sussex. About
ace in this neighbourhood the thermometer fell early in the
ng to 10°, 11°, 13°, and 15°. It had reached the low points at one
k in the morning, and did not rise above them till eight o'clock. It
ot severely felt in the Midland Counties, where the reading was as
zero. By Mr. Lowe it was estimated at 4° this is the lowest read
bserved by any one—it was lower than any in the immediate
bourhood.
number of original communications from various observers were
by Mr. Glaisher, on the fall of snow on January 3, which was
ed over the country, but by far the greatest depth was in the paral-
latitude occupied by the fog and extreme cold. In parts of Corn-
there was none or very little; whilst at Holkham, on the Norfolk
, it was 2 feet deep as the following day, the temperature fell early in the
There had been much snow previously, and it then lay on the ground
depth of several feet. The drifts over England and Wales varied
feet to 10, 12, and 15 feet. They were very deep at Derby and at
th'm, and upon the Norfolk coast.
conclusion, as connected with the severity of the weather as fall-
ereafter, his own observation, Mr. Glaisher stated that several birds,
sheathed with ice for some days, till Jan. 4, when it began to
, and fell to the ground. Beneath a row of trees in the imme-
vicinity of his house, it was literally strewn with large fragments
retaining the curvature of the branch it originally encased.
nals, ordinarily exposed on Blackheath, suffered severely,
were observed frozen to death; also birds, which
fallen dead from the trees, were picked up in the im-
ate neighbourhood. The number of crystallised flakes mingled
the snow was another indication of the low tempera-
nder which it had been formed. Mr. Glaisher laid before the meet-
number of photographic copies of several he had himself observed
nuary 1 of the present year.
the conclusion of the paper, J. C. Whitbread, Esq., rose and com-
upon the value of the paper, and the elaborate nature of the
. A vote of thanks was moved to Mr. Glaisher, and unanimously
d. The meeting was numerously attended.

THE POPE AND THE CZAR.

—The Papal Government is said to
operating on the subject of its Holy Places, which will be a
, supported by facts, to certain historical assertions of the Govern-
of St. Petersburg. It is to be first communicated to the different
Courts, and will probably be afterwards published in the *Univers*
éco. The Pontifical Court's apprehensive that, whatever may be
ue of the struggle between Turkey and Russia, there will result
a fresh condition for the benefit of the Greeks of the whole, or a
portion, of the Holy Places, and it wishes beforehand to throw as
light as possible on the question.

DEBT OF CLERGYMEN.

—Some people talk a great deal about
ters, and the cost of keeping them, paying their house-rent, table
ses, and other items of salary. Did such creakers ever think that
ts thirty-five million dollars to pay the salaries of American lawyers;
twelve millions of dollars are paid out annually to keep our
nals; and ten millions of dollars to keep the dogs in the midst of
ve; while only six millions of dollars are spent annually to keep
housand preachers in the United States? These are facts, and sta-
s will show them to be facts. No one thing exerts such a mighty
nce in keeping this mighty republic from falling to pieces as the
and its ministers.—*New York Recorder.*

LATEST INTELLIGENCE.

THE LAST RUSSIAN NOTE.

The latest report regarding the answer of Russia to the declaration of France and England, with respect to the entry of the combined fleets into the Black Sea, is that it arrived in London on the 22nd inst., in order that it might, in the first instance, be communicated to our Government; and that M. de Kisseleff, to whom the same despatch had been transmitted, was instructed to wait for the answer to be given to M. de Brunnow, before communicating the document to M. Drouyn de Lhuys. The Russian note expresses the astonishment felt by the Emperor Nicholas on learning that orders had been sent to the combined fleets to enter the Black Sea; and declares that, before giving a formal answer to the declaration to that effect, he considers it necessary to have some categorical explanations as to the attitude to be assumed by the fleets. He requires to know if France and England are about to abandon their neutrality; or if, on the contrary, they are about to become parties to the war carried on by Turkey against Russia. On these points the Emperor demands peremptory and categorical answers.

The nature of the answer sent by England is the subject of much speculation, both here and in Paris. The Paris correspondent says, it is reported there that "Lord Aberdeen has given an answer so pacific that the Czar cannot possibly take it in dudgeon." On the other hand, the correspondent of the *Chronicle* says, "there is no doubt that the language of the English Government, though equally courteous, is far more firm than that of France." The Paris correspondent of the *Globe*, writing on Thursday evening, says:—

There has been another rise of nearly one per cent in the Three per Cents, and everybody is talking of the peace; but on what information I know not, for the utmost that seems to be known from St Petersburg is, that the Emperor of Russia has not made a *casus belli* of the entrance of the combined fleets into the Black Sea. What is certain is, however, that persons who are supposed to have close relations with the Government, say that peace will be maintained if the English Cabinet will be ordered; but they say that the resolutions come to at the last Council in London were more *belligueuses* than they ought to have been. It was not long ago that these persons attributed the aggressive course of the Emperor of Russia to the excessive desire for peace manifested by the English Cabinet, and the hesitation at joining in the policy of vigorous action proposed by France; now there is quite a lamentation over the energy of the British Government.

The *Times* of yesterday did not venture to give any opinion on the Russian question; the *Chronicle* speaks of "further attempts at negotiation," as within the range of possibility; while the *Post*, in a semi-official looking article, makes the following significant statement:—

"The Emperor of Russia has thought fit to publish, in the *Journal de St. Petersbourg*, an announcement that the Russian Government has required from France and England a categorical declaration with regard to the character and bearing of their action in sending their fleets into the Black Sea, and that upon that declaration will depend the ulterior attitude of Russia.

"The Czar will not be held long in suspense. Before the meeting of Parliament, a definite, and to him most unsatisfactory, answer will be returned to his demand for explanations.

"The courier from St. Petersburg arrived at Paris two days later than at London, and the two Cabinets have had to concert their answer in this, as they have upon all other matters relating to the Eastern question.

"The Emperor would have been wiser to be silent, did he mean to avoid a rupture; for the answer that will be given must be as unpalatable to Russia as it is worthy of the Western Powers, and of the great cause they are united to support."

RUSSIA.

ST. PETERSBURG, Jan. 18.—It is believed that Count Orloff has received a confidential mission from the Czar for the Courts of Vienna, Berlin, Paris, and London. The energetic conduct of the Western Powers has produced that effect, and might lead to an arrangement before wounding too much the national *amour-propre*. The Czar is said to be greatly irritated against those who had urged him on to war, and fears were frequently entertained that he would have an attack of apoplexy. Another rumour says that he has sent to Prince Menschikoff an order for the return of the combined fleets were not there, and to continue the armaments at Odessa.

The Czar seems unwilling to abandon to the last moment the part he has hitherto assumed—not of the wrong-doer, but the wronged—not of the attacker, but the attacked; and he evidently prefers leaving to England and France the initiative in the complete rupture of diplomatic relations. While these notes and counter-notes are exchanged with diplomatic courtesy, private letters from St. Petersburg speak of the existence of an effervescence among the population of which it is difficult to give a just idea. The Czar, whether willingly or not, is afraid of what there stands for public opinion, encourages that general exaltation. His presence is hailed with frenzied shouts by the mob of "Orthodox believers" who throng the public ways and the churches; and even if he would, he dare not arrest that mad excitement. The state of things is alarming, and it seems not unlikely that an explosion of such a kind may take place as shall force the Emperor to publish a formal declaration of war even before his plans are matured.

The Odessa correspondent of the *Wanderer*, who is generally well-informed, wrote on the 12th that the first point at which the fleets were to touch was Sinope. Troops were continually marching through towards Brailla, and it was considered certain that the Danube would be crossed at that spot, or somewhere in the neighbourhood. For some days such tremendous quantities of beams, spars, fascines, and artillery have been forwarded, that it no longer admitted of a doubt that the most important operations were to be undertaken towards the lower end of the Danube. The news from St. Petersburg was anything but reassuring, the commanding officers having received orders to proceed with all possible energy. "The only chance of restoring peace is that the Porte may send a Plenipotentiary direct to St. Petersburg, for nothing less will satisfy the Emperor. The armaments throughout the whole empire surpass all belief." Trade was brisk, but the English and French ships were evidently in a hurry to be off. Perfectly credible advices of the 11th from St. Petersburg confirm the report of a new emission of Bank notes to the amount of 40,000,000 silver roubles. The organisation of all the reserve battalions has been ordered. We learn from Warsaw that on the 6th a part of the infantry corps, under General Luders, received orders to be prepared to march. The strength of the army of occupation in Poland is 45,000 troops of the line, and 24,000 men in garrison. These last are invalids.

AUSTRIA.

The intentions of Austria, in the event of a war, which is now considered inevitable, may be divined from the following short article in the *Oest Correspondens* of the 21st ult.:—

The report, which has run through the papers, that the Imperial Royal Internuncio and the Prussian Minister at Constantinople had protested against the Anglo-French fleets entering the Black Sea, has already been contradicted; but, in order that the exact truth may be known, we add the following:—

"When the representatives of the two great German Powers received the non-official intelligence that the fleets were about to be sent to sea, they considered it their duty to take measures for placing it beyond all doubt that this step had been resolved on without their having any hand in it (Zuthun).

"M. de Schreiner, the first dragoman of the Imperial Royal Embassy, was therefore sent to Redschid Pacha, with written instructions, and was besides instructed to leave a copy of them. The contents of the document were, that the measure in question must be considered as being beyond the agreement which the Allies had, on the 12th December, entered into with the Governments of France, Great Britain, and Prussia."

PRUSSIA.

Letters from Berlin state that the last news from St. Petersburg has greatly excited the Prussian Government. The feeling of the Czar was still against the proposition of France and England, and but little hope was entertained that the note would be accepted. Well-informed persons, however, think that the Czar, while he adheres to his resolution to treat alone with Turkey, without the intervention of any other power, will, nevertheless, give an evasive answer, so as to allow him not to recall his Ambassadors from London and Paris. He will also try to make some new attempts at the German Courts, and throw on the Western Powers all the burden of events in the Black Sea, as regards any new act on their part tending to a declaration of war, and the signal of an open rupture. His overtures with the view of bringing about another interview between the three Sovereigns have been received at Vienna, and still more at Berlin, with great reserve.

FRANCE.

PARIS, Thursday Night.—A private telegraphic despatch from Constantinople, of the 16th, announces that the combined fleets were making sail for Varna; and that the Russian fleet was cruising off Kaifa, at the entrance of the Sea of Azoff.

There was a report that the city of Kars had been taken by the Russians.

The Bourse has to day again shown much firmness. The Three per Cents closed at 70f. 40c. for the end of the month; and the Four-and-a-Half per Cents at 98f. 5c.

SPAIN.

MADRID, Jan. 21.—The Supreme Court of War and Marine has been reorganised and placed under the Presidency of the Captain-General, Villacampa.

AMERICA.

By the screw-steamer *Alps*, which arrived at Liverpool on Thursday, we have advices from New York to the 14th inst. The ship *Three Bells* had arrived at New York with 230 of the survivors from the wrecked steam-ship *San Francisco*. There was no news of importance from Washington. The New York Stock-market was depressed, but there was no alteration in the Money-Market. Flour was in good demand, at slightly advanced price. Wheat was also dearer. The ship *Chauncey*, Jerome, Jun., from Liverpool, for New York, was ashore near the Islands below New York, with her back broken and badly bilged. Crew and passengers saved.

THE ADDRESS.—The Address will be moved in the House of Lords by Lord Carnarvon and seconded by Lord Ducie. In the Commons it will be moved by Lord Castlereose (son of Lord Enamare), and seconded by Mr. Thomson Hankey.

GENERAL LORD GOUGH is to be the Colonel-in-Chief of the 60th Royal Rifles, vice Beresford, deceased—and not the Royal Duke who it was expected would have the appointment.

SIR RALPH LOPES, Bart., one of the members for South Devonshire, died on the night of the 24th, at his seat, near Plymouth.

THE screw-steamer *Olinda*, Captain Haram, which left Liverpool on Thursday, for the Brazils, has been wrecked on the Furlong Rocks, near Holyhead. The message announcing the circumstance states that the crew and the passengers were saved. The *Olinda* had a large and valuable cargo of fine goods. The *Lauriston*, from Liverpool for Ancona, was totally destroyed by fire in Holyhead Harbour on Thursday: her cargo was all lost.

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL.—We have much pleasure in stating that the proceeds of the performances on Wednesday even ing next, Feb. 1, at Exeter Hall, will be devoted to the funds of this charitable institution. A strong array of talented both vocal and instrumental, will be displayed on the occasion; and we trust the charity will reap much advantage from the evening's entertainment.

CROYDON PRIVATE THEATRICALS.—Three very clever amateur theatrical performances have recently taken place at Croydon, whereby the "Coal Fund" was benefited to the amount of £20, and the "Croydon Institution" received double that sum. A capital orchestra gave great zest to the performances.

NAVAL AND MILITARY INTELLIGENCE

PORTSMOUTH.—The utmost activity prevails in every department of this dockyard and its dependencies; and the Royal Clarence victualling establishment, Gosport, is in full work, baking and storing provisions for the fleet. The *Simoom*, 18, screw troop-frigate, Capt. Smith, is ordered to be ready for sea on the 15th February; *Bastlisk*, 6, paddle, Commander Egerton, by the 1st; and *Dauntless*, 33, screw, Captain Hyder, by the 3rd. Repairs are also to be immediately made in the steam troop-ship *Vulcan*, Captain Von Donop, as she will be required for service forthwith. Drafts of gunners have been ordered from the *Excellent*, for service in the *Cæsar*, 91, and *Dragon*, 6 (steam-ships), are ordered to be commissioned; the former by Captain Robb, and the latter by Captain Wilcox. Her Majesty's ship *Pelobe*, 16, Commander Nolloth, has sailed from Plymouth Sound for Sydney, South Australia. The *Apollo*, store-ship, has sailed for the Black Sea, with provisions, &c., for the fleet under Admiral Dundas. The *Cleopatra*, 50, was commissioned on Saturday for the Australian station.

PLYMOUTH.—The screw steam-ship *James Watt*, 90, has been commissioned by Captain George Elliot. The screw steamer *Nile*, 90, having been fitted with a screw propeller, will be taken out of dock on Monday, the 30th inst. The *Algiers*, 90, new screw steamer, was launched on Thursday.

PEMBROKE.—The new Royal steam-yacht, the *Windsor Castle*, is to be completed in six months from the present time. She will be built of solid Mahogany, upon the diagonal planking system. The principal dimensions are:—Length over all, 215 feet; breadth, 40 feet; and depth of hold, 22 feet. Tonnage, 2400 tons. She will be 20 or 30 feet longer than the *Duke of Wellington*.

ASSISTANT ENGINEERS.—It has been communicated to the young men in the factories at the dockyards, that any of them desirous of entering the Royal Navy as Third class assistant engineers will be accepted, if under twenty-eight years of age, on their passing the necessary examination as to their qualifications for that service.

THE ROYAL DOCKYARDS.—All classes in her Majesty's dockyards, artificers, labourers, &c., are now placed on job stock-work, and all earn, according to a revised scale of prices, as much money as their skill and industry can secure them.

THE ROYAL STEAM FORCE OF GREAT BRITAIN.—The progress of our Royal steam navy is wonderful: England possesses more marine steam-power in her Royal navy than all the steam fleets of the world combined could furnish. A few years since, we possessed only some 14,000-horse power; but, on the 1st of January, 1854, the British navy included no less than 762 steam-vessels of all classes; whilst the nominal steam-power of machinery in those ships represented more than that of 55,300 horses, with a reserve of 2800-horse power available for other Royal ships.

SOUTH-WEST DISTRICT.—The remainder of the 20th Foot have left Winchester by railway for Plymouth. The 36th Foot is expected to move from Portsmouth to Chatham, to embark for India in May. The 2nd battalion of the Coldstream Guards, at Chichester Barracks, has been instructed in great gun drill by the Royal Artillery. It is stated that this battalion of Foot Guards will exchange to Winchester Barracks.

READY FOR SERVICE.—It is rumoured that the 60th Rifles, the 79th Highlanders, and some of the Guards, are to hold themselves in readiness for instant departure.

NEW SUMMER TROUSERS FOR THE INFANTRY.—The texture of these trousers is the same as of those hitherto in use, the colour only being changed to dark blue, with a red stripe down the seam.

ENLISTMENT FOR THE ARMY AND NAVY.—A great many young men, varying in age from eighteen to thirty years, have arrived in London during the week from various parts of Somersetshire and Dorsetshire. They have come to town for the purpose of enlisting in her Majesty's service, and from the description given by them, many others will follow in a few days. It is expected that a strong levy will be made in the provinces, as there seems more reason now-a-days to believe that the promises held out to the men of bettering their condition will be fully carried out.

LONDON AND BRIGHTON RAILWAY COMPANY.—On Thursday the half-yearly meeting of this company was held at the Bridge House Hotel—Mr. Laing, Esq., in the chair—when the dividend of £3 10s. per cent (making 8 per cent for the year) was declared, and the arrangements for working the West-End and Crystal Palace Railway Company approved. In the course of the proceedings the chairman expressed his confidence that, should there be no unforeseen disturbing causes, the dividend of 5 per cent would continue to be maintained; though, from the high price of labour and materials used on railways, their expenses must of necessity be increased.

COSMOS INSTITUTION.—On Thursday a meeting was held at Exeter-hall to promote the establishment of a society under this name for the diffusion of education and science, on the great globe in Leicester-square to be purchased for the purposes of the society. Sir J. Dorat, M.D., took the chair; and resolutions approving of the establishment of the institution were unanimously passed.

ROYAL PANOPTICON OF SCIENCE AND ART.—On Thursday a special meeting of this corporation, which has for its object the diffusion of science and of taste for the fine arts, was held at the institution, Leicester-square, when the directors received authority to apply for a supplementary charter, in confirmation of the original one—a step rendered necessary by their late solicitor having neglected to lodge a copy of it at the offices of the Board of Trade within the period prescribed by law.

CALENDAR FOR THE WEEK.

SUNDAY, January 29.—4th Sunday after Epiphany. George III. died.
MONDAY, 30.—King Charles I. beheaded, 1648.
TUESDAY, 31.—Hilary term ends. Guido Fawkes executed, 1606.
WEDNESDAY, February 1.—Pheasant and Partridge shooting ends.
THURSDAY, 2.—Purification. Candlemas Day.
FRIDAY, 3.—St. Blaise.
SATURDAY, 4.—Stoppage of the United States' Bank, 1840.

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING FEBRUARY 4.

Sunday.		Monday.		Tuesday.		Wednesday.		Thursday.		Friday.		Saturday.

Now ready, with upwards of 600 Engravings, price 21s.,
VOLUME XXIII.

THE ILLUSTRATED LONDON NEWS, elegantly bound in cloth, gilt edges, rich in Illustrations of the events of the last Six Months, together with a mass of useful and highly-interesting articles on Art, Literature, and Science.

The COVERS for VOLUME XXIII., with the New Design, price 2s. 6d. each, may be obtained, by order, of all Booksellers, &c., in the Kingdom; as also the previous Volumes.

TO CORRESPONDENTS.

RUSTICUS.—We cannot spare room for your long letter on the British Museum, for the reform of which there seem to be as many plans as for its Library Catalogue.

ALPHA says that on the tomb of Charlemagne, at Aix la Chapelle, the bee is represented as embroidered on his mantle; and that Napoleon, in imitation of his illustrious predecessor, adopted it as his emblem.

A. CORRESPONDENT, 13, Birchin lane.—Motto of Nicholl: "Nil falsi audeat."

S. A. P.—The Beresford Viscountcy has become extinct. It was conferred on the distinguished soldier the late Marshal Beresford and the heirs male of his body, and ends, consequently, with his Lordship, who has died without issue.

Z. Y. (in reply to a letter of three sides) is recommended to consult the "Paris of Hackney Carriages," just published by authority of the Commissioners of Metropolitan Police.

M. E., Weymouth.—Any manufacturer of papier-mâché will supply you with imitative mother-o'-pearl.

T. R. H.—Hints for the Management of Gold Fish are appended to Bechstein's work on Cage Birds.

W. H. T.—See "Maunder's Treasury of Natural History."

E. F. T. S.—"To err is human; to forgive, divine;" is line 525 in Pope's "Essay on Criticism."

INVENTOR; Goswell-street.—The Lancashire Sewing-machine may be seen at the Company's Office, 2, Lawrence-lane, Cheapside.

G. H. L.—The verses are ineligible.

A PRESIDENT, Ren-ington, is thanked.

I. S. J., Camelford.—The sketches will be engraved.

J. D. C.—Specimens of stained glass may be seen at Wilmshurst's works, Foley-place.

A CONSTANT SUBSCRIBER.—The *North British Mail* is published in Glasgow.

COMMON THINGS.—Our correspondent will doubtless procure the information he seeks, on application to Lord Ashburton.

A CONSTANT SUBSCRIBER, Gatton, Dorset.—We do not find Woodsford among the Dorset castles destroyed in the Civil War; but we have not "Hutchins's History of Dorset" at hand.

A SUBSCRIBER, Norton Hall.—See "Short Short-Hand."

TALGARTH.—Mr. J. R. Wiffen, the translator of Tasso, has been dead many years.

J. M. T., Nottingham.—Received.

G. R. A.—The price of the beautifully-illustrated edition of Gray's "Elegy," lately published, is 7s. 6d.

J. D. D., Ball's Pond; and M. M. D., Liverpool.—The lines are inadmissible.

C. E. J. is thanked; but we have not room for his suggestion.

OPENING OF PARLIAMENT,
AND THE
WAR BETWEEN TURKEY AND RUSSIA.

Next SATURDAY, FEBRUARY 4th, will be Published, a Splendid
DOUBLE NUMBER
OF THE
ILLUSTRATED LONDON NEWS,

Containing Engravings of Scenes and Incidents in the War, received from Artists expressly despatched by this Journal, with Full and Accurate Description of the various Encounters of the Two Armies.

Also, a Series of Illustrations of the New Houses of Parliament; and the Opening of Parliament by her Majesty. Reports of the Debates, the Queen's Speech, &c.; with a

LARGE PRINT
OF THE
INTERIOR OF THE HOUSE OF COMMONS;

representing the Ministerial and Treasury Benches, with Portraits of all the principal Members. This Engraving is expected to be the finest ever issued with the ILLUSTRATED LONDON NEWS.

Price of the Double Number ONE SHILLING, with Large Print Gratis. In order to secure copies, immediate orders must be given to Newsagents and Booksellers.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JANUARY 28, 1854.

THE Emperor of Russia has asked for information on the subject of the entrance of the Allied fleets into the Euxine. He does not treat the mere fact of their entrance as a declaration of war; and M. Brunnow will therefore remain in London, and M. Kisseleff in Paris, until the Governments of Great Britain and France shall officially declare to the Emperor, that their fleets are not to be passive spectators of, but active participators in, the struggle between the Emperor and the Sultan. The notification conveyed to the Emperor, was sufficiently explicit, one would think, to have left no room for doubt. They were not only conveyed to himself at St. Petersburg, but to his Admiral, at Sebastopol; and, by the aid of the Allies in the Euxine, the Turks have been enabled to convey troops and warlike stores to their Generals in Asia Minor. If, however, his Imperial Majesty desires more explicitness, there can be no reason why the two Governments should not re-state their intentions in the plainest terms consistent with courtesy. But Europe does not appear to be in any doubt as to the real meaning of this new demand. It is not considered probable that the Czar has changed his mind, or that he is less bent than before upon the conquest of Turkey. To gain time seems more likely to be his object. The motive is quite intelligible in itself, and quite consistent with his character. If he could prolong negotiation on any pretext until March or April, he could bring all his forces to bear on the line of the Danube, and at the same time operate against Schumla and Varna. If successful in so bold a scheme, his armies might once again cross the Balkan, and Constantinople would be at his feet. It is to be hoped, however, if time be the Emperor's object, that he will not be allowed to succeed in it. The Allies have as many reasons for promptitude as he has for delay. To negotiation in good faith, there can be no objection; but to negotiation as a mere sham and make-believe, there is every objection that wisdom and policy can urge. We therefore hope that the Emperor will be allowed no chance of mistaking what England and France mean in this business. They mean to have peace, and they mean to secure the independence of Turkey; and they mean to try whether they cannot attain both, by the compulsion of Russia—by moral compulsion, if possible; by physical compulsion, if no other will answer. They are thoroughly in earnest, and never were more so than at the present moment.

THE annual gathering of the Manchester politicians is, no doubt, intended to exercise an influence upon public opinion, preparatory to the meeting of Parliament. There was a time when these displays accomplished their object; but that time has gone by. With the repeal of the Corn-laws came a simultaneous repeal of the usefulness of Mr. Cobden and his coadjutors. It is possible that those leaders of the League who bewildered their minds in the misty mazes of the Peace controversy may have preserved in foreign countries some portion of the authority which they have lost in their own. It therefore becomes necessary, for the sake of English character abroad, that Englishmen should protest against the supposition that Mr. Cobden and Mr. Bright represent public opinion amongst us. If, by any unlucky fatality, the Emperor of Russia should get it into his head that the sentiments of those gentlemen meet with any large approval or sympathy, the last slender hope of peace would be destroyed, and the war which Mr. Cobden so anxiously desires to prevent, would devastate all Europe. His policy, if fairly carried out, would reduce England to as low a level as Spain, and lead, at no distant day, to the utter extinction of that commerce which he seems to think the one thing needful, and to the destruction of those liberties of which he has been no undistinguished champion.

We confess ourselves unable to see the value of Mr. Cobden's arguments. He is of opinion that it is no part of the business of this nation to interfere in the quarrel between Russia and Turkey—because the upper classes of Russia imitate the manners of the English—because Turkey is a decaying country, which does not encourage commerce, and has no carriage-roads where four wheels can run—because, if Russia obtained possession of Constantinople, she could not turn the possession to any account, unless she became a great trading country, in which case she would of necessity be obliged to trade very largely with England—and because (which seems Mr. Cobden's principal reason) Turkey is Mahomedan. Ancillary to this line of argument, he asserts that we cannot interfere in such a quarrel with clean hands, because, however odious and unjust the aggression of Russia against Turkey may be, the British Government has been guilty of as great, if not greater, aggression in India. We are not to talk of protecting Turkey, "because we have knocked over Mahomedan dynasties like ninepins in India, and because we have shut up the Great Mogul in Delhi, although he once had 100,000,000 of subjects." We will put a parallel case to Mr. Cobden and those people—happily, we believe, few in numbers—who are likely to be swayed by his arguments. We will suppose Mr. Romanoff to have a large house, and to desire to obtain forcible possession of the house of his neighbour, Mr. Solyman, who is a man whose religion is different from that of his assailant, and is, moreover, old and paralytic, and not likely to live many years. But shall Mr. Romanoff be allowed first to plunder and then to murder Mr. Solyman? And shall a policeman, who detects Mr. Romanoff in the act of plunder, not interfere to prevent the consummation, because Mr. Solyman is a heretic, or an unbeliever; because, if left to himself, he cannot long survive; and because the policeman himself, at some previous period of his individual history, may not have been, in all respects, a model citizen? Is a man to be plundered with impunity, because he may offend our notions of the moral law—and may he be murdered because he is weak? Mr. Cobden, we are certain, would not for a moment support a doctrine so monstrous. The same morality which regulates the intercourse between man and man presides over the government of nations. Europe is one great Commonwealth, of which every king and ruler is a citizen. But Mr. Cobden attempts to meet this argument by asserting that he knows of no law or right by which this country can claim to act as the policeman of the nations, and to interfere in behalf of the oppressed. We can inform Mr. Cobden of the law that he ignores. It is the great and paramount law of necessity. We are bound, and France is bound, and Germany is bound, and we are all bound to interfere in such a case; because, if we do not interfere, we ignore the great morality of nations, and do our best to reduce Europe to the dominion of brute force—to make it a den of thieves or of wild beasts, in which force is the only ruler, and selfishness, in its most repulsive form, the only motive of action. Mr. Bright may imagine that, if the great Powers of Europe had never interfered, the dispute between Russia and Turkey would, in all probability, have been settled long ere this. There cannot be a doubt of it. The Russian armies would have been in Constantinople, and a fierce struggle of Mahomedan against Christian would have been raging in the fairest portions of the world—a struggle that would throw into the shade all the horrors of the most horrible war that ever desolated humanity. We have a proof of this in the treacherous and brutal massacre of Sinope—of which it is somewhat remarkable, and very suggestive, that Mr. Cobden does not choose to make the slightest mention.

We thank Heaven that Englishmen are not such men as Messrs. Cobden and Bright appear to wish them to be. If they were, this nation would be effectually relieved from the trouble of interference in the affairs of Europe. Our independence would be extinct, our power would be destroyed, our trade would be annihilated; we should be a seventh-rate people—a mere horde of miserable and spiritless slaves, the easy prey of the first despot who thought it worth his while to extend his dominion over us. Mr. Cobden and Mr. Bright have no monopoly in their detestation of war; but few will wish to invade their monopoly of love for the principle of peace-at-all-price. It is not the principle of men, but of sheep, and leads direct to the undisputed supremacy of the wolf in the government of the world. War is as hateful to every sensible man as it can be to the orators of Manchester; but there are many things infinitely worse than war; and, among the chief of these, is the loss of honour.

But Mr. Cobden is right in one thing. He is grateful to the British Ministry for having done so much to preserve the peace of Europe. But the Ministry have only been so far successful because they had a large fleet at their disposal, and because they showed that, however loth to employ it, they were ready to do so, if arguments were unavailing to bring the aggressor to reason. We, also, are grateful to the Ministry, and are rejoiced to think that they have at their command such first-rate members of an effective Peace Society as Admirals Dundas and Sir Charles Napier.

THE COURT.

The Queen and the Prince Consort have received a succession of distinguished visitors at Windsor Castle during the past week. The company invited to witness the dramatic performance in the Rubens-room, on the 19th instant, separated on Saturday; and on Monday the Archbishop of Canterbury, the Earl and Countess of Clarendon, and Viscount and Viscountess Hardinge, arrived at the Castle on a visit.

On Tuesday the Duke and Duchess of Argyll, and the Earl and Countess of Bessborough, were added to the Royal circle.

On Wednesday his Royal Highness the Duke of Cambridge arrived at the Castle on a visit. The Royal party was also increased by the addition of the Marquis and Marchioness of Exeter and Lady Mary Cecil, the Earl of Malmesbury, the Earl and Countess Bruce, Viscount and Viscountess Palmerston, Viscount Drumlanrig, and the Speaker and Mrs Shaw Lefevre.

On Thursday a dramatic performance took place in the Rubens-room. The pieces selected for representation were a comedy, in one act, by Mr. T. J. Serle, entitled "Tender Precautions;" and a farce, in one act, by Mr. Charles Dance, called, "The Bengal Tiger." The principal characters in both pieces were filled by Mr. and Mrs. A. Wigan, Mr. and Mrs. Keeley, Mr. Howe, Mr. Robson, Mr. Addison; Miss Murray, and Miss Marston. In the course of Thursday her Majesty honoured Mr. J. E. Jones with a sitting for a bust, about to be executed, by her Majesty's command, for Mr. William Dargan.

Her Majesty and the Royal children have taken their accustomed riding and walking exercise daily, and the Prince Consort has generally enjoyed the sport of shooting in the Royal preserves.

Her Royal Highness the Duchess of Kent has dined at the Castle several times during the past week.

Viscount Torrington has succeeded Colonel Wylde in attendance on Prince Albert.

The Duke and Duchess of Bedford have arrived in Belgrave-square, from Windsor Castle. His Grace dined with Sir Charles and Lady Mary Wood, on Wednesday.

The Marquis and Marchioness of Exeter have been entertaining a distinguished party of the aristocracy at Burghley. The noble Marquis and her Ladyship came to town on Wednesday, having been honoured with her Majesty's commands to pass a couple of days at Windsor Castle.

The Earl Granville, as Lord President, will give his annual official banquet to the great Officers of State and the Clerks of Council this evening (Saturday), when the roll of Sheriffs for the ensuing year will be arranged.

The Countess of Strathmore has left the St. George's Hotel, to join the circle visiting the Earl and Countess of Hardwicke, at Wimpole Hall.

The Earl and Countess of Verulam have been dispensing their hospitality to a large and distinguished circle, during the past week, at Gorhambury.

The Earl of Eglinton and youthful family have arrived in St. James's-square, from Eglinton Castle.

Viscount and Viscountess Combermere arrived in Belgrave-square, on Monday, from Combermere Abbey.

Viscount and Viscountess Newport are entertaining a select party at his Lordship's hunting seat, at Melton Mowbray.

Lord and Lady John Russell received at dinner, on Wednesday, his Excellency the French Ambassador and the Countess Walewski, the Excellency the Austrian Minister and the Countess Colloredo, the Count Stralytsky, his Excellency the Sardinian Minister, the Duchess of Inverness, Lord Castlereagh, M.P., Miss Russell, Hon. Miss Lister, Hon. G. Byng, Mr. R. Grey, Her Ladyship subsequently had an evening party, which was attended by a select circle.

The Right Hon. B. Disraeli and Mrs. Disraeli have arrived at Grosvenor-gate for the season.

The Hon. Charles A. Murray, her Majesty's Minister at Berne, arrived in town yesterday from Switzerland.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. W. R. Brown to Cottered, with Broadfield annexed; Rev. J. Crofts to Little Tey, Essex; Rev. J. W. Doran to Beeston St. Lawrence, Norfolk; Rev. C. Jenkin to Herringswell, near Mildenhall; Rev. W. L. Jeffray to Ashford, near Chester; Rev. H. Price to Kilybebill, Glamorganshire; Rev. C. J. Vernon to Grafton Underwood, Northamptonshire; Rev. E. Whitehead, to Godmanstone, Dorchester. *Vicarages:* The Rev. J. W. Hull to North Muskham, Nottinghamshire; Rev. G. K. Weston to Toller Fratrum, with Uruford Eagle annexed, Dorsetshire. *Incumbencies:* The Rev. W. M. Beresford to Walton, near Aylesbury; Rev. W. Burns to Grimsargh, Lancashire; Rev. J. R. Dakers to Hawick; Rev. W. Doyle to St. Oswald's, Churton-upon-Medlock, Lancashire; Rev. J. Graham to St. Chad's, Lichfield; Rev. R. Hill to Mansell Lacy, Herefordshire; Rev. W. Hulme to Corfe, near Taunton; Rev. W. Fennefather to Christ Church, Barnet; Rev. G. D. Thompson to Queenborough; Rev. J. M. Valpy to St. John's, Nottingham. *Perpetual Curacies:* The Rev. J. M. Hawker to Earley, Berks; Rev. W. Hulme to Corfe, Somerset.

TESTIMONIAL.—The parishioners of Swaffham Bulbeck have presented the Rev. L. Jenyns, on his resigning that living, with a valuable collection of divinity books.

CANONS OF ST. PAUL'S.—The Minor Canons of St. Paul's have published a protest against the course recently pursued by two of their brethren—namely, the Rev. R. C. Packman and the Rev. James Lupton—in the appeal they have recently made to the Bishop of London, as visitor of the Cathedral.

NEW CHURCH, KENNINGTON-COMMON.—A large and handsome church has been for some time past in course of erection in Lorimer-square, a few yards north of Kennington-common, and will be ready for consecration in a few weeks. It is cruciform in shape; and, according to ecclesiological nomenclature, in the Gothic style of architecture of the Middle-pointed period.

PROPOSED REMOVAL OF THE CHURCHES IN THE CITY.—At the meeting of the board of guardians of the Holborn Union, on Monday, an address was agreed upon to the Lord Bishop of London, on the spiritual destitution existing in that union, and praying that the population of the parishes comprising the union to be 46,971; and with very inadequate amount of church accommodation. The guardians pray his Lordship, in the event of the City churches being removed, to take the state of their union into his best consideration.

THE BOURBON FAMILY.—We are requested to state, on positive authority, that the Princes of the Bourbon family have no accredited organ in the press of France, or of any other country; and that the opinions which have been attributed to them on the important questions now agitated in Europe are as unfounded as the hopes they have been supposed to entertain.—*Times.*

THE ORLEANS FAMILY.—The following letter has been addressed to the editor of the *Morning Herald*:—"Sir,—A letter purporting to have been addressed by her Royal Highness the Duchess of Orleans to the Duke of Nemours appeared in your columns of the 16th instant, and as the authenticity of that letter has obtained some credit, I received his Royal Highness's commands to acquaint you that such a letter has never existed. I am, sir, your obedient servant, T. GAUTHIER. Claremont, Jan. 21, 1854." A letter declaring the letter published by the *Morning Herald* to be fictitious has also been addressed to that journal on behalf of the Duchess of Orleans.

EAST INDIA TROOPS.—To-day 150 men, of the East India Company's service embarked at Pilbury Fort, from Warley Barracks, on board the ship *Lanconia*; and on Tuesday next the same number of men will also embark on board the ship *Malabar*, for conveyance to Madras.

LOSS OF "THE TAYLEUR" AUSTRALIAN PACKET-SHIP, OFF LAMBAY ISLAND.

WRECK OF THE "TAYLEUR," IN DUBLIN BAY.

ur publication of November 26 we gave an engraving and a de-tion of the new iron clipper-ship *Tayleur*, then recently launched, largest sailing merchantman ever built in this country. The l was designed expressly for the Australian passenger trade, to one of Messrs. Pilkington and Wilson's celebrated White Star . She was 2500 tons new measurement, and was capable of ying 4000 tons of cargo. No expense had been spared in her con-tion and fitting up, and the general opinion was that she would o a fast and safe sailer. Had justice been done to so fine a vessel, expectations would, probably, have been realised; but, if the pre-ng statements are correct, the ship was undermanned when she Liverpool, and to that fatal error the sad catastrophe we have this to relate, must be mainly attributed.

e *Tayleur* sailed from Liverpool for Melbourne, at five minutes to e, on Thursday, with 652 persons on board, including the crew, about eight p.m. was off Holyhead. After nightfall it began to strongly, and during all next day the ship struggled with an ad-wind. By that time the more intelligent of the passengers became sed on account of the evident incompetence of the crew to manage vessel. A number of the men were Chinese and Lascars, who y knew the English language, and were consequently unable to stand the orders given by the captain. Throughout the whole of y the weather was thick and hazy also, so that no observations be taken. Early on Saturday morning the ship was under full for which the captain was blamed by some of the passengers, who rked that the crew could not take in so much sail on an emergency. e day wore on the weather became boisterous, and about ten a.m. was in sight. In order to avoid any possible danger hip's course was altered about half-past eleven, and she was d up two points to windward. It was whilst on this course, and in half an hour after, that the man in the bows on the look-out cried Breakers on the starboard bow." It was then blowing heavily, and a sea running. The helm was put hard to starboard, the sheets of ead-sails let go, and every means taken to bring the ship round on rse free from the threatened danger. It was then impossible to see le's length from the vessel, and in about twenty minutes more she e with great violence on a reef of rocks running out from a creek to the eastward bluff of Lambay Island. The shock was tre-ous, shaking the vessel from stem to stern. She rose on the next and drove in rather broadside on; and when she struck again eaving, the sea made a clean breach over her amidships, setting ishing on deck afloat. After two or three more shocks, the ship began k by the stern, and the scene of confusion and dismay that ensued all description; the passengers rushing up the hatchway—hus-carrying their children, and women lying prostrate on the deck their infants, screaming and imploring help. The ship's quarter d on towards one side of the creek; and one of the cook's assist-a black man), two Lascars, and three seamen, contrived to jump on shore, and thus saved their lives. A rope and a spar were ead got across, and by this means a number of lives were rescued, through the activity and devoted gallantry of two or three young passengers, whose exertions in saving the lives of their fellow-rs deserve the highest praise. Those who attempted to escape by ws of the vessel all, or nearly, met a miserable fate; the moment ll into the water, the waves caught them, and dashed them vio-against the rocks; and the survivors on shore could perceive the manate creatures, with their heads bruised and cut open, struggling the waves, and one by one sinking under them. A first-cabin ger, who managed to get on shore, gives the following account of scenes which followed:—

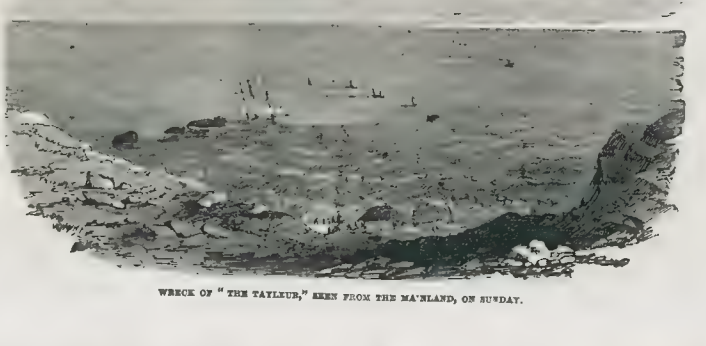
ng some of the earliest of the females who attempted to get on were some young Irishwomen. Most of them lost their hold of the and fell into the sea. The doctor of the ship, a most noble fellow, ed hard to save his wife and child, he had succeeded in getting half way to the shore on a rope—holding his child by its clothes in th—but just then the ship lurched outwards, by which the rope was d from the hands of those who held it on the lower rocks, and was by those above, thus running him high in the air, so that the ellow could not drop on the rock. Word was now given to lower e gently; but those who held it above let it go by the run, and the low, with his child, was buried in the waves, but in a short time appeared above the water, manfully battling with the waves and tions of the wreck that now floated about him. He at length swam der hanging by a rope alongside the ship, and got upon it. After he en there a minute or two he skulled close to him, he immediately id of her, and dragged her on the ladder, tenderly parted the hair r face, and appeared to be encouraging her, but in another minute washed from his hold, and sank almost immediately. He then got n into the ship and tried to get his wife on shore, but they both d. He deserved a better fate! The scene was now most truly The most desperate struggles for life were made by the wretched ers, great numbers of women jumped overboard, in the vain hope of g land; and the ropes were crowded by hundreds who, in their se, terror, and confusion, frustrated each other's efforts for self-ation. Many of the females would get half way, and then become to proceed further, and, after clinging to the rope for a short time, would be forced from their hold by those who came after them. Three women only, out of 200, were saved. One of those had got part of the way across when her legs fell, and she hung some time by her two hands over the foaming waves; her husband then came on the rope, and managed to assist her to the shore. Two men came on shore with children tied to their backs; but of the whole who fell into the water not above five were saved. I saw one fine girl, who, after falling from the rope, managed to get hold of another one, which was hanging from the side of the ship, and which she held on to for more than a quarter of an hour, the sea every moment dashing her against the side of the ship: but it was impossible for us to lend her any assistance. Some one got a spar out, by which several got on shore; but it soon broke; and now might be seen hundreds hanging to the bulwarks of the ship, each struggling to get on shore. I saw one young woman hanging on the middle of the rope for some time by her two hands, but those pushing to get on shore soon sent her to her doom. The ship's stern now began to sink; the ship made a lurch, and all the ropes were snapped asunder. The scene now was most harrowing. Every wave washed off scores at a time—we could see them struggle for a moment, then, tossing their arms, sink to rise no more. At length the whole of the ship sunk under water. There was a fearful struggle for a moment, and all, except two who were in the rigging, were gone. The coast-guard, who had been apprised of the wreck, now came up; but all they could do was to attempt to save the two who were in the rigging. They managed to get a line to one of them, by fastening two lines, at the end of each of which was a piece of wood, to a single line, and guiding it from the rock to the spot where the poor fellow was, so that he could reach it. They then dragged him ashore. There was one fine young man left on the top, but they could not reach him, and when he saw them going away his cries were heartrending. About two o'clock the next morning the coast-guard managed to reach him, after he had been in the top fourteen hours: you may fancy the poor fellow's joy at his deliverance. We found we were on Lambay Island, three miles from Rush, and about thirteen miles from Dublin.

Out of the entire number of persons on board only 282 individuals were saved, so that 370 lives must have been lost altogether. News of the wreck having been taken to Dublin, the steam-packet *Prince* was sent to Lambay Island on Sunday afternoon; and next morning the whole of the passengers and crew who had been rescued were taken to Dublin, where comfortable accommodation was provided for them.

Later accounts state that nearly 50 bodies have been found, and that an inquest is to be held. The *Liverpool Mercury* adds the following statement:—

We learn that a letter has been received from Captain Noble, but it conveys nothing like an accurate account of the cause of the disaster. It appears that he had two sails blown away in the gale of Friday and Saturday morning. His rudder—a patent one—is complained of as difficult to work, and his compasses were wrong. This is the sum of his statement. It appears that there were a little over 100 females on board, only three of whom are said to have been saved. The vessel still holds together; and, as there is a large quantity of timber on board, she may continue to do so.

A subscription list has been opened in Liverpool in aid of the unfortunate sufferers by this deplorable wreck. It is headed by Mr. Charles Moore, one of the owners, with £150, followed by the names of Messrs. Pilkington and Wilson (the Liverpool agents), £100; Mr. James Baines (of the Black Ball line of Australian packets), £100, &c.



WRECK OF "THE TAYLEUR," SEEN FROM THE MA'NLAND, ON SUNDAY.

THE LOSS OF THE 'SAN FRANCISCO."—The following abridged narrative of this disaster was supplied by Lieutenant Winder, U.S. Artillery, one of the passengers saved. "We sailed from New York on the 21st of December last. The *San Francisco* had on board about 800 troops, and 10 officers with their families, together with a crew, amounting in all to about 750 souls. On the night of the 23rd of December the vessel encountered a severe gale. We were then in the Gulf Stream. The vessel worked nobly until about three o'clock of that day, when the engineer reported the piston of the pump to be broken. The wind was then blowing hard from the north west. In a short time afterwards, the heavy sea which was running swept away all the boats. The ship was in the most imminent danger, and the greatest alarm prevailed. The passengers were then formed into gangs to pump the vessel, and all laboured to the utmost extent of their ability, and the ship was kept afloat. On the 24th, the barque *Ashby*, of Boston, hove in sight, and hove-to, and took off about 150 of the passengers. She was chartered to the nearest American port. On the 26th, we fell in with the British ship *Three Bells*, bound for New York. She lay by us, but the sea ran so high that we were then unable to communicate for several hours. On the 3rd of January the *Ashby*, Captain Stoddet, from New York to Liverpool hove in sight. She immediately bore down upon us, and when the weather moderated, the passengers and others on the wreck were embarked. The embarkation continued on the 3rd and 4th instant and on the morning of the 5th, all being completed, the two vessels set sail and left the wreck. The *Three Bells* sailed for the nearest American port, and the *Ashby* for Liverpool. When the *Ashby* left, the *San Francisco* was fast settling down. Her captain was the last man to leave her, and had to lower himself down by a rope from the bowsprit. The *Ashby* on Monday arrived all safe at the Mersey, and the rescued crew of the United States Government chartered the steamer *Arctic*, one of the Royal Mail steamers, to convey the troops rescued to Boston. The *San Francisco* was an entirely new and very fine steamer, capable of being used for war if required.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,
TAKEN DURING THE WEEK ENDING THURSDAY, JAN 26

Month and Day.	Corrected Reading of Barometer at 61° A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches
	Inches.	°	°	°	°			Inches.
ec. 20	29.952	52·1	31·7	43·6	+ 0·3	91	E.S.E.	0.00
" 21	30.178	51·0	32·3	42·3	+ 0·8	88	S. & S.E.	0.00
" 22	30.108	50·9	32·0	39·7	+ 2·9	91	"	0.00

" 24	29.724	46·9	38·6	43·7	+ 1·7	92	"	0.06
" 25	30.144	48·9	29·2	38·8	+ 1·7	83	"	0.00
" 26	30.347	51·4	33·5	43·5	+ 0·3	76	"	0.00

Note.—The sign + denotes above the average. The numbers in the seventh column are isolated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer increased from 29.98 inches at the beginning of the week to 30.32 inches by the morning of the 21st; decreased to 29.88 inches by the afternoon of the 24th; increased to 30.17 inches by the morning of the 26th; decreased to 30.12 inches by the evening of the same day; and increased to 30.47 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 30.073 inches.

The mean daily temperatures have varied from 42° to 46° above the average value. During the time they have been above their averages, on every day from 20th to the 26th (except on the 25th, when it was slightly below)—the average excess was 2·3° daily.

The mean temperature of the week was 43·3°, being 6·4° above the average of the corresponding week of 39 years.

The range of temperature during the week was 22·6°, being the difference between the highest reading on the 20th, and the lowest on the 25th.

The mean daily range of temperature during the week was 16°. The greatest was 20·4° on the 26th, and the least 8·8° on the 24th.

Rain fell on two days during the week to the depth of 0·07 inch (nearly an-tenth of an inch).

The weather on the 20th and 24th, was dull, and the sky almost wholly overcast; on the 21st, 22nd, 23rd, and 26th, very fine, and the sky almost cloudless; and the 25th was fine during the former part of the day, but overcast and damp during the evening.

JAMES GLAISHER.
Lewisham, Jan. 27, 1854.

HEALTH OF LONDON.—In the week ending January 21, the births of 1700 children were registered in 845 weeks, and 855 were females. In the average number in the corresponding week of nine years was 1798 boys and 723 girls. The number of deaths registered in the week was 1195: in the preceding week it was 1192. This favourable check has been caused by the milder atmosphere, as shown in our weekly Meteorological Table. In the week ending Dec 23, and in the week ending Jan. 5, the mean temperatures were 35° and 29·2° respectively; in the week ending Jan. 19, and in this week, the mean temperatures were 40·6° and 42·3° respectively; and this increase of about 12° has been followed by a decrease of mortality of nearly 300 weekly. The average numbers of deaths caused by different diseases were only those of their average. The deaths referred to diseases of the respiratory organs, exclusive of phthisis and hooping-cough, amount to 250, and these produced by zymotic complaints are about the same number: of these, no less than 72 deaths were caused by hooping-cough (exceeding its corrected average by 27). Fatal cases of bronchitis have declined from 98 in the previous week to 133 in the last: pneumonia, from 114 to 75. The former complaint is less, but is still above the average; the latter is now below it. Bronchitis existing in the chronic state in aged persons, and stimulated to increased activity by the chronic state in aged persons, continues its course when the atmosphere has become warmer: the natural powers in advanced life are nearly exhausted, and its mortality has not yet declined. A different effect is observed in young persons liable to pneumonia and other acute diseases from exposure to cold: when the cause is removed, its fatal consequences almost immediately cease.

CORPORATION INQUIRY.

The Royal Commission continues its inquiry into the working of the Corporation. Among the witnesses examined this week was Mr. H. W. Harvey, who gave some interesting evidence regarding the City police, of which he has been commissioner since 1839. He is not in favour of an incorporation of the City police in the general metropolitan system. If there is to be only one police force for the whole metropolis, he contends that its real heart and centre ought to be in the City, and not in Scotland-yard. Where one detective case is brought before the Metropolitan police, there are ten such cases brought before the City police. Last year the City police force consisted of 579 men, at an annual cost of £44,341, or £74 17s. 1½d. per man. The metropolitan police consisted of 5,402 men, at an annual cost of £391,928, or £71 5s. 1d. per man. The area of the former is a mile and a half: that of the metropolitan districts 700 square miles. But the mere size of the City is no fair criterion of the amount of work performed by it, or of the number of its inhabitants a proper test. From careful observation, it has been ascertained that although the residents in the City number only 128,851, the number of daily persons who pass in daily for business is 316,000, making a total of 444,851. After giving a number of statements to show the greater efficiency of the City police, he wound up by remarking that no pecuniary inconvenience to the ratepayers of the metropolis out two police jurisdictions with it, as on all great public emergencies, the two separate forces act in conjunction.

REFORMATORY ESTABLISHMENT.—At the last Quarter Sessions for the county of Somerset, held at Wells, the grand jury, on bringing in their last presentment, handed a petition to the honourable chairman, Mr. W. Miles, M.P., pointing out the necessity for providing a reformatory establishment for the treatment and education of youthful criminals, and requested the honourable chairman to present it to the House of Commons on the meeting of Parliament. Mr. Miles, after reading the petition, said that he entirely concurred in the prayer of it, and would be most happy to present it to the House. It urged "that the common goals and houses of correction do not generally provide suitable means for the educational or corrective treatment of young children, who ought, when guilty of crime, to be treated in a manner different from the ordinary punishment of adult criminals; and that penal reformatory establishments ought to be founded and supported entirely at the public cost, and to be under the care and inspection of Government."

THE AUSTRALIAN EXPLORING EXPEDITION.—A general meeting of the Fellows and friends of the Royal Geographical Society was held on Monday night, in the Royal Horticultural Society's Rooms; the Right Hon. the Earl of Ellesmere, the president of the society, in the chair. The secretary read a paper in connection with the Australian Exploration Expedition. It appeared that some time since a committee of the Royal Geographical Society had taken into consideration the propriety of an expedition being sent to explore Australia, from Perth to Shark's Bay and the Cambridge Gulf, across the great interior of the continent to the Darling or the Murray. The result of the deliberations of the committee recommended to the council an exploration from Perth (in the south of the colony) to that of the Albert, on Gulf of Carpentaria—the means of transport to be bullocks and dr-ays and horses, procured at Moreton Bay, where the expedition was to be organised. According to the estimate sent to the Colonial Office, on Nov. 24, recommending the adoption of the expedition, at a cost of £2200, and the submission of an estimate to Parliament for a grant for that purpose. Subsequently a deputation from the council of the Royal Society, consisting of Captain Sir Edward Belcher, Captain Collinson, and Mr. Hodgkin, waited upon the Duke of Newcastle, at the Colonial Office, which they did on the 18th inst., when his Grace was so kind as to state that, on account of the growing importance of the colonies, the Government had determined to assume the whole responsibility of the expedition, and that the offer of the command would be made to Captain Stokes. In the meanwhile, Capt. Start and Mr. Eyre have kindly sent in estimates and memoranda for the benefit of the expedition.

CITY SEWERAGE WORKS.—During the year 1853 sewers were constructed in twenty-five different places, their aggregate length being about 4 981 feet. Nearly the whole of those sewers were in substitution of ancient sewers originally intended for surface drainage only, but temporari y used for house drainage until more efficient sewers could be built. The ancient sewers in Lombard-street, formerly the only City Ditch, have received the houses on the south side of Hosier lane and in John-street, Minories, Coleman-street, and other places, have been abandoned and filled up, and the house drains entering them have been connected with the new and deeper sewers in these streets. The length of ancient sewers abandoned and filled up exceeds that of the new sewers constructed, and the total length of existing sewers within the City remains, therefore, about the same as last year, or 49 1-3 miles. In the course of the year an extensive reparation of that portion of the Fleet sewer which is south of Fleet-bridge was commenced. Nearly every gully within that district has been re-trapped with traps of improved construction within the last five years.

THE CITY POLICE.—Chief Commissioner Harvey has declined the present of a piece of plate, designed and executed by the members of the force over which he presides. He says:—"If I was about to leave a service in which I have laboured incessantly well-nigh fifteen years, the toil and anxiety of which are greatly soothed by the remembrance of my successful efforts to obtain for all the members of the force a well-earned increase of pay, the proposed memorial would be most acceptable to my feelings. But when I consider that it may be my painful duty to admonish with severity or instantly to dismiss some members who have contributed to the proposed testimonial, I cannot consent to encounter the painful impression which such a necessity might provoke."

NATIONAL SPORTS.

OUNDEL STEEPLE-CHASES.—MONDAY.
Farmers' and Tradesmen's Handicap.—Harry, 1. Ben Lomond, 2.
Handicap Sweepstakes.—Pipaulboy, 1. Topsy, 2.
Selling Race.—Sailing Painter, 1. Nom de Guerre, 2.
TUESDAY.
Free Handicap.—Nom de Guerre, 1. Old Rake, 2.

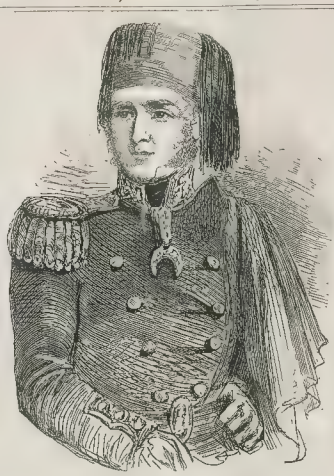
THE ILLUSTRATED LONDON NEWS.

No. 666.—VOL. XXIV.] SATURDAY, FEBRUARY 4, 1854. [WITH TWO SUPPLEMENTS, 1s.

THE QUEEN'S SPEECH.

IT may be doubted whether the civilised world ever offers so grand a spectacle as the opening of the British Parliament by Queen Victoria in person. The muster and parade of armies may be more brilliant, and, in many respects, more attractive to the taste of Continental Sovereigns and their people; but the annual assemblage of the Legislature of this free country is an event that appeals to higher faculties and emotions. It rises far above such merely physical displays as these. Despotic Monarchs are obliged to surround themselves with troops of armed men, and to mimic, even in peaceful ceremonials, the rude scenic effects of warfare, whenever on any great occasions they desire to make their royalty appreciated by a show-loving and hero-worshipping multitude. The scene when her Majesty, surrounded by her Court and by the Great Ministers of State takes her seat upon the throne in the House of Lords, is one of great beauty and magnificence in itself, but it has a moral significance and importance which vastly enhance its splendour, and make military parade of the most imposing kind appear vulgar and poor in comparison. It not only pleases the eye and fills the imagination, but it satisfies the judgment of the spectator. It may be said to do even more than this; for, rightly considered, it should increase his proper self-esteem and elevate in his own estimation the dignity of his citizenship. Those who witness a sight so brilliant, and even the countless thousands who read of it in the public journals, cannot but reflect, when her Majesty addresses the assemblage before her, that the speaker is the Sovereign of the greatest, and one of the most ancient empires in the world; whose fleets are in every sea, and whose power and commerce pervade the earth; that the individuals to whom her words are more immediately directed are a rich, intelligent, and popular aristocracy—who, by themselves, or their ancestors, have always proved themselves the friends of the liberty of the people; and the members of the House of Commons—the most illustrious legislative body that ever existed in any country. They cannot but remember that the few and well-considered sentences which fall from the Royal lips are intended not only for the ears of those who are privileged to listen, but for the great English people in every part of the world—and, next to them, for the consideration and criticism of all civilised nations that can by any possibility be involved in our politics or interested in our progress.



ADMIRAL SLADE (MUCHAVER PACHA), OTTOMAN NAVY.
(SEE NEXT PAGE.)

The circumstances of Europe gave to the usual State ceremonial of Tuesday last an importance which no similar anniversary has had at any period within the recollection of the present generation. The great question of peace or war did not, it is true, depend for its solution upon the words which the responsible Ministers of Queen Victoria advised their Sovereign to utter; but the anxiety of the nation was excited in the highest degree to know whether those words would assert the dignity of the British Empire; and the determination of its Government to do its best to maintain the equilibrium of Europe, by peaceful means, as long as peaceful means were both honourable and possible; and by warlike means whenever it became evident that the public disturber was not to be influenced by any other. The Speech has not belied expectation. The Emperor of Russia—who never appears to have believed that Great Britain and France were in earnest until their squadrons were in the Euxine—will understand, and, it is to be hoped, appreciate it. The immediate increase both of our military and naval armaments which the Speech, in its opening paragraph, so significantly announces, if it do not help the Czar to a pacific conclusion, will show the wavering Courts and Cabinets of Europe which side they had better take, if they wish to preserve themselves intact amid the impending crash, which is certain to follow on every point against which the united forces of Great Britain and France shall be directed. The result of the war—if war is to come—will be loss of power, of prestige, and of position to Russia; but to Austria, if she prefer a Russian alliance in a wrongful cause to a British

ADMIRAL SLADE'S (MUCHAVER PACHA'S) FLAG-SHIP "NUZETIEH," "VICTORIOUS."—(SEE NEXT PAGE.)

and French alliance in a right'ul one, it may be dismemberment and destruction. A similar fate may also await Prussia. If those Powers had the proper sagacity, they would see, ere too late, that participation with Russia is ruin to their true interests. If they had sagacity, even in a minor degree, they would see that their neutrality in such a cause is a voluntary abdication of their rank in Europe, which sinks them to the status of second-rate Powers, and fixes the date of their own decline.

In all the topics connected with Home Politics, the Queen's Speech is as satisfactory as in its short but pithy mention of Foreign Affairs. Deficient harvests no longer produce turmoil and sedition in this country. They cause the Government and the wealthy classes to sympathise with the people, but not to dread them. For this happy result the nation is indebted to the wisdom of the statesmen and legislators who recognised and affirmed the great principles of Free-trade. The allusion to this subject in her Majesty's Speech was as just as it was graceful; and the promise of a further extension of the principle to articles and interests not yet subjected to it will meet the public approval. Perhaps, too, in connection with the gratifying increase of Income over Expenditure which has accompanied the emancipation of trade from so many fiscal trammels it may induce other nations to ask themselves whether it would not be wise to imitate our example.

The reforms which the Ministry have promised are many and comprehensive; and, even without the more engrossing topic of a Continental war would have sufficed to render the Speech a remarkable one. The educational systems of the Universities of Oxford and Cambridge are to be improved; the efficiency of the Civil Service of the Crown is to be increased; the Ecclesiastical Courts—so antiquated, so cumbrous, and so costly—are to be relieved of their jurisdiction in testamentary and matrimonial cases; the practice of the Courts of Common Law, to which these cases are to be transferred, is to be amended; the Law of Settlement—which interferes with the freedom of labour, and prevents the working classes, especially the peasantry and farm labourers, from turning their industry to the most profitable account—is to be reconsidered, and, if practicable, amended; and the House of Commons is once more to be reformed. The Speech designates the direction of the reforms which are contemplated. They include the suppression and punishment of Bribery and Corrupt Practices at Elections, which is rather a purification than a reform; and an extension of the principles of the Reform Act of 1832. This may mean a further disfranchisement of small boroughs, and the transference of their privilege to new and rising towns; and may possibly include an extension of the franchise. Upon these and other points the public will be more fully informed as the Session advances. The importance of most of them is not easily to be overrated; and if only one-half of the reforms which are thus shadowed forth, be successfully carried through Parliament during the Session of 1854, it will be memorable in English history for other reasons than for the war against Russia. In the meantime the imminence of that war is the topic which most interests the nation. The significant language of the Speech, and the equally significant cheers of the multitude when the Turkish Ambassador was recognised on his way to the House of Lords, show that the Government and the people are of one mind. We doubt whether, after the lapse of a few months, the Emperor of Russia and his people will be in the same enviable position.

ADMIRAL [CAPTAIN] SLADE.

Captain Adolphus Slade (Mushaver Pacha), a Post Captain in the Royal Navy, is the fifth (third surviving) son of General Sir John Slade, Baronet, of Maunsell Grange, in the county of Somerset, G.C.H., and Colonel-in-Chief of the 5th Dragoon Guards. His eldest brother, John Henry, Lieutenant-Colonel in the 1st Dragoon Guards, died in 1842: his second brother, Major in the 3rd Light Dragoons, died on his passage home from India in 1838; and a third, but younger brother, Albert Robert, a Lieutenant in the Royal Navy, died at sea in 1828, from fever caught on the coast of Africa. He is also brother to Frederic William Slade, Esq., Q.C., and to Colonel Marcus Slade (twin with Frederic), who commanded the 90th Light Infantry during the Kaffir war, and is now Inspecting Field Officer at York.

Captain Adolphus Slade is a remarkable, but not uncommon, instance of what talent and energy will effect, even against the withering influence of the system of favouritism and patronage, which at one time so extensively prevailed at the Admiralty.

This gallant officer owes little to the Admiralty, still less to party. His promotion has been tardy, and every step deservedly but hardly won. He commenced his career at an early age as a pupil in the Royal Naval College, at Portsmouth, where he carried off the gold medal; but had the mortification to see many of his competitors promoted to the rank of Post-Captain, while he yet remained a Midshipman. He entered the navy in 1817, and first went to sea in the *Tyne*, 26, Captain Gordon Thomas Falcon, with whom he served three years in South America, returning in 1820. The remainder of his professional life may be said to have been passed in the Mediterranean, for we next find him on board the *Revenge*, flag-ship of Sir Harry Neale, with whom he was present at the demonstration against Algiers, in 1824. He passed his examination in 1822, and on the 27th November, 1827, shortly after the battle of Navarino, (at which he was present, in command, we believe, of the *Hind* cutter), obtained his first commission. In 1828 he went upon half-pay, and war having then declared itself between Turkey and Russia, he proceeded to Constantinople as a private traveller, but wisely availed himself on all occasions of his position as a British officer. In this capacity he was on board the flag-ship of the then Capitan Pacha (Achmet Fayzugli), and accompanied him with the whole fleet on a cruise in the Black Sea. He was also on board the *Blonde* frigate, Captain (now Sir Edward) Lyons, and visited Sebastopol, Odessa, and Varna in that vessel. After the peace of Adrianople he traversed the whole line of the Russian army from Varna to Widdin, and thence to Adrianople, concluding with an extensive tour in Asia Minor—a full account of which he afterwards gave to the public under the title of "Records of Travel in Turkey, with a cruise in the Black Sea with the Capitan Pacha."* Lieutenant Slade remained unemployed until 1834, but not idle; he placed himself as a student at the Royal Naval College at Portsmouth, in the senior department; and, under the able superintendence of the professors there, made himself master of the highest branches of scientific knowledge. In January, 1834, he joined the *Caledonian*, 120, flag-ship of Admiral Sir Josias Rowley, as additional Lieutenant, selected by the Admiral himself as an officer most competent to assist him in the delicate negotiations which he might have to transact as Commander-in-Chief in the Mediterranean. Lieutenant Slade served in the *Caledonia* until 1837, and during that time was constantly employed by the Admiral in matters of the most confidential nature connected with Constantinople and our policy in the East. He was twice, we believe—certainly once—again at Sebastopol, and furnished a most valuable report to his Admiral upon the state of the defences of that great naval arsenal of Russia, a most important document, and one which we trust is yet to be found in some pigeon-hole at the Admiralty. He again published an account of his travels during these years under the title of "Turkey, Greece, and Malta," and remained unemployed and unnoticed till 1841; at the close of which year (when Lord Auckland was First Lord of the Admiralty), after being twenty-six years in the service, he was at length promoted to the rank of Commander. Having attained this rank, he placed himself in the Arsenal at Woolwich, for the purpose of studying steam, where he obtained a first-class certificate; and, in 1846, (July 2nd), was put in command—not of a steamer, but—of a sailing-vessel, the *Recruit*, 12-gun iron brig, of a new construction: and for which he found the greatest difficulty in obtaining volunteers. He remained in this vessel till she was paid off, at the close of 1847, employed upon particular service on the coast of Spain and at the Azores, and in the performance of which his conduct was highly approved.

On the 1st January, 1849, the Earl of Auckland, First Lord of the Admiralty, died suddenly; and it was during the interregnum which occurred between his death and the appointment of his successor that Commander Slade obtained his post rank. The power was in the First Sea Lord. Admiral Sir James Dundas, the gallant Admiral who now commands the English fleet in the Black Sea, was the First Sea Lord; and on the 10th January, 1849, Commander Slade's name, with that of William Peel (son of Sir Robert), appeared in the *Gazette* as promoted to the rank of Post Captain.

Captain Slade has held no actual command in the British service since attaining his post-rank. At the close of 1849, he was again at the Naval College at Portsmouth, when the rumour of probable disturbances between Turkey and Austria, on account of the asylum which the former Power had granted to the Hungarian refugees, made it desirable that some officer should be sent out to the Mediterranean, whose knowledge of the language and customs of the Ottomans might be of service to the Admiral Commanding-in-Chief: Captain Slade was selected by the Foreign-office to discharge this important duty; and at their suggestion, we believe, was appointed by the Admiralty Second Captain of the *Queen* flag-ship, in the Mediterranean. He proceeded to join that ship within twenty-four hours of his appointment; and, after a very short service as additional Captain thereof, was lent (we believe the term is) to the Turkish Government; and, under these circumstances, is now serving in their fleet, with the rank of full Admiral, and the title of Mushaver Pachs (which means, consulting or advising Pachs).

Captain Slade is one of the most scientific officers in the service; in addition to which he is familiar with the principal languages of the Mediterranean, viz., French, Spanish, and Italian; and also with Turkish—and is, perhaps, the only English officer who is well acquainted with the latter language.

The Portrait upon the preceding page has been engraved from a family picture. We have also engraved the Admiral's Flag-ship, which bears the Turkish name *Nusrethi* (in English, *Victorious*). She was built in the Turkish waters, in 1838, by Mr. Rhodes, an American: she is a noble specimen of naval architecture, and will, no doubt, should her services be required, prove herself a powerful and dangerous antagonist. Her dimensions and armament are as follow:—

DIMENSIONS.

Length between perpendiculars	..	..	..	..	..	202	feet
Beam	..	..	..	..	..	48	,,
Displacement	..	..	..	..	..	4200	tons
Draught forward	..	..	..	..	..	21½	feet
,, Aft	..	..	..	..	..	23	,,

ARMAMENT.

Main deck	..	..	..	..	36	32-pounders	
Lower deck	..	..	..	..	36	45	,,

All nine feet guns.

Our Engraving is from a sketch with which we have been favoured by Lieut. Montague O'Reilly, of H.M.S. *Retribution*.

WARLIKE INDICATIONS.

THE RUSSIAN EMBASSY.

We are enabled to announce that diplomatic relations between Great Britain and Russia are broken off. His Excellency Baron de Brunnow, Ambassador of the Czar at the Court of St. James's, leaves London at an early hour to-morrow morning.—*Morning Post*, Thursday.

Yesterday his Excellency the Russian Ambassador, Baron Brunnow, gave notice to the servants not immediately waiting on his Excellency, that their services were no longer required, as the Baron was about to leave the country. Every preparation has been made to enable his Excellency to leave at once. The hour or day of departure depends entirely on the completion of the arrangements necessary for the Ambassador to leave. The passports requisite to enable his Excellency to leave are going on with the greatest rapidity.—*Globe* of Thursday.

Mission to Constantinople.—Sir John Burgoyne is about to proceed in company with, it is said, Colonel Ardent to Constantinople: these officers being commissioned by their respective Governments to proceed there on duty connected with military engineering. Several military councils have been held at the Tuileries with respect to this subject, at which the most eminent French military engineers have assisted. The Emperor has been present at all, and has taken great interest in their labours.—*Post*.

Sir Joseph Trackwell.—The *Cork Constitution* states that, on Monday, a telegraphic message was received in that city, summoning Sir Joseph Thackwell over to London.

Important Despatches to Constantinople.—On Monday night the Government sent off to our Ambassador at Constantinople, and to the Commander-in-Chief of the fleet, the official answer to the formal question of the Emperor of Russia, as to the reason why the British naval forces have entered the Black Sea. Mr. Tucker, the bearer of the despatches, proceeds at once to Marseilles, and thence by the *Cavador*, despatch steam-vessel, to the Bosphorus.

Crutches and Bandages.—About fifty tons of medical stores were sent out from Southampton yesterday week, by the Peninsular and Oriental Company's Constantinople steamer, *Delphi*, to the British fleet in the Black Sea. These stores were contained in nearly 250 packages, and their contents comprised everything that would be necessary after a great naval battle, such as bandages, knee-caps, bandages, &c., and in struments for surgical operations, every requisite for gun-shot wounds, &c. The whole of these stores were sent from Haslar.

Admiral Corry's Squadron.—It is stated in letters received from the fleet of Rear-Admiral Corry, that the vessels of the western squadron at Lisbon are ordered home, for the purpose of being stationed at the Nore and on the anchorage ground off the port off Sheerness, and are to be kept in a state of readiness for service, emergency, and in case their services should be required in the North Seas.—*Times*.

Prudent Precautions.—We are informed by a correspondent that a number of Russian ships that were at Liverpool have been sold to British subjects, and that the Russian flag will no longer be the navigated under the British flag. Information on the subject, we understand, has been forwarded to the Board of Trade.—*Shipping Gazette*.

The greatest activity is being used in all our naval arsenals: new ships, principally screw steamers, are being launched, and others are being equipped with the utmost despatch. The offices at the Horse Guards, and the military stations in connection therewith, are unremitting in their exertions.

Increase of our Army.—The army estimates for the ensuing financial year provide for an increase to the forces of no less than 10,000 men.

Royal Navy and Marines.—The active forces of the Royal navy are also to be increased by an addition of 10,000 seamen and 2000 marines.

A Disappointed Suitor.—The Madras *Athenæum* states that a native suitor was committed one day last month by the Chief Justice for contempt of court, under rather novel circumstances. He had brought an action against certain persons, which was unsuccessful, and when the verdict was pronounced he took out a knife and began to cut his throat before a l the public. Of course he was instantly seized, and Sir Christopher sent him off to gaol, for an attempt to perpetrate a felony. "I am act of authority which will tend to confuse still further the native notions as to what a man may do with his own."

Across the Atlantic in Five Days.—The *New York Tribune* says:—"The new steamer *W. Norris*, which is to make the passage to Europe in five or six days, is rapidly approaching completion. Her outside is nearly finished, and she may be afloat in a fortnight. This vessel is simply cut and sharp, with a good model for running fast in smooth water. She is made unusually strong, by having her timbers strapped diagonally with bars of iron, and by an iron kelson extending from the keel to the deck, excepting in the central part of the vessel, devoted to the engine. This kelson is composed of two parallel sheets of iron near half an inch in thickness, less than a foot apart, and so fashioned and connected as to form a water tank. On either side of this kelson are bilge kelsons, formed in the same manner, also connected with the deck. It is expected that these unusual supports will give such an amount of strength and solidity to the steamer as to make her excel all other vessels of similar dimensions."

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

Paris, Thursday.

The apparent impossibility of any pacific termination of the Oriental question seems to reconcile people here to the idea of war, to a considerable extent. Among the military the desire to be engaged in it is decidedly marked, and to such an extent, that all seek to take places in the army which it is supposed will be sent to Turkey. So numerous, indeed, are the demands, that it is found necessary to take measures to prevent the Bureaux being encumbered by the number of military men who come to seek enrolment. The Minister of War is more than ever averse to according leaves of absence. M. de Kisseleff, last week, at a soirée, in the house of M. G——, at Beaujon, made no secret of his opinion of the impossibility of an amicable arrangement of matters; and expressed his deep regret at the impending necessity of his departure from Paris, where he is so generally popular, and where he has for so many years led a mode of life so agreeable to him. M. de Kisseleff's habitual circumspection is so great, that there remains little or no doubt of the result of an affair of which he speaks so unreservedly.

The Russian Government entertains the greatest jealousy of permitting the entrance of strangers, whom it regards as spies. A Frenchman recently quitted Paris, with a passport duly signed by M. de Kisseleff, for Southern Russia and the Crimea; and, having gone to Sebastopol, he was, on visiting the Place d'Armes, accosted by a Russian officer, who demanded his business. Our traveller replying that he merely came as a *voyageur*, and producing his passport, the officer informed him that his passport was for Southern Russia; that he was forbidden only to enter Sebastopol or the Caspian Sea; and, without further parley, put him on board of a vessel starting for Odessa, where, however, he received all due attention and politeness, the Captain refusing even to accept passage money.

Prince Napoleon took his departure on Monday, for Brussels, where he is gone on a visit to the King of the Belgians. It is not supposed that this step has any particular signification beyond the general desire of establishing a continuation of the good understanding subsisting between the two countries, at a moment when the prospect of a war which concerns all Europe renders it doubly desirable that allies should strengthen the links already existing between them.

A brilliant ball was given at the Palais Royal, on Thursday, by M. de Cambacérès, Grand Master of the Ceremonies. On Sunday, a ball (non official), at which the Emperor appeared, was given by the Prince Jérome; and the Prince Murat followed the example on Wednesday. Fêtes at private houses continue to be as few and far between as ever.

The ball at the Hôtel de Ville, on Saturday night, was, as was expected, very brilliantly attended, and, though crowded, was more select than these entertainments are in general. The appearance of an *ouvrier*, in his working costume, in the midst of the guests, excited among the authorities, as well as among the *invités*, no small degree of astonishment, the greatest strictness having been observed in the examination of the tickets.

A commission has been formed, and a subscription opened, for the erection, by the Communs de Rusil (in which she lies buried), of a monument to the Empress Josephine.

The apartment called the *Salle de l'Empereur*, at the Hôtel de Ville, has just been decorated by the completion of the ceiling painted by M. Ingres. This work is of an allegorical character, representing the Emperor Napoleon I. mounting to the skies, attended by Victory and Nemesis. Notwithstanding the very doubtful and now happily nearly exploded taste, in which the ridiculous rarely fails to mingle with the sublime in these compositions, when treating of modern personages and events, the execution of the work in a great measure redeems this primary defect; and it is whispered in the artist circle that there is a probability of its bringing its author to a seat in the Senate—such an act having its precedent in the case of David, the painter, under Napoleon I., who had his place at the Luxembourg.

The statement contained in our last of the probability of the destruction of the present Palais d'Industrie, and the erection of a new one in the Champs de Mars, is not, it appears, to be carried out: the loss of time, money, space, and labour, that such a plan must necessarily entail, being too formidable to be encountered; more especially when the state of affairs is so menacing all over Europe as to render it likely that the number of objects sent from the different nations to furnish it will be much diminished. The mattresses for the purpose for which it is designed, however, none the less unquestionable, and various plans are being considered for making alterations and additions, so as to obviate, as far as may be, its defects.

It appears that, notwithstanding the agitated state of the country, the projects for demolitions, alterations, and buildings in Paris are no less active than ever. A plan is now proposed for the opening of a new boulevard in the Faubourg St. Marcel, occupying a length of two kilomètres, and calculated at an expense of four millions of francs (£160,000). The improvement to be effected by such a measure, in one of the worst and most unwholesome quarters of Paris, is unquestionable; but, undertaken at this moment, it must, of course, add to one of the crying evils of the day—the expense and difficulty attending the lodging of the poor and working classes in this city, whose sufferings from this cause, when added to the dearness of provisions, are already most severe.

A charity ball, for the benefit of an excellent institution—the Asile-Ecole-Fénélon—is to take place on Monday, at the Italian Opera-house.

At this moment is taking place the sale of one of the most singular and interesting collection of autographs that could be brought together. It contains not mere specimens of the handwriting, but in innumerable instances long and most interesting letters from some of the most celebrated characters of all classes (principally French) of the last two or three centuries. Among the naval illustrations are Jean Bart, Duquesne, Duguay-Trouin, the Comte d'Estrées, Tourville, Vivonne, and François de Vendôme, Duc de Beaufort—all highly interesting historical documents. Among the military celebrities figure the Princes de Condé and de Conti, Wellington, the Maréchaux Villeroy and Villars, Chamillart, de Bayard, Biron de Gulse, Massena, Berthier, Gouvion, St. Cyr, Desaix, Championnet, &c. Voltaire and Rousseau, Marmontel and Buffon, Mesdames du Châtelet, du Deffant, Geoffrin, de Staël, &c., represent literature. There are also letters from our Queens Anne and Elizabeth, and from Charles the First; from Marie de Medicis, Anne d'Autriche, Henri IV.; Louis XIV., XV., XVI., and XVIII.; Napoleon; and from almost all the principal actors in the Revolution—St. Just, Robespierre, Marat, Barnave, Condorcet, Collet d'Herbois, Mirabeau, Vergniaud, &c. These, however, are but a few of the names, taken at random from among those contained in this most precious collection, which is well worthy the attention of all persons of education and intelligence.

At the Odéon was celebrated last week the 233rd anniversary of the birth of Molière. "Les Femmes Savantes" and the "Bourgeois Gentilhomme" were represented on this occasion; and Randoux declaimed an ode composed by M. Philogène Boyer for the event.

It was reported in Paris on Wednesday that Russian transports, which had been sent from the European to the Asiatic ports on the Black Sea, belonging to Russia, having been fallen in with by the united squadrons, were at once sent back to the Russian ports, with a warning not to come out again. This is at once an answer to the demand for explanations made by the Czar. Russia is positively interdicted from making use of the Black Sea.

* We are happy to say that this work, which has been long out of print, is just republished.

The French Government has given unequivocal evidence of its intention to increase the army. The *Moniteur* of Sunday contained a decree calling out 40,000 men of the class of 1851, whose services have hitherto been dispensed with. The decree does not say, to be sure, that the object of the new levy is to enable the Emperor to fight the Russians; but the fact is as clear as if it had been stated. The first levy of the class of recruits of 1851 was called out by a decree, dated the 22nd of August, 1852. The second levy of the same class was not called out till the 28th of January, 1854. And why called out then? The decree says, "to fill up the vacancies created by the liberation in the special arms." It would be much as well to say that ten new battalions of the Chasseurs de Vincennes having been recently created by picking men from all the infantry of the line, it is found necessary, in presence of the impending war, to fill the vacancies thus created in the different regiments; and the remaining 10,000 men are consequently to be called out for this purpose. The effect, necessarily, is to add 40,000 men to the standing army.

The maritime preparations of France proceed with undiminished activity. A body of 700 sailors and carpenters have just been despatched from Boulogne for Brest and Toulon. Brittany also furnishes great numbers of men. The port of Rochefort has furnished 600 men. Fortunately for the requirements of the present conjuncture, the various naval stores and dock-yards were amply provided; and it is by drawing largely on these accumulated supplies that M. Ducos has been able, with his reduced budget, to provide for present wants.

A contract has just been taken at Rochefort for the equipment of 15 000 men; they are to be furnished within one month, independent of 20,000 more, which number is nearly complete.

At a council of general officers, summoned to the Tuileries by the French Emperor on Monday, the eventual expedition of a French land force to the East was discussed in its strictly military bearings. It is understood that the general opinion was that a larger force than was originally contemplated should be sent, and that it should consist of four divisions of 20 000 men each.

The *Times* article of Tuesday, in anticipation of the Queen's Speech, was telegraphed to Paris so incorrectly that the expressions of the writer were attributed to the Queen. Much sensation was excited, and the consequent fluctuations in the Bourse were serious. One rather amusing story relative to this matter has been in circulation. It is said that before the Royal sitting, the English partner of a great banking-house of European reputation sent a telegraphic despatch to the head of the firm in Paris, saying, "I have just seen what the Queen's Speech is to say. It contains expressions of great gravity. Sell 1,500,000f. of Rente." Towards three o'clock another telegraphic despatch was sent, saying, "The speech which has just been read differs very materially from what I had seen. Buy 3,000,000f."

ITALY.

The *Armonia* of Turin, the organ of the clerical party, publishes an address to the King of Sardinia, signed by all the bishops and nearly the general of the ecclesiastical provinces of Turin, Genoa, and Vercelli (except the Bishop of Novara, who is absent), in which they complain of the tenor of various circulars emanating from the Government, and representing the ministers of the state as abusing the influence over their flocks, in order to instil hatred towards the Government in their minds. They disclaim all hostile feeling towards the Government, and throw all the blame on the misrepresentations of the organs of the anti-clerical parties, and conclude with a remonstrance against a circular from the Minister of Grace and Justice, relating to certain pecuniary rights of the curates

The military commendant at Genoa has been lately engaged in putting all the batteries on the coast in a proper state of defence, by replacing the old guns by new and more efficient ones.

The *Milan Gazette* of the 22nd January publishes a decree from the Austrian Minister of Finance, announcing that, in consequence of the fall in the value of paper money, it will not be received at the Custom-house unless at a discount of 17½ per cent.

SWITZERLAND.

The Swiss Federal Assembly has voted a sum of 300,000f. to defray the expense of assembling troops in Eastern and Western Switzerland. The first corps is to be placed under the command of General Ziegler, a member of the National Council, and one of the best officers in the Swiss army. The other is to be commanded by the Federal Colonel Bontempo. Both these officers commanded divisions during the war against the Sonderbund.

GERMANY.

The bulk of the news from Berlin and Vienna, this week, consists of speculations regarding the nature of Count Orloff's special mission to these two Courts. It seems to be generally admitted that his main object is, if possible, to overthrow the existing Ministries, by working on the sympathies of the young Emperor of Vienna, and by bringing the strong Russian *prestige* to bear upon the personal feelings, habits, and tastes of the King. Another part of his mission to Vienna, at which place he arrived on Saturday last, is said to be, to obtain permission to send, under certain circumstances, a Russian corps from Warsaw, by way of The Sprouish the Danubian seat of war. His business, at Berlin, it is said, will be to obtain a corps of 100,000 men to occupy Poland in the name and interest of Russia, and thus set the garrison there at liberty to march to the south for the protection of the Principalities. In the event of this not be correct, both Prussia and Austria will find themselves obliged to come to a decision. The news of the departure of the Russian Ambassador from London will, perhaps, assist them in deciding

Austria, Bavaria, and Saxony have hitherto made no communication whatever to the Germanic Diet concerning the position they intend to assume in the Turko-Russian quarrel.

The *Gazette of Cologne* publishes letters from Vienna of the 28th January, which state that the disposition of the Austrians is not unfavourable to the Turks, even in military circles, and that Count Orloff will find great difficulty in succeeding in his mission. As it is, no State has hitherto suffered more than Austria from the disturbance caused by Russia.

SWEDEN.

Sweden continues to arm, according to the latest accounts, and on a great scale; yet no one knows which side will be taken. Private letters and the public press agree in stating that Russia is to be the ally. In this case, plain hints are given in the great papers that, if the Court allies itself with Russia, the people will ally itself with England. In fact, if this absurd step should be taken by King Oscar, no reasonable man, it is said, would give a brass button for his crown. The Swedish papers bitterly attack the document-secrecy system patronised by England, and now introduced by the Swedish Government, which has not yet made public the Neutrality Act, although it is of the last importance for its own subjects, especially the shipowners, several of whom are making arrangements to transfer their vessels under the English flag.

RUSSIA.

The *Journal de St. Petersburg* of the 20th ult., thus announces the course adopted by the Russian Government respecting the notification of the entrance of the combined squadrons into the Black Sea:—

The public have been informed already by the foreign journals of the orders given by Great Britain and France to their combined fleets to enter the Black Sea. As this order has been notified only verbally to the Imperial Cabinet, it has thought proper, in the first instance, to demand in London and Paris categorical explanations as to the character and extent which the two Governments give to the measure. On the result of these explanations will depend its ulterior attitude.

A letter from St. Petersburg of the 19th ult., in the *Cologne Gazette*, says:—

The Emperor has addressed a letter to the merchants of Moscow, thanking them for the readiness with which they have supplied articles for the hospitals of the armies who are fighting against the enemies of Christianity. The Count on the strength of Count Nesselrode, has confirmed the entrance of the combined fleets into the Black Sea as a measure hostile to their entrance into Sevastopol. There is, therefore, a hope that peace will be maintained. The Emperor, besides, has not received any note rejecting the propositions for peace to be drawn up. It is probable that the difference with Turkey will be adjusted without any intervention.

The *Hamburger Nachrichten*, in a letter from St. Petersburg, Jan. 21 explains the financial operations now resorted to by the State. For the facilitation of the circulation in the Imperial credit institutions, the creation of credit notes to the amount of 30,000,000 of silver roubles was ordered by a manifesto dated July 13, 1841. Of this sum 20,000,000 were carried to the reserve fund. Of that amount 10,000,000 have since been made use of, in virtue of the ukase of March 22, 1849. A new ukase of the 10th inst. orders the issue of those remaining 10,000,000, and in their place orders a new reserve fund to be formed by the creation of notes to the extent of 40,000,000.

General Schilder, chief of the Engineers, suddenly left Warsaw on the 19th ult., by order of the Emperor, for Wallachia, together with several superior officers of the same department. General Schilder is said to be charged with throwing bridges across the Danube, and directing the passage of that river.

At Cronstadt the assembling of officers and sailors, absent on leave of indefinite duration, had already begun. Other ports at which the same concentration is now going on are Revel and Sweaborg: this is under the Imperial Ukase of December 23rd.

Mr. Bell, the English engineer, who was taken prisoner at Sinope, has been released at last. Count Nesselrode, in reply to Sir H. Seymour's interference in the matter, asserted that Mr. Bell had entered the Russian service. That turns out to be false, like many other Russian statements. A letter from our Foreign-office arrived at St. Petersburg last Saturday week, and within twenty-four hours Mr. Bell was at liberty.

THE BLACK SEA.

There was a rumour, in the early part of the week, of a naval engagement having taken place off Batoum; but the latest intelligence from Constantinople, which comes down to the 19th ult., brings no account of it. The following letter, from an officer of Admiral Dundas's fleet, gives a brief notice of the expedition to Sinope, Trebizond, and Batoum:—

SINOPE, January 13.

We left Sinope on the morning of the 8th—*Agamemnon*, 91, screw, Captain Symonds, flag of Rear-Admiral Sir Edmund Lyons, G.C.B.; *Sanspareil*, 71, screw, Captain Dacres; *Terrible*, 21, Captain M'Geverty (paddle); a French steam two-decker-battle-ship with Rear-Admiral Hamelin; the paddle steamers *Gomer* and *Descartes*; and a Turkish Admiral, accompanied by six steamers of war, the latter all laden with ammunition to be distributed at Trebizond and Batoum. After steaming along the southern coast of the Black Sea, keeping all together, we arrived at Trebizond early in the morning of the 10th, and the Turkish steamers immediately commenced discharging part of their ammunition. Here they are very indifferently prepared to resist any attack from sea or land, having only a couple of miserable forts, and those scarcely supplied with cannon. We sailed from this place in the evening for Batoum, the nearest anchorage to the Turkish frontier, the whole squadron having shouted and loaded all their guns in readiness for action, having heard at Trebizond that a Russian squadron of four battle ships and four steamers had been seen off that place. The next day we arrived at Batoum. Saw nothing of the Russian squadron, which disappointed a good many who were really in hope of having "something to do." Assisted the Turkish steamers in landing all their ammunition for the army, which was encamped about fifteen miles from the on the frontier, which we succeeded in doing by two p.m. Batoum is a mere village, with a single fort on a point. General Guyon commands the Turkish force, which consist of 20,000 at Fort Nicolai, which is still held by them, notwithstanding frequent attempts on the part of the Russians to retake it. The people at Batoum are in great force; every man well armed, and wanting nothing but what we took them—powder. We left Batoum on Wednesday, the 11th, at four p.m., and reached this place this afternoon. The *Fury* leaves at once for Constantinople. The following is a letter from an officer on the fleet:—"We weighed anchor at two p.m., and all steamed together towards the Turkish frontier (twelve miles), where we got a distant peep at the Turkish encampment. We then turned about, and made the best of our way to Sinope under steam, where we have just arrived, January 13th, and found the fleets of Vice-Admirals Dundas and Hamelin here as we left them. The *Terrible* and the *Fury* leave this evening (13th) for Constantinople, to convey the six Turkish steamers there, I believe, accompanied by two French steamers also. We remain here (Sinope) for a short time, and shall all, after the arrival of the *Cornelos* with despatches, return to Constantinople, unless anything new turns up. Three Russian steamers were on this frontier three days previous to our arrival, trying the range of their guns at some of the Turkish forts.

Another letter of the same date, from an officer on board the fleet at Sinope, states that the harbour is much better sheltered from the north wind than was expected. The bottom of the anchoring ground is mud and sand, and the anchors hold admirably. The position is excellent for watching the movements of the Russian fleet at Sebastopol, and for preventing them from sending supplies to the Russian army of the Caucasus. The mountains of the Caucasus shelter the coast from Batoum to Anapa from the north and north-west winds. The north winds prevail as far as Varna, and blow with great violence. The currents, fogs, and snow render the navigation of that portion of the Black Sea during the winter dangerous, if not impossible.

The likelihood of a hostile collision had increased in consequence of the more recent instructions forwarded from home to the commanders of the allied fleets. When the fleets left Beicos Bay, on the Bosphorus, on the 4th of January, the Admirals sailed, in pursuance of orders they had received, to prevent any fresh aggression by the Russian fleet on the Turkish coasts. But at that time the orders subsequently despatched had not reached Constantinople. They did not arrive there until the 12th of January, and they were immediately despatched to the fleets by the French steamer *Caton*, which would probably find the Admirals on the 15th in the roads of Sinope. Those despatches ordered the two Admirals to announce to the Russian naval forces that they were not to cruise in the Black Sea, and that they must remain in the Russian ports; and the combined fleets would, if necessary, enforce that intimation. The *Valmy* and *Trafalgar* had left Constantinople to join the fleets. If it be true that the chief part of the Russian squadron left Sebastopol on the 12th, and has since then been cruising in the Black Sea, it seems highly probable that a collision will take place, unless Admiral Nachimoff has received instructions to obey such orders as the French and English Admirals may choose to give him.

The proclamation of the Russian naval authorities, that every merchant ship laden with war-stores in the Black Sea will be considered good prize, does not seem to be much heeded by the English merchantmen. The majority of these vessels, according to reports from Galatz, of the 18th, have gone to Constantinople with the design of serving as transports between the capital and the various Turkish ports on the Black Sea. Among other English vessels thus engaged, the steamer *Phæbe*, had been chartered to take 500 soldiers and 1500 sacks of flour to Trebizond, for which place 800 Egyptian gunners were also on the march, with some foreign officers who have gone over to Islamism.

On the 16th ult. five Turkish steamers, after having landed their troops and stores at Batoum, arrived at Constantinople from the Black Sea, in company with the *Samson*, the *Fury*, and the *Terrible*. They were about to proceed, without delay, again to the Black Sea, with provisions and other necessaries for the fleets, which were then cruising off the roadsteads of Sinope. These ships, on their return, saw nothing of the Russian fleet; but nine or ten vessels are cruising in some direction.

THE WAR IN ASIA.

Private letters from Kars, bearing the date of December 24, state that General Guyon, at the head of 20,000 men and 21 guns, was to cross the frontier on the 3rd ult., to besiege Akutchick, and that General Stein, with 25,000 men, was to march against Bayazid. Zarif Mustapha Pacha and Selim Pacha, with 18,000 regulars and 9000 irregulars, were on the Georgian territory, and with the first fine weather intended to attack Chirvan. The Russian army, consisting of 40,000 regulars and 9000 Cossacks, was in its winter quarters. The bulletins published by the Russians are all false. The battle of Baiander was gained by the Turks and at Soubattan the latter remained in possession of their ground. All accounts received from that direction are unanimous in their relations that the Ottoman troops gained the most brilliantly; but that, on retreating to their winter quarters, they disbanded, and were considerably harassed by the enemy. General of Brigade Tahir Pacha, who has received an English military education, has received orders to proceed to Kars.

Further letters from Trebizond confirm the news that Russia had met with a political check in Persia, where the councils of the English Minister have prevailed. Ahmed Wefik Pacha had obtained from the Shah an order to the Persian authorities to furnish whatever supplies the Ottoman troops might be in want of. M. Khanikoff, the Envoy Extraordinary of Russia to the Persian Court, had not arrived at his destination. The latest accounts left him in Russian Armenia, where he intended to wait for fresh instructions from his Government.

WAR ON THE DANUBE.

From the Danube we have news of frequent skirmishes between the outposts of the two armies, but no engagement of any whatever import had taken place up to the latest despatches. Accounts vary as to what the Emperor Nicholas means to do. One report is that he has given orders that no offensive measures shall be undertaken on the Danube till the spring. Another account, which seems more probable, is that he intends to bring forward his troops to that point as rapidly as possible, with the intention of overwhelming all opposition. The Russian reinforcements, which have been so long expected, have partly arrived at Krajova, but they are in a most wretched condition.

A despatch from Orsova, of the 24th ult., states that Omer Pacha was then at Rustchuk. Selim Pacha had received a reinforcement of regulars at Kalafat, and a number of irregulars had been sent to Sophia in charge of the Russian prisoners. Nothing of importance had taken place at Orsova; but, on the Lower Danube, the Turks had returned the visit of General Engelhart and his marauders.

TURKEY.

Lord Dudley Stuart returned from Schumla to Constantinople on the 14th ult., having come back by Adrianople. Omer Pacha, though slightly indisposed, received his Lordship with every attention, giving him a guard of honour, placing his horses at the disposal of his Lordship, and sending him dinner from his own kitchen. Lord Dudley Stuart visited all the fortifications of Schumla, and was present at the manœuvres of a body of 14,000 redifs, whom Omer Pacha had exercised purposely. At Adrianople, Mehemet Pacha, the Governor of the town, who not many years ago was Turkish Ambassador in London, and knew his Lordship there, placed his house at his disposal. Since his return to Constantinople, Lord D. Stuart has been actively engaged in furthering the interests of the Poles who are desirous of entering the Sultan's service.

AMERICA.

The steam-ship *Canada*, which arrived at Liverpool on Monday, brought news from New York to the 18th ult. The treaty between Mexico and the United States had been agreed to, although it had not been ratified. Mexico agrees to concede 40,000,000 acres of land (the Mesilla Valley) to the United States, while the latter power undertakes to pay to Mexico 20,000,000 dollars as an indemnity or equivalent. Resolutions had been offered and adopted by both Houses of Congress, by the New York Common Council, and by the merchants of the Exchange, complimentary to those ships who had so opportunely and gallantly assisted in rescuing the troops and crew from the ill-fated steamer *San Francisco*. The ship *Lucy Thompson* arrived at New York on the morning of the 16th ult., with 140 of the passengers from the *San Francisco*, which she took from the barque *Kilby*, which was crowded and in want of provisions. The *Kilby*, with the remaining passengers, arrived at Boston on the 17th.

LIVERPOOL, Thursday.

The United States mail steam-ship *Baltic*, Captain Comstock, arrived in the Mersey this morning, with advices from New York to the 21st ult., bringing fifty passengers, and a small quantity of specie on freight. The letters and papers announced the arrival of the *Cambria* at New York.

Mr. Clayton had given notice that if Lord Clarendon's letter were not modified, he would move that the naval and military forces of the United States be placed at the disposal of the President, to compel England to keep the treaty.

Senator Gwyn had moved for a naval force at San Francisco, to restrain Filibusterism.

MARKETS.—Money is easier; 7 per cent on call, and from 10 to 12 on good bills. Stocks dull, and declining. Sterling exchange, 109 for bankers. Flour had receded 6c., with fair sales. Cotton had moderate sales, at previous rates.

INDIA.

The letters and papers in anticipation of the mail which left Bombay on the 29th December, contain much interesting intelligence. It appears that the Bombay Government had received intelligence of certain hostile movements on the part of Persia, in concert with Russia. The army of the Shah, which had been concentrated on the north frontier, for the purpose of co-operating with the Russian forces in Georgia and Circassia, had marched southward, and was threatening Bushire. On the arrival of the Persian army (reported to be 60,000 strong) in the neighbourhood of Bushire, the Resident immediately sent despatches for the home Government to Bombay, with copies for the Bengal Indian Government, and summoned the officer commanding the Indian naval squadron in the Persian Gulf to Bushire, and his ship, the *Clive*, is now anchored there. The Resident of Bushire's despatches arrived at Bombay on the 20th December, and the steamer *Constance* was immediately despatched to the Gulf with instructions for the Resident. The steamer *Auckland* was ordered to get ready for sea, and was despatched on the 24th to the Gulf to reconnoitre and obtain information on which the Government could act. The communication between England and Bombay is as rapid as that between one extremity of our Indian empire and the other. The Bombay Government have, meanwhile, taken energetic steps for carrying out, without loss of time, any orders that it may receive. Leave has been stopped in the Bombay army, and the troops (about 7000) composing the camp of instruction at Poonah are ordered to stand fast, and preparations are being made in the army list as well as in the military department for the despatch of a powerful expeditionary force, if necessary. During the last Afghan war a force was despatched from Bombay that occupied the island of Karrack, close to Bushire, for two years, and while the means the Persians were kept for the time from involving themselves in Russian intrigues in Central Asia; but stronger measures may possibly be required in the present instance.

The seaports and coats of Persia are completely at the mercy of the Company's cruisers, and, if requisite, her Majesty steamer *Vixen*, now at Bombay, might be sent to increase the naval force in the Gulf. Bussorah might easily be defended by two or three light armed vessels belonging to the Indian naval Gulf squadron, and, were the Arabs about Bussorah subsidised, their hostile zeal would find ample occupation for the heretic army of Persia.

The news from Persia has greatly excited the Arabs, of whom (owing to our having left the Persian Gulf) there are always great numbers at Bombay. They are devout Sunnites, and hate and despise the Persians as heretics. One of these, Shaik Abdool Ettoo, said to possess great influence near Bussorah, declares that, if the Bombay Government would advance £2000 to start with, he would undertake to raise 25,000 Arab horse at Bussorah, in twenty-five days, and with these would account for the Persian army and plunder Bushire

The news from Madras still gives sad accounts of the famine which prevails in the northern districts of that presidency, consequent on the scantiness of the recent monsoon. From Peshawur we learn that the Afreedees have given in, the blockade of the Kohat pass having starved them into submission. The construction of the fort at Hazeed Khel proceeds briskly, and by the latest accounts all was peaceable. A plot had been discovered at Rangoon for surprising the garrison of that place, and massacring the British. It was to have taken effect on the 23rd of November, but was divulged by one of the accomplices in time to admit of precautions being taken, which precluded all possibility of its success. The court of Ava is said to have been at the bottom of it.

Lord Dalhousie is endeavouring to establish vernacular schools throughout India for the instruction of the masses of the people. Dr. O'Shaughnessy is to receive a salary of £2400 a year as superintendent of electric telegraphs in India, with £30 a month travelling expenses. His assistant, Mr. Sheppard, is to receive £600 a year, and £15 a month extra when moving about.

CHINA.

The accounts from Shanghai report most unfavourably of the condition and conduct of the Imperial forces. As to the progress of the rebellion we have no reliable information. The rebels are reported to have reached within fifty miles of the capital, and as they had broken down all the bridges in their rear, there was nothing left for them but death or victory. Trade still continues to be carried on under the protection of the cannons of the Consuls of Great Britain and America. The accounts from Shanghai state, that the exports of tea and silk from all parts of China are now considerably greater than at the same period last year.

CAPE OF GOOD HOPE.

By the *Propontis* mail steamer, which arrived at Plymouth on Monday evening, letters and papers from the Cape, to the 23rd December, have been received. The news is little more than confirmatory of that brought by former arrivals. Everything is quiet and orderly in the colony. In the sovereignty, considerable apprehension is expressed in consequence of the withdrawal of British authority. A scarcity of money at the Cape had affected the landowners to some extent, as the banks were not discounting as freely as usual. There had been some fresh skirmishes amongst the chiefs on the frontier, and the stealing of cattle from one another was complained of. A very important mining company had been formed, with a capital of £50,000. The whole of the capital had been taken up. Copper had been discovered of quality of the richest description; and it was reported that gold and silver had also been discovered.

PRISONERS IN IRELAND.—It appears from a Parliamentary paper, issued on Tuesday, that the total number of prisoners in the Government prisons in Ireland, on the 13th of September last, was 3902: of this number, 222 were members of the Church of England, 2 Presbyterians, 3 Catholics, and 44 Presbyterians or Dissenters. To all of these establishments a Roman Catholic chaplain is appointed, and in the majority Protestant and Presbyterian chaplains. In event, however, of there not being any of the latter appointed, every facility is given for the admission of any recognised minister. In the Irish gaols there were confined, on the 10th of September last, 601 Protestants, 137 Dissenters or Presbyterians, and 3263 Roman Catholics.

A GROUP OF RUSSIAN PEASANTS.

It would be impossible to be certain, within a thousand miles, what was the precise part of Russia in Europe to which these peasants belong, from their wintry costume. The sheepskin is a cheap dress, which the rigours of a part of the year make precious to the common people from Archangel to the sea of Azov. Their boots are of untanned leather; their hats of fur; shirts or stockings they have generally none.

Yet, faring with enforced abstemiousness, labouring hard in a stern climate, for permission to live—so strong is the physical constitution of this people that, at the very first glance, they impress the stranger by their tall, broad-backed, straight-limbed, and stalwart figures. Their natural temper is equally good; crushed by burdens, drafted into murderous conscriptions, the serfs of unfeeling and short-sighted nobles, they seldom think of violent measures, hardly ever quarrel among themselves, and are a cheerful people, inclined to religion, and fond of sharing the last loaf of bread, or the last pipe of tobacco, with a comrade. But, ignorant and oppressed, the very immensity of the empire over which they are scattered, and the number and diversity of their own tribes, render political combination or moral resistance equally impossible. The present Emperor is to them an object of peculiar veneration; for, on his own estates he has enfranchised the serfs—a fact carefully promulgated all over Russia.

COSSACK STATION NEAR THE CASPIAN.

The post represented in our Engraving is less wild in its immediate aspect than the broad steppes adjacent, which stretch away from the borders of the Caspian Sea. Though a sterile view, it is what the French call *accidenté*, and full of the peculiar life of the spot. The camel, the wild or half wild horse, the gaunt wolf-like dog, the woodsman, the group of women, the rude wooden post-house, the Government flags, the speeding courier, and the young Astrak dame (who rides "not sidewise, but otherwise"), the cloudy but lofty sky, and the undulating, boundless, sea-like plain, all speak of the region.

In time of peace serving regularly as a mail-post, and convenient, occasionally, as the wandering trafficker's stage—in time of war a halt for troops whom the march is to collect from far-separated cantonments at some distant point of concentration, the little station is characteristic in the midst of its desolation.

In spite of much that is Asiatic in the faces of the women, and the Georgian compactness of the men, we are in Europe. Not far rolls the Don towards the south; and not much farther, south-eastward, the rushing Volga thunders under the walls of Astracan, into the tideless Hyrcanian Sea. Though tideless, it is full of currents and choked with shoals; impossible of navigation to large ships, and dangerous to the only vessels which can venture on it, those of shallow draught; dangerous, we mean, in calm weather, and, like all inland seas, it is further liable to sudden and violent storms. Few of the inhabitants of its borders, whether on the Volga, or its own waves, but have had occasion to become hardy seamen; and in this particular locality they are almost equally ready and daring on the deck of the Caspian boat, and the back of the imported Khirgish horse. They live chiefly on flesh and wine. The wine is carried in greasy pig-skins (the original of the *hog's head*, in various countries), from the vineyards of the Crimea, and from those near Azov. The meat is principally mutton, of which there is such abundance in its live form, through the pasture steppes, spreading far around Astracan, that there are hardly shepherds enough to tend the scattered flocks. If an Englishman, who has, we will suppose, sailed down the Volga to the great Caspian metropolis, just as Tancred, in Mr. Disraeli's novel, threatened to do, when he supposed himself slighted in love; if such a stranger, tired of the bad imitation of French cookery in St. Petersburg, and of the cabbage, soup, and ogourtsi, on which he had too frequently fared, during his subsequent journey from the North—if, understanding that fresh mutton was so plentiful in this neighbourhood, the supposed visitor wished to enjoy some dish more English in character than any he had tasted of late, and, accordingly, ordered a mutton-chop—he would be told that, in order to have a mutton-chop, he must buy a sheep. However scared he might be by this intimation, he would be tranquillised on inquiring the price of the animal; although his first surprise would be changed into astonishment. He might have a sheep for a sum—fluctuating, of course, with the times (and, moreover, tending every year to grow more exorbitant)—for a sum, we say, ranging from sixpence to one shilling and sixpence. The beef is neither so good nor so plentiful. The wine, at its best, would hardly be relished by an English palate; and it is rendered exceedingly disagreeable by the filthy state of the receptacles in which it is ordinarily carried. They do not, in general, wait till the skins are thoroughly dry, or till they have exhaled all the animal matter which adheres to them.

The Cossack woman, who is represented on horseback, and setting off in a hand gallop with her male countryman from the station, possesses, as it will be perceived, something of the type of countenance for which her not very remote Circassian neighbours are celebrated. The men, too, between the Lower Volga and the Lower Don display in their whole organisation much in common with the Georgian race. In both countries, the compact and slim, not tall, stature; the features rather delicate; the fiery, quick-glancing eye; the loftily-arched eyebrow, denote either some kinship of origin, or an early intermixture of races, subsequently severed by the revolutions of politics and conquest.

The two canine specimens in our Engraving would be ill spared. For this people (of whom a group is presented, with their usual accompaniments) are the children of those ancient Caspii, of whom Herodotus can find few more remarkable particulars to record than that they were immemorially famous for the strength and ferocity of their dogs. So long, in some instances, do national peculiarities cling to the same localities. Happily, we hear no more of another characteristic of the ancient Caspii, among the Cossacks of the Don and Volga. Their progenitors, or, more correctly, their predecessors, allowed no person to commit the impiety of living beyond the seventieth year; after which day, all men and all women were scrupulously starved to death. They could be but a profitless incumbrance to a commonwealth of hardy barbarians.

Some of the most effective light cavalry in the Russian army are derived from this district; where, in truth, horses are so plentiful and so serviceable, and where men are so universally good riders, from boyhood, that one might imagine that the old cavaliers of Parthia (divided from these wild tribes by the Caspian Sea) were not also divided from them by so many changeful centuries, but were here alive again on the opposite side of the same great inland lake.

RUSSIAN PEASANTS.—FROM A PHOTOGRAPH, BY FENTON.

THE STEPPES OF THE CASPIAN.

Here stands the broad and desolate land—entrance to the most primeval parts of Asia. Less severely condemned by nature than the central solitudes of Africa or of Australia—less terrible than even the great Libyan deserts or the Arabian wildernesses of sand—here stretch that series of enormous Steppes, which belts the north of the oldest of continents, and is limited at last only by the Eastern Ocean. Into Asia and out of Europe—into Asia, but not out

COSSACK STATION, NEAR THE CASPIAN.

STEPPES OF THE CASPIAN

of Russia. This least attractive portion of the Muscovite empire is, after all, the back-bone of its strength—the original muster-ground of the Calmuck and Scythian horde, where (Antæus-like), it must seek recovery, if repelled and overthrown.

The Steppe must not be classed with the Desert. All along the south seaboard of the Mediterranean, for instance, runs a fringe of fertile ground, like a natural guard-n, refreshed by the breeze from the waters. This thin border of delightful habitable land is, on an average, not more than some fifteen or twenty miles deep; and is found to wither and melt into a much broader interior belt, called "the Plain." Yet the "plain" is not the "desert;" but interposes its mitigating barrier between the smiling sea-coast and the real waste of sands—where man passes, indeed, but never hopes to settle. In the "plain" there is a scanty spontaneous herbage—many inches between each blade of grass; and the soil refuses not an occasional crop of rice, or meagre corn, or the wild flowers, from which the bee even there extracts hives of honey, precious to the wandering Kabyle. What the "plain" is to the Desert, the Steppe is to the Plain. It advances more still towards what is necessary to the habitancy of man; and (comforts being out of the question in either), it offers far more varied resources for his wants. Here stray the countless wild horses, which, after passing through a hundred markets, and leaving a profit at each change of hands, are yet cheap, when bought at Moscow. Here, too (in the most southerly districts), the camel thrives; and to the patient labour of "the ship of the desert," great caravans, monthly and weekly, entrust fortune and life. We might detain the reader too long if we yielded to the temptation to speak either of the Tartar horse, or the Tcherkessi camel. Both animals are peculiar in many of their habits, but of very great perfection. Flocks, too, of birds, many of which would not be unworthy of our game-preserves, reward the wanton sport, or relieve the unforeseen necessities of the caravan traveller. We direct the reader's attention to the engraving in which the wild and strange beauty of the scene is well depicted—just as the weary band of chance comrades are nearing the resting-place, where water and refreshment await them, and where there is a sort of city of pelicans, about to be scared from their skilfully-selected place of rest.

All these points raise the Steppe many degrees above the Desert; and, indeed, a wiser and more civilised system of rule would have long since replaced with the dwellings of men, the mute population of birds and beasts, whose home is found in such numerous portions of the Southern Steppes. Observant travellers who have written on the subject, and merchants who have no leisure or inclination to do more than converse about their impressions, have taught us how abandoned to the mercy of nature a vast tract of this region is; and how much could be done for it by that art and that industry, before the application of which to our own country it was an unprofitable expanse of marsh and forest.

Only very little to the south of the unsouth panorama which our Engraving delineates, flocks of excellent sheep, of priceless theoretic value, but of comparatively no market estimate, wander far and free; having owners, indeed, but owners who can turn them to little account. Again, a day's journey south-west, through the Tcherkessi, and you come to the land of vines and wild rose beds. Advance, and you are in the midst of the exuberant wealth of the Crimea—the Magna-Græcia of Russia.

We will not here trouble the reader with further details about the Caspian Steppes; we have touched on some main and salient points; and whoever carries them out in his own reflections will realise this neglected, but essentially transitionary and improvable region, with sufficient exactitude and fidelity.

WIDDIN AND KALAFAT.

Widdin and Kalafat are important towns, and must ever occupy a conspicuous position in the history of the war that has broken out in Eastern Europe. They are both situated on the banks of the Danube, nearly opposite to each other, Widdin being on the right, and Kalafat on the left bank. The Turkish Government has stationed a two gun steamer between these positions, with orders to ply backwards and forwards, and watch all movements on the river.

The appearance of Kalafat from the surrounding hills, with its baths and mosques, and graceful minarets, is very fine. But the interior of the town is dirty and uncomfortable, for its thoroughfares are badly lighted at night, and the filth of the houses, instead of being carried away under ground, flows in gutters along the streets. The population has increased of late, and the village-like quietness that formerly distinguished this little town, has given way to the noise and bustle of active life. Omer Pacha, by his glorious defeat of the Russians, and slaughter of upwards of 5000 of their number, has rendered Kalafat, hitherto scarcely familiar in name, even to the best geographers, a town of the greatest historical interest.

The fortifications and entrenchments surrounding Widdin and Kalafat form an almost perfect circle, with the Danube for its diameter; and for its circumference, a line of defences joining Hugiavitz, Skripetz, Wegvi, and Kolani, on the left bank: and extending in a southerly direction as far as Belgradschick, on the right bank. Within this circle are stationed some 60,000 good soldiers, with 250 cannons of the "heaviest calibre." Towards the south, a tower of considerable elevation has been erected, whence the slightest movement on the part of the enemy can be easily detected. Such fortifications as these are not likely to give way, under even fiercer attacks than any that have hitherto been directed against them.

Widdin—called by the Hungarians Bodon, and by the Turks Winadovan—is said to contain about 30,000 inhabitants. On account of its advantageous position on the Danube, it is, as it were, the key to the province of Bulgaria, and has been for centuries past an object of attack and defence. It was, for a long while, in the possession of Hungary; and it required the utmost vigilance on the part of the Magyars to hold it against the invasions of the Turks. In 1443 the Turks attacked it against Johann Hungady, and were repulsed with a loss of 30,000 men. They were not scared, however, by this defeat; but succeeded shortly afterwards in taking possession of the long coveted stronghold, and held it until the lapse of half a century, when Wadislow, King of Hungary and Poland, entered the town in triumph, over the mangled bodies of thousands of fallen heroes. The Turks made another unsuccessful attempt upon Widdin in 1595, having been forced to retreat with a loss of upwards of 18,000 men. Some time after this event, however, the Turks recovered their position, to be again driven from it in 1689. But in the following year, not by war, but by treaty with Hungary, the Turks finally reinstated themselves in the town of Widdin, and have held it ever since.

But Widdin has ceased to be a mere Turkish frontier. It is now the boundary that separates European civilisation from Asiatic barbarism.

WIDDIN, ON THE DANUBE.

CALENDAR FOR THE WEEK.

SUNDAY, Feb. 5.—5th Sunday after Epiphany.
MONDAY, 6.—Dr. Priestley died, 1804.
TUESDAY, 7.—Mary, Queen of Scots, beheaded, 1587.
WEDNESDAY, 8.—Half Quarter Day.
THURSDAY, 9.—

WITH THE PRESENT NUMBER OF THE ILLUSTRATED LONDON NEWS IS GIVEN A LARGE PRINT OF THE MINISTERIAL SIDE OF THE HOUSE OF COMMONS.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, FEBRUARY 4, 1854.

DEPARTURE OF THE RUSSIAN AMBASSADOR.

As was to have been expected, from the nature of the categorical demand made by the Russian to the British and French Governments, the Ambassadors of the Czar in London and in Paris have received distinct and unmistakeable replies. They have been informed that the Allied Fleets have entered the Euxine, not to prevent the Turks from navigating it with their armed vessels, or from conveying arms and ammunition from place to place, and from port to port; but to prevent the naval forces of the Czar from attacking those of the Sultan, or making any hostile descent upon Turkish territory. If such are not the terms of the answer, there can be no doubt that such is its spirit; though, as was proper and necessary, it has been conveyed with all possible courtesy. Whatever may have been the actual phraseology employed, it is the same in both instances. The British and French Governments use identical language; and their reply is both collective and individual. Baron Brunnow received the reply of the British Government on Thursday; and, having made all necessary arrangements for some days previously, in anticipation of the nature of the communication which he was certain to receive, will take his departure from London this morning. M. de Kisseleff has been instructed to act in a similar manner at Paris. At this moment, therefore, diplomatic relations between the two Allied Powers and the Court of St. Petersburg are at an end. So let it be. The Allies have not sought this war: they have done all that was consistent with honour and wise statesmanship to avert it; and the odium, as well as the penalties of it must rest on the head of the rash Monarch who misinterpreted the signs and proofs of a noble and patient forbearance, into those of vacillation and cowardice; and who refused to listen to any other prompters but his misguided self-will, and his insatiable vanity and ambition. He will now enter upon the realities of the war which he has provoked; and it will not be the fault of Great Britain and France if he do not speedily discover, in his signal defeat, how greatly he has miscalculated his own strength to do evil, and that of his opponents to punish and restrain him.

THE debates on the Address, in both Houses of Parliament, present a remarkable unanimity of feeling on the great question of Peace or War; and as remarkable a multanimity, or divergence of opinion, on the various correlative questions, in which the conduct and capacity of the Ministry are involved. If the Session had commenced a month earlier a vast congeries of misstatements—many of them malicious, and a greater number merely foolish—would never have existed. One night's discussion in each House of Parliament has, however, sufficed to make a clearance of them. The few persons on the Opposition benches of both Houses who think we have nothing to do with the war between Russia and Turkey are in so infinitesimal a minority as to be positively of service as a gauge whereby to measure the greatness of the majority. Lord Grey in the one House, and Mr. H. Baillie in the other, represent this class; and stand almost alone. Earl Grey is by no means a strenuous supporter of the opinion which he emits, for his Lordship merely states that he is "not quite sure whether we have any interest in supporting Turkey at all." Mr. Baillie's reasons seem to have been derived from those of Mr. Cobden and the "Manchester Cossacks." The honourable gentleman thinks that "when Prince Menschikoff presented his ultimatum, we ought to have informed Turkey that she was not to reckon on our aid;" and his reason for being in favour of such a cowardly policy is the alleged fact that the Turkish Empire is a "tottering fabric"—a statement which their gallant behaviour on the banks of the Danube is quite sufficient to overthrow. We are not aware that it is a smaller crime to murder a man with an incurable disease than to murder one in the full flush and vigour of health; but perhaps in the peculiar ethics of the friends of Russia in this country, such an act would amount at the utmost to justifiable homicide. Lord Derby, though he did not approve of the conduct of the Ministry in the proteracted negotiations which have taken place—and it was scarcely to be expected that he should—was earnest in his denunciation of the Emperor Nicholas; and thought, as most Englishmen do, that it is the true policy of England to resist that aggression, and to do its utmost to maintain the independence of the Ottoman Porte. We confess ourselves, however, at a loss to understand why the noble Earl should consider the Emperor of Russia to be an ill-used man, or in what respect her Majesty's Government deceived or deluded him. As the Earl of Clarendon very properly remarked, "a policy of suspicion is never a wise or an expedient policy;" and when, at an early stage of this unhappy dispute, the Czar gave the most positive assurances that he had no desire or intention to aggrandise his empire at the expense of that of the Sultan, when he not only gave direct and positive answers to the questions addressed to him by the British Cabinet, it was not the part of the Government to inform him that no faith was to be placed in his assurances, and to act as if it were necessary to declare war against him. We believe—with Lord Derby, and with many others—that it would have been far better if Great Britain had declared the occupation of the Danubian Principalities to be a *casus belli*. We believe, if this had been done with promptitude, and followed up with vigour, the Emperor of Russia, like bullies and braggarts in general, would have been overawed, and glad to make peace. If Lord Derby had said that the Sultan was an ill-used man, the world might have seen some reason for the assertion; but how the Czar can, under such circumstances, be regarded in this light, is difficult to imagine. A criminal condemned to death for the crowning atrocity of his life might with about as much reason complain that the law of the land and the public opinion of his fellows had ill used him, while he was still a well-behaved man, in not believing that some day or other he would commit an offence deserving of extreme punishment. Mr. Disraeli's objections to her Majesty's Speech were not of much moment, and seem to have been uttered more because he was leader of the Opposition, and because something was expected of him, than because he had anything to say. So far was the right honourable gentleman from fearing a war, or from taking the part of the Emperor of Russia, that he would have been better pleased with the Speech if it had been more decisive, and if it could have announced that Austria and Prussia were as zealous in the cause as Great Britain and France. It cannot be denied that the Ministry has to some extent become unpopular, for negotiating during so long a period, instead of sending a fleet to the Black Sea in July or August last; but the statements of Lord Clarendon, Lord Aberdeen, and Lord John Russell, will, we think, restore the waning confidence of the public. It is proverbially easy to find fault; but the statesmen charged with the grave duty of administering the affairs of a mighty nation like this, should do nothing rashly. It is no light thing at any time, and in these times more especially, to commence a European war. Boldness approaching to rashness, is often wise policy on the part of individuals, but boldness of this kind, is not to be desired in statesmen. The progress of events has proved that those who relied upon the honour of the Emperor Nicholas have been deceived; but it has also proved, in a more striking manner than would have been possible had the occupation of the Danubian provinces been declared a *casus belli*, the justice, moderation, and calm strength of Great Britain and France, and the inherent vitality of the Turkish Empire. Besides, it is idle to dwell upon what should, or should not, have been done months ago. The present aspect and position of the question alone concern us. Whatever errors of omission may be laid at the door of Ministers, there are none of commission with which they can justly be charged. They have brought the question to a simple and tangible issue. They have proved, to the satisfaction of the whole world, and by the acts of the Emperor Nicholas himself, that that Sovereign is utterly and perversely in the wrong; that the two greatest Powers of Europe are cordially united in their determination not to tolerate that wrong; that their power to prevent its consummation is commensurate with their intentions; that no state in Europe, great or small, dares to express sympathy with him or lend him a soldier or a ship; and that Turkey is neither so imbecile or so paralytic as to be incapable of striking heavy blows in her own defence. Messrs. De Brunnow and De Kisseleff may carry to their Imperial master this, among other valuable information, now that they have been recalled from London and Paris. If any one can remove the veil of passion and lust of dominion from the Emperor's eyes, it is they. Delay, after all, has not proved so very injurious; for it has evoked a spirit in Western Europe which will stand us in better stead than another fleet, or an additional army. It has reconciled the people of Great Britain and France to a war. It has even rendered it a war in which they will spend their money ungrudgingly, and in which they will put a heart and an enthusiasm which are the certain forerunners and signs of brilliant, if not speedy success.

We anticipated in our last that the calumnies directed against the illustrious Consort of the Sovereign by the pot-house newspapers, and, for party purposes, adopted by the more respectable journals, which sometimes claim the exclusive right to be called Conservative and loyal, would be effectually demolished on the opening of Parliament. Lord Palmerston did not feel it necessary to speak upon the occasion; but the Earl of Aberdeen, Lord Hardinge, Lord Derby, and Lord J. Russell, bore their high and unimpeachable testimony to the utter falseness of the accusations of which the Prince had been made the object. Lord Derby disclaimed for the Conservative or Protectionist party all participation in those malevolent and—where not malevolent—stupid reports. His Lordship's disclaimer was not necessary. No true and high-minded Conservative could be suspected of encouraging them. It was not denied that the Prince is in the councils of his Sovereign—openly and publicly—as well as in that sacred privacy to which his relationship to the Queen entitles him; but it was affirmed by high authority, that the exigencies of common sense and the ties of nature in this respect are not in opposition to the strictest reading of the Constitutional Law. His Royal Highness, though he has been conversant with all affairs that are brought under the notice of the Queen in her capacity as Chief of the State, never—as we learn by the testimony both of the present and of the late Prime Minister—interfered in the slightest degree with their functions or responsibilities. It was stated in the course of the debate that so far from seeking any other position than that which he holds, the Prince refused to entertain a proposal made by the late Duke of Wellington that he should succeed him as Commander-in-Chief. It was a foolish proposition—which the advanced age and failing energies of the illustrious Duke sufficient to explain; but it is not the less creditable to the good taste and good sense of the Prince, that he was not dazzled by it. We trust that the country will hear no more upon the matter. The vindication of his Royal Highness was complete and decisive.

THE COURT.

The opening of the Session of Parliament by her Majesty in person has formed the leading incident in Court life during the past week. The Queen and the Prince left Windsor Castle for Buckingham Palace at ten minutes before one o'clock on Monday afternoon, attended by the Lords and Ladies of the Royal household. The august party travelled by the Great Western Railway to Paddington, and proceeded thence to Buckingham Palace in three of the Royal carriages, escorted by a detachment of Lancers. At three o'clock the same afternoon her Majesty held a Court and Privy Council, which was attended by his Royal Highness Prince Albert, and the whole of the Cabinet Ministers. At the Council, the Queen's Speech on opening the Session of Parliament was arranged and agreed upon; and her Majesty pricked the list of Sheriffs for the present year for the counties of England and Wales. At the Court, Namik Pacha, accompanied by M. Musurus, the Turkish Minister, was presented to her Majesty at an audience by the Earl of Clarendon, G.C., the Queen's Principal Secretary of State for Foreign Affairs. The Queen gave audiences to the Earl of Aberdeen, the Earl of Clarendon, Earl Granville, and Lord John Russell.

On Tuesday the Queen went in state to the House of Lords to open the Session of Parliament with a Speech from the Throne. The Royal procession was marshalled in the quadrangle of Buckingham Palace. The Queen and Prince Albert were conducted to their carriage by the Vice-Chamberlain, Lord Ernest Bruce. Her Majesty quitted Buckingham Palace at eighteen minutes before two o'clock, escorted by a detachment of Life Guards. The crown was conveyed to the House of Peers in a state carriage, by Sir William Martins, Gentleman Usher. Her Majesty returned to Buckingham Palace at five minutes before three o'clock; and at twenty minutes past four, left town for Windsor Castle, attended by the Lords and Ladies of the Royal Household. The august party arrived at Windsor at a quarter-past five o'clock.

On Wednesday the Queen took a drive in an open carriage. The Prince Consort enjoyed the sport of shooting during the morning. In the course of the day her Highness the Duchess of Cambridge and the Princess Mary arrived at the Castle, on a visit to her Majesty. The following distinguished personages also arrived on a visit: the Duke and Duchess of Bedford, the Duchess of Sutherland, the Marquis of Granby, the Earl Spencer, the Earl and Countess of Hardwicke and Lady Elizabeth Yorke, the Earl and Countess Grey, Lord and Lady Ashburton, the Right Hon. Pemberton Leigh, and the Vice-Chancellor of Cambridge.

On Thursday evening a grand dramatic performance took place in the Rubens Room. The piece selected for representation was Shakspeare's play of "The Tempest." The principal characters were filled by Mr Charles Kean, Mr. Cooper, Mr. Cathcart, Mr. Ryder, Mr. Webster, Mr. A. Wigan, Mr. Harley, Mr. Bartley, Mr. Graham, and Miss Heath, with Miss Leclercq as *Ariel*.

In the course of the day the Earl Spencer (Lord Steward) and Viscount Drumlanrig (Comptroller of the Household) had audiences of the Queen, to present the addresses from both Houses of Parliament, in answer to her Majesty's Speech

POLITICAL ENTERTAINMENTS.

The Earl of Aberdeen gave a full-dress Parliamentary dinner on Monday evening, at Argyll-house, to a distinguished party of Peers, supporters of the present Administration. After dinner the noble Earl read the Queen's Speech, as agreed upon at the Privy Council, to the company. The health of her Majesty was afterwards drunk by the guests

Lord John Russell gave a full-dress Parliamentary dinner party, on Monday evening, at the Foreign-office, Downing-street. The invitations included the Right Hon. the Speaker, Viscount Canterbury (the mover of the Address), and Mr. Thomson Hankey (the seconder).

The Earl Granville, Lord President of the Privy Council, gave a grand dinner to the Cabinet Ministers and the great Officers of State of the Queen's Household, on Saturday, at his residence, in Bruton-street. At the meeting, the roll of High-Sheriffs for the counties of England and Wales for the present year was settled, preparatory to its being submitted to the Queen in Council.

The Earl of Derby gave a grand dinner, on Monday night, at his Mansion, in St. James's-square, to a party of thirty Peers, supporters of the noble Earl's policy in the Upper House. The Queen's health was drunk after the dinner with all the honours.

The Right Hon. B. Disraeli, M.P., gave a grand dinner on Monday evening, at his mansion, Grosvenor-gate, to a party of members of the House of Commons, supporters of Conservative principles.

We are happy to announce that the Marquis of Londonderry is completely recovered from his late severe indisposition.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,
TAKEN DURING THE WEEK ENDING THURSDAY, FEB 2.

„ 2	30.151	45·8	37·2	40·2	+ 2·5	83	N.	0.00

Note.—The sign + denotes above the average.

The reading of the barometer decreased from 30.51 inches at the beginning of the week, to 29.86 inches by the afternoon of Jan. 29; increased to 30.27 inches by the morning of the 31st; decreased to 29.97 inches by the afternoon of Feb. 1, and increased to 30.26 inches by the end of the month. The mean for the week at the height of 92 feet above the level of the sea was 30.103 inches.

The mean daily temperatures of the 28th and 30th are the highest mean daily temperatures recorded on those days since the year 1840, when they were 52·3°, and 48·6° respectively. During the time they have been above their averages—viz., on every day from Jan. 7, to February 2 (except on Jan. 19, when it was slightly below)—the average excess daily has been 5·3°.

The mean temperature of the week was 45·9°, being 8·5° above the average of thirty-eight years.

The range of temperature during the week was 21·8°, being the difference between the lowest reading on Jan. 27th, and the highest on the 30th.

The mean daily range of temperature during the week was 13°.

Rain fell during the week to the depth of six-tenths of an inch.

The weather, with the exception of the first and last days of this week, which were fine, has been cloudy, and the sky has been mostly overcast.

Lewisham, February 2nd, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—The number of births registered within the week was 1662: the average number in the same week of the preceding years was 1544: making up of 723 males, and 715 females. In the last week 817 boys were born, and 845 girls. The number of deaths registered within the same week was 1178: in the preceding week it was 1189, showing a slight decrease.

MEETING OF CONVOCATION.—The session of Convocation for the province of Canterbury, was formally opened in the Jerusalem Chamber on Wednesday, after which the right reverend prelates with the Dean of Canterbury in the chair, proceeded to the Lower House containing to sit in the Jerusalem Chamber. The Bishop of London reported that the committee appointed in July last to consider the right of stipendiary curates to vote in the election of Proctors, had decided that the evidence was against their right to do so. The Bishop of Exeter alone opposed the adoption of the report. On the motion of the Bishop of London a committee was appointed "to consider and report to the Houses with a view to addressing her Majesty thereon, whether any, and if so what, reforms in the constitution of Convocation are expedient to enable it to treat, with the full concurrence of the Church, of such matters as her Majesty may be pleased to submit to its deliberation." After some other business the synod was formally prorogued till the 20th of June.

THE MURDER AT ACTON.—The thrice-adjourned inquiry touching the death of Richard Medhurst, aged 14, who was found murdered in a ditch in Friar's-lane, was resumed at the Goldsmiths' Arms, Acton, on Tuesday. Sergeant Earthy said the police were using their utmost endeavours to discover the guilty persons. Mr. Wakley, the Coroner, felt sure that the perpetrators of the diabolical deed would not long escape punishment. The jury returned a verdict of "Wilful Murder against some person or persons unknown."

THE MARQUIS OF ANGLESEA.—As his Lordship was taking a morning walk on Wednesday, he was observed to rest against a lamp-post, when a gentleman who knew him by appearance approached, and found that his weakness was the result of an attack of paralysis. He immediately conveyed him to Uxbridge-house, when medical aid was at once called in. It is hoped that his health will be restored in a few days.

HOUSE OF LORDS.—THURSDAY.

(Continued from Supplement, page 106.)

The Lord Chancellor took his seat on the woolsack at five o'clock.

THE VIENNA NOTE.

Lord LYNDHURST asked the Foreign Secretary whether the description of the transactions connected with the Vienna note, given in the despatch of Count Nesselrode, was correct—viz., was the note sent simultaneously to the Governments of Russia and Turkey for their adoption? or had it been first sent to Russia, and when assented to there, had been sent to the Porte? He also asked whether that note had originated with the Austrian Government alone, or with the Powers generally.

The Earl of CLARENDON repeated the account which he had given on Tuesday of the origin of the note. The note emanated from the French Government; had been, at their strong request, assented to by England, Prussia, and Austria, in succession, and, after protracted negotiations, sent, with some alterations calculated to give it greater strength and clearness, to the CZAR and the Porte, simultaneously. It was accepted by Russia, and when the news of such acceptance reached Vienna, the intelligence was sent after the note to Constantinople.

Lord BEAUMONT asked whether the original French note had been sent to St. Petersburg, and not to Constantinople?

The Earl of CLARENDON could not at present say. It was a question to which only the French Government could reply.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

The Speaker took the chair shortly before four o'clock.

On the motion of Mr. G. A. HAMILTON, a new writ was ordered to be issued for the borough of Ludlow, in the room of MR. R. Clive, who had accepted the office of Steward of the Chiltern Hundreds.

Sir J. PAKINGTON gave notice that he would, on Tuesday, the 7th of February, move for the appointment of a committee to take into their consideration, whether the proceedings of the House could not be facilitated by a better arrangement than at present.

Sir F. KELLY gave notice that, on the 15th inst, he would move for leave to bring in a bill with respect to bribery, corruption, and intimidation at elections for members of Parliament.

In answer to Mr. Pellat, Sir W. MOLESWORTH said it was not the intention of the Government to make the Thames Tunnel available for carriage and heavy traffic.

In answer to questions from Mr. H. Baillie and Mr. French, Lord J. RUSSELL said it was the intention of the Government to introduce Reform bills in the present session with respect to Scotland and Ireland.

The Marquis of BLANDFORD obtained leave to bring in a bill to make better provision for the management of episcopal and capitular property.

Lord J. RUSSELL moved that no warrants for new writs for Barnstaple, Cambridge, Carnarvon, Hull, Maldon, and Tynemouth be issued before the 9th day of March next.—Agreed to.

The CHANCELLOR of the EXCHEQUER moved for leave to bring in a bill to explain and amend an Act of the last session of Parliament, c. 99, relating to the duties of Assessed-taxes.—Agreed to.

The CHANCELLOR of the EXCHEQUER moved that the House should go into Committee on Public Revenue and Consolidated Fund Charges.

The House having gone into Committee, the CHANCELLOR of the EXCHEQUER said that the object which he had in view under the notice of the House the subject of the charges which were defrayed out of the revenue before the receipts came into the Exchequer, and it was the intention of the Government by the bill, the introduction of which he moved, to establish an accurate system of public accounts.

Mr. HUME congratulated the House on the introduction of the bill.

After a few words from Mr. W. WILLIAMS,

Mr. DISRAELI expressed his approbation of the bill.

Leave was then given to bring in the bill.—Adjourned.

MUSIC.

The Musical Soirée of the Réunion des Arts, at the Society's rooms, in Hanley-street, on Wednesday evening, was exceedingly elegant and agreeable. It was attended by a large and fashionable assemblage, and was more of the nature of a *conversazione* than a regular concert, though the musical part of the entertainment was of no small interest. A grand trio by Thalberg, for the piano, violin, and violoncello, was a novel and remarkable feature. It was something very different from what we could have expected from this composer, and indeed placed him in quite a new light. It seemed as if he wished to show that he was able to write in another and a better style than that which has rendered him so popular with the million. Instead of being a series of brilliant difficulties and *tours de force*, which nobody but himself could execute, it was modelled upon the classical works of the older masters, regular and symmetrical in form and construction, sober in style, melodious, expressive, and sufficiently easy of execution.

THE THEATRES, &c.

DRURY-LANE.

Mr. G. V. Brooke recommenced a new engagement on Monday, and was enthusiastically received by a crowded house. The piece selected for the occasion was the tragedy of "Brutus," by the late Mr. Howard Payne, and to which the acting of the elder Kean lent much lustre on its original production. We should form a higher estimate of the evidences of Mr. Brooke's popularity, if public attention had not been so strongly solicited by the manager's advertisements. High as Mr. Brooke's merits are, claims are asserted which no critic can conscientiously indorse. We have no temporary purpose to subserve—our object is to guard and promote the permanent interests of art. The *Lucius Junius Brutus* of Mr. Brooke is a striking performance, but exceedingly unequal, and most so in the early scenes. The actor has no skill in the simulation of idiotcy, and not the patience to wait until the proper opportunity for vehement effects. These, however, in the malediction of the third act, and in the popular demonstrations of *Lucretia's* avenger and supporter of his country's liberties, were frequent and powerful. The pathos of the final situation, also, was appreciated, and the house could not fail to be deeply impressed with the sense of the strife between paternal agony and judicial duty. The stream of applause was not, however, so continuous as it should have been; and the refinements required in certain of the more subtle touches of sentiment were altogether wanting. The performance, however, though not a triumph, was undoubtedly a great success—the house being overwhelmingly crowded, and the applause and *bouquets* remarkably abundant.

On Tuesday Mr. Brooke performed *Master Walter*, in "The Hunchback," with his usual felicity. This, in fact, is a part in which he is perfect.

The opening of the Royal Italian Opera is fixed for March 21.

EMPLOYERS AND EMPLOYED.—The conference convened by the Society of Arts to discuss the subject of trades unions and strikes, was held on Monday, at the society's rooms, in the Adelphi, and was well attended. Besides the deputations of numerous trade societies, there were present Lord R. Grosvenor (in the chair), Lord Goderich, Lord Stanley, M.P.; Viscount Elmsley; Sir William Clay, M.P.; Mr. Hindley, Mr. Slaney, Mr. George Dawson, Mr. Thornton Hunt, Mr. E. M. Whitty, Mr. Sidney Smith, and a number of other gentlemen connected with the press. The chairman having read the subjects of discussion as laid down by the council, Mr. Ernest Jones proposed a series of affirmatory resolutions, which the meeting refused to receive upon which Mr. Jones, in the name of the "working classes," denounced the whole proceeding as a complete delusion, and withdrew from the Conference. Among the speakers were Mr. Slaney, Mr. Lloyd Jones, Mr. Hughes (barrister), Mr. W. Newton, Mr. George Cowell, Mr. S. Kidd, Mr. Fryone (late Professor of Political Economy at Cambridge University), Mr. Henderson (of the firm of Fox and Henderson), Lord Goderich, Mr. Hindley, and Mr. Robert Owen. Mr. Ainsworth (Secretary of the Preston Masters' Association) was present, but not in a representative capacity, and declined to offer any statement or explanation. The speakers, even those of the same class, differed on the subject of trade combinations; but there was a general condemnation both of strikes and lock-outs, an equally general desire for arbitration in disputes between masters and men, and a unanimous resolution against the law of partnership. Mr. Henderson avowed the readiness of himself and partners to submit to arbitration in any case of dispute; and a letter to the same effect was sent by Mr. Knott, of Sunderland. Mr. Hindley regretted there were so few masters present, defended combinations among men as necessary while masters also combined, and complimented Mr. George Cowell. There was no time to enter upon the question of "wages" and modes of payment; a motion for adjournment being resisted by the committee. The proceedings, therefore, closed with a vote of thanks to the Council and to Lord Grosvenor.

The new Ulster King of Arms, Mr. Bernard Burke officiated, for the first time, among the officers of State, at the recent Vice-Regal levee and drawingroom, on the 25th and 26th January, in the Castle, Dublin.

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

The Marquis of CLANRICARDE gave notice that on Monday he would ask a question of her Majesty's Government as to whether we were at peace or at war; and he would draw their Lordships' attention to the last despatch addressed to St. Petersburg, dated the 24th December.—Adjourned.

HOUSE OF COMMONS—FRIDAY.

Mr. ADDERLEY gave notice of his intention, on Tuesday next, of asking Lord J. Russell a question relative to the intentions of the Government upon the subject of national education.

Colonel SIETHORP gave notice of his intention to renew his motion for the reduction of the duty upon fire insurance.

In reply to Mr. Bentinck, Mr. CARDWELL stated that the Government intended, in the course of this session, to introduce a bill for the better prevention of railway accidents.

In reply to Lord Stanley, Lord PALMERSTON stated that he intended shortly to introduce a bill for the better regulation of burial societies, and for the prevention of abuses connected therewith.

MERCHANT SHIPPING AND PILOTAGE.

The House having gone into Committee upon the subject of Merchant Shipping and Pilotage,

Mr. CARDWELL moved for leave to bring in a bill to admit foreign ships to the coasting trade; and also a bill to consolidate and amend the laws relating to merchant shipping; intimating his intention of seeking advice from all quarters best competent to afford it, with reference to the provisions of the former measure.

Mr. HOUSEALL trusted that ample time would be given before the second reading in order to afford the mercantile community an opportunity for considering the bills.

Mr. HUME highly approved of the measures proposed.

Mr. LIDDELL doubted whether the removal of the restrictions would produce the effects anticipated; and he warned the Government of the danger of weakening our maritime interest by subjecting them to competition.

After some further discussion leave was given for the introduction of the Bill.

Lord DRUMMANRIG, Comptroller of the Household, brought up her Majesty's answer to the Address presented to her by that House, which was couched in the usual gracious terms.

The Lord Advocate obtained leave to bring in a bill for the valuation of lands and heritages in Scotland.

On the motion of Mr. Wilson, it was resolved that, on Monday, the House should go into Committee to consider the oaths taken by members of the House of Commons.—Adjourned.

THE FLEETS IN THE BLACK SEA.

Letters from Constantinople to the 22nd, state that the "combined fleet" had returned from the Black Sea to the Bosphorus, and anchored at Beicos, preparatory to convoying some Turkish transport vessels to Varna. Of course, this must have meant the portion the "combined fleet," the main portion of which was then at Sinope, or on the look-out for the Russian squadron. One of the ship's company of the *Sanspariel* writes, on January 14:—

There is no sign as yet of the enemy; they had left two days before our arrival, and intelligence was given to Admiral Lyons, that a Russian squadron of ten sail was blockading Batoum. The inhabitants of Trebizond were overjoyed to see us; they made us a present of mutton and vegetables, enough to last three days. The French made a signal to load the guns with shot, as we fully expected the enemy was close at hand. We weighed anchor the same evening, and proceeded to land the troops and stores. When we reached there no Russians were to be found; they were safely moored beneath the guns of Sebastopol. They heard the combined fleets were in the Black Sea, and did not like our company. The Black Sea has ceased to be a Russian lake; we can range it from one end to the other at our leisure. We are in number thirty-three sail, eighteen of which are ships of the line, the remainder frigates and steamers—enough, I should say, to sweep the world before it.

THE BALTIC FLEET.

Orders were despatched by telegraph to Plymouth on Thursday for the screw ships *Hogue*, 60, Captain Ramsay, and *Edinburgh*, 58, Captain Hewlett, to proceed eastward. These ships, together with the *Blenheim*, 60, screw, Captain Hon. F. Pelham, fully manned at Portsmouth, are to complete their crews and be ready for active service. They are the best ships we have for Baltic service.

THE FLEET IN THE TAGUS.

The *Sultan* steam-ship, which arrived at Southampton on Thursday, reports Rear-Admiral Corry's squadron as having been still in the Tagus on the 20th ult.; and we see that the chief engineer, of the third-class, has been ordered to proceed from Southampton to Lisbon, on the 7th inst., to join the *Amphion* there.

THE DANUBIAN PRINCIPALITIES.

Letters from Jassy, of the 23rd ult., state that the Russian General, Count Osten-Sacken, arrived in that city on the evening of the 20th, and took possession of the apartments parepared for him at the Government house. It is now ascertained that he will administer the government of the province, in the capacity of vice-president. The Russian troops continue to pour into the plain; that body which came into Moldavia, however, the week before last, by Skuleny, continued their march into Wallachia, not by Jassy, but by Podulolei and Romani.

A Bucharest Correspondent, writing under date of the 21st inst., says, "Giurgevo is being bombarded by the Turks, and great damage is done to the town."

COUNT ORLOFF'S MISSION.

The most contradictory rumours prevail regarding the success of Count Orloff at Vienna. The Emperor of Austria is said to have declared to him that if the Russians cross the Danube he will consider that as a declaration of war.

Letters from Berlin, in the *Weser Zeitung*, say that at the sitting of the Council of State the Prince of Prussia had pronounced himself against all neutrality and tergiversation. "He was ready to do honour," he said, "to the noble qualities of his brother-in-law the Emper Nicholas, but, as a Prussian Prince and heir presumptive to the throne, he did not hesitate to declare that the moment was come for Prussia to assume a decisive attitude, and to notify to the Cabinets of Europe that a refusal to accept the propositions of the Conference would force Prussia to take her stand by the side of the Western Powers, and to follow them to all extremities.

The *Assemblée Nationale* affirms that the proposals tending towards opening new negotiations, of which Count Orloff was the bearer, have not been deemed acceptable either in London or in Paris

The same journal announces that M. de Kisseleff had an interview with the Minister for Foreign Affairs, on Thursday, and that the reply of the French Government to the demand for an explanation made by the Emperor of Russia, was such as to satisfy that Minister, who accordingly demanded his passports. It was understood that he would leave Paris yesterday (Friday).

A LONDON FOG.—From an early hour yesterday (Friday) morning till about two p.m., the metropolis and its suburbs were visited, with slight intervals only, by a thick fog, which put a stop to almost public business, and exposed foot passengers in the main thoroughfares to extreme peril. The navigation of the Thames was also partially suspended; while those who did proceed in their several vessels, either up or down the river, had to use the utmost vigilance to escape accidents.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. R. Dunn to Hunstham, Devon; Rev. J. Stroud to Bondleigh, near North Tawton. *Vicarages:* The Rev. E. P. Brett to Sandhurst, near Gloucester; Rev. J. J. P. A. Morshead to Salcombe Regis, Devon; Rev. C. F. Smith to Crediton, Devon; Rev. E. Smyth to Harling, Essex. *Incumbencies:* The Rev. H. Owen to Llanerchymedd; Rev. J. R. Dakers to Hawick. *Perpetual Curacies:* The Rev. G. Garbett to Accrington; Rev. C. Marshall to Harpurhey, near Manchester; Rev. D. Sigman to Withnall, near Chorley.

TESTIMONIALS.—The parishioners of Rancorn, Chester, took the opportunity of the occasion of a recent visit of the Rev. W. C. Safford, their late Curate, to present him with a very handsome and massive tea and coffee service, as a small token of their appreciation of his former services. To the Rev. G. W. Paul, their Vicar, by the boys of the Finedon Church Sunday School. To the Rev. J. W. Murray, from the congregation of St. Mary's Church, Reading.

TOWN AND TABLE TALK, ON LITERATURE, ART, &c.

HERE we are, in 1854, committing alike irreparable folly to one committed in 1840. No nation, it is said (and said truly) has a nobler collection of national records than Great Britain; yet it is remarked, and with equal justice, no nation is so careless of them. If we were poorer we should be more watchful—prodigality of wealth (in this case, at least) has led to indifference. We have not been content with exposing our records to the chances of a magazine of powder (the most curious are still above such a mine of explosive matter), but we hand them over to damp and, worse still, to ignorant persons, to do what they will with. Who (of the thousands interested in English history) has forgotten the important Parliamentary inquiry of 1840 into "the destruction and sale of Exchequer documents"? Let us, however, recal the circumstances as briefly as we can. Some ignorant men about the Exchequer, who knew no more of history and of the value of ancient papers than they knew of the present position of our affairs with Russia, mutilated an immense mass of Exchequer papers of the reign of Elizabeth, James I., and Charles I., and then (carrying the profits into the Exchequer) sold their mutilated mass to a fishmonger of the name of Jay, in Hungerford-market. Jay, though only a fishmonger, knew more about the value of his acquisition than the Exchequer clerks; and the consequence was, that he soon brought autograph dealers and collectors of MSS. about him; turned his purchase to good account; and, in his evidence (modest enough evidence), expressed (not unnaturally) a desire for a second acquisition of the same value at the same price. But the fishmonger was not the only person who profited by the heedless ignorance of the authorities at the Exchequer. The very dealers who bought of the fishmonger sold many of their rarest acquisitions to the Trustees of the British Museum; and thus the public was called upon to pay—and in a mutilated state—for papers destroyed in wretched ignorance by its own servants.

That we are not exaggerating the case (and it is one properly retracting great attention in literary circles at the present moment), it is easy to prove, from the report of the committee. But we will not wander so far as to call up unnecessary proofs. At present, we shall content ourselves (before we state our fresh grievance) by directing attention to a recommendation of the committee:—

The Committee are also of opinion that the practice of selling useless papers from the public offices is mischievous, as affording a cover for the improper and surreptitious disposal of more valuable documents; they, therefore, recommend that in future all papers and parchments, the preservation of which in any public office may be considered unnecessary, should be completely and effectually destroyed.

This, as far as it goes, is sound advice. But has it been acted upon? No, we reply, in two instances within our own knowledge, in the destruction of a portion of the correspondence of the Home-office some six years ago, and in (which has led to these remarks) the ignorant destruction of a mass of Ordnance papers during the present month.

If there is any portion of English history with which it behoves an Englishman to be better acquainted than with another, it is that which Lord Clarendon has called the Great Rebellion. Great men were on both sides, and the whole kingdom was a participator in the struggle. Two centuries have nearly passed since the war ceased, and curiosity is still alive to know more about it. Where, how, and by what means did Charles equip his army? Where, how, and by what means did Cromwell arm his invincibles and Haslerig his lobsters? We turn to printed books in vain, for information on these heads. Where shall we find it? In the British Museum? No! Where then? In the books of the Committee of the State, not publicly known to have been preserved? In a rash order from the Ordnance has doomed them to the hands of another Mr. Jay—to (we believe) a Mr. Waterlow. This rash doom has awakened the curiosity of collectors; and State papers of importance of the age of the Commonwealth, and once the property of the nation, have been secured by private individuals, at, of course, greatly increased prices. Nay (if we are not misinformed) the trustees of the British Museum are on the eve of becoming purchasers of a portion of the papers thus unhappily scattered; and the votes of the House are to be increased by a sum required by the negligence and ignorance of the servants of the public. We have seen some of the papers thus heedlessly lost; can bear witness to their importance; and shall, therefore, have more to say upon the subject before very long.

The literary and political worlds have been greatly amused and amazed, during the present week, by a printed correspondence between Mr. Croker and Lord John Russell, on the subject of "Moore's Diary." Croker and Moore (Irishmen both) were friends of nearly thirty years' standing—as much friends as two satirists and political opponents could possibly be. Croker is a Tory, and Moore was a Whig. One swore by, and wrote in, the *Quarterly*; the other swore by, and wrote in, the *Edinburgh*. Their friendship resembled a sort of armed neutrality, for which they liked one another. Each feared the other; and Moore, it so happened, was indebted to Croker for important advice, and more important official assistance, in his Bermuda business. A satirist who keeps a diary is only too apt to indulge in hits even at his friends; and Moore was not exempt from the sin of saying hard things of Tory friends to Whig allies; but, worse still, was in the habit of writing them down. Now it naturally happened that a constant frequenter of Holland House, and of Lansdowne House, was sure to hear hard, and often untrue, things of Mr. Croker; and some of these, Moore (who was much at both houses) has set down in his Diary; and Lord John has now and then allowed them to appear in print. Mr. Croker is of course not pleased; nor is he altogether pleased with the "Diary" itself, while, so far as the editing is concerned, he is utterly at a loss to understand on what principle of admission and omission its editor can have possibly acted. Thinking thus little of the book itself, of its author and its editor, he inserts a long, bitter, and, we must add, a most readable article, in the *Quarterly* upon it. Lord John is nettled; the widow, a most amiable woman, is greatly hurt. It is now Lord John's turn to reply; and, in a note to one of the new volumes of the "Diary," he does so, and in terms at which Mr. Croker takes offence. Here, then, begins the correspondence: Mr. Croker opening with a letter to Lord John, in which he repels the personal imperfinence of the note, and enters, with his usual skill as fencing and hitting, into the merits of the work itself, the ingratitude of Moore, and the folly of his editor. Lord John replies—in no way giving in; but, if anything, adding to the offence of his printed note. To this Croker rejoins, angrily and yet with temper, ably, and yet at too much length; and the whole correspondence is sent with a note from Mr. Croker to the *Times*.

People are divided about the propriety of the correspondence. Mr. Croker's friends think that he is triumphant, and call the day on which the correspondence was published, viz., the 30th of January, not King Charles's martyrdom, but Lord John's; as if Mr. Croker had done for one Russell what King Charles II. did for another of the same name. The Whigs, again, are unanimous in their belief that Croker has done for himself; that, meaning murder, he has committed suicide a second time. Calmer people, uninfluenced by politics, and only weighing the case judicially, take a different view. Lord John has performed his duty very remissly as an editor, by suffering too many passages to remain calculated to give offence to surviving friends; and he has shown his partiality for his political partisans by inserting whatever he could find recorded in their praise. Mr. Croker, on the other hand, has, in his article in the *Quarterly* shown two little tenderness towards the widow of the poet. As we should have been ashamed to have edited the "Diary" as Lord John Russell has edited Moore's, so we should indeed have been unwilling to have written of Moore as Mr. Croker has written, while his widow was yet alive.

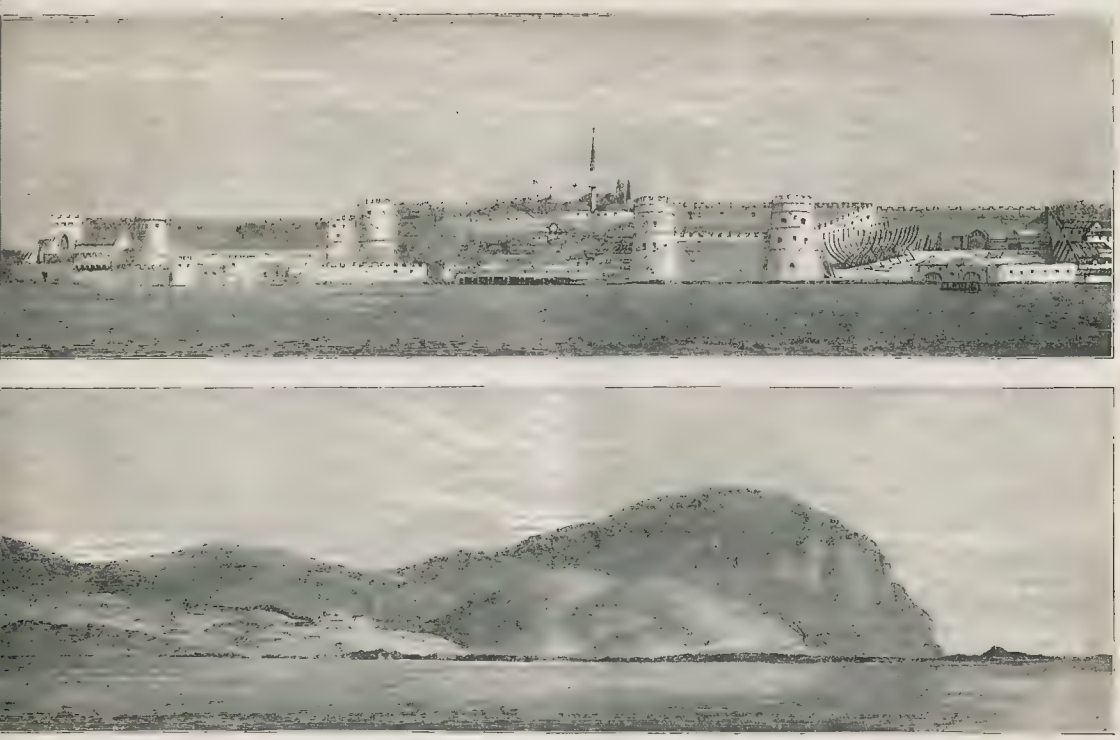
Officers and men killed, drowned, and missing, Turkish squadron, 2841.

Two Russian frigates and four steamers remained cruising outside; still the Russians had 198 guns engaged more than the Turks, and of larger calibre.

INSIDE OF THE CORVETTE "NEDGE JESAN," 24 GUNS.

CHED AFTER THE LATE BATTLE.



PANORAMA OF SINOPE.

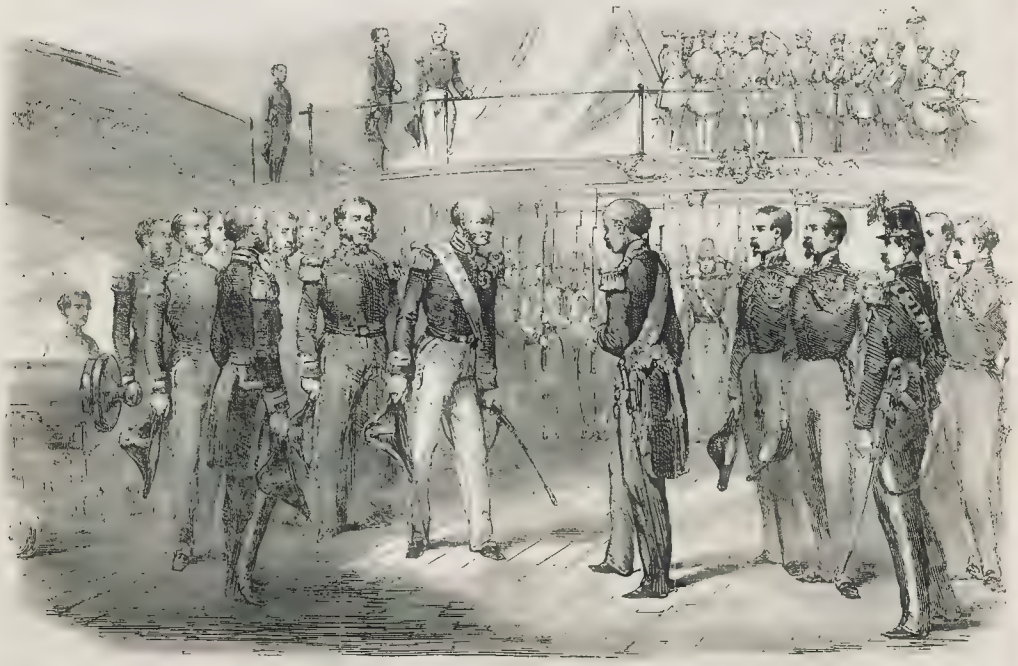
We are enabled, by our obliging Correspondent, Lieutenant Montague O'Reilly, of H.M.S. *Retribution*, to present our readers with the accompanying Panoramic View of Sinope, and the inside of the corvette, *Neiige Jeun*, 24 guns, ashore. The scene of desolation, with what may be termed the *débris* of the vessel, will convey an idea of the force employed in the general action between the Turkish and Russian squadrons, and its disastrous termination. The Panorama is sketched from the anchorage of the *Retribution*.

In the Picture is shown the greater portion of the Bay of Sinope, with the drifted hulls and shattered remains of the destroyed vessels, exactly as they were found by the *Retribution* and the *Mogador* steamships. Lieutenant O'Reilly, under an impression that the Sultan would be anxious to know the condition of his frigates, their positions in the Bay, or any fact of the fate of his devoted adherents, had the honour to send, through Admiral Slade (Muchever Pacha) the plan of these details.

We append a tabular view of the results, which supplies data not to be found in the accounts hitherto published.

THE VISIT OF GENERAL BARAGUAY D'HILLIERS TO ADMIRAL DUNDAS.

The visit of the French Ambassador, General Baraguay d'Hilliers, to the English fleet while at anchor in the Bosphorus, of which we give an Engraving in to-day's publication, took place soon after his arrival in Constantinople. On this occasion the General, who was accompanied, in addition to his staff and the *personnel* of the French Embassy, by Vice-Admiral Hamelin, commanding the French squadron, Rear-Admirals Jacquinot and Le Barbier de Tinan, was received by Admiral



RECEPTION OF GENERAL BARAGUAY D'HILLIERS BY THE BRITISH ADMIRAL DUNDAS.

Dundas, and the officers in command of the English squadron, with the usual military honours—the band playing French and English national airs, and the marines presenting arms.

The latest accounts from Constantinople speak of a military *reconnaissance* which General Baraguay d'Hilliers proposed making in person on all the points previously examined with great attention and minuteness by his Aide-de-Camp, soon after their arrival at Constantinople, with a view to establish, in case of necessity, a line of defence, and thus protect the capital from an attack on the European side. The General was to be accompanied in this excursion by Tefik Pachs, chief of the staff of the Turkish Minister at War. He was to have left Constantinople on the 16th ult., but the preparations for his departure were suspended the same morning; and the reason assigned was the request to that effect of the Ambassadors, who considered the presence of the General at Constantinople indispensable, in case news of importance should be received from the Black Sea.

CHESS.

TO CORRESPONDENTS.

LANCASTER.—Mr. Brierley, the originator of the Liverpool Chess-club, and whose long absence still and the Society almost irreparable blow to Chess in Liverpool, we are glad to hear, is on his return to power and has been unanimously elected President of the Society There can be no doubt whatever that, under his auspices and direction, the Club will again become as famous as we remember it ten years ago.

AZEPH, MEDICUS, and Others.—Finding it impossible to obtain any redress for the expense and inconvenience to which we have subjected to by the sham challenges and acceptances of challenges, of the charlatan in question, we are glad to hear that Mr. Staunton has taken the only course left to secure himself from future annoyance, by putting the whole matter into his solicitor's hands

ARNOLD, W. F. F., AN OLD PLAYER. The appointment of Secretary to the St. George's Chess-club rests with the committee. 2. The salary is £100 per annum. 3. We cannot undertake to receive proposals. They should be sent to the proprietor. 4. Preference, we think, would be given to a Fellow of the Club.

STERLING, W. H. L. (Bath.) Is to Play in Part 1 of the *Correspondence Chronicle*, F. B., Liverpool.—1. Get the last volume—that for 1853—of the *Correspondence Chronicle*, which contains all the Chess intelligence of the year, and some 50 games, problems, &c., by the best players in the world. 2. Apply to the honorary or secretary, Morton Sparke, Esq., and you will have no difficulty in being constituted a member.

R. G.—Pray remember that the *second* solution was equally correct.

R. C. J.—See the notice above to J. F., of Liverpool, and procure the magazine there mentioned.

FIN, Manchester.—It shall be examined.

T. A. M., Liverpool.—A reply has been forwarded.

JOHN.—There is, in such a case no liability attached to either King or Pawn.

M. P. L. B. and Others.—Our last problem, as solved by the author, deserves the epithet we applied to it, but, unfortunately, it admits of a very common place solution, in the same number of moves.

HOLLANDER, J. D. B., and others.—The solution of No. 518 was found to be imperfect, and is nowunder consideration.

SOLUTIONS TO PROBLEM No. 518.—I. J., of Hanworth; J. P., of Dalston; Derevon, are correct SOLUTIONS TO PROBLEM No. 519.—I. J., by Ernest. Almaric, R. D. M., Derevon, J. B. of Brighton, Correct; J. P., G. P. C., J. W. B. of Wrexham, Swede, Jack of Newport, D. H. of Dublin, T. T. of Hanworth, A. C. of Leamington, Crosby Docks, F. W. M. C., Dalmeny, are correct.

SOLUTIONS TO ENIGMAS, by Sigma, Ernest, Germanus, J. P., Jack of Worcester, F. R. of D., Derevon, are correct. All others are wrong.

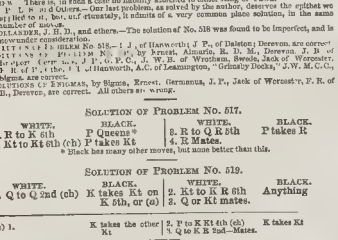
PROBLEM No. 520.

By W. BIGLAND, Esq.

BLACK.



WHITE.

White, moving first, to checkmate in four moves.

THE REPRESENTATION OF SOUTH DEVON.—The vacancy in the representation of the southern division of Devonshire, by the death of Sir Ralph Lopes, Bart., is likely to produce a severe struggle. Already three candidates, all of long standing in the county, have been named. The three gentlemen whose names have been already freely circulated as Sir Ralph Lopes's successors are his own son, Sir M. Lopes, the present Baronet; Sir Stafford Northcote, Bart., of Pynes, near Exeter; and Mr. Lawrence Palk, of Haldon-house, eldest son of the Baronet of that name. The general opinion at present is, that Sir M. Lopes has by far the most probable chance of being successful. In addition to his own interest in the south of Devon, which is by no means small, it is stated that he can reckon with certainty on the support of Sir John Yarde Buller, the other M.P. for that division. That this is not improbable may be judged of from the fact that the political views of both honourable Baronets coincide; whilst a matrimonial alliance between the two families is expected to take place at no distant period.

REPRESENTATION OF WEST SUSSEX.—Mr. R. Prime, of Walberton, near Chichester, who has represented the western division of the county of Sussex during the last seven or eight years, on the Protectionist interest, has issued an address to the electors of West Sussex, in which he states that the late hours to which the legislative sittings are usually protracted are so incompatible with the requirements of his increasing years, that he feels called on to resign his trust into younger hands. Mr. Henry Wyndham, son of Colonel George Wyndham, of Petworth-house, is spoken of as his successor, and follows in little doubt of the result. West Sussex is, in fact, as much under the control of two or three of the landowners of West Sussex, as ever was Gatton or Old Sarum.

THE WRECK OF THE "TAITLEUR."—An inquiry into the cause of the wreck of *Taitleur* commenced yesterday week, at Malahide, before the Dublin county Coroner. From the evidence, it appeared that the entire crew—including captain, stewards, cooks, clerk, and apprentices—consisted of 71 persons. Of these, however, only 26 were able seamen and 11 ordinary seamen. Of the former, 12 were foreigners; all of whom, except two Chinese sailors, could speak English. The complement of seamen required by the Emigration Act is three men to each 100 tons register. The tonnage of the *Taitleur* was 1677; so that, according to this calculation, the number of men ought to have been 60. Government ships have generally four men to every 100 tons even when carrying ship stores. The captain stated that he had engaged the crew himself about a week before the vessel sailed. The whole of the crew, with the exception of four men, were strangers to him. He had not experienced any obstruction from the want or the inefficiency of hands. The inquest was brought to a conclusion on Monday evening, when the following is the record of the verdict:—"That the parties were drowned by the sinking of the said ship off Lambay Island, and that this deplorable accident occurred in consequence of the highly-culpable neglect of the owners in permitting the vessel to leave port without compasses properly adjusted, or a sufficient trial having taken place to learn whether she was under the control of her helm or not; and we find that Captain Noble did not take sufficient precaution to insure the safety of the vessel by rounding to after he found the compasses were in error; but we consider, from the time the vessel came in sight of land, that he acted with coolness and courage, and used every exertion in his power to save the lives of the passengers.

OBITUARY OF EMINENT PERSONS.

SIR RALPH LOPES, BART., OF MARISTOW, DEVON.

THE death of this respected Baronet occurred on the 26th ult. Sir Ralph, the son of Abraham Franco, Esq., by Esther Lopes, his wife, succeeded, in 1831, to the Baronetcy and large estates of his uncle, the late Sir Manasseh-Masseh Lopes, M.P., and assumed, thereupon, by Royal license the surname and arms of Lopes. He was born 10th September, 1793, and received his education at Winchester, and at Brasenose College, Oxford, where he graduated in honours. For several years Sir Ralph sat in Parliament. His first election was for Westbury, in 1814, which borough he represented for a very considerable time. In 1840 he became Knight of the shire for South Devon, and continued as such up to the period of his decease. He was a Magistrate and Deputy-Lieutenant for Devon and Wilts, and was appointed Special Deputy Warden of the Stannaries in 1852.

Sir Ralph married, 8th May, 1817, Susan Gibbs, eldest daughter of the late A. Ludlow, Esq., of Heywood House, Wilts, and leaves several sons, of whom the eldest, the present Sir Massey Lopes, third Baronet of Maristow, was born in 1818.

CHARLES RODNEY MORGAN, ESQ., M.P.

By the premature death of this gentleman—the heir of the great estates of the Morgans, of Tredegar—a vacancy has occurred in the representation of Brecon.

Mr. Morgan had only just completed his twenty-fifth year, having been born at Ruperra House, Glamorganshire, December 2nd, 1828. He was educated at Eton, and entered the Coldstream Guards in 1847. His return from Brecon was the result of a close contest at the last general election.

Mr. Morgan's father, Sir Charles Morgan Robinson Morgan, Bart., of Tredegar, represented the ancient and opulent house of Morgan, which derives its descent from Llewellyn ap Ivor, Lord of St. Clere, by Angharad, his wife, daughter and co-heir of Morgan Mwynvawr, of Tredegar, a descendant of Rhys, Prince of South Wales.

CHARLES JOHN TINDAL, ESQ.

THIS lamented gentleman, whose untimely death, near Sydney, New South Wales, has been recently announced, was the youngest son of the Right Hon. Sir Nicholas Conyngham Tindal, Chief Justice of the Common Pleas, and received his education at Trinity College, Cambridge, where his father had, in former years, greatly distinguished himself. Mr. Tindal was, for a considerable time, Marshal to his father; and, shortly before the Chief Justice's death, had conferred on him the office of "Registrar of the Acknowledgments of the Deeds of Married Women," now held by Sir John Jervis's son-in-law, Mr. Bankes.

The deceased was a member of Lincoln's Inn, a director of the South Sea-House, and one of the Commissioners of Lieutenancy of the city of London.

JEROME ADOLPHE BLANQUI (AINE).

BLANQUI (aîne) JEROME ADOLPHE, who died on Monday the 23th ult., at his own residence in Paris, was the leading member of the French Academy of Moral and Political Science. Like the majority of the French *savants*, he was the artificer of his own fortune.

Blanqui (aîne) was born in 1798, the eldest son of a large family at Nice, an Italian city, which at the time was the chief place of a French department called Alpes Maritimes. After having been subjected to the usual routine of education, he was prepared for the Public Instruction Service, in which he obtained his first experience. He gradually rose in the confidence of successive Ministers of Public Instruction, till he was appointed, in 1825, Professor of History and Economic Industrielle in the special School of Commerce at Paris. In 1830, he became director of this institution, and succeeded the celebrated J. B. Say as Professor of Political Economy at the Conservative des Arts et Métiers. In 1838, he was elected a member of the Moral and Political Sciences Academy. In 1846, he represented the department of La Gironde in the Chambre des Députés, an appointment he held up to 1848.

If Blanqui (aîne) had never done more to cause his name to be remembered, than discharging officially as he has done his onerous duties, he would still have been inscribed on the roll of fame. From the nature of his original employment in connection with schools, it might very naturally be inferred that he was of homely and sedentary habits. Such, however, is not the case.

M. Blanqui (aîne) has travelled throughout Europe, in order to study and compare the different processes of industry and social economy. His scientific excursions through the industrial world may be accounted as follows:—Fifteen travels in France, ten in England, five in Italy, two in Spain, many in Germany, Austria, Servia, eastern countries, and Algeria, several of which have been the subject of important books and scientific memoirs. It was but last summer that the indefatigable economist finished his important work on the agricultural population of France * by order of the academy of moral and political sciences.

Above all, the most important work of Blanqui (aîne) is the "Cours d'Economie Industrielle," ably delivered at the Conservatoire des Arts et Métiers: those who heard him, speak of him as an economist of uncommon power and ability, and as one of the most remarkable orators of whom the annals of political science have any record. Fortunately for the scientific world, the valuable "Cours d'Economie Industrielle" has been stenographed and published by M. A. Blaise and Garnier.

WILLS.—The will of Baron Mockletthwait has been proved under £30,000 personalty in this country.—William Edwards, Esq., of Bristol, banker, who died on the 6th ult., has left personalty amounting to £80,000.—His son, George Oldham Edwards, Esq., being the principal legatee.—William Knott, Esq., of Surrey, died possessed of £50,000 personalty, bequeathing to the Protestant Dissenters' School, instituted 1714, at Hoxton-town, now at Mare Fund, Southwark, £100; Baptist College, Stepney, £100; New College, London, £100; Orphan Working School, Hampstead, £50—appointing his daughter and granddaughter the residuary legatees.—Lady Wilmington, of Wimbledon, Worcester, personal estate £20,000—leaving the whole to her son, Sir Thomas Edward Winnington, Bart.—The Rev. William Bengo Collier, D.D., formerly of Christ-church, but late of Peckham, notwithstanding his well-known benevolence, extending over a long period, has been able, by the aid of a legacy left to him some time since, to make an ample provision for his widow: his personal estate being sworn under £5000.

SPRING CIRCUITS OF THE JUDGES.

WESTERN CIRCUIT.—The Hon Mr. Justice Erle and the Hon. Mr. Baron Martin, the Judges appointed to proceed and hold the assizes in and for the several counties comprised within this circuit, have appointed the following days for opening the commission in and for each county; namely—County of Southampton (Hilsea) Monday, March 27, at the Castle, at Winchester. Wiltshire: Monday, March 6, at Salisbury. Dorsetshire: Friday, March 10, at Dorchester. Devonshire: Tuesday, March 14, at Exeter; city of Exeter, the same day, at the same place. Cornwall: Tuesday, March 21, at Bodmin. Somersetshire: Tuesday, March 28, at Taunton.

OXFORD CIRCUIT.—On Monday the Hon. Mr. Justice Wightman and the Hon. Mr. Justice Talfourd, the Judges appointed to proceed and hold the assizes in and for the several counties comprised within this circuit, finally settled the days and times for opening the commission in and for each county, namely:—Berkshire, Saturday, Feb. 25, at Reading. Oxfordshire: Wednesday, 1st March, at Oxford. Worcestershire: Monday, 6th March, the Shire-hall in the city of Worcester, the same day, at the Guildhall of the city of Worcester. Staffordshire: Saturday, 11th March, at the Castle of Stafford. Salop: Tuesday, 21st March, at Shrewsbury. Herefordshire: Saturday, 25th March, at Hereford. Monmouthshire: Wednesday, 29th March, at Monmouth. Gloucestershire: Saturday, 1st April, at Gloucester; city of Gloucester, the same day at the same place.

NORTH WALES AND CHESTER CIRCUIT.—Mr. Justice Williams, who proceeds on this circuit, and joins Mr. Justice Crompton, at Chester, has also finally fixed and signed the precepts for holding the assizes in and for the several counties comprised within this circuit, namely—Montgomeryshire: Tuesday, March 14, at Welshpool. Merionethshire: Friday, March 17, at Bala. Caernarvonshire: Monday, March 20, at Caernarvon. Anglesey: Thursday, March 23, at Beaumaris. Denbighshire: Saturday, March 25, at Ruthin. Flintshire: Wednesday, March 29, at Mold. Cheshire: Saturday, April 1, at the Castle of Chester; city of Chester, the same day, at the Guildhall of the city.

* A book executed after an active inquiry of more than three years and throughout the eighty-four departments of France.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The collectors and comptrollers at all the ports have received directions to transmit to the Comptroller-General, with all practical despatch, the account of charges of management paid out of the Customs' revenue in the quarter ended the 5th instant.

The Belgian Minister of Finance presented last week to the Chamber of Representatives a bill proposing a credit of 1,736,000f., for the continuation of the defensive works of the country.

The amount of railway calls falling due in the ensuing month, is a little over one million, against £865,981, in last February. The greater portion of the amount called for is by foreign companies, French, Belgian, and Canadian.

The municipality of Madrid has resolved that henceforth the streets shall be lighted with gas during the whole night. Heretofore the lamps have been extinguished on moonlight nights.

The Admiralty have called for tenders for the supply of 14,000 tons of coal, to be delivered at Malta in a short time, for the supply of the fleet.

The Russian squadron returned from Nangasaki, a port in Japan, to Hong-Kong on the 11th December. It brought a report of the death of the Emperor of Japan.

Mr. George Roe, the chairman of the Executive Committee, stated at the meeting of the Royal Dublin Society that Mr. Dargan's losses by the Exhibition amount to little short of £20,000.

The produce of Belgium, the greatest glass producing country in the world, is 50,000,000 feet of sheet glass annually; equal to 22,300 tons, or 25 per cent more than is made in England of both crown and sheet glass.

According to a circular issued by the Custom-house agent, Sydney, the amount of gold shipped from Sydney to England, in 1853, was 1,476,374 ounces; in 1852 it was 990,008 ounces.

The marriage ceremony was performed last month at Rochester (United States) by the "Rev." Antoinette L. Brown, a female preacher.

A Mr. Schietzenbach, a German chemist, of the vicicity of Baden, has lately discovered a means of obtaining a fifth more sugar from beet-root than that vegetable at present yields.

The army in Ireland consists of—Cavalry, 2679; infantry, 17,450; artillery, 1347: total, 21,476. Besides recruiting parties and 13,700 constabulary and staffs of militia.

A letter from Turin of the 13th ult. says that M. de Brenier had continual conferences with Count Cavour, and that a treaty offensive and defensive had been concluded between France and Piedmont.

At a Court of Directors held last week, John Peter Grant, Esq., was appointed a provisional member of the Council of India.

The betrothal of the Princess Maria Anne of Anhalt with Prince Frederick Charles Nicholas of Prussia, only son of Prince Charles of Prussia, took place on the 10th ult., at Dessau. The bridegroom was born in 1828, and the bride in 1837.

Petitions to the House of Commons will be presented from the old-established fire offices, advocating a repeal of the Fire-Insurance duty.

The *Crœsus*, which left Southampton on the 11th ult. for Australia, and which called at Lisbon for the Australian mails of the 4th December last, which were detained there, was to leave that port to proceed on her voyage on the 24th ult.

Lieutenant Poole, R.N., has been appointed Admiralty Agent on the Southampton station.

Letters from Alexandria, in Egypt, of the 17th ult., mention that the export of maize has been again declared free, and the prohibition removed.

Letters from Konigsberg state that Mr. Sturge and his two friends, who have gone on a mission of peace to the Czar, passed through that town on the 26th ult., on their way to St. Petersburg.

The Swiss National Council voted, on the 27th ult., the establishment of a federal university, comprising a polytechnic school, by 58 votes to 40.

John Mitchel's paper at New York, the *Citizen*, is published. Of the first number, containing an editorial article commending "ribbon lodges," 50,000 copies were sold.

The numbers attending the Museum of Ornamental Art, at Marlborough House, during January, were as follows:—11,385 persons on the public days, free: 585 persons on the students' days, on the payment of 6d. each, besides the registered students of the classes and schools.

No less than fifty-six fatal cases of cholera have taken place at Plymouth, where the disease still exists. The town is stated to be in a filthy condition.—*Medical Circular*.

The docks which the Cunard Mail Steam-ship Company commenced, some time since at Jersey city, New York harbour, have been completed. They extend 500 feet into the river. A large covering, extending over the whole pier, has been erected.

The Earl of Carlisle, who has arrived at Malta from an extended tour in the dominions of the Sultan, is expected to return to this country at the end of the month.

The directors of the Crystal Palace at Sydenham intend to open the building in May next.

The Emperor and Empress of France visited, on Monday, the painting-room of M. Ingres, to examine the painting which he has just terminated for one of the ceilings of the Hôtel de Ville.

The East India Company are about to issue a new copper coin, to be designated a "half-piece," and which shall be of the value of 1-128th part of a rupee, but shall not be a legal tender except for fractions of a rupee.

The packet-ship *Continent* has arrived at New York, after a six weeks' voyage from Liverpool, with the loss of fifty-four of her steerage passengers by cholera.

An extensive movement has taken place among the workmen and sailors of the Tyne and Wear, for an increase of wages.

The municipal council of Genoa has just voted 3500 francs in aid of the subscription for the monument to be erected to Christopher Columbus.

A memorial to Lord Aberdeen from the capitalists, merchants, shipowners, and others, of London, on the necessity for the immediate adoption of a system of agricultural statistics, has obtained many influentially signatures.

A "difficulty" about land occurred between Judge Gates and Jonathan Harrold, in Sutter township, California: the luminary of the law settled it by shooting Harrold through the head. The Judge gave himself into custody, and he has been held to bail.

Lord Dalhousie, the Governor-General, is endeavouring to establish vernacular schools throughout India, for the instruction of the masses of the people.

By certain telegraph arrangements now in progress, vessels sighting Cape Clear, Ireland, will be telegraphed to London within an hour.

The Empress Eugénie (of France) having been prescribed exercise, she has a pair of skates made fitted with wheels, and on these she skims the polished floors of the saloons in the Tuileries.

Mr. Michael Beresford has bequeathed his estates in Carlow county, with £15,000 to build a house, to the second son of the late General Sir Denis Pack. Capt. Denis W. Pack, Lord Beresford's godson, is to assume the arms and name of Beresford.

During the past year (1853) the value of the exports from London and Liverpool to the Australian colonies exceeded £13,000,000.

The master of the *Jules*, of Paimbœuf, France, reports that, on 21st October last, when in 34° 30′ S., and 26° 30′ E., he caught a petrel, with a ribbon round its neck, bearing the inscription "Owen Glendower, London."

The lamented Governor of the North-West Provinces of India, Mr. Thomason, has bequeated the whole of his valuable private library to the Government College, at Agra.

A few days since, as a rope-dancer was performing his feats of agility on a rope placed across the market-place at Vence (Var, in France), he fell head-foremost to the ground, and was killed.

Anna Maria Jones, authoress of the "Gipsy" and some other novels of the day, died last week, in Bermondsey, in the most abject poverty.

We are informed by a correspondent that a number of Russian ships that were at Liverpool have been sold to British subjects, and taken over, with the officers and crews, to be navigated under the British flag. Information on the subject has been forwarded to the Board of Trade.—*Shipping Gazette*.

The office of City Comptroller is vacant, owing to the death of Mr. Thomas Saunders. His department embraced all the law business relating to the property of the corporatio nand the completion of the purchases for the new streets to St. Paul's and Clerkenwell.

The last accounts from Asia announce the death of the Russian General Prince Orbelian of the wounds which he received in the affair of Baschkadykla.

The Lord Chancellor has appointed Sir John Eardley Wilmot, Bart., and Mr. Edward Cooke, Judges of the Bristol and York County Courts respectively, in the place of Mr. Arthur Falmer and Mr. E. H. Elsley, who have resigned, on the ground of ill-health.

Mr. Lotius Henry Bland, M.P., Home Circuit; Mr. Richard Armstrong, Leinster Circuit; and Mr. John Thomas Ball, Home Circuit, have been nominated Queen's Council at the Irish bar.

THE BEARD AND MOUSTACHE MOVEMENT.

England is a conservative country in more respects than one. It loves that which is old. An old church, an old ruin, an old tree, an old custom, all receive popular homage. An old law, even although it be very bad and oppressive, attracts to itself a certain kind of reverence, and is never repealed until after long and wearisome investigations. The English preserve their fashions in the same obstinate manner. They will not suffer themselves to be blown about by every breath of caprice, even although the matter be no more serious than one of taste. Yet, as a people, we are by no means deficient in a love of novelty; but it is only a certain kind of novelty which is successful, one which blows lightly and pleasantly, as a breeze upon the surface of society, but which is seldom able to penetrate into the bones and marrow of the inner life. A Mrs. Hayden may set our tables turning, and turn weak heads at the same time by the mysteries of spirit-rapping; but it is beyond the power of a Mrs. Bloomer to shorten by an inch the petticoats of the women of England. Though the fashions are always said to be changing, the changes, in reality, amount to very little. They do not affect essentials. The conservative spirit sets itself sturdily against any but the smallest and most insignificant innovations. The almost hopeless obstinacy of fashion and custom may be seen in the form of the hat and the cut of the coat—two articles of modern costume that fill painters with vexation and drive sculptors to madness.

Upwards of twelve, if not twenty, years ago the Germans, French, Italians, Spaniards—in fact, we may say, all the Continental nations, quietly though suddenly effected a revolution in the personal appearance of the male of the human species. They seem to have come to the conclusion that there was manly dignity in a hairy face, and that the use of the razor was unnatural effeminacy. They threw aside the unnecessary implement, and wore beard, moustache, and whiskers in all that flowing luxuriance which nature intended. To all objectors there was the unanswerable reply, "The beard grows—*ergo*, it ought to be permitted to grow; Nature gave it—*ergo*, it is good." But the English were unconvinced by the argument, and did not imitate the example. They stuck by the custom of their fathers and grandfathers; and underwent the daily martyrdom of shaving, as if it were a point of religion and of duty. The national love for bushy whiskers was never extinguished. The moustache was tolerated, and even admired, in officers of cavalry regiments; but was not endured in any one else. The few who were daring enough to set public opinion at defiance in this respect, ran the risk of being considered members of the swell-mob, or sham foreign Counts and real *Chevaliers d'Industrie*. As for the beard, it was an abomination in English eyes, and was never seen, unless occasionally in aged eccentrics ripe for Bedlam, or on the chins of ancient Hebrews who cried "Old Clo'" through the streets of the metropolis. It was in vain to urge that shaving was a nuisance. Every one admitted the fact; but no one was ready to forego the infliction. The dread of being thought odd, peculiar, eccentric was too much even for the wisest of men to overcome. A learned lady once deplored the misfortune of her sex, and the heavy weight of that primeval curse which declared that "in sorrow women should bring forth children." She envied the happier condition of men. "Ah! madam!" said a still more learned person, in reply; "bewail your fate no more: the evil you lament is not of frequent occurrence, and does not afflict old age. Think of man's misery, who has to shave every day. You may then decide whose afflictions are the greatest." "But man's are self-imposed," said the lady; and the philosopher was silenced.

Within the last few months, however, a considerable change has been effected in the public sentiment. The thick crust of popular apathy, or hostility, has been broken through; and it seems as if the English, after their heavy resistance, were no longer disinclined to adopt the comfortable and picturesque beards of the men of the Continent, and to abolish the civilised barbarism of the razor. The movement was first commenced by gentlemen who, in foreign travel, had learned, not only the beauty, but the convenience of hair on the chin and upper lip. Artists, with that love and appreciation of the picturesque, which might have been expected in members of their profession, were the next to encourage the hairiness of nature, and became the real *prodromoi* and forerunners of change. They gradually accustomed the eyes of the English multitude to the use of the moustache by civilians. Ultimately, a few musicians and *litterateurs* gave in their adhesion, and talked loudly of the comfort they derived from letting Nature have her own way. If a man had a taste for the fine arts, they told him his portrait would be vastly improved by a beard. If he were indolent, they showed him how pleasantly and profitably he might encourage his favourite vice by the discontinuance of his morning exercise with the razor. If he had the tooth-ache, they told him hair would prevent the recurrence of the evil. If he were vain of his beauty, the sop to his vanity was that ladies always admired cavalry officers, not because of their fine clothes, but because of the manly splendour of their upper lips! A portion of the press next took up the subject, and medical men came forward to prove, on satisfactory evidence, that to many artisans the moustache was invaluable as a supporter of health; and that, in conjunction with a beard and whiskers, it prevented the attacks of many maladies that afflicted those whose avocations were carried on amid dirt, dust, grit, filings, and smoke; besides being of great service in neuralgic and pulmonary affections. The result is, that we are now in the very thick and heat of a new agitation, and that the friends and foes of the natural face of man write, speak, and assemble in public meetings all over the country to urge their arguments *pro* and *con.*, and do battle for the beard, or against it. The ladies have been appealed to; but, having no representative or delegate who can express their collective sentiments, a few individual opinions only have been elicited, and these are strongly in favour of the beard, and still more strongly in support of the moustache. The cause has continued to grow; the police force of whole towns have added hirsuteness to their terrors; stokers, masons, gun-barrel grinders, and glass-cutters have adopted the new mode; and Mr. Muntz possesses no longer the sole or even the grandest specimen of the British beard. Whether Sheffield has yet felt any effects of this embryo revolution we are unable to state. At a recent meeting we notice that an Anti-beardite condemned the movement as unscriptural, because he could neither find a command to shave, or not to shave in the Decalogue. The Scriptural knowledge of the objector was barer than his face. Adam must have worn his beard. Abraham is always represented as having had a large and flowing one; and Moses and Aaron are never portrayed, by painter or sculptor, without the manly, and in them, the venerable appendage. The beard of Jupiter is known to every student of art, and that of Homer to every reader of poetry. Even in more recent times, and in our own country, shaving is quite a modern practice. It was not much known in Saxon England; and, if it reached the beard, it spared the upper lip. The practice of shaving came in at the Norman invasion. Among the Saxons none shaved their moustache but priests, and the ploughman ploughed, and the smith wrought at the anvil, with all their flowing hair, both on sconce and chin. Those who have any curiosity to know the history of the beard, and how its shape, and even its existence, was regulated and interfered with by Kings and Popes in the olden time, may read with advantage the chapter "On the influence of Politics and Religion on the Hair and Beard," in "Mackay's Memoirs of Popular Delusions, and the Follies of Crowds." They will there learn that shaving the face was a Monkish innovation; and that Protestantism ought, in reality, to protest against the razor. As far as argument goes, the friends of the Beard and Moustache have decidedly the best case. Nature gave the male face an ornament and a protection; and the male Englishman, from the age of twenty to that of seventy, reckoning that he shave every day, and that the operation of shaving lasts, with all its precursors and accessories, ten minutes, spends 254 working-days of his life in the Sisyphian labour of removing it. It remains to be seen whether Reason or Custom shall prevail, now that attention has been so forcibly directed to the subject. The chances are in favour of Custom; for is not Custom a tyrant? and is not Reason an abstraction which men may respect without yielding it obedience?

Taxes on Knowledge.—Soiree at the Whittington.—The Association for Promoting the Repeal of the Taxes on Knowledge will give a *soirée* to Mr. T. M. Gibson, at the Whittington Club, next Wednesday evening, in honour of the repeal of the Advertisement-duty. The meeting, which will, no doubt, be a large one, will be addressed by Mr. Cobden, Mr. Gibson, and other ardent advocates of a free press. Sir John Villiers Shelley has promised to preside on the occasion.

NATIONAL SPORTS.

NEWTON RACES.—Wednesday.

Handicap Plate for 70 sovs.—Jessamine, 1. Andante, 2.
Golborne Stakes.—Yestick, 1.

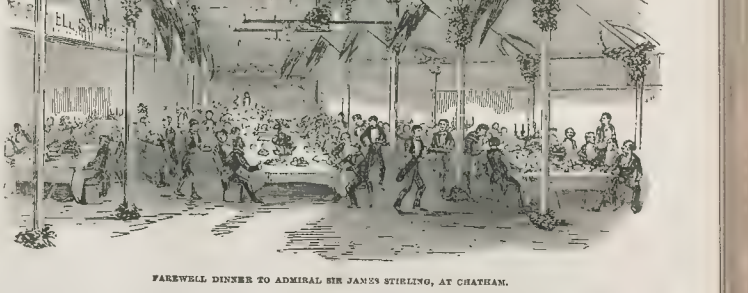
200 to 3 agst Talfourd (t)

The Coal Trade.—Twenty years ago London was satisfied with a supply of two million tons of coals, but last year it was half-starved with double that amount. Its impatient cry is, therefore, for more coals, and, with the view of increasing the importations, it is proposed to open up the coasting trade to foreign vessels. More carrying power would thus, perhaps, be obtained, but it does not therefore follow that there would be a proportionate increase in the supply of coals to London. The market is extending, and even at present ships have frequently to lie for days before their turn comes to get a cargo. It is obvious, therefore, that until our various shipowners have a much greater quantity of coals at their disposal, the demand will continue to exceed the supply. The retail price of coals in the metropolis was a few days ago 2s. 9d. per cwt. for second qualities, and 3s. for the best, being nearly 150 per cent higher than it was at this time last year. An immense fleet of colliers, about a thousand in number, have, however, left the north-east ports for the Thames during the last ten days, the cargoes of which, and the return of milder weather, will tend to lower the price. Coal freights continue high, being to London 12s per ton from Newcastle, 13s. 6d. from Sunderland, Hartlepool, and Middlesborough, and 15s. from Seaham. *Sunderland News.*

A Way to Find One's Cousins.—Some time since Mr. Russell, a respected inhabitant of Bristol, carrying on the business of a wine-merchant, in Barr's-lane, died, leaving a considerable amount of property. Among the legacies mentioned in the will were several sums of £100 bequeathed by the deceased to each of "his cousins." No names were specified; and, consequently, it was open to the whole of Mr. Russell's cousinhood, immediate or remote, to come in and seek to substantiate their claims. We understand that the decision of the executors was final, and that the legacies were restricted by them within the limits of the first cousins and their children. It was expected that about six or seven claimants might possibly appear, and prove their right to the sum. The actual number of those who have come forward has been 59, out of whom only two have failed in making out a case to the satisfaction of the executors! "Good news flies space," and these cousins have started up in all directions, and from the most remote parts of the globe, including New Zealand, Australia, &c. The post says, "One touch of nature makes the whole world kin," but it would appear that, after all, the most touching test of relationship is a legacy.—*Bristol Mercury.*



FAREWELL DINNER TO ADMIRAL SIR JAMES STIRLING, AT CHATHAM.

FAREWELL DINNER TO ADMIRAL SIR JAMES STIRLING.

On Monday night a farewell dinner to Admiral Sir James Stirling, on the occasion of his departure to take the command of the East India and China fleet, took place in a large marquee, very handsomely fitted up in the grounds adjoining the White Swan Inn, Chatham.

Throughout the afternoon the spacious tent, which was one hundred feet long by fifty wide, was crowded by hundreds of visitors to inspect the decorations, which were arranged with great taste. An immense number of flags, bearing suitable loyal and political mottos, were suspended from the roof and affixed to the sides. Among the guests present were G. Ely, Esq., in the chair, Admiral Sir J. Stirling, the Hon. F. H. F. Berkeley (M.P. for Bristol), W. G. Romaine, Esq., Capt. Baker, Capt. Kains, Capt. Wilson, J. Hulkes, Esq., J. L. Levy, Esq., J. Foord, Esq., Dr. Steele, J. Dulvey, Esq., and a number of gentlemen from Rochester, Strood, and the surrounding neighbourhood. By half-past five o'clock no less than 600 persons had taken their seats, and shortly after that time Admiral Stirling, accompanied by W. G. Romaine, Esq., and a number of other influential gentlemen and political friends arrived. The gallant Admiral's appearance was the signal for a shout of tremendous cheering.

On the removal of the cloth the usual loyal and patriotic toasts were given, and then George Ely, Esq., the chairman, proposed the health of Admiral Sir James Stirling, whom he eulogised as a man of whom it might truly be said that the more they knew of him the more they esteemed him. He had come forward at a time when they were anxious to return a Liberal representative to Parliament; but now he was about to quit them to perform a greater service to his country in a distant part of the world, where he would carry with him the love and confidence of his Chatham friends, and their best wishes for his complete success in whatever his duty should require him to undertake (Loud cheers.)

Admiral Stirling rose amid the most enthusiastic cheering. He could not but feel that the reception he had met with was a very high compliment. He stood there as an unsuccessful candidate for the borough; but that fact had not estranged their sympathies. This was gratifying, because it showed that they had confidence in the principles which he and they advocated. He was a Reformer. He belonged to that party which had always been in favour of improving our institutions. At present all parties were in favour of Reform. The only differences of opinion were as to the extent to which reforms ought to be carried. Even the Tories were now advocates of Parliamentary Reform. Mr. Walpole had a Reform measure for conferring votes upon militia-men; and Mr. Disraeli had another project, which he would, no doubt, bring forward before long. He was anxious, however, to see such a measure of Reform proposed and carried as would remove all desire for change or alteration for many years to come. In conclusion, he referred in very complimentary terms to the conduct of Mr. Romaine during the two contests for the borough. He did not think the electors could have made a better choice; and he hoped, when in another part of the world, to hear of their having triumphantly returned him to Parliament. The time was coming when great events might have to be decided; but—thanks to the advocates of reform in Parliament, and to the measures which have been already adopted for placing our revenue and finances on a secure foundation, and for affording satisfaction and contentment to the people—we were now in a position to defy the world in arms (Cheers). We had nothing to fear, whatever foes we might have to encounter; and it was the proud boast of the Reform party that Reform has brought about the prosperity to which our safety is mainly owning, and to which the happiness and strength of England must be attributed (Loud cheers).

The Chairman proposed "The health of Mr. Romaine," the gentleman who has been invited to stand as their candidate, in the room of Sir James Stirling. The toast having been drunk with all the honours, Mr. Romaine returned thanks; and in doing so expressed his confidence in the wisdom and firmness of Ministers, who were, he was persuaded, determined to redeem their pledges as regards Reform.

A number of other toasts were given and responded to, and the company separated about eleven o'clock.

WRECK OF THE SCREW-STEAMER "OLINDA."

The columns of the newspapers have, unfortunately, for some days past, teemed with the painful details of shipwrecks, not only on our own coast, but in other climes. The fine steamer the *Humboldt*, on the coast of Newfoundland, through the ignorance of an assumed pilot; the *San Francisco*, through stress of weather, in the Gulf Stream; the harrowing and frightful loss of the emigrant ship *Tayleur*, in the Bay of Dublin (the verdict on which will be found in another column); and now is to be added to the list that of the fine new iron screw-steamer the *Olinda*, on the Welsh coast.

The *Olinda* left Liverpool for the Brazils on Thursday week, having on board a valuable cargo of fine manufactured goods and about twenty passengers. At the time of the accident she was under the charge of the pilot, who having been unable to land, had attended to

accompany the *Olinda* to Lisbon. Though the weather was unusually rough, it is reported that he took the ship through instead of round the Skerries. Whether that be so or not, it is clear that on Friday evening, between eight and nine o'clock, she struck on the Harry Furlong Rocks, which lie to the eastward of the Skerries. The first official information, containing a statement as to the position of the *Olinda*, was known by a telegraphic despatch to Messrs. Miller and Thompson, the agents of the *Olinda*, received from Captain Hirst, of the Chester and Holyhead Railway Company; and on Saturday the following letter from the chief officer was received by Messrs. Miller and Thompson. Captain Haram having been prevented from writing by being on board the wreck:—

CEMLYN, Jan. 27.

SIR,—I beg to report the stranding of the *Olinda* on the Harry Furlong Rocks, at 8.45 p.m. yesterday. The ship was in charge of the pilot at the time. Passengers are landed, all safe. Ship was quite dry at low water, and all the crew left the ship. Mails not yet landed. Found the fore cargo-hold full of water. The ship is in a very dangerous situation; if the wind veers to the north-west she will break up in six hours. We have had the steamer *Cambria*, from Holyhead; but she cannot come alongside. Flats will be the best means of saving the cargo, if she holds together. The rudder and propeller are carried away, six feet of forefoot gone, and the racks through her forward. Masts, &c., all standing. Nothing saved as yet, up to eleven a.m.; blowing hard from west. Captain Haram managed to get on board this morning, and has not yet returned. I am waiting for his coming ashore to open a communication with the ship, and take this opportunity of informing you of our position, as Captain Haram may not have an opportunity of writing himself from being on board, and a messenger is about to leave for Holyhead.

Your obedient servant,
JAMES BLOW, Chief Officer.

W. Hadfield, Esq.

The surgeon and one of the passengers arrived in Liverpool on Saturday, and their narrative bears out the impression conveyed in the chief officer's communication, that no blame is attributable to the captain. They state that the passengers were loud in their praises of the calmness and intrepidity which Captain Haram, the chief officer, and the crew, displayed in the trying emergency. They succeeded in lowering the boats without sustaining accidents, and in landing the passengers, although there was a heavy sea at the time. The pilot is an experienced man, having been twenty-five years connected with the port. Before the accident occurred, he stated that he knew the coast accurately, and that there was no danger in running so near the shore.

It is feared that there is little chance of recovering the ship; but there are hopes of a portion of the cargo being saved, three steamtugs, two lumps, fifty men, and diving apparatus having been sent down. Captains Richard and Daniel Green have also proceeded to the scene of the disaster, as well as the representatives of the London and Liverpool underwriters; and Mr. Hadfield, the secretary of the company, has likewise gone for the purpose of attending to the passengers and seeing after their baggage.

A letter from Captain Hirst describes the position and details still further:—

I was called upon by Lloyd's agent at this place, accompanied by one of the officers of your steam-vessel, *Olinda*, at 4.40 a.m., stating that the vessel was ashore on the rocks called Harry Furlongs, and requesting me to send a steam-vessel to her assistance. I lost no time in doing so. Steam was raised in the company's vessel *Cambria*, extra warps and men put on board here, and at 7.40 a.m. I proceeded to the *Olinda*, the weather very bad; wind from W.S.W. and S.W., thick with rain, blowing a gale. I arrived near the *Olinda* at 8.40, and found that she was full of water up to the 'tween decks, apparently fore and aft, and had twisted completely round, with her head to the eastward. She hoisted a signal of distress. I signalled her to send a lifeboat, which I observed alongside, as the sea was heavy. She, however, did not do so. I had the *Cambria* cutter manned, and, with some difficulty, reached the ship, and found her with only the commander, two other officers, a Liverpool pilot, and three men on board. I offered to land her mails and any valuables which my boat was capable of carrying in such a sea. I took ten mail bags (there being only fourteen), with her chronometer; all given up to the post-office here at noon, with the exception of the parcel which I had in my charge. I promised to send a boat for the remainder of the mail bags, and did so immediately but the crew left the ship soon after I pushed off. I sent the boat notwithstanding, but could not get the remaining bags. In the meantime the life-boat was driving to leeward, and could not fetch the shore. I took her into Cemlyn Bay, waited, and saw them all landed in safety. I very much fear she will become a total wreck if the wind comes more westerly, and would urge prompt measures to save the cargo and ship if possible.

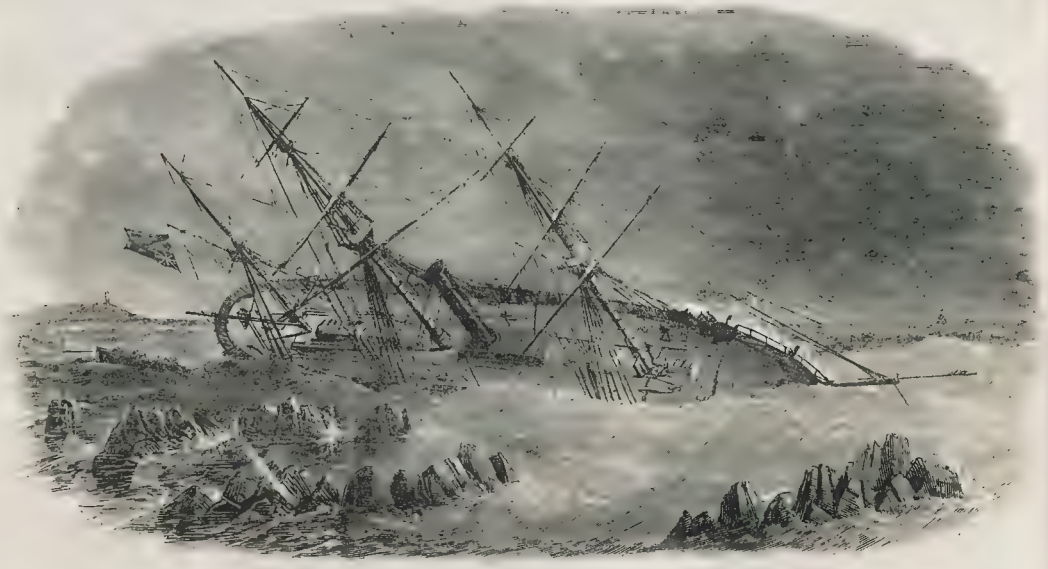
The *Olinda* was an iron vessel, of 1130 tons builder's measurment, and was built at Port Glasgow by Messrs. Reid and Co. She was a fine screw steamer, and was launched only in April last. Her engines were of 300-horse power, made by Messrs. Caird and Co., of Greenock. The *Olinda* was valued at £35,000, and the cargo was estimated at £20,000: both, it is said, were insured.

REMAINS OF THE INFANTA LYING IN STATE, IN THE ROYAL CHAPEL, AT MADRID.

REMAINS OF THE INFANTA OF SPAIN LYING IN STATE.

WE are enabled, by an Artistic Correspondent at Madrid to illustrate this recent solemnity. The Infanta was born on the 5th ult., at half-past ten in the morning; and, next day, should have been baptised with the customary ceremony in the Royal Chapel, but the Infanta being attacked with illness, she was baptized on the 6th, by the Patriarch of the Indies, in her own room, as is usual in such cases of urgency. On the 8th, after having received all the aid which medical science could furnish the Infanta died, at ten minutes past eleven a.m. On the 9th her remains were placed in the Royal Chapel, upon an Imperial bed, the hangings of which are of yellow velvet, embroidered in colours, and fringed with silver. The body was dressed in white cambric, richly worked, and trimmed with costly lace, and a silver girdle. The guard of the corpse was confided to two masteros (grooms) of the chamber, the two major-domos of the week, and two of the Queen's Guards. Thus sumptuously appointed, and surrounded with regal honours, the Infanta lay in state. On the 11th, the solemn Mass of "The Angels" was sung by his Excellency the Cardinal of Toledo; and, at eight o'clock on the morning of the 12th, after the whole population of Madrid had been spectators of the solemn spectacle, the remains were conveyed with great pomp to the Church of St. Lorenzo del Escurial; and, on the 13th, were deposited in the Pantheon of the Monastery.

The accompanying Engraving of the solemnity in the Royal Chapel is from a sketch by M. Benjumea, who has been honoured with a commission by the Queen of Spain to paint a picture of the sad scene.



WRECK OF THE STEAM-SHIP "OLINDA," ON THE HARRY FURLONG ROCKS, EAST OF THE SKERRIES.

ESENTATION OF A TESTIMONIAL TO THE RIGHT HON. G. BANKES, M.P.

s interesting ceremonial took place on the 11th ult., at the Town J, Dorchester, when the Right Hon. George Bankes was entertained a magnificent banquet. The Testimonial consists of a massive silver au-light Candelabrum, from the establishment of Hunt and Roskell design represents branches of the vine, dividing at the base. In the ere is the following inscription:—

resented to the Right Honourable GEORGE BANKES, M.P., by the Magis- ses and Inhabitants of the County of Dorset, a testimonial of their se of his long and distinguished services as Chairman of the Court of arter Sessions. Jan. 11th, 1854.

e Monogram and Coat of Arms of the right honourable gentleman also introduced. The centre of the piece is formed by four infantine ures, in frosted silver, emblematic of Mercy, Justice, Wisdom, and th. Mercy is fondling a dove and a lamb; Justice holds its sword scale—a novel feature in the latter being the substitution of a steel- d and one scale, instead of the orthodox "scales of justice;" the re- ing figures of Wisdom, and Truth, complete the group. The entertainment was presided over by the Right Honourable the t of Shaftesbury, being his Lordship's first visit to the county on any ilic occasion, since his valedictory address to the electors at Pound- y. The Hall, which was tastefully decorated, was well filled with wards of 160 guests.

TESTIMONIAL PRESENTED TO THE RIGHT HON. G. BANKES, M.P.

The right honourable recipient of the Testimonial was, in early life, pointed a Curritor Baron of the Exchequer, which office he still holds. About thirty years since he was appointed Recorder of Weymouth, in the room of Mr. Giles Templeman; and, until the Municipal Reform Act came into operation, he presided at the sessions, where his legal knowledge and ability gave universal satisfaction. In 1828 Mr. Bankes was elected a representative of Corfe Castle, and was also a member of the Duke of Wellington's Government, at its dissolution in 1830; after which he was chosen one of the county members for Dorset. About twelve years since, upon the retirement of Mr C. B. Wollaston, the right hon. gentleman was appointed Chairman of the Quarter Sessions He also received the appointment of Judge Advocate, under Lord Derby's Administration, and became a member of her Majesty's Privy Council.

After the customary loyal toasts had been duly honoured, the noble Chairman rose, and, at the close of an eloquent speech, presented the Testimonial to the Right Hon. Mr. Bankes, whose health was drunk with enthusiasm. Mr. Bankes returned thanks. The health of "The Lord-Lieutenant and the Magistracy of the County, coupled with the name of the Rev. Henry Farr Yeatman," was then drunk; and the rev. gentleman returned thanks. The Marquis of Westminster then proposed the health of "The noble Lord in the chair," for which the Earl returned thanks. Several other toasts were drunk, including "The Ladies, coupled with the name of Mrs. Bankes." Mr. Fyler acknowledged the toast in a few brief remarks. Mr Bankes also returned thanks for the honour done to his lady; and the entertainment concluded with "Rule Britannia."

PRINCE NAPOLEON BONAPARTE.

THIS Prince, who stands next but one in succession to the Imperial Throne of France, in default of heirs to the present Emperor, has, of late years, occupied no small share of attention, even in this country, but more especially on the Continent. Now that the Emperor, Napoleon III., is no longer a bachelor, his grand-cousin is the chief object of speculation to those political gossips who busy themselves in devising alliances for eligible and marriageable Princes and Princesses. A short time ago, when the Queen Christina of Spain visited France, attended by her daughters, one of those beautiful young ladies was unceremoniously allotted to Prince Napoleon. More recently still, when a reconciliation having taken place, after an estrangement of years between himself and his near relative the King of Wurtemburg, this Prince was again married by these political quidnuncs, in the most off-hand manner, to a fair cousin of his, a Princess of that Royal family. Hitherto, he has escaped these imaginary matrimonial toils; but his ever-watchful persecutors are again at their benevolent work, and hints have been thrown out of a still more desirable match than would have been either of those indicated. What is more authentic than the apocryphal arrangements is the very important fact announced in the *Moniteur* of Tuesday, that his Imperial Highness Prince Napoleon, accompanied by Colonel Desmarets, his aide-de-camp, and by several officers of his household, started on that morning for Brussels. The Prince de Chimay left by the same train. Prince Napoleon was received at Quiverain by General Chazras; and at Mons the authorities offered their felicitations to his Imperial Highness, the troops being drawn up as he passed. At the Brussels station, his Royal Highness the Duke de Brabant came to receive the Prince.

In this brief but pregnant announcement, we have evidence at once of the importance of the Prince and of his mission. Of the latter, the exact purport has not yet transpired; but the former may be measured by the fact of his selection for a duty on which the independence of Belgium and her close alliance with France are supposed to hang. It is remarkable that the present chief of the Bonaparte family has sought, by all possible means, to conciliate and keep them together. For a considerable time after Louis Napoleon was the *de facto* ruler of France, there existed, publicly, at least, a misunderstanding between him and his cousin, founded, it is believed, less on personal than on political considerations: but no sooner were their relative future positions defined, than all jealousy appears to have subsided—the Emperor seeking, and the Prince cordially accepting, a reconciliation. One of the first acts of the Emperor was, to determine the position of his cousin in the succession; and the cousin, from having been a Republican and a demagogue of formidable pretensions, at once glided gracefully into princedom and presumptive heirship. It is probable that the Princess Demidoff may have been the mediating instrument in this family re-union. Since that time the young Prince Napoleon has, to all appearance, been a prime favourite. Posts of honour and duty have been liberally awarded him; he came over here on the occasion of the Camp at Chobham; and now he is the Envoy Extraordinary to King Leopold, in a matter too delicate and momentous to be entrusted to less than a Prince of the blood. In point of fact, Prince Napoleon, like his cousin the Emperor, has, in a political sense, sown his wild oats, and Royalty and Napoleonism certainly become him much more than the rampant Republicanism he enacted while chief of the Mountain.

PRINCE NAPOLEON BONAPARTE.

Prince Napoleon Joseph Charles Bonaparte is the son of Jerome Bonaparte, by his second marriage with the Princess Frederika of Wurtemberg. He was born on the 9th September, 1822, we believe at Trieste. He was, in one sense, the child of misfortune; as his father, when he was born, had already for some years suffered adversity. An elder brother, Jerome Napoleon, who was born in 1814, is dead. The youth of Prince Napoleon was passed, sometimes at Vienna, sometimes at Trieste, sometimes at Florence and Rome, occasionally in Switzerland, and, we believe, in America. At a later period, the Prince resided for a short time in Brussels; but, like most of the other members of his family, he did not, until the last revolutionary period, take any active part in political affairs. On the recal of the Bonaparte family from their long exile, Prince Napoleon was elected to the Constituent Assembly, in which, probably, more from policy and

THE JAPANESE EXHIBITION, IN PALL-MALL EAST—(SEE NEXT PAGE)

family motives, than from conviction, he became the leader of the extreme Republican party, known as the Mountain. From the violence which he manifested on many occasions, it was currently supposed that he was either playing over again the part of his uncle Lucien as against the first Emperor Napoleon, or that, from a desire not to lessen the Bonaparte influence in any quarter, he was simulating a zeal for Republicanism in order to associate the two. It was even believed that he and his cousin Pierre Bonaparte were really plotting to supplant the present Emperor in the affections of the French people. All conjectures on the subject have long since been set at rest.

These exhibitions, whether they were real or not, certainly served a purpose at the time, by preventing other democratic leaders from taking a position which might, perhaps, have damaged the interests of Bonapartism. The Prince Napoleon of the present day is a very different person, officially from the fellow chief of the mountain. According to all accounts, he is—always speaking in a political sense—a sort of reformed rake; who ably seconds, in every way open to him, the designs of his cousin the Emperor, while loyally and cordially supporting his authority.

JAPANESE EXHIBITION.

A SINGULAR cargo of curiosities has just been brought to the metropolis from Japan, one of the most sealed countries of the globe; and the rarity of whose productions beyond its own pale, reminds one of the disgust of the Citizen of the World at the meanness of the Dutch merchants, through whose covert dealings we have hitherto been accustomed exclusively to receive *quasi* specimens of Japanese Art and Manufacture.

The Collection was opened to the public, at the Gallery of the Old Society of Painters in Water Colours, in Pall-mall East, on Monday last; and it is said to be the first direct importation that has ever taken place to this country; one European ship, belonging to a Dutch merchant, having permission to trade annually with Japan. The articles consist of tables, cabinets, boxes, &c., japanned upon wood; inlaid with pearl and enamel; distinguished from the paper mâché of this country by its extreme lightness and smoothness, and absence of painting, as much as by the peculiarity of the designs, which are in most cases exceedingly graceful. There are also some embellished with very beautiful designs in coloured straw, a kind of ornamentation peculiar to the Japanese, and of which the cabinet, with the birds in our Engraving, is one of the best specimens. The bronzes are rare and mostly antique: there two largest bronze vases, which are very pure in form, and are shown on the table in our Illustration, we understand, are purchased for the Museum of Practical Art, at Marlborough House; as also a very beautifully ornamented glove-box, some boxes of the red and green lacquer, which are exceedingly scarce, and a small table ornamented with silver. The porcelain, of which there is a considerable show, consists of vases and water-bottles of elegant forms, and some of a grotesque nature, cups, &c., of uncommon lightness and transparency, some of them very nicely decorated; round many a bamboo cabinet has been woven with impervious money, considering the thickness of the cup being no greater than that of an egg-shell. The tall vase waterbottle and cups on the table in our Illustration has been selected as fairly representing this department of the Exhibition. The last-named is fine and ingenious in shape and pattern, and all of it executed in bamboo.

There are also some silk dresses and wrappers, very soft and lightly wadded, which are worn by the Japanese nobles; and on the walls are pictures of Japanese of all ranks—both men and women—in a variety of costumes, of which that of a bride, and a female walking with one of the familiar parasols commonly used in that country will be seen in our Engraving; which also contains one of several screen, on which are depicted the houses and domestic habits of the people. In the left hand ground of the Illustration is an inlaid wardrobe, purely Japanese; the forms only of most of the furniture being evidently of European origin, though the decoration, in all cases, is wholly their own. The table in the centre is one of the best: the top is decorated with a very graceful design, inlaid in pearl; the claw being of a novel form, consisting of a representation of three flying foxes, the wings of which form the support. There are also tables, supported by monkeys and fish; puzzle-boxes of a variety and a quaintness of design, which is far superior to that in general use. Altogether, it forms a very curious collection; and, no doubt, from the interest recently excited by the United States' Expedition to Japan, it will be very attractive.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The warlike attitude which both England and France have taken in regard to the Russo-Turkish question has given rise to a variety of rumours in reference to the future. We need scarcely observe that the value of Consols has been severely tested, this week; nevertheless, in present low range of prices both for cash and for the numerous account buyers of Stock, the quotations have not suffered to any extent. The leading figure for the Three per Cents has been 90½ ⅞. There has been a steady though not to any great demand for money; as the supply in the hands of the private bankers, as well as in those of bill-brokers, has continued large, no advance has been noticed in the rates of discount. First-class Paper, at from one to two months to run, has been readily discounted at 4@5 per cent. In the Bank of England the rate of discount Bullion is rather on the increase; but, in Paris it is still rapidly declining, although large sums have been lately drawn from that country.

During the week we have received about £280,000 in gold from Australia and two parcels of specie from the United States. It is obvious—when we consider that the balance due to this country from America is little short of £25,000,000 that future imports will be on a liberal scale; but we are of opinion that, owing to the immense supplies of grain and flour which have been purchased for shipment to England, we shall shortly be compelled to forward both gold and silver rather largely to the United States to meet the necessary demands upon us. The whole of the Continental Exchanges are against the country.

On Monday, the Foreign Stock Market was very dull. The Three per Cent Reduced remained at 90½; the New Three per Cents, which were the Account Stock, left off at 90½ ⅞; Three per Cents, 90½; and the New Two-and-a-Half per Cents, 71¾. Long Annuities, 1860, were 5⅛; Exchequer Bills, 5s to 3s. prem. The Bank of England, on Tuesday, was unchanged. The Three per Cents opened at 90⅞ ⅞, the Three per Cents Reduced at 90⅝ ⅝, and the New Three and a-Quarter per Cents at 99⅜ ⅜. Long Annuities sold at 5⅛-16. In the Stock Exchange, on the same day, Consols, South Sea Old Annuities marked 103¾, and India Stock, 255. The amount of business doing was unimportant. The Three per Cents Reduced were officially quoted at from 90⅝ to 90⅞; the New Three per Cents Quarter per Cents, 91½ @ 92¾. India Bonds sold at 3s. to 5s., and Exchequer Bills, 10s. to 13s. premium. On Thursday, Consols were steady, at 90½ ⅝ ⅜ ½; the Three per Cents Reduced, 90½ ⅝ ½; and the New Three and-a-Quarter per Cents, 99 to 99½. Exchequer Bills advanced to 15s. and 14s. premium.

Miscellaneous Securities have ruled dull, but no change of importance has taken place in prices. Australasia Joint-Stock Bank Shares have been done at 75, Chartered Bank of India, Australia, and China, 41, London Chartered Bank of Australia, 14½; London Joint Stock, 22, Oriental Bank Corporation, 44; South Australia, 4½; Union of Australia, 71½. Australian Agricultural have marked 37½; Ditto, Royal Mail, 23 ¾; Crystal Palace, 6; Ditto, New, 4¾; London Docks, 104; Netherland Land, 2; Peel River Land and Mining, 4 to 4¼ dis.; Portland Iron Company, 2¾ ex div.; Scottish Australian Investment, 2¼; Van Diemen's Land, 1¼; West London Waterworks, 139; Grand Junction, 72; Southwark, and Vauxhall, 89¼; West Middlesex, 110 ex div.; Hungerford-bridge, 12; Waterloo, 5¼; Vauxhall, 2¼; Albion Insurances have sold at 95; Atlas, 20¾; Crown, 138; Globe, 140¾ ex div.; Guardian, 16¾; Imperial Fire, 270; British Commercial, 20; Pelican, 45; Phœnix, 186; Rock, 74; Royal Exchange, 240; Sun Life, 65; General Screw Steam-shipping Company, 1¼; Peninsular and Oriental Steam, 8¼ to 82.

Foreign Bonds have ruled very little attention. Brazilian Five per Cents have been done at 97; Mexican Three per Cents, 22¾; Peruvian Four-and-a-Half per Cents, 66¾; Portuguese Four per Cents, 38; Russian Five per Cents, 103¾; ditto, Four-and-a-Half per Cents, 90; Sardinian Five per Cents, 88¾ to 87; Spanish Three per Cents, 40; Dutch Four per Cents, 92; and Dutch Bonds, 88¾.

Advices from St. Petersburg state that a large issue of new paper money—to the extent of £10,000,000 sterling—is about to take place, to meet the expense of the war.

Railway Shares have been in a depressed state, and prices have further given way. The total "calls" for the present month are £1,021,504. In February, last year, they amounted to £636,146; in February, 1852, £856,911; and in February, 1851, £1,349,830. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS. Aberdeen, 19¾; Caledonian, 51¼; Dublin and Belfast Junction, 4¾; Eastern Counties, 13¾; East Lancashire, 63; Great Northern, 83¾; Ditto, A Stock, 60½; Ditto, B Stock, 107¾; Great Western, 61¾; Lancashire and Yorkshire, 63; Leeds Northern, 12; London and Blackwall, 7¾; London and Brighton, 97. North-Western, 101¾; Manchester, Sheffield, and Lincolnshire, 21¾; Midland, 61¾; Norfolk, 46; North British, 31; North Staffordshire, 11; ex div.; Oxford, Worcester, and Wolverhampton, 39¾; Vale of Neath, 14¾; Waterford and Limerick, 2⅝; York, Newcastle, and Berwick, 63¾; Ditto, Extension, 11; York and North Midland, 45¾.

LINES LEASED AT FIXED RENTALS.—London and Greenwich, 12¾; South Staffordshire, 7¾.

PREFERENCE SHARES.—East Anglian, 2¾ ex new; Great Northern, Five per Cent, 119; Ditto, Redeemable at Ten per Cent prem., 109; Great Western, Five per Cent, 64; Midland, Four and-a-Half per Cent, 104.

FOREIGN.—East Indian Extension, 1¾; Luxembourg, 8; Ditto, Railway, 5⅝; Ditto, Canal, 1¾; Northern of France, 29; Ditto, 220 Bonds, 12¾; Paris and Lyons, 29¾; Paris and Strasbourg, 28¾; Royal Danish, 8¾; Sambre and Meuse, 3, West Flanders, 3¾.

In Mining Shares so little has been doing that the quotations must be considered as almost nominal. Cobre Copper have been 43; United Mexicans, 3¾.

Friday Evening

A full average business has been doing in the Consol Market to-day, and prices have been on the advance. The Three per Cents Reduced have been done at 91¾; the Three per Cent Consols, 90⅝ 91; and the New Three-and-a-Quarter per Cents, 99¾ ⅞. Consols for Account, 91. Bank Stock, 215. India Bonds, 2s. to 6s.; Exchequer Bills, 11s. to 14s. prem.; Long Annuities, 5 3-16. Foreign Bonds and Railway Shares have been firm.

THE MARKETS.

CORN EXCHANGE (Friday). Notwithstanding that the supply of English wheat on offer in to-day's market was very limited, the country and by retail dealers, the demand for all kinds was in a very sluggish state, at Monday's decline in the quotations. We were well supplied with foreign wheat as grainary, and the fresh arrivals are over 9000 quarters. The amount of business done in most descriptions was limited, on former terms. Floating cargoes were dull. Barley ruled heavy, at the depression noticed on Monday last. There was very little doing in malt, on former terms. Good oats were in request, and quite as dear. Damp parcels were neglected. Beans, peas, and flour were unaltered. The imports of the latter continue good.

ARRIVALS.—English: Wheat, 1,040 quarters; malt, 1,370; oats, 1050; flour, 760 Irish: oats, 30 [illegible] quarters; malt, 1 quarter; oats, 1,030 sacks; 1,350 barrels.

English.—Wheat, Essex and Kent, red, 42 to 45s.; ditto, white, 47s. to 49s.; Norfolk and Suffolk, red, 40s. to 42s.; ditto, white, 44s. to 46s. per 480 lbs. Rye, 30s. to 31s. Barley, 24s. to 26s.; distillers' ditto, 29s. to 32s.; malting ditto, 42s. to 47s.; Lincoln and Norfolk, 44s. to 47s.; Grinding ditto, 34s. to 37s. Kingston and Ware, 50s. to 52s. Oats, Yorkshire and Lincoln, 21s. to 23s.; Scotch, 22s. to 24s.; Irish, 19s. to 20s.; ditto, white, 20s. to 23s.; Cork, 19s. to 20s.; ditto, white, 20s. to 23s.; Youghal and Cork, 18s. to 20s.; ditto, white, 20s. to 23s.; Galway and Sligo, 18s. to 20s.; ditto, white, 20s. to 23s.; potato ditto, 20s. to 22s.; Dublin, Belfast, and Londonderry, 20s. to 23s.; ditto, white, 23s. to 25s.; potato ditto, 22s. to 24s.; grey peas, 34s. to 36s.; maple, 36s. to 38s.; boilers, 42s. to 44s. per quarter. Town-made flour, 42s. to 43s.; Suffolk, 38s. to 40s.; Stockton and Yorkshire, 36s. to 38s. per 280 lbs. *Foreign.* Wheat, 40s. to 44s.; Barley, 26s. to 28s.; Oats, 20s. to 22s. per barrel.

[illegible] Baltic crushing, 30s. to 32s.; Mediterranean and Odessa, 34s. to 36s. per 480 lbs. Rye, 30s. per quarter. Barley, 24s. to 26s. per malting ditto, 30s. to 32s. Beans, 34s. to 36s. per horse ditto, 34s. to 36s. per bushel. English rapeseed, £30 to £32 per last of ten quarters. Linseed cakes, English, 10 to £10 15s.; Foreign, £9 to £9 10s. per ton. Rapeseed cakes, £6 10s. to £7 per ton. Linseed, 54s. to 56s. per quarter. English clover-seed, red, 52s. to 58s.; ditto, white, [illegible]

Trade.—The stock of wheat[illegible] in the metropolis are from 11d. to 11½d.; of household ditto, 9½d. to 10½d. per 4lb. loaf.

TEA.—Our market is firm, and prices have a downward tendency. Common so and congou has changed hands at 1s. 6½d. to 1s. 7d. per lb. The imports continue on a liberal scale.

SUGAR.—Our market is firm, and prices of last week's quotations have given way 6d. to 1s. per cwt. Fine yellow Barbadoes 30s. to 32s. 6d.; mid. to good, 33s. to 33s.; fine yellowish Demerara, 33s. 6d. to 34s. 6d.; fine yellow, 35s. to 36s.; mid. to mid. yellow Jamaica, 34s. to 35s.; fine brown, 33s. 6d.; good yellow Mauritius, 32s. to 33s.; low to fine grey, 30s. to 32s.; fine white Benares, 38s. to 39s. 6d.; fine grocery yellow, 36s.; brown, 34s. to 35s. per cwt. Refined goods are steady. Brown lumps, 44s. 6d.; and low to fine grocery, 46s. to 48s. 6d. per cwt.

COFFEE.—A few parcels of good ord. native Ceylon have changed hands, at 1s. to 30s. per cwt.; but plantation kinds have given way fully 1s. per cwt.

RICE.—This market is firm, and all kinds are lower to purchase.

PROVISIONS.—Both English and Irish butter is dull, and lower to purchase. Foreign qualities are rather dearer, but the demand is by no means active. The bacon market is heavy, at is less money. Lard, and all other kinds of provisions, are selling on former terms.

TALLOW.—Since our last report, the demand has been to a moderate extent. P.Y.C., on the spot, is selling at 63s. to 63s. 3d. per cwt. Town tallow, 63s. 6d. net cash; rough fat 3s. 9d.

OILS.—Linseed is quoted at 34s. per cwt. Cakes are in fair request. Turpentine leaves on scarcity, at 100 late decline.

SPIRITS.—Rum is very brisk, and dearer. Proof Leewards, 2s. 7d. to 2s. 8d.; East India, 2s. 6d. to 2s. 8d per gallon. Brandy is higher. Sales of Cognac, best brands of 1851, 9s. 10d. to 10s.; 850, ditto, 9s. 1½d. to 9s. 3d. per gallon. Genevas continue to command more attention.

Hay and Straw.—Meadow hay, 43 to 85s.; clover ditto, 47s. to 86s.; and straw, 21s. to 30s. per load.

HOPS.—Although the supplies are increasing, dealers generally are firm, as follows: Kent and Essex Pockets, 90s. to 130s.; Sussex, ditto, 84s. to 120s.; Yearlings, 40s. to 140s. per cwt.

SEEDS.—[illegible]; Cosforth, 27s.; Hadley, 28s.; Lambton, 28s 6d.; [illegible] 2 per ton.

POTATOES.—[illegible] being in most kinds of hops, at our quotations. The imports this week are—120 bales from Ostend, and 110 ditto from Glocksandt. Mod and East Kent, £3 15s. to £15 15s.; Weald of Kent, £3 15s. to £6 15s.; Sussex, £2 12s. to £3 3s.; Farnham, £4 4s. to £6 6s.; Sussex, £2 12s. to £3 3s. per cwt.

Smithfield (Friday).—The markets are very moderately supplied with beasts, both as to number and quality. All breeds moved off slowly, at Monday's currency. Prime Downs and sheep were scarce, and in fair request, at extreme rates. Otherwise, the supply of sheep was large, but inferior in point of quality. Calves were in fair supply and fair request, on former terms. Pigs met a slow sale, at our quotations. Milch cows sold heavily, at from £14 to £19 10s. each.

PRICE OF MEAT [illegible] to sink the offals:—Coarse and inferior beasts, 3s 4d to 3s. 6d.; second quality ditto, 3s 8d to 3s. 10d.; prime large coarse woolled ditto, 4s. 2d.; prime Scots, 4s. 4d.; coarse and inferior sheep, 3s. 8d. to 3s. 10d.; second quality ditto, 4s. to 4s. 2d.; prime coarse-woolled ditto, 4s 6d. to 4s. 8d.; prime Southdown, 5s.; large coarse calves, 4s. 2d. to 4s. 4d.; prime small ditto, 4s. 8d. to 5s.; large coarse pigs, 3s. 4d. to 3s. 6d.; small ditto, 3s. 8d. to 4s.

CHARLES LEWIS GRUNEISEN, Secretary.
31, Norfolk-street, Strand, London, Jan 14, 1854

FIFTEENTH PUBLIC DRAWING.—The Shareholders of the CONSERVATIVE LAND SOCIETY are informed, that the Fifteenth Public Drawing of Shares, under the Society's Estates, is fixed for SATURDAY the 11th of FEB., at noon precisely, at the offices, 31, Norfolk-street, Strand. Care will be taken up to the time of placing the final numbers of the uncompleted Shares in the Wheel, and the Wheel will be turned by the Secretary and a Shareholder unknown to him, and the Drawing. Members are respectfully requested in order to find [illegible] Pass Books, or to Give Agents, to be sure that their subscriptions are not in arrear up to the date of the Drawing.
CHARLES LEWIS GRUNEISEN, Secretary.

FIVE PER CENT INTEREST.—The CONSERVATIVE LAND SOCIETY is Enrolled under 6 and 7 Will. IV., cap. 32, and was Established in February, 1852, for the benefit of Working Members of all Classes, in every County, to obtain the Franchise of Freeholders, by the safe and easy investments of the Society. There is not the slightest partnership liability, and the interest of Shareholders wishes to draw out his money, the prompt withdrawal of shares is secured. A completed share, bearing Five per Cent Interest, costs £25 5s. 8d., and is immediately entered on the Order of Rights, to select Lots on the Society's Estates; but the payment of subscriptions is strictly optional. A year's Subscription and Fees on a single share, £1 5s. 8d., bearing Five per Cent interest. Monthly payments, 8s. per share, and in every three months, for quarterage. The first payment of a year's subscription is 12s. 8d., including 4s. Entrance Fee and Pass-Book, and 1s. quarterage. Prospectuses containing the First Annual Report of the Executive Committee, and full statement of the Society may be had of
CHARLES LEWIS GRUNEISEN, Secretary.

LITHOGRAPHY.—Messrs. DAY and SON, Lithographers to the Queen, having built suitable and most extensive premises, large and lofty, more appropriate than any other establishment in the world, are now prepared to carry out with greater perfection and despatch, and more economically, all those higher branches of artistic Lithography for which they have so long been pre-eminent. Colour-printing, as perfected by them, is rendered available, from the rapidity and economy with which it is produced, for every purpose of illustration, either fac-similes of pictures or book plates: likewise to the production of patents-books, show cards, &c. Every description of engraving, drawing, plan work, and all kinds of commercial work executed for professional persons or the trade, with a rapidity and superiority of style hitherto uncombined. Estimates given.—17, Gate-street, Lincoln's-inn-fields.

NEW MUSIC, &c.

Price 3s., postage free,
THE ORPHAN'S PRAYER. By GEORGE LINLEY. This beautiful Composition was written, composed, and presented to the Commercial Travellers' Orphan School, by the Author
Published, for the exclusive benefit of that Institution, by JULLIEN and Co., 214, Regent-street, London.

PASSED AWAY to HEAVEN—JOYFUL, JOYFUL SPRING—THE SUMMER AND AUTUMN OF LIFE ARE PAST—THE WINTER OF MY HEART.—IN THIS BLEAK WORLD OF WINTER.—WALLACE'S three favourite songs, within the compass of a moderate voice, are now among the best English songs that have been published.—Athenæum, No. 1349
CRAMER, BEALE, and CO., 201, Regent-street, London

Each volume contains about 36 Glees.—Published at the MUSICAL

(Continued from page 98.)

rather than to advance its interests; and it would be as a counterpoise to the damaging intervention of such maladroit exponents of Roman Catholic policy that Lord Castlereagh, and some others who resemble him, would become useful to their country as well as to their church. The family to which the noble Lord belongs numbers among its ancestors martyrs to the cause of that church. The holder of the Earldom in the reign of James II. forfeited, for himself and his family, the titles and estates, by reason of his adherence to the cause of James. The attainder, it appears was not reversed; but the fifth Earl from him of whom we speak, was invested with the titles enjoyed by his predecessors. The next holder after him also enjoyed an English barony, but on his death the title became extinct.

MR. THOMSON HANKEY, JUN.,

SECONDER OF THE ADDRESS IN THE HOUSE OF COMMONS.

This gentleman is one of the high mercantile aristocracy of the city of London, of whose position it is remarkable that they should so often find a difficulty in entering Parliament, and then only through small boroughs, while mere pretenders, without a tithe of their power, influence, or character, command the votes of thousands in the boroughs attached to the metropolis. Mr. Hankey is the son of Thomson Hankey, Esq., of Portland-place, by Martha, the daughter of Benjamin Harrison, Esq. He was born at Dalston, near London, in the year 1805; and he married, in 1830, Miss Apolline Agatha Alexander, half-sister of the late Lord Chief Baron Alexander.

He was elected at an early period of his mercantile career a Director

MR. WARNER, M.P. FOR NORWICH.

of the Bank of England; and in 1849 was selected by the Court to fill the office of Deputy-Governor; and, after two years' service in that capacity, he was elevated to the important position of Governor of the Bank of England. The urbanity of his manners rendered him deservedly popular among his colleagues; and his assiduity in business earned for him the respect of all with whom he came officially in contact. During his tenure of office, many important reforms and improvements were introduced in the administration of the Bank; and the great interest which he took in instituting a reading-room and library for the use of the officials and clerks of the establishment, will cause his name to be remembered by those on whom such a benefit has been conferred.

Although devoted to his commercial pursuits, Mr. Hankey has always taken a lively interest in City politics; and his name will occur to the reader in connection with public meetings, but only on very important occasions. He is a decided Liberal, and a supporter of the present Administration in regard to Free-trade and Parliamentary Reform; but he goes beyond them in their collective capacity, in so far as he is favourable to the Vote by Ballot.

Mr. Hankey made an effort, in 1852, to enter Parliament. In June of that year he, together with his near relative, Mr. John Alexander Hankey, contested Boston against Mr Heathcote and Mr E. B. Cabbell. He was unsuccessful, polling only 148 votes, while his relative polled 487—the lowest number of the successful candidates being 490. In June, 1853, he contested Peterborough against Mr. George Hammond Whalley; who had, in the November previously, defeated Mr. George Cornewall Lewis, but was unseated on petition. At the new election, Mr. Hankey polled only 215 votes, to 238 polled by Mr. Whalley but, on an inquiry before a committee, 24 votes were struck

MR. THOMSON HANKEY, M.P. FOR PETERBOROUGH, SECONDER OF THE ADDRESS TO HER MAJESTY IN THE HOUSE OF COMMONS.

off Mr. Whalley's poll, and Mr. Hankey was declared duly elected. It appears, however, that his antagonist is returning to the charge; for, on the opening night of the session, Mr. Bankes presented a petition, setting forth that there had been, amongst other things, an informality in the preceding decision, the usual fourteen days for petitioning not having been allowed; and praying for permission again to present a petition against the return of Mr. Hankey, as if that decision had not taken place.

Mr. Hankey has always supported Liberal politics, and has been a strenuous supporter of the principles of Free-trade. On that account, as well as from his position in financial matters, he was selected by Government to second the Address to her Majesty on the present eventful meeting of Parliament. The speech which he made on that occasion justified the choice of the Government, and gives promise of his proving an efficient and useful member of the Legislature.

MR. WARNER, M.P.

Mr. Edward Warner, who has sat for Norwich since July, 1852, is the eldest son of the late Edward Warner, Esq., of Walthamstow, in Essex. He was born at Walthamstow, in 1818; and married, in 1848, Maria, the daughter of Thomas Carr, Esq., of New Ross, in the county of Wexford, the widow of Mr. Hibbetts.

Mr. Warner was educated at Wadham College, Oxford, where he took first-class honours in mathematics, in 1840, and obtained the two open mathematical scholarships in 1841. In 1844 he took his degree of M.A. He was called to the bar at Lincoln's-inn in the year 1850, but he does not practise. He is a magistrate of the county of Essex.

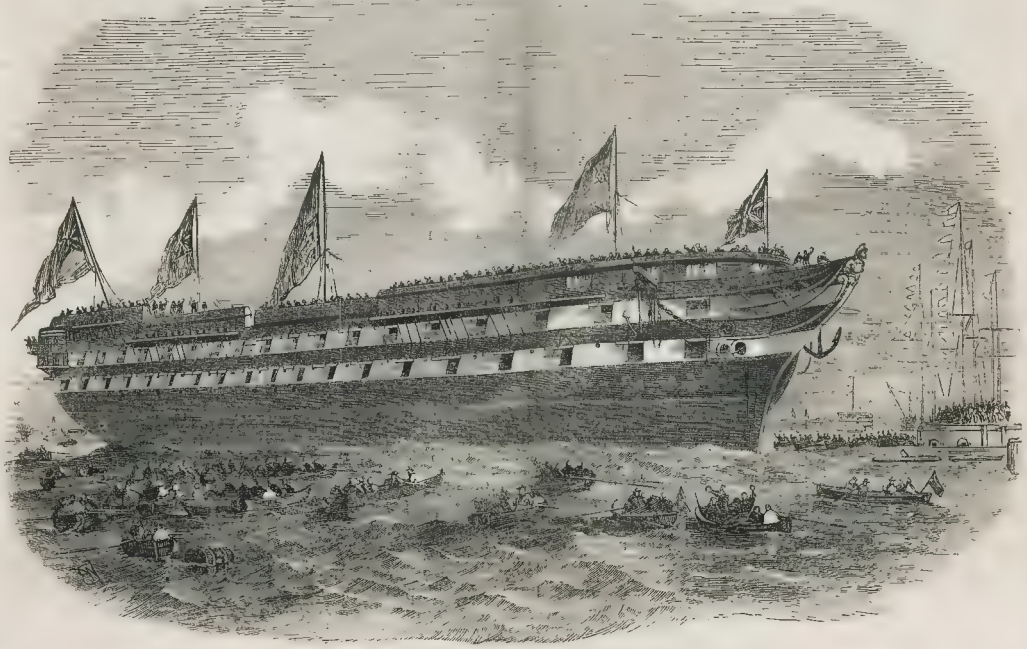
Mr. Warner is a thorough-going Liberal—a Free-trader and financial reformer, and an advocate of an extension of the suffrage, of the ballot, and of a reform of the Established Church.

THE HON. A. G. J. PONSONBY, M.P

This gentleman, who has but little exceeded his majority, has already been in Parliament a year and a half, during which time, however, he has taken but a small share in political discussion. As his name almost imports, he is a Whig, but he carries his Liberal principles within the confines of what is termed Radicalism, in so far as he is not only favourable to the Ballot for electioneering purposes, but has voted for it in the House of Commons. Mr. Ponsonby is the youngest son of the first Lord de Mauley, who was for some years a member of the House of Commons, and was elevated to the peerage in the year 1838. The mother of Mr. Ponsonby is the Lady Barbara, daughter and only child of the fifth Earl of Shaftesbury. Mr. Ponsonby was born in 1831, and is unmarried. He is a Lieutenant in the Grenadier Guards. He is

THE HON. A. G. J. PONSONBY, M.P. FOR CIRENCESTER.

also a Deputy-Lieutenant of Hampshire, to which office he was nominated in December, 1852. With the sole exception of his support of the Ballot, Mr. Ponsonby's political views assimilate with those of the leading Whigs. He is a Free-trader, and prepared to give an extension of the franchise. Although not in the habit of speaking in Parliament he has already given evidence of ability in this respect. He was first returned for Cirencester, in July, 1852, and he continues to sit for that borough.



LAUNCH OF "THE HANNIBAL," STEAM SHIP FROM HER MAJESTY'S DOCKYARD, AT DEPTFORD.—(SEE PAGE 98.)

SUPPLEMENT TO THE

ILLUSTRATED LONDON NEWS

No. 667.—VOL. XXIV.] SATURDAY, FEBRUARY 4, 1854. [WITH TWO SUPPLEMENTS, 1s.

OPENING OF THE PARLIAMENTARY SESSION BY HER MAJESTY THE QUEEN.

THE second Session of Queen Victoria's fourth Parliament was opened, and by her Majesty in person, on Tuesday the 31st ult.

The real importance of that brilliant though sedate spectacle is to be found in the fact that the head of the State was proceeding through the streets of the capital—those streets being crowded by an excited populace—to summon the State to sanction and to strengthen those measures which she had taken, upon the advice of her Ministers, but in the absence of Parliament, to resist the aggression of one of her allies upon another of her allies—those measures leading, in all probability, to a European war, of which, once begun, no man could foresee the result. This great fact is, in our time, a new fact; and in the face of such probabilities, the Session then opened must be pronounced as transcending in importance every other session of the Parliaments called in the present reign. Even were the Russian question not in

OPENING OF PARLIAMENT.—THE NORMAN PORCH.—HER MAJESTY PROCEEDING TO THE ROBING-ROOM, PREVIOUS TO ENTERING THE HOUSE OF LORDS.

presence, there are other circumstances which would render the opening of the session of 1854 an epoch. The speech from the Throne which declared conditional war against the Czar, announced, also a Reform Bill —a measure which may produce as great gradual changes as were produced by the Bill (of which this is a complement and a continuation) of 1832—a measure from which undoubtedly we shall date in our constitutional history. We remember the reign of William IV. solely for the Reform-bill, in the passing of which he was the reluctant agent; and, whatever may be the other memorable episodes reserved by fate, it would so far appear to be certain that posterity will principally commemorate Victoria for the measures which made trade free, and the measure which struck a death-blow at the system, peculiar to our Constitution, of electoral corruption and simultaneous party representation. For still other reasons must we regard and record the initiation of the new Session with no ordinary interest. Fortunately for a people threatened with a great war, and to whom the Sovereign appeals to undertake a great struggle, the Parliament assembled on Tuesday is, in the loftiest sense, a "National Council," since it meets at a moment when "party" has for the present disappeared, if it has not been permanently destroyed; and the curious yet gratifying circumstance is noticeable that this Parliament, whom the Queen, with the national approval, has invited to "Reform" itself, is a Parliament in the first place in unusual accord with the Government, and in the next place is a Parliament in which, so far as the conduct of a war would be concerned, the people would appear to [place the most unbounded—it may be said—unparalleled confidence. That is to say, we have not only a coalition Government, but a coalition House of Commons, in which—national danger impending, and national respectability (by the adoption of a Reform Bill) having to be secured—individual differences are indiscriminately suppressed. Perhaps the theory that "government by party" is the only Government applicable to a mixed Constitution like that of England may be quite sound; but at any rate it is obvious that the Ministers of Queen Victoria are not just now in face of any tangible body to be termed "Her Majesty's Opposition." That there are, and will be, varieties of opinions upon varieties of subjects, is as certain as that there are 654 members of the House of Commons. But the House of Commons is, for the present, without any of those party organisations which indicate the continuance of Government by party. We may return to the ancient ways of watching, or waiting for our freedom, and arranging our prosperity; but, for the present, the National Council is unconstitutionally unsymmetrical—there are no "sides." And such a fact is to Englishmen at such a time a subject for congratulation.

All was not, however, *couleur de rose* in the splendours of Tuesday's ceremonies. There were more people along the line of the Royal procession than have been seen on any like occasion since the Queen went to open the Crystal Palace in 1851—certainly a greater number than have attended any opening of Parliament since the inauguration of her Majesty's first Parliament.

This crowd collected partly because of national excitement in the apprehension of a great European war, but chiefly because of the prevalence of what Lord John Russell termed in the evening of the same day, an "honest delusion"—a delusion, however honest, discreditable to the sagacity and good taste of those who encouraged it. It is undoubtedly a fact that all proper precautions were taken in anticipation of a possible manifestation of unpopularity.

The *whole* of the Horse Guards were out—an unprecedented thing, we believe; and every available policeman that could be obtained by Sir Richard Mayne was drafted to duty along the line of the procession. There was no hissing to an extent to render such precautions necessary; and, on the other hand, there being more people than usual, there was an unusual cheering—the few hisses arousing indignant loyalty. The signs of disapprobation were very partial in the Park; but in Parliament-street they were unmistakenly evident, and the cheering which suppressed them enables the loyal to afford to admit their existence.

In other respects, the procession was as usual. The crowd, respected and "chaffed" the Guards; cheered, with ironical cheers, that special Briton, the Beef-eater; admired the horses of the Royal carriages; and wondered at the beautiful women, beautifully dressed, who, in brilliant equipages, flashed past, on their way to the Peeresses' boxes and the galleries in the House of Lords. When the carriage of the Turkish Ambassador appeared, solitary, and attracting all eyes by the peculiar livery of his servants, he was at once recognised, and, of course, heartily cheered. The scene was a complete political ovation, which will be talked about for months to come at Constantinople and by the soldiers of the army on the Danube. "Will the Russian Ambassador appear?" was a general question; but M. de Brunnow showed his tact, and stayed at home. The liveries of the French Minister were recognised, and his Excellency received a gratifying intimation that the Anglo-French alliance is a highly popular one.

The attendance at the House of Lords was both larger and earlier than usual. Long before the hour appointed for the opening of the doors, a protracted line of carriages connected the Victoria Tower with Charing-cross; and numerous ladies, wisely impatient of the delay occasioned by getting the vehicles up in turn, descended in all their full-dress glory, and made their way on foot to the humble entrance provided for them. The Royal Gallery—by which name is known the magnificent hall through which the Queen passes from the Robing-room to the House, and which is lined on each side with seats, row over row—was very soon filled; and lucky was the new arrival whose good looks, or pertinacity, procured her a seat twenty minutes after the doors were opened, though it was then nearly two hours before the Queen would arrive. Nor were the yet more favoured lady occupants of the North Gallery (that usually set apart for less interesting strangers) much later; and this "highly advantageous locality?" was speedily adorned with a goodly show of youth, beauty, and irreproachable millinery. The body of the House filled somewhat more slowly; but the numbers of Peeresses and their friends at length appeared to be much larger than ordinary, and they even encroached upon the single marginal bench reserved for the ermine bars. The gallery to the left of the throne was also completely occupied, but that on the right was not filled. It only remains to remark, with the utmost respect, that the fair spectators, as usual, looked to far greater advantage at the opening of Parliament than at its close, and the fresh faces and healthy complexions spoke of country rides and sea breezes, rather than of the midnight mazurka and the crowded supper-room.

The Peers were late. There was a large assemblage of Judges (who clustered together in the centre of the House), and several members of the Episcopal Bench. The Ambassadors, as they arrived, did not take their places behind the Bishops, but joined in groups near the Throne, and their various uniforms and glittering decorations helped the striking picture presented by the scene. It was, of course, matter of speculation whether the Russian Ambassador would be present; and searching were the glances directed at each bedizened diplomat, to discover the representative of the Power whose misdeeds were expected to be exposed. But Baron Brunnow, if present (which we doubt), escaped observation. The Turkish Ambassador was there, and came in quite radiantly, having been tremendously cheered by the people.

The distinguished assembly seated itself, the ceremony of packing being performed with considerable dexterity, as well as courtesy, by the much-entreated officials; and a few minutes before two the usual signal was given, and scarfs, opera mantles, and shawls, fell with a gentle rustle. A brief pause, and then came the guns, and then the subdued clangour of the military music. A few minutes, and the picturesque procession, with its heralds, and nobles, and pages, entered—and then the Queen. The entire assembly rose, and remained standing until Her Majesty, having taken her seat upon the throne, graciously requested their Lordships to be seated. The Queen wore a splendid tiara of diamonds and a diamond necklace, a white satin dress, and a train of rich claret-coloured velvet. The ensigns of State, borne by the great officers, were duly posted to the right and left of the Sovereign. The Prince Consort took his seat; and word was given to summon the Commons. The ordinary and somewhat protracted delay ensued, but a trampling of feet and cries of "Order" were heard at last, the tall form of the Speaker appeared at the bar, and the members surged up behind him, and, let us add, manifested a strange lack of self-restraint, frequently causing portions of the Speech to be lost by the noise they made. Once, indeed, an enthusiastic member so far forgot himself as to cry "Hear, hear," at a passage which, it may be presumed, strongly reflected his own political tenets.

Her Majesty then read, with her usual clearness and emphasis, the following Speech:—

"My Lords and Gentlemen,

"I am always happy to meet you in Parliament; and on the present occasion it is with peculiar satisfaction that I recur to your assistance and advice.

"The hopes which I expressed at the close of the last Session, that a speedy settlement would be effected of the differences existing between Russia and the Ottoman Porte, have not been realised, and I regret to say that a state of warfare has ensued.

"I have continued to act in cordial co-operation with the Emperor of the French, and my endeavours, in conjunction with my Allies, to preserve and to restore peace between the contending parties, although hitherto unsuccessful, have been unremitting. I will not fail to persevere in these endeavours; but, as the continuance of the war may deeply affect the interests of this country, and of Europe, I think it requisite to make a further augmentation of my naval and military forces, with the view of supporting my representations, and of more effectually contributing to the restoration of peace.

"I have directed that the papers explanatory of the negotiations which have taken place upon this subject shall be communicated to you without delay.

"Gentlemen of the House of Commons,

"The Estimates for the year will be laid before you; and I trust you will find that, consistently with the exigencies of the public service at this juncture, they have been framed with a due regard to economy.

"My Lords and Gentlemen,

"In the year which has just terminated, the blessing of an abundant harvest has not been vouchsafed to us. By this dispensation of Providence the price of provisions has been enhanced, and the privations of the poor have been increased; but their patience has been exemplary; and the care of the Legislature, evinced by the reduction of taxes affecting the necessaries of life, has greatly tended to preserve a spirit of contentment.

"I have the satisfaction of announcing to you that the commerce of the country is still prosperous; that trade, both of export and import, has been largely on the increase; and that the revenue of the past year has been more than adequate to the demands of the public service.

"I recommend to your consideration a Bill which I have ordered to be framed for opening the coasting-trade of the United Kingdom to the ships of all friendly nations; and I look forward with satisfaction to the removal of the last legislative restriction upon the use of foreign shipping for the benefit of my people.

"Communications have been addressed by my command to the Universities of Oxford and Cambridge, with reference to the improvements which it may be desirable to effect in their institutions. These communications will be laid before you, and measures will be proposed for your consideration, with the view of giving effect to such improvements.

"The establishments requisite for the conduct of the Civil Service, and the arrangements bearing upon its condition, have recently been under review; and I shall direct a plan to be laid before you which will have for its object to improve the system of admission, and thereby to increase the efficiency of the service.

"The recent measures of legal reform have proved highly beneficial, and the success which has attended them may well encourage you to proceed with further amendments. Bills will be submitted to you for transferring from the Ecclesiastical to the Civil Courts the cognizance of testamentary and of matrimonial causes, and for giving increased efficiency to the Superior Courts of Common Law.

"The laws relating to the relief of the poor have of late undergone much salutary amendment; but there is one branch to which I earnestly direct your attention. The law of settlement impedes the freedom of labour; and, if this restraint can with safety be relaxed, the workman may be enabled to increase the fruits of his industry, and the interests of capital and of labour will be more firmly united.

"Measures will be submitted to you for the amendment of the laws relating to the representation of the Commons in Parliament.

"Recent experience has shown that it is necessary to take more effectual precautions against the evils of bribery and of corrupt practices at elections. It will also be your duty to consider whether more complete effect may not be given to the principles of the Act of the last reign, whereby reforms were made in the representation of the people in Parliament. In recommending this subject to your consideration, my desire is to remove every cause of just complaint, to increase general confidence in the Legislature, and to give additional stability to the settled institutions of the State.

"I submit to your wisdom the consideration of these important subjects; and I pray God to prosper your counsels, and to guide your decisions."

At the conclusion of the Speech, her Majesty retired in the same order in which she had entered the house.

After the delivery of the Royal Speech their Lordships adjourned during pleasure.

Their Lordships resumed at a quarter past five o'clock, when the attendance of Peers was numerous. Among those present were the Earl of Aberdeen, the Duke of Newcastle, the Earl of Carendon, the Marquis of Lansdowne, and Earl Granville, on the Ministerial bench; and the Earl of Derby, Lord St. Leonards, the Earl of Malmesbury, Lord Colchester, and the Earl of Cardigan, on the Opposition benches. A considerable number of Peeresses occupied the galleries.

HER MAJESTY'S SPEECH.—THE ADDRESS.

The Lord Chancellor having read the Speech delivered by her Majesty,

The Earl of Carnarvon, in a maiden speech of great promise, entered at some length upon a review of our foreign and domestic affairs. He lamented the causes which had led to the existing state of things in the East, but he was sure that if it were found necessary to employ force in support of our allies, the country would find men able to defend its interests and its honour upon the principles laid down by such men as Wellington and Beresford. He cordially congratulated their Lordships upon the just and honourable union which prevailed at this moment between this country and France. Recurring to our domestic affairs, the noble Earl reviewed in succession the topics suggested in the Speech, and expressed his satisfaction that they were about to be brought under the consideration of Parliament.

Earl Ducie seconded the Address.

The Marquis of Clanricarde rejoiced that, in the present very critical state of Europe, there was no probability of an amendment to the Address, as moved and seconded by the two noble Earls. For his own part, he rejoiced to be able to concur in many of the topics suggested in the Speech from the Throne, particularly in those relative to Parliamentary Reform; but, with respect to Foreign Affairs, he felt [illegible] upon—however painful it might be to his own feelings—to express opinions he held with respect to the policy of her Majesty's Government. He believed they had made unremitting exertions to maintain peace; but those exertions had not conveyed a true notion of what was the opinion and determination of the Government. Up to this moment these had been concealed alike from Parliament and the country. Even in the Speech itself, not one word was said to show whether we were at peace or war. Were we really at war; and, being at war, why were we afraid to say so? Certainly, it was most unfortunate that the Government had not thought proper to define our position, although they had recommended an increase to the army and navy. He complained that information had not been given to the country upon these subjects until we found ourselves in the position of being at war. He characterised this policy as the result of a compromise for the sake of the Cabinet; and asserted that no policy had ever been attended with more want of success. The people of the Continent had, in consequence, conceived a very low opinion of the character of the English nation—that we were a nation not to be trusted by friends or feared by foes—willing to wound, but yet afraid to strike." We were on the brink of a great war, but a war which a more firm and direct attitude on our part might have prevented. He reproached the Government with not having been more watchful of the aggressive policy of Russia upon Turkey, and contended that they could not plead ignorance, seeing that such had been called for by the public press, and, in February last, by the French Government itself. No man could doubt the real character of Prince Menschikoff's mission to Constantinople. Was not the fact of Colonel Rose having sent for the fleet enough to call their attention to the subject? If a straightforward question had been put to the Emperor of Russia as to his intentions at that time, he had no doubt that a straightforward answer would have been given, and that the answer would have been satisfactory. But if nothing but a "general assurance" was given in reply, he was clearly of opinion that we should not ourselves declare our intentions in a straightforward way. He regretted, therefore, that our Government had not, on this occasion, acted with energy; but, unfortunately, vigour and decision appeared to be the French Government had with respect to this affair, had been checked and discouraged by her Majesty's Ministers. He might be told that Austria was acting with us. He wished to know whether it was under the advice and with the approval of Austria that our ships had been sent into the Black Sea? By the last accounts it appeared that propositions had been sent to St. Petersburg for further negotiation. He did not expect a favourable reply to these propositions; but he must say that if the Emperor of Russia did not accept them he greatly misunderstood his own interests, for that, he believed, to compel Turkey to accept a renewal of the treaties which had led to the present difficulties. But if Russia were mad enough to force us into war, it certainly must not be for the renewal of such treaties, but for placing the relations of the East upon a footing which would secure permanent peace.

The Earl of Clarendon: My Lords, I think my noble friend, who has just sat down, would have acted more fairly—although, possibly, not more conveniently to himself—if he had waited for the production of those papers which her Majesty has promised shall be laid before their Lordships without any delay, and which, before your Lordships separate this evening, it is my intention to place upon the table (Hear). It is only another proof of that inconvenience of which I have so much in the course of the last few months—the inconvenience of not being able to lay all the information on this subject before the country. No one can have felt more that inconvenience more than myself; no one knows better than myself that many misrepresentations might have been prevented by greater publicity. But we thought it right not to depart from the established practice of this country. The Government is amenable to Parliament alone for its conduct. We therefore thought it right to abstain from following the example that has been held out to us of the conduct of other Governments which have no Parliaments to account to (Hear). We thought it better to abstain from producing, from time to time, the information which I am about to lay on the table, although it might have satisfied the public at the time, and to a certain degree have been advantageous to ourselves; but, at the same time, it might have been disadvantageous to the cause of peace. And, although I fear I may stand still lower in my noble friend's estimation than I now appear to do, I am not ashamed or afraid of saying that the maintenance of peace has been a great and the dearest object we have had in view (Cheers). My noble friend seems to think that we have shown an abject determination to avoid war. My Lords, we have done no such thing. But we have felt it our duty to stop short of no sacrifice except that of national honour or of not fulfilling our engagements (Cheers). We have felt that it was our duty to this country, because of those numberless social, political, and commercial interests that have grown up, and have extended for a very great period, during a peace of unexampled duration. We have felt it due to other countries—countries which, like ourselves, had turned to account the blessings of peace, and which must be desirous therefore, honourably to maintain it; for, my Lords, it must be remembered that if this peace, which is of unexampled duration, once broken, be once disturbed, it may be followed by a war almost without parallel (Hear, hear, hear), and as unexampled as it. You must remember that those doctrines which convulsed Europe in 1848 are still cherished by vast numbers; and that they having lost none of their strength, a war now would be no ordinary war. Europe, in such a war, would be the battle-field not only of contending armies but of contending opinions; and we, to whom such mighty interests are entrusted, would have been worthily thought unmerciful of their important trust if we would have disqualified ourselves when we asked for support in a necessary war, if we could not have then shown that we had first exerted and exhausted every means of maintaining the blessings of peace (Hear). But, my Lords, if we are destined to do so, if it is appointed for us that we are to embark on that state of things, then I must say that never was the tranquillity of the world more wantonly disturbed than it will have been in the provocation of that necessity (Cheers). Never, also, I must say, was there a moment when it was the duty of France and England to stand up together, formally to oppose aggression and support the just cause of the weak against the strong (Hear, hear). My noble friend thought that we had placed the most undue confidence in the assurances of Russia (Hear, hear). I admit that we did put confidence in those assurances—because they were not only what we asked, but, in addition, were all that we could desire. We received—not evasive answers, but direct ones. Were we to receive them with suspicion? In my humble opinion, a policy of suspicion is never a wise or an expedient policy; and on this occasion there was no ground for suspicion. The Emperor of Russia had given abundant proof of a desire to maintain the peace of Europe. Over and over again he had affirmed that the Ottoman Empire was a European necessity, and that the maintenance of it was a fundamental principle of European policy (Hear, hear). And certainly, if he had desired the overthrow of the Ottoman Empire, and the aggrandisement of Russia at the expense of Turkey, what a year 1853 would have been suited his designs, and would have been more likely to have seen their attainment. I can assure your Lordships that whatever the noble Marquis may think, that, up to the end of August, we had no reason to believe there existed any other cause of difference between Russia and Turkey, except that connected with the Holy Places (Hear, hear)—a question which closely concerned France and which the Porte, by endeavouring to please both Powers, had given some cause of complaint (Hear, hear). But though the matter could only indirectly affect England, her good offices towards its adjustment were offered, and were accepted; and the difficulty about the Holy Places was settled thereupon. It was only after that settlement that we, for the first time, became aware that other and ulterior objects were sought to be attained by Russia (Hear

r, hear). Not but that it is perfectly true that, during the time pied in those negotiations, rumours of various kinds reached as to treaties which, it was said, had been proposed under nces; and as to large armies which, according to the same rority, were being prepared by Russia. Any person, aware of ficial secrecy with which all affairs are conducted in Rus- and of the still greater exaggerations which distinguish all Constantinople, could tell your Lordships the value of these, with what caution and what distrust they should be received. But ther these rumours were true or untrue, as soon as they reached us y were every one made known by us to the Russian Government; we asked a categorical answer to our inquiries upon them (Hear); e answer we received was a plain and unqualified denial to all the ems we had received (Hear, hear). We were assured that the mis- of Prince Menschikoff had reference to nothing but the Holy ces (Hear, hear)—that he had great latitude allowed him in the ling of that question, and, in fact, might almost settle it in what he pleased; but that it was all he had to settle. Subsequent events ly prove the correctness of these statements; for it may seem that ugh he, in his character as head of the Orthodox Church, had gone her in his demands than the requirements of his mission justified, he , at length, abandoned these particulars, and assented to a note ch, though still unacceptable to the Porte, was certainly much re- ed in regard to its stipulations. When, however, he quitted Con- tinople, he quitted it under circumstances menacing to the ce of Turkey and the interests of Europe. It was impossible us to tell where some of these armies collected on the con- s of Turkey might not be marched to. We, therefore, immer- diately ordered her Majesty's fleet to proceed to Besika Bay, where it remained by the French fleet (Hear, hear). Your Lordships are aware t after Prince Menschikoff had withdrawn, Count Nesselrode sent k his note to Constantinople with a threat that, unless it was signed hy days, the Principalities should be occupied. To that demand are aware that a refusal was the reply, and that thereupon Count selrode's threat was carried into execution. My noble friend seems like with that the fleet had been ordered when the first Russian soldier ed the Pruth, all that has followed, or is likely to follow, might have n prevented. But the noble Lord must consider that, in entering the ncipalities, the Russians were either sincere or insincere in the as- rances and protestations made by them to Europe, that that occupation ld be but momentary that they would hold the Principalities only material pledge for the fulfilment of the demands then made by gia upon Turkey; and that the evacuation of them was the wish desire of the Emperor of Russia himself. In either case, it was in interests of peace, and in the interests of the Sultan, to allow further ortunity for the ascertainment of the real issue, and for the discovery ome form of note distasteful to neither party, and sufficient to carry effect the intentions of both. Austria and Prussia entirely agreed h us as to Russia's occupation of the Principalities, which they con- ved not only unjust and dangerous as a precedent, but as dangerous themselves, and menacing to the peace of Europe. They therefore ed, at this crisis, to enter into the negotiations, and to assist in an mpt at the settlement of these differences; and they earnestly reated any declaration of war on the part of the Sultan l all peaceful means of settling his differences with Russia been finally exhausted (Hear, hear). And, whatever the le Lord may think, I doubt not that your Lordships will own it of great importance that the four Powers should be thus united. Austria and Prussia should join with England and France in ing Russia in her wrong (Cheers), and in leaving Russia no excuse ld she not be able to reckon on that support from Austria which more than one reason, she might have expected (Hear, hear). Her esty's Government never doubted that the occupation of the Prin- ties was a *casus belli* (Hear, hear): but the Government, recognising s a *casus belli*, considered also the declaration with which it was ompanied, and, under the impression that that might be sincere, did advise or press the Sultan to treat it as such, and so end all chance eace. Take the other case, that Russia was not sincere. A declara- of war at that moment would have furnished the Emperor with just very excuse he wanted. It would have absolved him from his pro- se, and from the responsibility of commencing hostilities, and would him in a position to say, "I occupied the Principalities, but I ared it should only be for a short time. I did not desire war. I was dy to accept peace; but my assurances have been disbelieved. War been declared upon me; and I now consider myself bound in honour dignity to accept the challenge" (Hear, hear). I do not say that would be just; but it would be as good an argument as ny others employed in the course of this affair. And your Lordships st be aware that at that moment Turkey was wholly unprepared for istance—her forces scattered, and her army weak and un- ed. Were not these most cogent reasons, on our part for not recom- ending the Sultan to declare war? By our not doing so, he gained time— e for settling affairs peaceably, time for making preparation for war, t before this opinion of her Majesty's Government could be conveyed to stantinople, we found that her Majesty's Ambassador there—who, being the spot, was a better judge than ourselves of what was for the in- st of the Sultan—had tendered the same advice, that the Sultan had epted and determined to act on it; and that, with such a hope of a ceable solution, it would have been most unjustifiable in us to urge Sultan on to war. I trust your Lordship will consider these satis- ory reasons why we did not then press on those more active measures my noble friend considers to have been necessary; and I assure that our not doing so was not from any abject indisposition to war, h as he seems to attribute it to; for I do not think that any Govern- nt in this country, with a just and righteous cause, would be allowed want the support of the people of England in carrying it out. And e, I am sure, you will not think it out of place if I declare my ti- ony to the straightforward, friendly, and perfectly honourable policy the French Government on this question (Hear, hear). The two ernments have been in daily, almost hourly, communication on . They have formed, as it were, but one Cabinet; and I can assure noble friend that there have never been more difference between the Governments than are to be found in the same Cabinet (Laughter— ence that have only increased our respect for each other and dered the harmony more complete. And the union that exists be- en the two Governments is not confined to the Eastern question. extends to other measures, in which, happily, the policy of this country coincides. Nothing, may be now seen to be hazardous regards the Vienna Note, it should be stated that, after Prince menschikoff left Constantinople, the Austrian Government sent h a note as, whilst not unacceptable to Russia, should secure to Tur- the independence of Turkey. In the meantime, the French Govern- nt prepared a note on the same principles, and they submitted it to as did not think it to be successful: but, as the French Government had a manifest desire to send it by way of ultimatum, and as it was considered simply as means of rendering more clear the *bonâ fide* intentions of both parties, were, on that ground, adopted at the Conference Vienna; but they were rejected by Russia. Would not, of course, think the note originally exposed the Porte to the dangers supposed, but the anges made were made on that supposition, and were merely such as re clearly defined the first meaning and intention of the note. A aggrandizement exists on this point as to the part taken by the Four wers. The Four Powers, be it remembered, had merely offered to diate between the two parties; they were not arbitrating, and are to be considered as arbitrating. They were not there to enforce the te, of which the first proofis, that, as I have stated, they at once and hesitatingly adopted the modifications pronounced requisite by the Porte. But her Majesty's Government did not suppose the note to be of the dangerous character supposed by the Porte, till Russia explained the use it might be turned to; then her Majesty's Government said no more in behalf of it. The conference, after having signed the protocol, determined to ask the Porte on what terms he would be prepared to accept it, and the Four Powers offered their bases for the conference at Vienna. By the protocol they affirm that, if Russia does not accept them, it is the sole obstacle to peace, and must be held responsible for war; and that is the present state of affairs as far as negotiations are concerned. No answer has been received from St. Petersburg; but I am inclined to agree that such fair and reasonable proposals as those are not very likely to be rejected. As regards the position of her Majesty's Government, when, notwithstanding that negotiations were going on, that terrible disaster at Sinope happened—when, the Turkish fleet not having been employed that I know of in the way stated by my noble friend, but simply lying peaceably in harbour—when the Turkish fleet was destroyed in the barbarous manner it was (Hear, hear) in the harbour of Sinope, her Majesty's Government with France determined at once to protect, not only the Ottoman territory, but also the Ottoman flag. They determined then to extend their protection, and, as in honour bound, gave us notice of their intention to the Russian Admiral at Sebastopol and to the Russian Government. That is the present state of our communications on this important subject, and, as I have said, I shall refrain now from entering into any details. I have merely endeavoured to meet some of the main charges brought against the Government by the noble Lord, leaving it for the House, when your Lordships have the papers before you, to say whether the interests, the honour, and the dignity of the country have not been well cared for. We may even then, possibly, be charged with having laboured too long, too far, and too hard in the cause of peace, but such will not, I think, be the opinion of the majority of the House. On the contrary, I think that, in the event of war, we shall be able, with all the greater force, to appeal to those pacific efforts, when, if we must, we call for the hearty and energetic assistance of the people of this country in aid of a just and righteous cause (Cheers).

The Earl of MALMESBURY called attention to the fact that the Royal Speech made no reference to the part taken by Austria and Prussia in the recent negotiations and said it as a remarkable omission. The noble Earl then revived the old topic of the speeches at Carlisle and Halifax against the Despotism of the French, and said that these speeches combined with the tone of the coalition press toward Austria had placed the Emperor of Russia under great misapprehension as to the harmony which existed between the two countries. When Colonel Rose sent for the last despatch, we had then the very best opportunity of assuring Russia of the firmness of the British and French alliance. Similar opportunities had been lost on subsequent occasions, and he agreed with the noble Marquis opposite that wiser counsels and greater vigour, at an earlier moment, would have prevented the impending war.

Earl GREY, whilst suspending his opinion upon the whole policy of her Majesty's Government until he had read the papers, must say, that in the speech it appeared to him to stand greatly in need of explanation and vindication. In the first place, he was not sure that we had any interest in supporting Turkey at all: and in the next, if we had any interest in supporting Turkey, it would take much to convince him that we ought not to have interposed earlier. Yet, if we were on the eve of war, let it be carried on with vigour. Let no consideration of ill-timed economy prevent the Government from calling upon the country for whatever sacrifices might be necessary, in order to inflict upon Russia the heaviest blows in every quarter, so that the contest might be closed as speedily as possible. He hoped, too, that they would adopt measures for the employment of young and vigorous officers, known to possess military talent, and for reforming the vicious organisation of the war departments. At the same time he suggested that it would be inconvenient to bring in a new Reform Bill at a time when Parliament would be involved in a discussion of the measures which a state of war would render necessary.

After a few observations from Lord BERNERS,

The Earl of DERBY said there was one subject alluded to in the Speech in which, from the office he had the honour to hold, he naturally felt great interest. He alluded to the subject of University Reform. Whilst there was room for very considerable improvement in the discipline, management, and studies of the Universities, he was bound to say that there was a well-considered determination to adapt their teachings more and more to the requirements of modern life. The alterations and reforms proposed by the Government, in order to be ultimately beneficial, must be made with caution and prudence by the authorities of the Universities and colleges themselves, and not through the wellmeant but not always judicious intervention of the House of Commons or even of your Lordships' House. The measure of her Majesty's Government, he hoped, would be rather of an enabling character, by which the authorities at the Universities might have the means of making such reforms as were necessary. Having noticed several omissions in the Royal Speech, the noble Earl referred to the state of our relations in the East. He asked whether we were in a state of war or not? When the papers were produced, he hoped they would be found to define the exact position of our fleet in the Black Sea. We ordered it to be at Besika while we conveyed the ships and ammunition of one party, and prevented the other from leaving their ports, we were undoubtedly in a state of war. He did not blame the Government for having used their best endeavours to preserve the peace of the world; but he did complain that the means taken by the Government to maintain peace were those best calculated to produce war. The whole policy of Russia for the last 150 years had been a policy of aggression. Such being the character, the mode in which she should be encountered was by a frank and open expression of the point beyond which England would not allow her to go. If this course had been taken earlier we should now have been in a different position to that in which we found ourselves. At the same time, if we were to be involved in war, provided the objects of it were—as he thought they were in this case—laudable, and honourable, and right, then he concurred with the noble Earl opposite (Earl Grey) that it would be inexpedient to introduce a new Reform Bill at such a time, for such a measure was sure to excite much opposition, and to engender a state of feeling which, under such circumstances, might be productive of considerable inconvenience. He recommended, however, that as her Majesty's Government intended to introduce a measure for the prevention of bribery and corruption, they should bring in another for the prevention of intimidation. Before he sat down, he must refer to one question upon which Parliament would neglect its duty if it abstained from commenting. For twelve days the country had been without a Minister for the Home Department. He, therefore, moved the noble Earl at the head of the Government to give some explanation of the cause of the resignation of Lord Palmerston, and to tell the House why, after the expiration of twelve days, the noble Lord was not present. The noble Earl concluded by stating that there was no intention of moving an amendment upon the Address; but that he desired to see the word "intimidation" inserted after the words "bribery and corruption."

Lord ABERDEEN, repeating in the strongest terms all that he had ever said to express his horror and detestation of war, defended himself from the odious imputation that he had been "the instrument and tool of Russia" in the late negotiations; whereas, no man in public life had more strenuously taken part against the Russian Government. He was quite willing to repeat that declaration against engaging in war; but he was unfrequently reproached for having engaged in war, which they have afterwards repented having done. He considered it his duty, and the duty of her Majesty's Government, not, under any circumstances, ever to engage in war without first using every possible effort to check it, even with the feeling was laudable and natural to admire it as it might be in the present instance. There was, at present, he must admit, a popular feeling of indignation against that which appears to be an aggression and an injustice; but still it was the duty of Government to restrain within the bounds of prudence and reason the influence of that feeling. He would remind their Lordships that it was not only the statement and precepts of moralists, and the opinion and declaration of all statesmen, that no war can be justifiable unless it be entertained of war—still he was ready to admit that there might be circumstances when, although there might be no other alternative but war, the country in the war now existing between Turkey and Russia, and in the policy pursued by it, the balance which had been established [illegible] considered in some sense as arming in self-defence, when we seek to preserve the relative position and power of the various states which are necessary to the security and safety of the whole. As regarded the imputation of his having been the instrument of Russian ambition, the same charge had been brought against him with respect to Austria, with which, since he had been accredited as Ambassador to it, forty years ago, he had had no more concern than with Japan. He maintained, in reply to those who would have preferred a more vigorous course, that nothing would have been gained by a game of brag, and that, if we had menaced Russia in the spring of last year, we should only have provoked an immediate march upon Constantinople, which the Turks were then wholly unprepared to resist. He had, too, been accused of indifference to the French alliance—he who had through his long life uniformly maintained the necessity of such an alliance—the author of the *entente cordiale!* It was consolatory, after such calumnies, to see that on the other side, and with at least as much reason, Count Nesselrode was accused of being a traitor to his country, and as bought by English gold. His Lordship briefly described the circumstances of Lord Palmerston's resignation and return to office; and then, in indignant terms, commented upon the monstrous imputations which had been made upon the character and conduct of Prince Albert. He concluded by denying, in the most explicit language, that the Prince had ever interfered in the conduct of the business of the army.

Lord HARDINGE added his personal testimony to the statement of the Earl of Aberdeen as to the utter groundlessness of the charges made against the Prince in connection with the administration of the army.

The Earl of DERBY, while generally concurring with Lord Aberdeen's observations on the subject, complained of the manner in which he had introduced it. Warmly disclaiming any connection on the part of the members of the Conservative party with these calumnies, he denied that the Conservative portion of the press was responsible for them, and ascribed their origin and propagation to the *Daily News* and *Morning Advertiser*. He gave it as his opinion that in this country, where, after all, the Sovereign was not a mere puppet, it was advantageous to the public interest and satisfactory to a Minister, that the Queen should have an intimate and confidential adviser, whose interests were bound up with her own, and who should be possessed of the ability and discretion of the present Prince Consort

Lord CAMPBELL, viewing the question constitutionally, expressed his opinion that not only as a Privy Councillor, but as the husband of the Sovereign, Prince Albert should be consulted upon public affairs.

In the course of the short discussion which brought the debate to a conclusion, the Earl of HARROWBY taunted the members of the Opposition with allowing these unfounded attacks to be repeated in journals

House in carrying out vigorous measures, if such should prove necessary, but ascribed high credit to the Ministry for the forbearance and moderation which they had exercised in their prolonged efforts to avert the deplorable calamity of war. Should this country unfortunately be compelled to engage in war, it would have the consolation of knowing that it will not be a war embarked in rashly, or for the sake of military or naval glory, or through the desire of conquest, but undertaken for the purpose of maintaining those treaties to which the faith of England is pledged.

Mr. T. Hankey, in seconding the motion, selected from the Royal Speech its most important topic, the controversy in Eastern Europe; and considered that topic in its most important bearings, namely, the state of fitness and preparation in which England was found at the arrival of a crisis that seemed to threaten war. For this purpose he compared the financial and industrial resources of the country as they now existed, and as they were left at the close of the last war. Enumerating various facts and returns which showed how much had been done towards diminishing debt, reducing taxation, enacting reforms, developing industry, and extending civil and religious liberty, during the past forty years, the hon. member pointed out that all these vast improvements had been effected in a period of peace, and were rendered possible by it. He contended that the Government, therefore, had done their duty, and deserved well of the country, by labouring indefatigably and making all possible concession for the sake of prolonging peace. He then expressed a belief that those labours and concessions were not yet exhausted; but declared that there was a clear and well-defined limit to them—that assigned by the credit and character of the country. Passing on to other points in the Royal Speech, the hon. member invited the House to sympathise with certain distressed classes, whose sufferings he believed would be only temporary, and to assist in accomplishing the promised reforms in University Education, the Ecclesiastical Courts, the Law of Settlement, and the Representative System.

The question having been put, Mr. H. Baillie said that he should chiefly confine himself to the question of the East. He was not of opinion that it was desirable to wait for papers, as the House had already as much information as it was likely to get out of a Blue Book, carefully prepared for concealments. He did not blame Government for trying to avert war, or believe that a bolder policy at first would have been more successful; but he regretted that they had adhered to the antiquated theory called the traditionary policy of this country, and had thought that its blood and treasure should be expended in maintaining the tottering fabric of the Turkish empire. When Prince Menschikoff presented his ultimatum, we ought to have informed Turkey that she was not to reckon on our aid, in which case we should have no more of war (Disapprol The Prince's propoeals woul been accepted, and the fate Ottoman empire indefinitely poned; and this was all tha be gained by a bloody war from the moment that the ance had been given that E would support Turkey, this became a party to the wa ought to have taken part but the Government had afraid to follow up the polic had announced. HER MAJESTY THE QUEEN ASCENDING THE THRONE IN THE HOUSE OF LORDS.

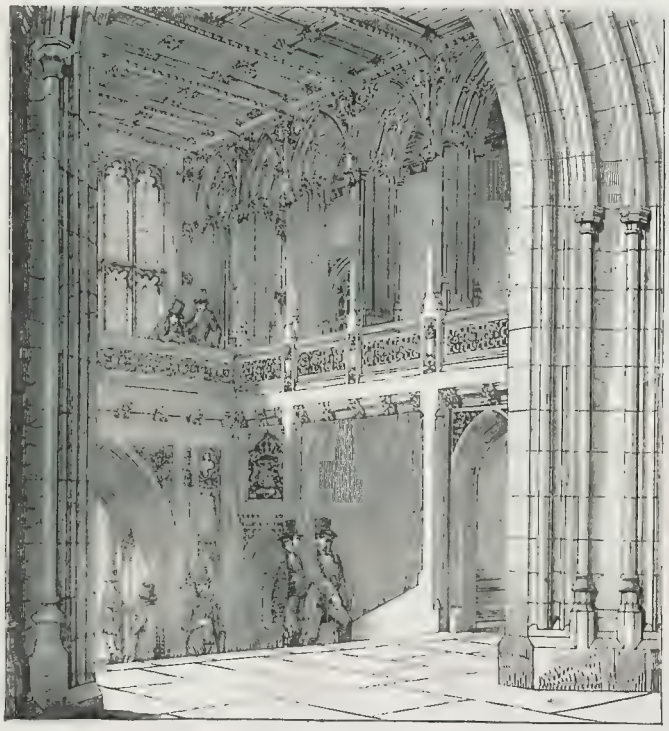
PEACE AND WAR.—BAS-RELIEFS OF THE NEW VESTIBULE, AT BUCKINGHAM PALACE.

The Grand Vestibule at the summit of the State staircase in Buckingham Palace has recently received these interesting embellishments, from the hand of Mr. John Thomas, of Paddington, executed by command of her Majesty and Prince Albert. The subjects are Peace and War.

They are very ably designed, and skilfully carried out. The backgrounds of these compositions being a dull red, their effect is greatly heightened; and it harmonises with the richness of gold and co on all sides.

THE NEW HOUSES OF PARLIAMENT.—ST. STEPHEN'S PORCH.



STAIRCASE OF ST STEPHEN'S PORCH.

made for the occupation of the House, for he could not believe that a body of statesmen would, on the eve of the complications of a terrible conjuncture, have asked the House to undertake all the great reforms proposed to it. He agreed with Mr. Liddell in the abstract proposition that the measure of Parliamentary Reform was most inopportunely brought forward, if we were going to war; but he considered that Government had only done what it was their duty to do in meeting the question—two Governments having been formed on the basis of the dogma that such a reform was absolutely necessary. It was impossible for the Government to escape from the question without sacrificing all their reputation for political prescience. And there would be the less excuse, inasmuch as last year, when members of the Ministry declared themselves to be in fear of worse than war—invasion—they still were promised reform. It might be madness to bring in the large measure of Parliamentary reform, but the present Ministers must do it. The Bill when produced, should receive due attention from his friends and himself, but he protested against the adroit arrangement that coupled the reform of corruption with the alteration of the franchise. He would support the first (remarking that no party had so little interest in corruption as the landed interest), but would not connect it with measures for reconstructing the electoral body of the country. And why was not intimidation to be suppressed as well as bribery? He went on to say that he deemed it unwise to introduce a measure of Parliamentary reform at the present time, and was disposed to stand upon the measure of 1832, whose injustice time had in some degree softened, and with which it was most undesirable to tamper. But if the new and large measure were produced, he should analyse it to the best of his power, with a view to bringing about a juster relation between parties, and for redressing the injustice which, as he had demonstrated, had been done to the land. He and his friends should appeal to facts and principles, and should demand justice.

Lord J. RUSSELL, while waiting for the production of the official documents, declined to add anything in defence of the Ministry to the vindication already offered by the Member for Tamworth. He defended the secret system of diplomacy, excused the Vienna note, and confessed that slight hope remained that Russia would accept the terms of accommodation last sent; but remarked, in reply to Mr. Disraeli, that the despatch in question fully secured the independence of Turkey, and had received the signature of the Turkish Ambassador. Respecting the co-operation of Austria and Prussia, the noble Lord stated that those powers had joined with England and France in the issue of certain manifestoes, and ventured to trust that they would also unite with equal cordiality, should it become necessary to proceed to acts. Turning to the strictures offered upon other points, Lord J. Russell observed, in regard to popular education, that it possessed the sympathy of Government, but must be made a question of time; and, with reference to Parliamentary Reform, contended that the precedent set by Mr. Pitt, which Mr. Disraeli had adduced, did not now apply, because reform was postponed in 1793 in prospect of a war against democracy, while our present foe was the reverse of a democrat. He could not think that there was any danger in discussing the question of reform during the excitement of a foreign war. The time that really was dangerous for such a discussion was the time of great popular excitement and dissension at home (Hear). It was said that there was no feeling on the

subject—that there was a complete apathy about reform. If that really was the case, was it not the proper time to discuss the question of reform (Hear)? Lest in the course of the war there should be times and periods of distress, when the people should become excited, and large meetings should be assembled in every town, partly crying out for more wages and cheaper food, and partly crying out for an increase of political power—was it not wise to forestall any demand of that sort (Hear, hear)? Supposing we had the calamity of war, and had with it the necessity for increasing the public burdens, was it not a fitting time to enlarge the privileges of the people when Parliament was imposing upon them fresh taxes (Hear, hear), so that in imposing taxes upon the people, it might, as far as possible, impose them upon those who had elected them (Hear, hear)? The noble Lord then alluded to the charges brought against the Prince Consort, noticing what he considered calumnies in deference to the honest delusion with which they were accompanied, stating generally that no Sovereign had ever governed more strictly in the spirit of the Constitution than her present Majesty, and, adding that the Queen had invariably accorded her full and entire confidence to the successive Ministers who had obtained the confidence of the House of Commons, he proceeded to delineate the somewhat undefined position of the Prince Consort, arguing that the presence of his Royal Highness at the Privy Council Board, and his cognizance of all public despatches, were equally sensible and appropriate. When her Majesty came to the Throne, being then only eighteen years of age, and, of course, inexperienced, Lord Melbourne considered what it became him to do when her Majesty was pleased to say that he should continue in the post of First Lord of the Treasury (Hear, hear). It seemed to Lord Melbourne that it was his duty to advise her Majesty on all subjects with regard to matters of domestic interest—with regard to the arrangements of the Palace, as well as to perform the ordinary duties of Prime Minister (Hear, hear). But, doubtful as to whether he had come to a right opinion, he resorted for advice to the highest authority he could obtain; he went to the Duke of Wellington (Cheers). The Duke of Wellington entirely agreed with him, and said that, if he held the office of Prime Minister, he would take exactly the course that Lord Melbourne had pointed out (Cheers). Three years after her Majesty's accession her Majesty espoused Prince Albert. The position in which the Prince Consort should stand then became a matter for consideration. He was, as the House knew, naturalised by Parliament, and naturalised in such a manner that he could be a member of the Privy Council (Hear). Some doubts had been stated on this subject, but anybody who looked into the subject would see that he was not only enabled but fully authorised to sit in the Privy Council (Hear, hear). His Lordship went on to explain as follows:—"Lord Melbourne asked me what was my opinion as to the course that should be pursued with respect to the despatches that should arrive, and all the secret communications of the Minister? I said that I had no doubt whatever that her Majesty should communicate them as she thought fit to the Prince Consort (Hear), and that I did not think, in his relation to her Majesty, it would be fair to have any concealment on the subject (Loud cries of 'Hear, hear,' and cheers). I am not sure from recollection, and do not very distinctly recollect, whether Lord Melbourne at that time mentioned the subject, but I am sure that Lord Melbourne and I thought it our duty to advise that that should be the conduct with regard to public despatches and communications (Hear, hear). I think that any other advice would be foolish and unbecoming (Cheers). It could not but happen that the Prince, after his marriage, should discuss public events with her Majesty (Hear, hear); and that he should only gather his information from the newspapers or public documents, while her Majesty had all the despatches and official information before her, would not only be an absurdity, but it would be impracticable (Cheers). Well then, Sir, such being the position of the Prince, it is quite evident that there is no truth whatever in the colour which has been attempted to be placed upon his Royal Highness's relation to her Majesty in this respect, or in the statement that Lord Melbourne constitutionally debarred the Prince from a knowledge of those state affairs, and that Sir Robert Peel was the first person who introduced the practice (Hear, hear). Why, Sir, I believe, it is true, that in Sir Robert Peel's time, it first happened that his Royal Highness was present during the interview with Ministers, but the House will at once see, that his Royal Highness, according to the advice of Lord Melbourne, was informed of all that was going on, and knew as well as her Majesty all that was taking place, his mere introduction into the closet when the Ministers had their communications with her Majesty was merely a convenience, and established nothing beyond the principle that had been adopted (Hear). If the Prince had not been present when the Ministers were with her Majesty, her Majesty would have communicated with him. That would be a circuitous report of what the Ministers had said, and would be a less convenient mode of proceeding than if his Royal Highness had been present; for in the one case, as in the other, his Royal Highness having, I need hardly say, the intellect (Cheers), the information, and the genius (Hear, hear) which belongs to him, it would have been quite impossible that her Majesty would not have spoken to him on every matter of great importance that would arise (Hear, hear). I am now speaking generally of their relations, without any reference to the constitutional relations which subsist between the Sovereign and her Ministers, because, as I have stated at the commencement, there has never been any complaint that these relations have not been properly recognised (Hear, hear). It was Lord Melbourne and I who advised it, and we thought we were acting entirely in the spirit of the Constitution in giving that advice, that his Royal Highness should be fully informed with respect to all that had passed (Hear, hear). But did Lord Melbourne consider that there was no advantage in her Majesty taking that counsel (Hear, hear). Be it remembered that he had taken upon himself on her accession, during the youth of the Queen, to give her advice upon every subject. At the time that Sir Robert Peel assumed the reins of Government, her Majesty had been already married. It was in the beginning of September, 1841: and on the 26th of August in that year Lord Melbourne wrote in those terms to her Majesty:—

Lord Melbourne cannot satisfy himself without again stating to your Majesty in writing, what he had the honour of saying to your Majesty respecting his Royal Highness the Prince. Lord Melbourne has formed the highest opinion of his Royal Highness's judgment, temper, and discretion; and he cannot but feel a great consolation and security in the reflection, that he leaves your Majesty in a situation in which your Majesty has the inestimable advantage of such advice and assistance. Lord Melbourne feels certain that your Majesty cannot do better than to have recourse to it when it is needed, and to rely upon it with confidence.

That was the opinion which Lord Melbourne had formed of his Royal Highness's ability, and I may say that no one who had had any intercourse with his Royal Highness could form any other opinion (hear, hear), but must appreciate the judgment and ability of this amiable Prince (Cheers)." His Lordship then adverted to another portion of the charges, namely, those connected with the army, and stated that the late Duke of Wellington had apprised Prince Albert that his Grace considered it would be an advantage to the service if, after the Duke's death, the Prince should become Commander-in-Chief; and that the Prince, though appreciating such a compliment, rejected the idea, on the ground that his place was always to be near the Queen; that the Duke urged that the Prince should have his attention to anything concerning the interests of the army, and this his Royal Highness promised—but he had never interfered with its ordinary business, or with its patronage. Lord J. Russell then explained the circumstances connected with the late resignation of the Adjutant-General, and declared that it was entirely false that the Prince had anything to do with the matter. He also offered a refutation of the charge that the Prince had interfered in the Eastern question, in contravention of the views of the Queen's responsible advisers, and had corresponded with foreign Courts; and his Lordship added a hope that the country would entertain what must be the position of a Prince Consort; and declared that there was no harm in telling the truth, namely, that in public and private councils the Queen and Prince were inseparable; and he concluded with an eloquent expression of belief that the people of England, always just, would, on reflection, see in the fact an additional cause of attachment to the Throne.

Mr. WALPOLE said that the House was indebted to Lord J. Russell for his complete defence of Prince Albert, and begged, on his honour, to add corresponding testimony of her Majesty's confidence in the Administration of Lord Derby during its tenure of office. He also expressed satisfaction with various explanations made by Lord J. Russell in reference to the Royal Speech; and, after a few strictures on the Eastern negotiations, adverted to the promised Reform Bill, which he did not think was required, deprecated the mixing up separate topics, and warned its authors against undue change, and the substitution of greater for lesser evils.

The Address was then agreed to, and the House adjourned at ten minutes to eleven.

HOUSE OF COMMONS.—WEDNESDAY.

The Speaker sat at twelve o'clock

Mr. John O'Connell took the oaths and his seat for Clonmel.

Mr. RAINES presented a petition from the magistrates of the hundred of Lonsdale, South Lancashire, in favour of the establishment of reformatory institutions for juvenile offenders.

Mr. BASS presented a petition from Derby, praying that England would assist the Porte in repressing the aggressions of Russia.

Mr. OLIVEIRA gave notice that he would, on the 14th of February, bring the subject of the Wine-duties under the consideration of the House.

In answer to a question from Mr. W. WILLIAMS, Lord PALMERSTON said he hoped to bring in a bill to alter the present system of sewerage at an early day (Cheers).

Lord J. RUSSELL gave notice that he would, on an early day, move that no new writ should be issued for Cambridge, and other unrepresented boroughs, before Thursday, the 9th of March.

Mr. OLIVEIRA gave notice that on Tuesday, the 7th inst., he would move for a return of the expenses that have been incurred in alterations, repairs, and improvements to the various public buildings in Downing-street, from the year 1830 to the end of the year 1853, specifying what amount has been expended each year, and detailing its application.

Mr. OLIVEIRA presented a petition in favour of a reduction in duty upon wines, numerously signed by the inhabitants of Marylebone.

Mr. INGHAM presented a petition from the Corporation of Tynemouth, in favour of decimal coinage.

Mr. BROTHERTON moved, that if any new business be brought on after twelve o'clock at night, and a member rises to order, and objects to the House proceeding with the debate, a division shall, without further discussion, be immediately taken on the question that the debate be now adjourned, unless the mover of the original motion agrees to its being postponed. He was of opinion that the motion would not cure the evil, but he believed that it would in some degree mitigate it; and, as he had no hope of carrying a motion to remove the evil altogether, he was anxious to carry the present motion, which would enable the House to transact its business more satisfactorily and beneficially for the country.

Mr. W. WILLIAMS seconded the motion.

Sir J. PAKINGTON said the motion was a mere question of hours; but there was another of more importance—that of months. He thought they ought to meet earlier in the year, by which the public business of the House would be facilitated, and would render the long sittings of Parliament, as at present, unnecessary.

Lord J. RUSSELL said that the House had at all times the power of controlling the sittings of the House, and on many occasions measures were necessarily brought forward which, from their peculiar nature, made it necessary to engage the attention of the House under circumstances which could not possibly be foreseen. He could not see that any benefit would be attained by adopting the motion, seeing that it was always in the power of any member who wished to obstruct the business of the House to do so under any circumstances. That House was the model of the legislative assemblies of the United States, because there were State Legislatures, whereas, in this country, all the business might be done in the Imperial Parliaments. He would not, however, object to the appointment of a committee to consider the subject, with a view to the adoption of any agreement which should be thought desirable. He hoped his hon. friend would not persist in his motion, but if a committee were appointed, the Government would willingly consent to it.

Mr. HUME thought that they should commence the session with the determination to finish their business early in July; and if they came to that determination, he was sure the business of the House would be more satisfactorily settled. He thought the question should be settled by the House, and not by a committee. The Government had commenced well as to the business of the House, and he hoped they would carry on the system they had commenced. No human strength could stand against the present system. The time was when he did not care how long he sat up, but he was altered now, and could not keep up as he used to.

Mr. WALPOLE, Mr. E. DENISON, and Mr. NAPIER were in favour of the appointment of a committee, as the best course they could pursue.

After some observations from Mr. HADFIELD,

Mr. NAPIER said, he thought this inconvenience would be remedied by preventing Irish business from being brought on after twelve o'clock at night (Cheers). He was in favour of the appointment of a committee.

Mr. BROTHERTON having made a few observations in reply, the House divided, when there appeared—

For the motion, 88; against it, 54: majority, 34.

Mr. H. G. LIDDELL moved for a return of the time at which the night mail from London is due at York and Newcastle-upon-Tyne respectively, under the present arrangement; of the date when such arrangement took effect; and of the actual time of arrival at York and Newcastle on each day, from that date to the last day of December, 1853.

Sir G. GREY complained of the present delay, but did not think that the adoption of the motion would remedy the evil; and he hoped the Postmaster-General would consider the subject, and give directions for the carrying out of a better arrangement.

After a short discussion the motion was agreed to.

THE QUEEN'S SPEECH.

The report on the Address, in reply to her Majesty's Speech, was brought up and agreed to.

The House adjourned at half past two.

(For remainder of Parliament see page 91.)

THE REFRESHMENT-ROOMS, HOUSE OF LORDS.

(See page 112.)

THE Refreshment-rooms to the House of Lords are the most luxurious apartments imaginable: the beautiful ceiling—the richly-carved doors, screens, and panelling—the fittings-up, the crimson and green paper-hangings, and the general decorations, being extremely striking and harmonious in their *tout ensemble*.

The Rooms are lighted by windows on one side only, and which look into the Peers' Court; and, on the opposite side, the walls are paneled, and have fireplaces of rich and beautiful design, the spaces between chimneypieces being highly decorated, with boscage and foliage. At present the paneled spaces of the rooms are filled with a very handsome papering; but subjects, groups of dead game, &c., have been suggested as appropriate pictorial embellishments, and will doubtless be carried into effect. An extremely rich and beautiful scroll moulding, surmounted by a pierced trefoil cresting, runs round the upper part of the walls; and above them the ceiling is slightly coved, this portion being filled with elegant tracery, and the flat spaces within the tracery painted with admirably-designed arabesques. Except at the coving just described, the ceiling is flat, divided by massive ribs into square compartments, and these again filled with diamond-shaped compartments, each containing a painting of fruit, very cleverly treated in a conventional style, harmonising admirably with the details of the ribs, beams, and the bosses which spring from the intersections of the ribs. Amongst the carved furniture is a buffet, especially noticeable for its exquisite richness of sculptured detail, and beautiful proportions.

THE HOUSE OF COMMONS, FROM WITHIN.

IF, as a representative institution, the House of Commons does not give universal satisfaction, there can be no doubt that, as a constituent body, it is an object of interest to the great majority of Englishmen; and there prevails a very natural curiosity to know something of its ways and habits, the place in which it moves and has its being, its modes of doing business, the *personnel* of its members, and all the minutiæ of what may be called its "inner life." Perhaps, as is the case with Freemasonry, although its proceedings may be in themselves no very wonderful things, yet, because they are, in a certain sense, not public, the desire of penetrating the mystery—such as it is—is stimulated and kept up. It is true that the elaborate reporting of the debates in the newspapers gives publicity to all that is said which is worth preserving; but that by no means satisfies a desire to know the daily goings on there; or gives any accurate idea of the peculiarities of the men of whom the House is composed, or of the system by which they are guided. Nothing can be gathered from the reports, of the way of thought and the way of talk of the House of Commons, which are peculiarly its own; and, although it takes a session or two to mould a new man into a business-like member; yet, very soon after his admission within its moral portals, he becomes the "member" in tone and habit, and even appearance, and presents to the initiated very unmistakeable indications of his calling—for a calling, and no inactive and unlaborious one, it unquestionably is.

That the profession of a member of Parliament demands, in those who embrace it, certain adaptabilities—mental and physical—is undoubted; and, if this were the place for a disquisition on such questions, they might easily be pointed out. But, the object is to throw some light into the recesses of the House, as well as its material aspect, and arrangements as the place of business of the busiest and most stirring branch of the Legislature; and to describe such things and places as can only become familiar to its *habitués* proper.

To begin with the beginning. Let it be imagined that some person authorised to enter unchecked into the innermost recesses of the Commons' House of Parliament, arrives at the spot on which a Royal palace has stood since the days of Edward the Confessor, and on which now stands the vast Gothic building, the official name of which is her Majesty's Palace at Westminster. As, by the happy and skilful treatment of the architect, Westminster Hall has been made the grand vestibule of the Houses of Parliament, it will be necessary to enter New Palace Yard—in the centre of which, and opposite the great door of the Hall, Marochetti's statue of Richard I. has been recently erected. Whoever wishes to know anything of Parliament must be prepared to meet with much that is odd and incongruous; and perhaps it will strike the observer that here is incongruity the first: for, whatever may have been Cœur de Lion's merits, there is not any historical record which points to the connection between a memorial of him and the popular action of the Legislature. We must omit, however, all detailed notice of the Building and its several parts, most of which have been already described in our columns, and proceed at once to the "Lobby" of the House.

Pushing that door open, you are at once in the Lobby of the House. This is a fine and rich-looking apartment, about 40 feet wide each way, being square on the plan, having each of its four sides symmetrical, and each containing an archway giving access to those parts of the building appertaining to the House of Commons: that on the north being the entrance to the House itself; that on the south to the Central Hall just described; that on the east to the Libraries, Refreshment-rooms, &c.; and that on the left, to the private entrance for members. Carved open screens, bearing the words, "Domine salvam fac Reginam," on each side of these various archways, part of the Post-office, Vote-office and other apartments connected with the daily business of members, while windows over these, rich with stained glass, bearing the coats of arms of boroughs returning members to Parliament, give a subdued light to the interior. The roof is of dark wood, and massive in its character, while the flooring is paved with encaustic tiling, with the motto, "God save the Queen" introduced, and so, of course, continually trodden under foot by her faithful Commons and others of her liege. At night the lighting consists chiefly of massive and elaborate carved brass gas standards placed in the four angles, which are ventilated on a principle invented by Barry, by means of which all communication between the air of the apartments and the light is cut off, and the deteriorating effect of the gas prevented.

It has been said that the west door of the Lobby leads to the private entrance for members, and that passage is worthy of notice, as it is a restoration of the old cloisters of St. Stephen's, which has been carried out with such skill, that the additions and restorations can with difficulty, if at all, be distinguished from the old work. The fan tracery of the groin is one of the most elaborate and beautiful specimens of this kind of architecture that yet remains in England, and from the richness of this portion it may be gathered what was the splendour of the Royal Palace and Monastery of which it formed a part. The small projecting chapel anciently an oratory, on the west side of the Cloister Court is singularly remarkable for the beauty of its details. The upper story of the Cloister had been entirely destroyed, either by innovation, or the fire of 1834; and only just enough remained to afford an idea and authority for its restoration. An entirely new Upper Cloister has been added, which is reached from the Lower Cloister by a characteristic and admirably-executed staircase. The Lower Cloister is used as a receptacle for the members' cloaks and coats; the reception of their letters, and the usual appendages of the private entrance, which opens into Westminster Hall, and has also an outlet into the Star-chamber Court, the gate of which is in New Palace Yard. The effect of the rich graining of these Cloisters both above and below, heightened by the bright hues of the stained glass of the windows, and the many-coloured tiles of the floor, is most striking; and the staircase with its central clustered pillar supporting the groined stone roof above, is most picturesque, as well as original, in its composition.

Returning to the Lobby, we shall find that, on each side of the arched doorway of massive oak, studded and ornamented, and looking as if the Gordon Riots, when the mob threatened to break in and work their will on the members, was in the mind of the architect when he planned it, there sit enthroned, in large leathern chairs, the two janitors of the House. They are important functionaries (as all door-keepers are), and act as "tylers" their business being to know accurately the person of every member, and to prevent the uninitiated from entering the precincts of the House, which they are taught to consider sacred. One of them is a character: a short, stout, bustlingly-dignified personage, with magnificent silver hair, and a rubicund countenance, indicative of good port as the Bellamy of olden time was wont to supply. He is a relic of the unreformed House; of the times when a good door-keeper was considered to be worth something like £1000 a year; reformers Pitt and Fox, doubtless has original anecdotes of Sheridan, and looks on modern members as a set of innovating boys, over whom he is entitled to exercise a dictatorial authority; evidently believes that he is an important and indispensable part of the Legislature, if not an institution himself. Any one who wishes to know what door-keepers who have a true sense of their duty are, should try to walk into the House, not being a member. The other is a most respectable and civil person, very intelligent as to all that relates to the House, and has risen to his present office by long service and good conduct in other positions in the messenger department, and holds it under the reformed and reduced system of remuneration. He succeeded an official who was, in many respects

cal in character with the elder dignitary above described; he had me silver hair, perhaps a little more abundant, the same rubicund nance; but he was tall and thin; and, although quite as dignified penetrable, perhaps not quite so irascible, as his shorter coadjutor.

sitting together, in their large chairs, on each side of the door, eem to have adopted as their model a poetical notion of Minos Rhadamanthus, in all their sternness and severity of aspect, and did their parts very well.

he Lobby, from about half-past three on every day that the site, the scene is much the same, but that same is very cha- latio of the place. Grouped about, but kept within such bounds leave a reasonable space for the movements of members from ree doors more immediately appropriated to them, by the picked men whose duty it is in the Palace of Westminster, are to be Parliamentary agents, solicitors, a stray Parliamentary barrister , parts a interested in private bills, railway directors and sears- deputations from constituencies who have brought up petitions presented by their members, acquaintances of members looking r orders for the Strangers' Gallery; now and then, two or three smuggled in by members to get a peep at the House, if the digni- oor-keeper is in a good humour; correspondents of provincial, , and Irish newspapers, watching for any decision on a private r the asking of any question in which their localities may be sted, and with which they will rush off to the Telegraph-office; angers on upon members, with hopes of fulfilled promises kindling e countenances (it is astonishing how much a number of persons tly of this kind have to say to the Irish members). Then there uaker and cotton-spinning looking men from Lancashire, on the ut for the northern borough members; agricultural-aspected, well- spirants for a word or two with Mr. Newdegate or Mr. Christo- black-coated and white-cravated individuals, who will inevitably e on Sir Robert Inglis or Mr. Spooner; there are sanitary and cleansing countenances, which may be found in close contact with njamin Hall or Sir De Lacy Evans; while every class seems, at me or the other, to have something to say to Mr. Brotherton, who in and out of the door like one possessed: this is because he the first and second reading of almost every private bill. g in and out of every group, with a self-possessed and smiling ay be seen Mr. Hayter, the "whipper-in" of the Government, ing a word, in passing, or, it may be, giving a significant look ch member of his party whom he encounters; while Colonel ter and Mr. Bateson, who hold similar offices under the Opposi- re equally assiduous, although there may be more of a *laissez-aller* a their manner of proceeding, for they need not be officially se—it is not now their business to see that the Government is not on a division.

the while members are passing in from the private entrance, en- the House, or going to the Post-office, or the Vote-paper Office, or ding to the Library, and, it may be, sustaining nature at the very rranged refreshment-stand which occupies one angle of the Lobby, y by-stander sees his man come in, he pounces upon him, and him, often seeming very loth, into a corner for the intended ence. Sometimes, as a distinguished personage—such as Lord Russell, Mr. Disraeli, or Lord Palmerston passes through ear arose before the door of the House, there is a buzz and a ering, and nudging of the sight-seers, and an eager straining of the st such a glimpse of the interior of the Chamber as the swinging momentarily affords. This sort of bustle, without con- —for everything is kept subdued and decorous—goes on till about lock, when all private bills, petitions, questioning of Ministers, e preliminaries of the business of the night are disposed of, and ote settled down into the orders of the day; the temporary s then clear off, and for the rest of the evening the Lobby is ted chiefly by the privileged and of-right occupants of the House s appurtenances, and those who have business connected with the es on hand.

earliest assembled lookers-on in the afternoon, at a quarter be- our o'clock, are always startled by a loud cry of "Mr. Speaker," nevertheless through the corridor leading to the Library, which en up by the door-keepers in the Lobby, followed by the order Hats off." In solemn procession then passes the first commoner ngland, in flowing wig and silken gown, accompanied by the nt-at-Arms, bearing the massive mace (the same, by the way, Cromwell treated with such little respect), and supported by bearers, and his chaplain—all in that traditional suit of black vay coat, knee-breeches, and buckles, which seem inalienably en- d on the English Constitution. Bowing gracefully, and with a nt smile on his handsome countenance, the right honourable man passes on and enters the House, the portals of which are closed until prayers are over.

ddedly, the House of Commons is fortunate in its choice of a er. It may be absurd, but the association of official dignity a tall figure and commanding presence is very prevalent. Mr. Lefevre is far above the middle height, his figure is straight well set up (he is a distinguished yeomanry cavalry officer), is limbs well made; while, strange to say, he looks better in fficial costume, which would not be becoming to every-body, in his ordinary dress. His countenance is expressive of that he possesses in perfection, good humour, and command of t, while his tact, acquired in the exercise of the duties of ffice, is unbounded, and it is a tradition of the House that ne has ever been offended with him under any circum- es whatever. His voice is good—loud and sonorous, but with effect of a slight indistinctness of utterance. Altogether he is del Speaker, and it will be difficult to replace him, whether as is his perfect knowledge of his duties or his personal qualifi- s. Apart from the mere prestige of a fine-looking man in the a good "physique" is indispensable to such a position in a like the House of Commons, where so much of the physical ht prevails. Indeed, until last session, it was a positive part of the of the Speaker never to be ill, for there was no provision for carry- n the business of the House in his absence, and it is not a House the Speaker is in the chair. Oddly enough, the instances of ab- of Speakers from illness have been so rare as almost to be unheard This question was wisely and indeed mercifully considered last n; and, for the future, arrangements may be made to relieve the ker from the necessity of dying at his post rather than stop the edings of the House.

the right honourable gentleman has been supposed to have into the House; and we will take the liberty of preceding him and finding out what manner of place it is which is awaiting nt emptiness his arrival. The first thing that would occur to a ger on entering the House of Commons, must be that it is the t and most incomprehensible apartment that ever was seen. It is y like nothing that ever was built before. It has no shape. It is quare, and it is not oblong, and if it resembles in its outline y degree any other room in which a number of persons were ssembled, it is the old-fashioned Dissenting chapels, which erected before Baptists and Independents had acquired ectural tastes, and when it was thought that plainness ildings devoted to the worship of God should degenerate downright unshapely ugliness. Look at the House of Com- ns as regards its size, and it will be found that it is positively small; it looks cramped, "cribbed, cabined, caged, confined, bound in." One thinks it must certainly have been built under great pressure and difficulty; there must have been an insurmountable want of space for the ground-plan, and the architect had to do his best to deal with the exigency. But then it may occur to one to remember that the New Palace of Westminster stands on an area of about eight acres, has four principal fronts, and contains within its area no less than eleven quadrangles or courts for the admission of light and air to the numberless rooms, residences, and offices, of which, besides the two Houses and their adjuncts it is made up. Some idea may be formed of the intricacy and extent of its plan, when it is known that it contains no less than 500 rooms of all kinds, with separate residences, some of them of large size, for eighteen different officers of the Houses of Lords and Commons, besides a chapel for the use of the residents in the building; and it was all built because of this particularly small and mean-looking room. If it had not been for this place, there would have been no occasion for a Legislative Palace at all. The stranger cannot tell what it all means. Why such an expenditure of time, money, space, skill, art decoration on this huge edifice, if that part of it which is, so to speak, its very heart, and ought to be its real climax, is so narrow and small, and in spite of some attempt at ornament, which in such a room is but a mockery, bears itself so poorly? The only conclusion one can readily arrive at is, that Sir Charles Barry, in his architectural humourist, and intended the House to be typical of the legislation which is carried on in it—which always is proposed to be comprehensive and expansive, but is practically narrow and circumscribed.

The fact is, that the House is what is called, in naval architecture, a "razee;" that is, a large room cut down to a small one, with much the same effect as is observable in ship-building. It was originally lofty and well proportioned; of the same height, and little less dimensions, than the House of Lords; and would have been—though a more simple—in its way, quite as handsome and imposing a chamber. But, long ere its shell was finished, the initiated discovered that the important question of hearing was involved, and that size and space must be made subservient to that vital point; and then first commenced the reduction of extent. When the House of Lords was opened for business, its vast dimensions were found incompatible with anything like an accurate hearing of the speaker; and, great state-room as it is, even there some alteration was found to be indispensable. When, however, the House of Commons was temporarily fitted for a trial of its capabilities, preparatory to its actual opening, it was ascertained that not one-half of what was said reached the region set apart for the representatives of the Fourth Estate; and, though that might be comparatively of no consequence in the House of Lords—which the Commons are apt to consider a combination of a registry-office and a show-room—here the speaking was intended, if not for the country, at least for the constituencies, and must be heard. There was a perfect panic among honourable members. The architect was commanded, on pain of penalties too tremendous to be named, to accomplish this object, at any sacrifice of appearance or comfort. Hints were given to the House that the faculties of the professors of architecture in this country might be quickened if one of their number was hanged. In fine, Sir Charles Barry set to work: he lowered the roof, cutting the height of the building nearly in two; divided the windows, leaving only the lower part of them visible in the House; the galleries at both ends were thrown far forward, and the length of the room materially diminished; and, at last, he succeeded in locating the Commons of England in a chamber in which, certainly, every word that anyone speaks in a tolerably distinct and audible voice may be heard; but which presents an aspect as comical and eccentric as can be found out of China.

Of the eight acres of the ground-plan of the New Palace at Westminster, there is reserved for the House of Commons a space 75 feet long and 45 feet wide; while the heighth from the floor to the centre of the ceiling is 41 feet. This ceiling is a very singular composition altogether: it is flat in the centre, and the sides slope down to about half-way of the original walls and windows. It is divided into compartments, the prevailing colour being bright oak; and each compartment is ornamented with large roses, thistles, and shamrocks, the cornices being, as usual in all the decorations of the building, mottoes, such as "Dieu et mon Droit," "Domine fac salvam Reginam," &c. Seen by daylight, the flat centre of the roof looks as if it had been washed, and the colour driven out by the process. The fact is, that the whole of it is composed of ground-glass, the pattern and ornaments being very slightly tinted; as it is from hence that, by an ingenious process (the invention, we believe, of Mr. Goldsworthy Gurney), the House is entirely lighted. At night the whole flat centre of the ceiling is filled with a soft, pleasant light, something like very strong moonlight. The effect is not brilliant, and is not intended to be, but the light is quite sufficient for purposes of reading and writing, and avoids successfully all oppressiveness to the eye. There was no other lighting whatever, not a lamp or candle all over the House, until last session, when some burners were placed behind the pillars at the back of the Gallery, to which point the light of the roof does not penetrate. It is not an improvement, and it is understood that it was only done to enable the Speaker to see the members who sat darkling there; and as no one else wishes to disturb their personal or artificial obscurity, it would be better if the plan was discontinued.

On both sides of the House a range of benches, covered with green leather, and having comfortable stuffed backs, rise in tiers from the floor to a point far under the Galleries. At the north end stands the Speaker's seat, a sort of canopied throne, which bears evident marks of an intention that it was to have been a handsome and ornamental appendage to the House, but now appears as if it was pared down to meet the exigency as regards space which prevails all over the building, in which, vast as it is, every room for every purpose is cramped and insufficient. Even in the House of Lords, which alone has any pretensions to size, the principle of paring down has been carried out in the accommodation below the Bar, and it may be mentioned that the artists who were entrusted with the execution of the statues of the Barons who procured Magna Charta, and which fill the niches in the Lords' Chamber, were restricted to a certain width across the shoulders of the figures. The chair itself, in which the Speaker sits, is, however, one of the only things that is too roomy; for, in order to occupy any other position except a bolt upright one, its occupant must loll across it at right angles. Exactly in front of the Speaker is the Clerks' table. This piece of furniture is both too large and too small. It affords scanty room for the three clerks, who always sit in a row, at that end of it which is next the Speaker; and it occupies so much of the floor between the Treasury Bench and the front row of the Opposition seats, that every one who walks by on either side of it to reach the Speaker's chair, or the outlets from the House behind it, causes a movement of the outstretched legs of the sitters on those uneasy benches, who must draw them up close to avoid being kicked.

Exactly in the centre of the House, the seats are divided, and a passage between them reaches up to the last row under the Gallery. This is what, in the parlance of the House, is called the "Gangway." At the southern end, near the door leading into the Lobby, on the right of the entrance, is the raised arm-chair of the Serjeant-at-Arms; and on the other side is a similarly enclosed seat, which belongs to nobody, but is only placed there for uniformity sake; and by the side of it is a small table on which cards and notes for members, sent in by persons waiting to see them in the Lobby are placed. Between these two seats is the "Bar [illegible]," but, when persons are summoned thither, whom the rules of the House do not permit to go beyond that point, two sliding rods of brass are drawn, like telescopes, from both sides, and meeting in the centre, a material "Bar" is temporarily formed. Behind the Bar, and under the South Gallery, on each side of the entrance doors, are two rows of benches enclosed, which are appropriated to Peers, and which on nights of important debates are always filled with noble Lords belonging to the Government, and other distinguished members of the Upper House. Here, too, are constantly perched the Government prompters, and greet up of facts and statistics; and often, during the progress of a debate, a Chancellor of the Exchequer, or a President of the Board of Control, or Trade, or their secretaries, may be seen in earnest conversation with quiet-looking men, who have been sitting gravely observant of the proceedings; and after that, you may be sure, the Opposition member who has at that moment made a hit, will find that the member of the Government who has just glided into his seat, has got a note of the point, with the answer to it ready for his reply.

The Galleries are an important feature in the arrangement of the House, and are divided into several. One gallery, with a double tier of seats, runs along each side of the House, which is set apart for the use of members. Half-a-dozen doors opening into them lead into very comfortable, handsomely-fitted up, and well-lighted retiring-rooms, where reading, writing, and chatting may be carried on by large or small parties with great convenience. These two galleries communicate at the south end. Here, just over the Bar, is a deep gallery, extending a very considerable way back: the front row, which is separated from the rest by the passage by which the two members' galleries meet, is set apart for the use of the diplomatic corps and distinguished foreigners, but is often occupied by Peers. It was here that the Earl of Derby sat, leaning far over into the House, listening to Mr. Disraeli's first budget, in April, 1852, when he astonished every one by the uncompromising testimony which he bore to the benefits derived from free-trade; and on which occasion Lord Derby is reported to have said to the Bishop of Oxford, who was sitting next him, in the language of Scripture, "Behold, we hired this man to curse them, and he has altogether blessed them." In this gallery, last session, two East Indian gentlemen of dignified appearance, and wearing the rich costume of their country, sat, night after night, during the discussions on the India Bill, apparently deeply impressed with the character of the proceedings, principally from their being unacquainted with the language in which they were conducted. Behind this row is a considerable space, called the Speaker's Gallery, which is reserved for those who have orders from the right hon gentleman; and between this and the wall, or rather the ornamented stone screen surmounted by a lattice of brass-work, which separates the interior of the House, is the Strangers' Gallery, to which persons are admitted with members' orders. Over the Speaker's Chair is the Reporters' Gallery.

For the first time in the history of Parliament a specific place has been assigned for the use of ladies; but, as this is still considered against Parliamentary regulations, and as they are only there as it were, by a courteous violation of rule, their seats are placed behind the ornamental brass trellis, in the stone screen, just over the Reporters' Gallery. Nothing can therefore, be seen of them; and their *locale* has been facetiously described by an honourable member as "something between a nunnery and bird-cage." The accommodation for them is, however, very good. Their gallery is divided into three compartments, each containing one row of chairs; and there are commodious anterooms attached. There is no difficulty in seeing, and most probably none of hearing, through the interstices of the trellis-work; but it is to be feared that the arrangements do not quite satisfy the fair occupants of the place; for, painful as it is to record, they are very apt to keep up a continuous chatter during the most important speeches, to the dire confusion and distress of the reporters—a proof that they do not hear sufficiently well to have their attention entirely absorbed; while it is also to be feared that they are not content with the loopholes through which they get a view of the House, for they are continually breaking off leaves of the shamrocks and roses of which the brass lattice is composed, which usually fall outwards, and with their sharp ends downwards, on the heads of the occupiers of the back bench in the Reporters' Gallery. They might, perhaps, be more satisfied if they could compare their present accommodation with that afforded to ladies in the old house, which was in the space above the roof over the chandeliers, which acted as a ventilator.

Although the House of Commons is more plainly decorated—at least, as respects colour and gilding—than the House of Lords, it will be found, on a close examination of the delicate carving with which it is covered, that on every portion of it there has been expended no less an amount of thought and labour. The prevailing oak colour is heightened to a slight extent by the decorated panels of the ceiling, and the emblazoning of the coats of arms, which bear the Royal cognizances of the Sovereigns of England in succession, arranged along the front of the Galleries. It is understood that the architect proposes to decorate, in colour, on a gold ground, the coved under side of the Galleries, emblazoning thereon the armorial bearings of the Speakers, in chronological order, in the same way as has been done with the coats of arms of the Chancellors in the House of Lords; but as yet nothing has been done except to prepare the ground, it being a question whether, by gaining in splendour, the House would not appear to lose its business-like character.

The windows of the House are filled with stained glass, the devices being the armorial bearings of boroughs, beginning with Westminster. The supporters are intensely grotesque, the mediæval designs being carried to the utmost limits. The supporters, in the case of maritime boroughs, are horses with fishes' tails; those of the inland boroughs, a sort of leopardised lions; and those of the Universities are saints. Sundry and manifold have been the gibes and jeers at these strange beasts when members, as they often do, get a fit of abusing their House: so much so that, previous to last session, on one side these heraldic supporters were removed, and the shields and crests were rested on scrolls entwined with roses, thistles, and shamrocks. On the other side, however, up to last August, the fierce animals in question retained their rampant positions.

It should be said that none of the windows about the building are ever opened; the first principle of the ventilation employed being the rigorous exclusion of the external air. That being effected; by a complex and expensive apparatus, an artificial atmosphere is created, which consists of alternate blasts of hot and cold air, infused by imperceptible crannies in the flooring from the machinery below; thermometers are hung in all parts of the House, corridors, and lobbies, and a staff of officials continually visit them, and give notice of the alterations required to keep up an equable temperature. Of course, however, no hot or cold blast can be forced into the rooms without, at least, a temporary sensation of draught going on, and the effect is anything but agreeable. Another consequence of never opening the windows is, that during the day, the artificial atmosphere not being in operation, there is a subsiding of the impure air necessarily generated in crowded and lighted apartments, and a sickly vault-like smell pervades the place which is most unpleasant. In order to facilitate the issue of warm and cold air through the flooring, which, by-the-by, is formed of perforated cast-iron plates; a coarse pervious matting, looking like ill-washed sack-cloth, is spread over the parts of the House. Nothing can have a meaner or more unsightly appearance, while its aptitude for generating dust is immense, and loudly complained of. If the account thus given of the aspect of the Chamber in which the Commons of England assemble, be at all intelligible, there can be little doubt that it will be allowed that the case against it is made out, namely, that it is the oddest and most absurd apartment in the world.

Along both sides of the House are the Division Lobbies: that on the west side being usually appropriated to the "Ayes," and that on the east, to the "Noes." These corridors are plainly and substantially fitted up with oak paneling, the windows being filled with stained glass; stairs at each end communicate with the Members' Galleries above. At the Speaker's end of the House, behind the chair, are two small chambers—one for the use of the members of the Government, to hold conferences with each other during debates, if necessary; and the other is appropriated to the Opposition for similar purposes. The door behind the chair also affords access by means of a long corridor to the Speaker's private rooms, and the official residences of the Librarian, the Clerks, and the Serjeant-at-Arms.

Such being the Chamber, with its appurtenances, we will proceed with an attempt to give some notion of the style and manner of conducting the public business therein.

It is twenty minutes to four o'clock. The House is swept and garnished, and a solemn silence prevails. If the season be so far advanced as that at that hour it is daylight, the place looks like a theatre or Vauxhall by daylight. In truth, it is prepared and got up only for night work. It has been often asked why is all important legislation carried on by night? and jokes have been made about "after dinner" enactments, and statutes smacking as much of the wine-cup as of the midnight oil. But it is really a necessity. As yet no man wholly devotes himself to membership as a profession. The only persons in the House who are paid are those in the Government, and the day is hardly sufficient for the discharge of the duties of their departments and prepa-

OPENING OF PARLIAMENT.—THE ROYAL PROCESSION PASSING WHITEHALL.

ration for Parliamentary debates, and by this alone their salaries are fairly earned; so that even they perform their legislative functions in a manner gratis. No other member is paid for his services, and all have some other vocation. There are merchants and professional men of all sorts, who have their own business to attend to; the landed squires are by no means idle men in any sense of the word; and if there are a few members who are idlers by profession, ten to one but they are of that very hardworking set, the "men of fashion," who go to the House because it is the right thing, and during the session is a sort of club, which is really an agreeable change from the regular ones in which they lounge all the rest of the year. Every one of these, persons has very much to occupy himself in the forenoon. Even if he has not, every legislator is condemned "a double debt to pay" in his capacity of member. Private business has demands on one of his functions, public business on the other. The mornings he must give up to individuals, companies, and corporations, who, labouring in commercial affairs, get Private Bills, from eleven to four. The evenings must be devoted to the nation, in the discussion and enactment of public bills, and this for at least six months of the year.

To return, however, to the empty House. If an important and exciting debate is expected, a temporary fit of piety seizes a number of members, and they get into the House at this hour, in order to be present at the prayers with which business always opens—because, if they do, they have the privilege of affixing a card to the back of any seat they may select, which secures it to them the rest of the evening; but no one is allowed to reserve a seat after prayers. It is an ordinary session, half a dozen is a large muster. Next drop in, wigged and gowned, the Clerks, who have seats at the table. At ten minutes to four the doors are thrown wide open, and a loud voice proclaims "Mr. Speaker." All the members present rise and stand uncovered, while the right honourable gentleman passes up the floor, accompanied by the Sergeant-at-Arms bearing the mace, each making three reverential bows—one at the bar, one in the middle of the House, and the third at the table. The Speaker takes his seat in one of the Clerks' chairs on the right side of the table; the mace is duly placed thereon; and, after a solemn pause, the Chaplain enters, makes the three customary bows as he advances, and having performed his duties, retires backwards again, bowing the prescribed number of times. The doors which have, all this time been fast closed—no one being admitted during prayers—are opened; and the Speaker, still sitting at the table, proceeds to count the members present, and those who enter, until, reaching the number thirty-nine, he makes a sort of bow to himself, utters in a loud sonorous voice, the word "Forty!" leaves the table, and takes his seat in his own canopied chair, and technically "the House is made."

It is not a House unless forty members are present. This rule often leads to the phenomenon called "no House," which arises when four o'clock precisely arrives, and forty members are not present. The Speaker immediately leaves his place, the House without ceremony adjourns, and by no possibility can any business be done on that evening. The circumstance called "no House" seldom occurs in the beginning of the session. Then members are fresh, vigorous, and enthusiastic; committees and private business are not in full and exhausting play; the time of the year is unpropitious for afternoon rides; parties of pleasure in the day have not commenced; and in short, the "season" has not begun to exercise its influence on our legislators—every few of whom are quite exempt from its allurements. But when summer is in bloom, and the full-dress debates are pretty well over, while the real work of legislation—the whipping of measures into shape in committee—is in full operation (this being actually done by less than forty members), "no House" may be expected on those nights which do not belong to the Government.

It should be understood that at the commencement of the Session, on Monday and Friday, precedence is given to Government business, while Tuesdays, Wednesdays, and Thursdays, are appropriated to any measures or motions brought forward by private members. In June and July the Government takes Thursdays as well, and usually put their bills advanced a stage on Wednesday also. But these days always remain the inalienable right of private members. Accordingly at the advanced period of the session just indicated, private member and their motions become a bore; it is no business of the Government "Whipper-in" to see that a House is made (his care is for the real nights); nay, perhaps some motion is of a troublesome nature—will require explanations from the Government—which will lead to a debate which "can probably have any result at that time of the year;" and so the said adroit functionary may even employ some of the persuasions with which he is so highly gifted to induce honourable gentlemen to stay away about four o'clock.

It generally happens on "no House" nights that the first motion on the paper is in the name of some member who has not a sufficient number of personal friends to make a House for him, and the subject is one in which no one takes any interest but himself; and, although there is not much behind it a notice of more importance, and with a name of more weight attached to it, the friends of this latter member are, although well canvassed to come down and make a House, may think that the owner of the first motion will do or do not attend punctually, and other members—that forty members at the o'clock—by such occurrence, the evening may be spared a certain something that the appearance of things in the Lobby would they easily interpret. Therefore each member of these classes at the Whipper-in's request or suggestion or command, or under grace, as on the seeing—which he has the "orders of the day" will make a House for themselves. Nay, he is evidently eager and anxious to get together the requisite number of members for the honourable gentleman, who is, perhaps, not able to do it for himself; for he speaks impressively to every one who is about to pass into the House; he is evidently "whipping him in." But, somehow, one after the other, those very gentlemen pause, look about the Lobby for a moment, and then glide gently into the corridor leading to the refreshment rooms, and are seen no more. The doors are opened after prayers; few and far between are the passengers into the House; the clock stands on the stroke of four; there is a stir with in the House; the principal doorkeeper uproariously shouts out. "who goes home?" a schoolboy air of holiday enjoyment pervades the atmosphere; every one looks relieved and happy except the unfortunate gentlemen who have motions on the list; they gather up their papers, dash on their hats, and stride away, looking unutterable things at every one they see in the vicinity of the House; and will perhaps send the names of the Members present at the time of the necessary adjournments to the newspapers, besides bringing the matter indignantly before the House at the sitting next day, by which course, it should be said, they don't improve their chances on a future occasion.

In the last Session it was only on one occasion that there was "no House." It may be accounted for by the fact of its being the first Session of a new Parliament; and besides, the general election resulted in the return of a great number of fresh members, chiefly young men, who were delighted with the House and their new avocations, and many of them with their vigour unabated by their labours in the committee-rooms, were quite ready to rush down to the House on being informed "that the Speaker was at prayers," the technical way of ordering Committees to adjourn.

Assuming, however, that no such misfortune intervenes, and that the Speaker is enabled to get safely into the chair, the business of the evening forthwith commences. The first thing usually, if counsel be required, is the swearing in of new members. The neophyte is waiting in the seats under the Gallery beyond the Bar, when Mr. Speaker cries out, "Who comes to be sworn to come to the table." Whereupon he puts himself at the Bar, and is there joined by the members sent usually on personal friend, and the other the "whipper in" of the party to which he belongs. Supported thus on each side, he advances with the three bows to the table, where, having handed in a statement of his qualification, he takes the oath of allegiance and supremacy, signs the Parliamentary rolls, and, having shaken hands with the right hon. gentleman in the chair, is, to all intents and purposes, a working member.

Although usually a ceremony that attracts little notice; yet, when a man who is popular, either in the House or the country, is sworn in; or when his election has been the result of some party triumph, there is a good deal of cheering, from a House full or than usual, at that hour. The most exciting incidents of this kind of late years have occurred when the Jewish members have presented themselves to take their right to sit in the House. In the first case—that of Baron Rothschild—the proceedings, after he came to the table, were stopped by his demanding to be sworn on the Old Testament—a book which Sir Robert Inglis said he did not believe was in the library of the House; that question was, therefore, to be discussed, in his absence; and it was amusing to observe the effect which the curt formula, "You may withdraw," always used by the Speaker in turning any one out of the House, had upon the richest man in Europe. As is well known, after debate, the Baron was allowed to be sworn on the Old Testament; but on his sticking fast at the concluding words of the oathe, "on the true faith of a Christian," he again heard the loud words of dismissal; and, notwithstanding the strenuous efforts which were then, and have since been, made on behalf of him and those of his persuasion, he has never yet got beyond the seat under the Gallery, where, however, he may often be seen.

The next ordinary proceeding is what is called "Private Business"—that is, the passing of Private Bills through their different stages. It may as well be said that, from the sitting of the House until nearly five o'clock, it presents the appearance of being the abode of a set of unrestrained lunatics.

Every body is talking—everybody is running in or out of the doors in the Lobby and behind the chair—coming up to the table and writing their names on lists for the guidance of the Speaker in the presentation of petitions and notices of motion; and, if the House of Commons might be supposed to have a patron saint, one, at the moment, would unquestional ly fix on St. Vitus as being that saint. From amids the din there rises the voice of the Speaker, shouting continuously, "Mr. Brotherton;" and that excellent and indefatigable member may be seen, at each utterance of his name, rushing from the bar to the table with a paper in his hand. He is, in fact, bringing up and moving the first reading of "Private Bills," of almost the whole of which he is the clerk. His exhausting runs at length concluded he takes his seat on the fre. sary bench, and the clerk at the table calls out in succession the titles of more bills, and the same hon member moves that each be "read a second time," and retires to the Committee, all of which appeared of being the abode of a set of unrestrained lunatics.

Every body is talking—everybody is running in or out of the doors in the Lobby and behind the chair—coming up to the table and writing their names on lists for the guidance of the Speaker in the presentation of petitions and notices of motion; and, if the House of Commons might be supposed to have a patron saint, one, at the moment, would unquestional ly fix on St. Vitus as being that saint. From amids the din there rises the voice of the Speaker, shouting continuously, "Mr. Brotherton;" and that excellent and indefatigable member may be seen, at each utterance of his name, rushing from the bar to the table with a paper in his hand. He is, in fact, bringing up and moving the first reading of "Private Bills," of almost the whole of which he is the clerk. His exhausting runs at length concluded he takes his seat on the fre. sary bench, and the clerk at the table calls out in succession the titles of more bills, and the same hon member moves that each be "read a second time," and retires to the Committee, all of which appeared of being the abode of a set of unrestrained lunatics.

Usually, private bills pass through the first and second read ... out discussion, the ordeal they have to undergo in the Select Committees being mostly sufficient to satisfy the parties concerned. Sometimes, however, the opponents of such a bill endeavour to stop it on the second reading, and in such cases there will be found appended to its title in the list of the day the words "by order." Some member moves that it be read a second time "this day six months" (the Parliamentary parsphrase for "never," or, what is much the same thing, "next session"), and smart and rapid debates, which are sharpened by the influence of local influences and sympathies, ensue, ending in divisions. This is, however, the exception, and Mr. Brotherton may be seen through the first, second, and third readings of his different private bills, which require to be respectively passed through those stages in ten minutes or a quarter of an hour.

Then comes the presentation of petitions, which, of the many Parliamentary forces, is, apparently, the most farcical The Speaker, from a written list, calls out the names of members in succession. At each call some one rises, and mumbles out a few words, of which the only one usually heard is just that which nobody wants to hear, namely the word "petition." In nineteen cases out of twenty, what it is about, or where it comes from, is not heard So unintelligible is the whole affair, that in order to give publicity to petitions an active officer of the House has adopted the plan of spending the greater part of his evenings in copying the subject of each petition, the place it comes from, and the member presenting it, on separate slips of paper, which are sent *en masse* to every newspaper; and thus they appear, to the satisfaction of constituents and members. No power of reporting could effect anything of consequence in the matter. As the substance of the petition is stated, the Speaker desires the member "to bring it up," and puts the question "that it do lie on the table," with the customary appeal for the verdict of the House, terminating with the everlasting "the Ayes have it"

As soon as the presentation is over, a messenger comes in with a couple of carpet-bags, into which he shoves the petitions very unceremoniously, and walks off with them. Supposing as this ceremony is, it is not without its significancy and weight; and, of late years, the withdrawal of more than one important measure has been the result of the petitions presented against it; while, of the strengthening effect of petitions in favour of bills there can be no doubt. Some sessions ago, when a monster petition from the Chartists was presented by Mr. Thomas Duncombe, it was brought in on strong poles by four or five messengers, and occupied a considerable portion of the floor, while much laughter was caused when the Speaker desired the honourable gentleman "to bring it up;" a matter beyond Mr. Duncombe's power, though he has done some wonderful things in his day. The privilege of has the privilege of presenting petitions—not through a member of the House, but the Sheriffs, who appear at the bar in full official costume, and hand in the document.

By the time the petitions are disposed of, it is half past four or a quarter to five, and the hubbub has subsided; the House is full, the Minister and chiefs of the Opposition have come in, and all the notable members are in their usual places. The Speaker then proceeds to call for "Notices of Motion." Notices of Motion do not occupy much time or attract much attention, unless something remarkable is indicated by the Ministry or leaders of the Opposition, and even then the interest is but momentary. Their time will come.

On the proceeding to Orders of the Day follow attention is concentrated, for the Ministry is to undergo a series of questions, on all public subjects, which they are to satisfy as they best may. No moment could be better chosen for a characteristic view of the House of Commons than this. Everybody is in his place, provided with his hat on—a custom originating, most likely, in the want of convenient places where to bestow those incompressible coverings of the head. It looks odd and undignified, but the plan has its merits, too, inasmuch as it makes all the members look profound, and the Ministers impenetrable By-the-by, Mr. Disraeli never wears his hat, but always stows it away under his seat as soon as he reaches his place. The Treasury bench is full, very full; indeed its limits are far too contracted for all its occupants in and out of the Cabinet About the centre sits Lord John Russell, his hat pulled down over his brow and down to his ears, his arms folded across his chest, always seeming very tired and out of sorts. On his left is Lord Palmerston, in the easy attitude so natural to him, with his air of quiet recklessness that anything that is said to him; and on his right is Sir James Graham, his hat placed rather on the back of his head, and a perpetual lazy smile upon his lips. Sir James, despite his still stalwart figure, begins to look old in the face. Beyond Lord Palmerston is to be seen the eager intelligence of Mr. Gladstone's countenance, toned down by the solemnity of his neighbours. Lord Cardwell and Mr. J. Wilson, the Secretary to to the Treasury, Lejond whom, up to the end of the bench next the chair usually congregate, accumulate as many as may be, Mr. Peel, Sir J Young, and the law officers for England and Scotland. Below Sir James Graham may generally be seen Mr. Sydney Herbert, Sir William Molesworth, with his singular hat and *prononce* hair and eye-glass, even at this hour verging from the region of lethargy which appears to think the normal condition of a Cabinet Minister in Parliament. Then comes Sir Charles Wood, who always contrives to have his secretary, Mr. Lowe, next to him; Mr. Strutt, emulative of Sir W. Molesworth in the sleeping department, and Mr. Fitzgerald, the active Under Secretary for the Home Department, and Mr. W. Cooper; then come Mr. Grenville Berkeley and the Earl of Mulgrave, the ready orator of Mr. Secretary to the Treasury, Hayter, in the "whipping-in" business—this latter gentleman never sits down, but is in a constant state of vibration between the Treasury bench and the Lobby. Mr. Bernal Osborne, Mr. Charles Villiers, Mr. Keogh, Mr. Monsell, and Mr. Sadleir, do not appear to frequent the Ministerial bench, except at such times as their own departmental affairs are in progress On the second bench, immediately behind the last Ministerial seat at the "Gangway," is the prescriptive seat of Mr. Hume, the father of every sort of reform; and beyond him, on the Speaker, usually sit Sir Joshua Walmsley, Mr. Ewart, Mr. Aglionby, Mr. Horsman, Mr. Pelo, Dr. Williamore Sir James Weir Hogg, Mr. Oliveira, Sir James Anderson, Mr. Hastie Mr. Glynn, Mr. W. Brown, Mr. Headlam, Mr. Dunlop, Lord Mouck, and Mr. Brotherton, whose labours in the cause of private business, accompanied by advancing years, seem to have somewhat diminished his zeal for moving the adjournment of the House at a reasonable hour; indeed, the sittings of the last session fairly swamped him, and he gave up the task altogether. In the centre of the second bench Mr. Macaulay has taken his place, on the few occasions that he has spoken in the present Parliament. On the third bench, exactly behind Mr. Hume, may always be found Mr. W. Williams, the Member for Lambeth. Near him usually sit his colleague, Mr. W. A. Wilkinson, Mr. Duncan, Mr. John M'Gregor, &c. But about its centre this bench may be observed the fall of the Peel Ministry, Sir James Graham set the fashion of ex Ministers sitting on the third bench; and here, accordingly, we find those members of Lord John Russell's Government whom it was found impossible to include in the arrangement of the present Ministry, comprising Lord Seymour, Mr. Vernon Smith, Mr. Labouchere, Sir George Grey, Sir Francis Baring, Mr. Edward Ellice, and Mr. Tuffnell; and near them—although he evidently does not wish to be thought of the almost the only immediate follower of Sir R. Peel, for whom no place has been found—Mr. Goulburn. The other benches are always well filled but the next not readily pin ant them is that Mr. Thomas Duncombe the greatest tactician, and one of the greatest humourists, in the House and consequently one of its best-latch ... locate himself nearly on the last bench, ... gallery next the gangway, where despite of impaired health and strength, he ever and anon delivers himself of his epigrammatic jocularities, which differ from most jestings, inasmuch as they always bear direct upon the question at issue.

Below the "Gangway" on the Ministerial side, the appropriation and reservation of seats by a courteous prescription, obtains almost as much as on the Government bench itself. In the corner seat in the first row, until now always sat Sir Robert Inglis, one of the members for the University of Oxford; chief champion of the Church; opposer of all religious innovations—the admission of Jews into Parliament in particular. He looked as if intended by nature for a dignified Abbot, his fine smooth bald head, wearing the very appearance of the tonsure (he wore far too old-fashioned ever to keep his hat on in a room); and no one ever remembers to have seen him, no matter what the season of the year, without a flower in his button-hole. Next to him, there shone day by day, as remarkable, but a very different kinds of head. That of Sir Robert Inglis is globular, and without angles, the face placid, and the expression that of repose; while the head and features of Mr. Henry Drummond, his invariable next neighbour, are sharply cut and defined, and the whole expression bearing the aspect of intellect and taste, cultivated to the highest point of refinement. He is the most eccentric speech-maker in the House—the very Cain of debate, for "his hand is against every man." He never rises but to sneer at all public virtue, and to tell the House that it is a mass of corruption; but that, nevertheless, he rather likes them for it. No one can tell what his political creed is, for he alternately supports and opposes all questions; but he is always listened to, for he is always amusing; and, though somewhat bitter, not ill natured a man, for, in private life, he is understood to be delightful. To sum up his eccentricities, it may be stated that he is, by religious profession, an Irvingite; and, consequently, the antithesis of the unbending Church of Englandism of Sir R Inglis. Next to Mr Drummond is generally to be found Mr. Austen Layard, whose Eastern travels—his having been an *attaché* of the Embassy at Constantinople, and his not having been re-appointed under-Secretary for Foreign Affairs, an office he held for a short time under Lord John Russell's Ministry—erected him last year into the popular interpellator on the lagging Russia and Turkey question

Beyond him, on this row, down to the Bar, is a knot of the youngest members of the House, the product of the last general election—and ultastic representatives, ready for every subject, and generally taking part in every debate. If it would not be irreverent, one might call this the "Chatter-bench." Here, as at an advanced outpost, unwearied and vigilant, are stationed these dashing young "voltigeurs" of the House: perpetual is the skirmishing, and continuous the "crack," "crack," of the only weapons which they can use there. Here a good deal is said that is smart, showy, sounding well, often brilliant and effective; but, nevertheless, it does not impress the House; and, so, not too much of it is recorded by the reporters, who know well what is worth writing down, which they judge of by the strictest House of Commons standard It, however, temporarily amuses during parts of the evening that would otherwise be dull, and must be agreeable to Mr. Drummond, who was a Parliamentary "trailleur" himself when younger, and whose ensets still rather partake of that style of fighting.

Among those indicated will be found Mr. Blackett, Mr. J. G. Phillimore, Mr. Phinn, Mr. Danby Seymour, Mr. Otway, Mr. Cobbett, Mr. Crawford, Lord Goderich, Mr. J. Bell, Mr. Keating, &c.

On the second bench are compactly arranged the members of the Manchester school, supported and backed by the metropolitan members. There is Mr. Bright, with his thoroughly English look, and who, great as are his powers and abilities, has not brought it beneath with a single peculiarities of the House of Commons, and has transformed himself, without losing one particle of his earnestness, into a first-class declamatory platform orator into one of the soundest and most eloquent debaters of the present extant. Next him is Mr. Cobden, with his shrewd half-sneering expression of face, listening to all the speakers as if he thought they were universally bent on setting political truth in a fog—people of this country" never rising but to command attention; but not affecting to concern himself in the least about the opinion of the House, but speaks to the country: as a proof of which he has often made great speeches about half past six, when every body else has gone to dinner. Flanking him is Mr. Milner Gibson, who, despite of his unmitigated and most outspoken Radicalism, looks too much the *petit maître* really to be of the rough and-ready Manchester school. There is Sir Benjamin Hall, the untiring discoverer of abuses, and who says severe things about Bishops' incomes in the gentlest of voices, and who appears to dine out, or to be dined with, every day in the session; since he always comes down about half-past ten, in the fullest of full dresses; with him is Lord Dudley Stuart, the universal linguist—unwearied exposer of wrong and oppression, foreign and domestic. There is the mercurial member for Westminster, Sir John Shelley, who thinks his questions and motions during a session ought to be about equal in number to his constituents; and the other Member for that city, Mr. Lacy Evans, who seems to have brought with him from Spain a good deal of Spanish slowness and sententiousness. The lower Hamlets and Fin-bury have here reserved for them good places by Sir William Clay, Mr. C Butler, and Alderman Wilkinson, and the phalanx of metropolitan members is completed by Mr. Montague Chambers, the Liberal Member for Greenwich.

In this section of the House sit the Irish Members who support the Government; such as Mr Vincent Scully, a wonderful speaker, for, in order to get rid of a debate on Maynooth, he once spoke from half-past twelve till six o'clock, on a Wednesday (when the House adjourns itself as of course), well knowing that there was not another day for renewing the debate that Session. Beside him are Mr. J. D. Fitzgerald, Mr. Pollard Urquhart, the O'Connells, Mr. F. Scully, &c. In short, what are called the more reasonable Irishmen in Parliament. Here, too, may be found meek and sententious, but earne t, Mr. Miall, who contrives to get his anti-Church-State doctrines listened to, because he puts them forward in so mild and with such an evident desire not to do injustice to any one. Mr. Geach, Mr. James Bell, Mr. A. Anderson, Mr. Base, Mr. Heyworth, Mr. Crossley, Mr. Heywood, and many of the north of England members, congregate in this position; while the remarkable hat and hair of Mr. W. J. Fox (most unlike that of speakers), if not always here, is just on the other side of the "Gangway," in close contact with the knowing "chapeau français," and "Antinous"-like curls of Mr. Thomas Duncombe; near whom also generally flutters Mr. Apsley Pellatt, the new member for Southwark; while from the darkness of the back bench under the gallery near the "Gangway" is seen to loom the magnificent beard, and to tower the grand form of Mr. Muntz, the Member for Birmingham.

Combined with all these—who are more or less constabilities, and who are scarcely to be regarded as separate parties—is the formidable, if not numerous, phalanx of Peelites, who sit on the left side of the chairman of committees, and who, as at present constituted, are, in short are those who do the business of Parliament, as contradistinguished from its talk. You may not see long reports of speeches attached to the names of Mr. Thornley, Mr. T. Greene, Mr. Ingham, Mr. Scholefield, Mr. W. Brown or Mr. Wrightson, on the Ministerial side; and among the Opposition (for in the conduct of the business of the House no one has any politics), Mr. Wilson Patten, Mr. Sotheron, Mr. Bramston, Sir J. Yarde Buller, and Sir John Trollope; but, when party contests and debates are unwelcome out in the middle of July, and a long array of bills, to which nobody has attended, are being passed rapidly through all their stages, the qualities of this sort of men come into play, and mistakes and errors are avoided by their diligence and knowledge of the forms of the House.

All this class of members are the staff of the Permanent Chairman of Committee, an office now filled by Mr. E P. Bouverie, who represents Kilmarnock. The attainment of the office by that gentleman was a delicate piece of Parliamentary tact. On the appointment is made is, when, in a new Parliament, the House goes for the first time into Committee of Ways and Means, for the leader of the Ministry to move that "Mr. So-and-So do take the chair," and if agreed to —which is usually the case—he is conducted to the chair. The necessary qualifications being very few—he retains it permanently during the continuance of that Parliament. Mr Ralph Bernal held the office during Lord Melbourne's Government; was succeeded, when Sir Robert Peel came into power, in 1841, by Mr. Greene, Member for Lancaster; but resumed it after the general election in 1847, Lord John Russell's Ministry being in office. It so chanced that, at the general election in 1852, both Mr. Greene and Mr. Bernal lost their seats; and Mr. Wilson Patten, a gentleman who had long devoted himself with great energy and ability to private business, was nominated by Mr. [illegible] Manners [illegible] early in the spring of 1853, Mr. Wilson Patten's health having failed him, he resigned; and Mr. Bouverie, who had been for some time an active member of the staff for private business above alluded to, was appointed

Just ten days afterwards Mr. Greene (a Ministerialist) was re-elected for Lancaster, his opponent at the general election having been unseated on petition. If he had been in the House at the time of the vacancy, he would certainly have been appointed, for if everybody admits that Mr. Bernal was the best possible Chairman of Committees, everybody also admits that Mr. Green was quite as good as he. The office is the worst paid in the House, relatively speaking, for the work is tremendous and never ceasing, while the salary is only £1500 a year; less than the Serjeant-at-Arms gets for wearing a Court dress and sword, carrying the mace occasionally, and lounging in the only comfortable chair in the House during its sittings; and, besides, more than one-half of these onerous duties are performed by a Deputy-Serjeant at £1000 a year.

However absolute may be the fact of the Ministerial majority when a great Liberal question comes to a division, to the eye of the stranger the Opposition seem quite as numerous, and quite as closely packed when the House is full. The truth is that both sides of the chamber will not exactly alike, and as it only contains accommodation for some 450 or 460 members, those of the remaining 654 who chance to be within the walls, must be floating about in lobbies, libraries, refreshment-rooms, &c., carefully avoiding the inexorable functionary who is perpetually looking out for them. In this case, then, the Opposition looks formidably equal to its duties as a Parliamentary institution; how it may be if examined in detail, is, of course, a matter of opinion.

On the first row next the table, about midway, and near to one of the two green velvet covered, brass-ornamented boxes, which flank a small collection of well-bound books, in front of which the mace reposes sits the ex-leader of the House, and ex-Chancellor of the Exchequer, Mr. Disraeli. Familiar as his appearance has been made by the pictorial squibs of the day, scant justice has been done to him even in caricatures. He has nothing of the hollow-eyed, round-backed, Jew-boy look which has been so liberally bestowed on him. If he be not a handsome man, contemporaries does not come up to the English standard of manly beauty, and if it is strongly indicative of race, and that neither Norman nor Saxon, yet an impartial and candid observer would admit that it has a character striking and even distinguished. He is neither tall nor is he short: he is rather thin; his forehead is high, round, and smooth; he has black eye-brows, clear dark brown eyes, high cheek-bones, lips firmly set, a pointed chin; and black hair, curling like tendrils all over his compact head, of which one curl is intended to drop carelessly over the brow, but somehow seems to have been got into its place with pains. So of his dress it may be said that it is elaborated into carelessness; but the art is not sufficiently artfully concealed. Its details, its minutiæ, are studiously correct. He sits sunk into his seat, his head, always uncovered, reclining forward, so that his eyes appear to be fixed on the ground, or staring at vacancy (which they by no means are), and his whole attitude that of the most rigid repose, till what he conceives the right moment for being aroused arrives, when his listlessness drops, as cloak to the paleness of his complexion, would seem significant of fragility of body or ill-health—is cast off for animation and vigour equal to a sustained speech of five hours and a half.

On each side of him are ranged the members of Lord Derby's Government. There is Sir John Pakington, the most neatly dressed man—not only in the House, which would perhaps need but small effort, but in the country—who was a very fair "private business member," up to the moment when he was called to hold the seats of the Colonial-office, a post of whom it is reported that the late Duke of Wellington, when he was told of his appointment, bluntly said, "Why I never heard of him." He was not the worst of Colonial Secretaries notwithstanding. There is Mr. Walpole, ex-Minister for Home Department, who has the misfortune of him a haunting resemblance to the late Sir Robert Peel—the voice, the manner, the face, and, above all, the sleeves of the coat, are dimly like: he is, in short, a kind of very much diluted Sir Robert. Lord Stanley, heir to the Earldom of Derby, and the image his father, style of speaking, though without the physical vigour, of his sire—a philosophic and inquiring young statesman, who will find his place some day. Lord John Manners—a very emphatic young nobleman, who was always going to do something, but has never done it; not even succeeding in getting up a mediæval May-pole in Kensington-gardens, when he was Commissioner of Woods and Forests. Mr. Henley, whose practical sense and business habits pointed him out as one of the best working editors of Lord Derby; but who failed to fulfil expectation, as Lord President of the Board of Trade. Mr. Stafford, the late Secretary to the Admiralty—handsome, nonchalant, and fluent. Lord Naas, ex-Secretary for Ireland—a fair, stout, good humoured, well-looking young man, who has had good opportunities for his time of life. Major Beresford, whose great services as "whipper-in" of the party when out of office were rewarded with the place of Secretary-at-War, when in; and his delegates—Mr. Forbes Mackenzie (he was unseated for Liverpool on petition); Colonel Forrester, one of the handsomest of a very handsome race; and Captain Bateson, quite a beauty-man, two or three years ago, but on whose looks the House, politics, and fashionable life are beginning to tell. Sir F. Thesiger, the ex-Attorney-General, who was the author of that ill-starred speech; and Sir Fitzroy Kelly, ex Solicitor-General, who was the fiercest of Protectionist talkers on the hustings, and a vigorous, if not very successful, opponent of Mr. Gladstone's financial measures last year. The compliment of the Treasury Bench is completed by Mr. R. J. Dallie—a grave man, and, it is said, a sound adviser of Lord Derby, who had great confidence in him; and Mr. Cumming Bruce, who is one of the comparatively few Scotch members who are not on the Ministerial side.

Behind this rank are ranged Mr. Newdegate and Mr. Spooner, colleagues in the representation of Warwickshire, allies in their unyielding opposition to Roman Catholicism in every shape, and staunch believers in Protection, though they have closed their ostensible connection with any movement in its favour; the Marquis of Granby, a sincere and earnest politician, and whom the House, by their unanimous cheers, once declared to be "a man of the strictest honour." Mr. Malins, an eminent Chancery barrister, but rather too loquacious for a new member; Mr. Edward Bail, the real farmer's friend, which character the tenant-farmers of Cambridgeshire have endorsed by returning him for their county, and giving him, besides, the necessary qualification; Lord Henry Lennox, who was cheered one evening when he, the son of a Duke, brought Mr Disraeli an orange while he was speaking; Mr. Isaac Butt, whose claims to be in the front rank of Protectionists are as undeniable as those of Messrs. Napier and Whitside, who, it should be said, are usually clear neighbours of Mr. Disraeli. Here, too, we find Sir Edward Bulwer Lytton, who left Parliament a Whig, and something more ten or twelve years ago, and returned at the last election a Derbyite and Protectionist, and a prominent one too; and Mr. James McGregor, a railway magnate, and who deserves to be one.

Here and hereabouts congregate the broad-acred squires—Sir John Tyrrell, Mr. Christopher, Sir John Yarde Buller, Mr. Cayley, and Mr. Robert Palmer, the Tollemaches, the Egertons, Mr William Miles, Mr. Deedes, Sir John Trollope, Mr. Henry Seymour, Mr. Henry Baillie, and whose Parliamentary vocations are well nigh gone since Protection has ceased to be the gathering cry of their party. Here, too, are to be found the young scions of nobility who make the House their resting-place, while waiting their flight into the Lords, or their steppingstone to office and promotion. Here is to be found the Marquis of Chandos, who has proved, by his actions, that he is an honest man, as well as a man of business, and has rightly interpreted the proud motto, "*noblesse oblige*." Here is the Marquis of Blandford, a zealous Church reformer; here are the Bentincks, and the Cecils, the Beauchamps, the Hamiltons, the Lascelles, the Lennoxes, the Liddells, the Percies, the Lowthers, the Mannerses, the Vanes, and the Somersets, who may be depended on to fill the House with well-dressed men on late nights, when divisions are expected between two and three o'clock.

On the front bench, below the Gangway, may be seen Mr. Adderley, a steady colonial reformer, and advocate of juvenile reformation also; Mr. Thomas Baring, a great name in commercial circles, and who declined to leave the guidance of the financial affairs of the merchant-world, in order to be the arbiter of the monetary details of Israel, as Chancellor of the Exchequer, under Lord Derby. In a well-chosen position, on a bench near to the Gallery, may often be seen, when the House is most crowded, a young man with a singularly-handsome face, almost Italian in its style, with rich dark hair, and superb moustache and Vandyke beard; dressed in the extremest easiness of the present fashion, leaning one hand on an enormous stick, while the other is in his pocket; and delivering himself of a series of most singular phrases and words, which, though they sound odd, yet have a glimmering of genius in them, taken altogether, are the very personification of the "free and easy" style of oratory. This is Sir Robert Peel, an eccentricity in politics, as he is in appearance, and who appears satisfied with himself so long as he makes a sensation, in which he is generally successful.

From an exalted station, far back under the Gallery, the renowned Colonel Sibthorp still delivers himself of those jerked sentences of denunciation of all political and governmental honesty, and earnest desire for economy and saving the people's money, which, strange and absurd as they sound, are very rarely without a vein of practical sense running through them.

On the second bench below the Gangway are ranged the Irish Brigade. At their head sits Mr. Duffy, whose likeness to Mr. Disraeli is very remarkable; and who would disappoint those who expected something distant in the editor of the *Nation* newspaper for he is a remarkably mild mannered quiet-talking man, whatever strong things he may say, and has, besides, proved himself a capital Parliamentary tactician. There is Mr. G. H. Moore, a fine and eloquent speaker, but who will not condescend to talk in the Houses of Commons way, and who will not condescend to talk in the Houses of Commons way, and the [illegible] newspaper is a loud sounding print, and force of language [illegible] considerable extent; but Mr. [illegible] and the author of a great deal of it. [illegible] among the Irish one he will get earnest, and he will state his opinions, and roundly, too, but he is never coarse, and, being a man of sense, he studies his audience, because he wants to make way with them. There, Mr. Sergeant Shee, with his marked features, of disproportionate size, though he is in the prime of life; a man with much rough and honest power about him. There is delicate and learned Mr. Bowyer, who ought to have lived in the times when lawyers were also ecclesiastics; Mr. Blagden, a steady journalist, who is making his way in the House; Mr. Swift, ex-Sheriff of London; Mr. M'Mahon, who has descended from the Reporters' Gallery to take his place on the floor as member for an Irish county; Mr. Ouseley Higgins, Dr. Brady, and the rest of this band of brothers. Among the Irish one here who may be called unattached, and who sit in this locality, are Colonel Dunne (a nephew of [illegible]), Mr. Sergeant Shee, with his Morgan (an ex-Light Dragoon, who [illegible] on most occasions more or less amusing personal, but yet parliamentary, differences among the Irish members; and Mr. Conolly. These, with many others—to mention whom would be hardly more than stating a catalogue of names—go to fill, and fill well, the Opposition side of the House.

It is in the face of this audience—keen, watchful, and critical that her Majesty's Ministers have every day, about five o'clock, to undergo a series of questionings, in the nature of cross examinations; a kind of parliamentary baiting. Perhaps the question is addressed to Lord John Russell, and requires information on the subject of the war in Burmah, or of the intentions of the Cabinet on the Eastern crisis, or some kindred topic, on which the noble Lord has nothing to say—to the House of Commons. Slowly rising, and swaying himself to and fro over the table, his Lordship delivers himself of a few sentences—half of which being lost, from the low muttering tone in which they are spoken, the reporters, who are responsible for the accuracy of important Ministerial dicta, are driven into temporary frenzy, at the communication that is going on between the leader of the House and the green box on the table. Indeed, since his return to power, Lord John has adopted a tone of reserve towards the Reporters' Gallery, by his inaudible manner of speaking, especially when the subject is of interest. Upon this, up starts Mr Bright (who seems to be a self-constituted guardian of the public), and the following dialogue, or the member of the [illegible] the bill, replies to him, and sums up the debate. At an early hour of Saturday morning, the impatient and expectant House, by a general understanding, comes to a division.

It is on occasions like these that all the characteristics of the House of Commons come out. Now is to be seen the phenomenon of the rapid emptying of the House, when a "nobody," or still more, when a "bore" rises; and the as rapid filling when one of its real speakers gets on his legs. It is peculiar to the House of Commons way of talk; nothing of the debating society style, which existed even as late as the time of Canning, will be tolerated there. Mr. Disraeli tried it when he first got there, and failed; and that to such a degree, that it was a wonder he ever opened his mouth again. But, having promised that "some day they should hear him," he set about acquiring the knack, and has it in perfection now. Even when making a great speech his tone is friendly and familiar, much as if he were holding an impressive conversation with Lord John Russell, sitting opposite to him, and this tone hardly varies when he utters the bitterest sarcasm, except, perhaps, [illegible] he is slower and more careless in manner, the words just dropping from his lips. When he comes to the peroration he gets more serious and solemn; the march of his sentences is grander, a little eloquence is ventured on, and there is a little raising of the voice, and more vehemence of gesture; but to the last he is unexcited, and the great care is to be unpretending, that he may always get cheered at the right place: and his speeches are always hits.

Lord Palmerston has the reputation of having made one of the greatest speeches ever delivered in Parliament (that on the Greek question in 1850); he had a whole night to himself; and, as was said by one who ordered dinner from "the close of one day to the dawn of the next the House hung upon his lips." He is one of the best speech-makers we have. But no one speaks plainer English, or uses plainer words. Terse, pointed, epigrammatic, full of knowledge of his subject, accompanied by a smacking air in the manner which sets like a charm, and yet in such what would be called charming, his addresses never fail to interest and to sway the House; but as to eloquence, as people usually interpret the word, he has not a particle of it.

Lord John Russell labours under positive defects of utterance; he pauses between every word to say "ah!" and he flattens every letter into the most unnecessary breadth; and as to his language, it is usually plain-sailing enough, while his manner is cold in the extreme—and yet who more than he has made more successful speeches in Parliament than he has. He certainly has, on occasions which demand an ascension above the dead routine, risen into something very nearly eloquence, and uttered fine passages; but even these he mechanically ordinary in delivery of his manner has scarcely altered; while no visible excitement has quickened the slowness of his delivery.

Mr. Gladstone has as great a command of words as any man in or out of the House, and he delivers himself with astonishing fluidity of wonderful sentences, which, sounding involved, almost verbose, are yet skilfully brought up to their climax; and they are so complete as to be capable of being transferred at once from shorthand notes to print at intervals. His five hours and a half speech on introducing his Budget last year was, considering [illegible] on, never pausing, right-a-hand rapidity, the best-sustained effort of the kind on record. He has, however, been too long in the House not to know that it won't listen to words alone, but demands figures that indicates things. In short, the House of Commons is a moral despotism which will have its own way of talk, its own way of doing business, and its own standard of everything which innovators and independent Members strive against in vain.

The speaking in Parliament is not so much discussion, which the word "debate" implies, as a series of members delivering their sentiments, or offering advice. There is little hope or expectation of influencing votes or results; and, what every one most wishes is, to get himself individually right with his constituents. It rarely happens that the very numbers on a division on an important question, are not known to within two or three. That test, however, is, nevertheless, still as formally and carefully applied at the end of every debate. The speaking, by universal consent, ceases, and the word "divide" is echoed on all sides. The Speaker cries out in his loudest tones, "Strangers must withdraw." This order, until within a short period of the close of last Session, used to be literally complied with, every one but members and officers of the House being turned out. This occupied some time, and much noise and confusion was caused by the return of the strangers to their places after the division was over. The system was reconsidered, and now no one is actually required to withdraw except the occupants of the Peers' seats behind the bar, and the diplomatic gallery over it, which are considered as in the body of the House, and might lead to their mingling with members.

As soon as the order to withdraw is given, a two-minute sand-glass is turned by one of the Clerks, in order to give time to members in the Library, and other parts of the building, to come in. They are summoned by the simultaneous ringing of sharp and peculiar-sounding bells in every room, which is effected by means of electricity. Those who are in the Library in, and, the sand having run out, the outer doors are instantly closed, and egress or egress being no longer allowable. The Speaker gives the direction.

"The Ayes to the right, the Noes to the left," and the former file out by the door at the back of the chair; the latter pass up the Gangway on the Opposition side, and out at a small door at the end of the House, on the left side, under the Gallery. The Speaker then orders two "Tellers" to each door; one of them reports to him that "the Ayes are clear," and then files off; the Ayes entering at the principal door at the Bar, the Noes by the left-hand door behind the chair. Each member passes between the two Tellers, who count them as they pass; while a clerk, with a list of names in his hand, ticks off that of each man, in order to the immediate preparation of the "Division Lists," which appear every morning, printed with the "Votes." When all have reentered the House, and assumed their places, the Tellers compare notes, and having made up the numbers correctly, all four of them place themselves about the middle of the floor, and advance together, bowing three times, as usual, to the table. The principal Teller then, in a loud voice, declares "the Ayes to the right" to be so many, the "Noes to the left," so many; which formula is immediately repeated by the Speaker, and the fate of the question, for that time, is decided. When the numbers are declared, both parties cheer vigorously for those on their own side the winners, for the victory; and the losers, for having shown a good fight. The machinery by which the votes of individual members are collected, arranged, and made known, may sound cumbrous when it is described, and it may occur to many that a simpler process might be adopted with advantage, but, practically, it is the quickest and most accurate mode of registering votes, and assigning each member his place in the list, for the actual operation from the moment when the clearing of the House begins, to the return of every one, and the declaration by the "Tellers," even when the House is at the fullest, does not take more than [illegible] and six persons are employed, [illegible] a walk out of one door, through [illegible] and in at another—is not an excessive labour.

RECEPTION OF THE TURKISH AMBASSADOR, ON TUESDAY LAST.

usually occur, are in the cases of members getting into the wrong
se, and voting exactly contrary to their intentions; but that is their
faults, they alone are responsible, and must clear themselves in the
way they can, by means of the newspapers.
th the question of voting, the whole system of party manage-
le inseparably connected. It is not the personal influence of
ters, or chiefs of Opposition, the political weight of Cabinets, or the
stions brought to men's minds by great argumentative speeches,
ring members up in a body at the right moment, to give their votes
eir own right sides. If the arrangement were to be left, to be regu-
by such chances, no one could ever reckon on any measure
carried in a single session. Now by a great moral law of the
of Commons, which pervades and acts upon its whole system, like
the atmosphere on the human frame, not the less powerfully because
it is impalpable, every man must more or less yield up his individuality;
no one can be in its integrity that which is called "an Independent
member." On fitting occasions a man may, if he sees fit, show that he
is no blind or bigoted follower of any set of ruling men, but can think
for himself; although the rarer he makes those occasions, the greater
will he find his sphere of real usefulness to be. But do what he
may, the times will and must come when he will be called
on to perform the act of voting, when he will be called on to say "aye"
or "no" on certain questions; and from this position he cannot escape,
and it will only remain for him to decide which is the most in ac-
cordance with his principles.
He will thus be insensibly brought under the influence, and, to a
certain extent, under the control, of a functionary of his party,
called the "Whipper-in." This is a gentleman of great Parlia-
mentary experience, no little knowledge of mankind—political
mankind especially; perfectly acquainted with all the resources
of his party, the machinery of which he works pretty much
himself as Director-General; and who usually has attached to him, as
assistants, two members younger than himself, who are better able to
touch the sympathies, and accommodate themselves to the humours
and tastes of men of their own age; the seniors he keeps to him-
self. It is his and their business to have themselves informed of the
whereabouts of every available man of their party who may be required
on a division on any night; and as regards the Government party, to
see that enough for a working majority are always actually on the

premises, and within hearing of the division-bell, so as to reach the House before the two-minute sand-glass has run out. On nights when a great party debate is expected to terminate (of which every member of the party is informed by circular), of course the interest is strong enough to bring down a full House without much excitement. But, even then, great vigilance and watchfulness is required on the part of "Whippers in" to keep all the men together till the end, as each party likes to turn out as strong as possible at the division list, no matter what the result; and some men will get tired and want to go away, and others are comfortable elsewhere, and don't want to come; and for the management of such subjects much address and skill is requisite. A great deal might be said about the science of "whipping in," but those the adroit and practised sort of intellect and *physique* it requires in its professors. It may suffice, however, here to add that that functionary on the Government side is generally one of the Secretaries to the Treasury, and that the office is admirably well filled at the present by Mr. Adam; and that on the Opposition side the task of overlooking and bringing up is more onerous, as the number of young, aristocratic, and fashionable members is much greater, and it is absolutely necessary for the "Whippers in" to be acquainted with every man's habits, tastes, and haunts—such of the latter as may be able to fix on the exact dinner-table or ball-room, stall at the opera, or corner of a club-room, where he may be found at a particular hour of the night.

In this House, voting becomes anomalous to absurdity. It may be that a motion is being made, or a clause in a bill, or an item in the Estimates being discussed in Committee, as is often the case, with scarcely forty members present: a division is suddenly called; the bell rings, and in rush members in twenties and fifties: they belong to both sides; don't know what has been under discussion—what the question is they are to assist in deciding—except from what they can learn in the sharp two-minutes' run from some friend or official; but, if they fall in that, they will be sure to find the faithful and vigilant Whipper-in pointing to the Lobby where they are to go; and there, as they are having their names marked, they may absolutely learn "what is the question:" "They vote by an instinct which never errs; and all is right. This subject was very ruefully brought before the House by an Irish member last session, on some Tenant-right amendment in a bill which the thinness of the House all the evening had given its supporters some hopes of carrying; and which hopes were destroyed by the unexpected apparition of sixty or seventy Government men in less than two minutes. On that occasion, Lord John Russell gravely justified the custom, and stated that it was founded on the exigencies of our parliamentary system, which necessitated a great deal of voting which rested solely on confidence in party. As English men are very practical, and with good measures to be passed as fast as possible—after that explanation, it is to be presumed that there is nothing more to be said in the matter

It is from February until after Whitsuntide that the show Parliamentary season is in full vigour. It is during this period that the important Ministerial measures have been got through their second readings—that the great party moves of the Opposition have been made—that the clash of hostile debates has rung far into the hours after midnight. But July comes, and Parliament is getting tired of its old habit of reversing the usual order of human tastes, which induces men to seek the country during the heats of summer, and to congregate in cities during winter; and a sensible alarm begins to be felt lest the shooting season should commence before the prorogation. Therefore the process of weeding the long list of measures which still present a prospect of six months' work, is duly entered upon. This is called, in the jocular parlance of the House, "the massacre of the innocents." Day after day some Minister signifies that such a measure will not be proceeded with this session. The Speaker gets some rest, for the House is every day in committee, when the Chairman of Committees presides, sitting in the chair at the right side of the table.

It is when the House is thus constituted that the clauses of bills are considered. The Speaker retires, the mace is removed from its place on, and placed under, the table; and the Chairman reads each clause of the bill, which is then considered, altered, and, perhaps, added upon; amendments are made, or not, as the case may be; and all this is done by a very few working members, for even "the forty" are not always present. A member can speak any number of times in Committee, whereas he is limited to five if he return a matter in before the House. A good deal of tedious talking is carried on, but it is all conversational; nothing is full-dress; and it does not expect—what it would not get—any reporting. When the Chairman leaves the chair, it is on the motion "that he report progress;" the Speaker comes in and takes the chair, the mace reappears on the table, and the Chairman states what has been done. If the clauses are not all gone through, he "asks leave to sit again," but, if the bill is finished, it is reported, and then is ready for the third reading. It is only in the case of the most important and strongly-opposed measures that much debating takes place on a third reading. The process of exhaustion has been pretty well gone through when it comes to that stage; and the official and party strength which has borne the brunt is generally sufficient, and more than sufficient, to tide it safely over the last shoal it has to encounter. Its opponents are generally content with short protests against its principle, and the fine voice of the Speaker has a mellow pleasantness in its pathos when it says, "that this bill be read a third time;" and in the refrain, "the Ayes have it." With even a little more unction does the right honourable gentleman deliver himself of the important words, "that this bill do pass;" which places it beyond the criticisms or control of the Commons' House of Parliament.

It sometimes happens, however, that divisions are taken on the third reading, and even on the question "that the bill do pass;" but they are rare attempts, and very little is ever gained by them. Clauses are often added, and amendments made, on the third reading; but they are mostly such as have been previously agreed upon, and do not excite much discussion.

Very important functions are exercised by Committees of the whole House. All questions of taxation and finance—such as the Income-tax and Succession duties—are disposed of by a Committee of Ways and Means; while the voting away of money for expenditure is conducted by a Committee of Supply. It is in this latter that the Army, Navy, and Miscellaneous Estimates are discussed and voted. Although the number of members attending these latter committees is generally small, the most vigilant, practical, and sensible men in the House are regularly in their places. Every item of money to be voted is printed in papers which are in the hands of members; and every vote is put separately by the Chairman. The most minute discussion is thus effectually obtained; objections are taken, and votes defended and explained; suggestions for the future are made, modes of lessening expenditure pointed out, and the principles of economy and diminution of expense made. The aspect of things on these occasions is much more satisfactory to those who don't think much of your great Parliamentary display, in which all the talk leads to nothing, and influences no result. In Committee of Supply no one thinks of making speeches, or glorifying himself; but sound practical sense and desire for saving the public money, combined with good humour, and a great deal of conversation on all sides, may be said to characterise the proceedings.

It is not meant to be said that every Committee of Supply produces large savings to the country; but in these days there always appears each year a diminution in many items as compared with the previous year, and if the results be not always in figures, yet the tendency is to lop off all that is useless and unnecessary, and to see that for every sum that is spent something worth having is got. It is on these occasions that Mr. Hume, the Nestor of administrative reform, headed by his imitator and follower Mr. W. Williams, is in full force. Here, too, may be found, loudly remonstrant, the vigilant guardian of the people's purse, Colonel Sibthorp, who will not remain to posterity in history (which he does not read) as the man who fought for an allowance to the Prince Consort, but as the man by the means of an annual saving of £20,000 a year. On these occasions the naval and military men, the scientific men, the engineers, &c., are to be found bringing their experience to bear, and saving the country pounds by their pence; and it is to be hoped, probably, some precious time is lost, upon the whole, good is done, and the hearty cheer with which the passing of the last item of the Estimates is always greeted, is the ebullition of feelings of a body of somewhat English gentlemen, who have the consciousness that they have been doing their duty.

It is in July that the Government seizes on the Thursdays for their business—the orders of the day have precedence then as well as on Mondays and Fridays. The bills introduced by private members and to which the Wednesday sittings from twelve at noon till six in the evening are devoted, begin to find their inevitable fate; that is, having advanced to a certain stage, say half-way through Committee, they begin to slip through the fingers of the gentlemen who have them in charge in a most unaccountable way, till suddenly they are one day found to be in so queer a position that the bland suggestion of some Minister (who assures the honourable gentleman that the Government will consider the principle of the measure), to withdraw the bill for the present, is eagerly acceded to, and the half-shapen piece of legislation is consigned to the "limbo of next session." A bill brought in by a private member must have some wonderful inherent strength to get passed through the House. Such was the case of the bill for extending the jurisdiction of the County Courts to £50 brought in by Mr. Fitzroy, then out of office; and in which he beat the Ministry in their decided opposition to it, led on by the Attorney-General of the day. But the fact is, that the whole legislation of the country is passing into the hands of the Government for the time being—a principle which is looked upon with much jealousy and distaste by many members.

From the middle of July the Government has the business of the House pretty much in its own hands. Then commence Morning Sittings, when the House meets at twelve at noon, and adjourns at four till six o'clock. This has of late years been found indispensable to getting through the day. Notwithstanding this, the sittings are often protracted till three, half-past three, and even four o'clock the next morning, when the wearied and sickened legislators wend their ways home to get such sleep as will enable them to come again at twelve o'clock, into the dreary looking and stuffy chamber, which they have left so few hours before, that the heated atmosphere has scarcely had time to evaporate. At the morning sittings they remain mute things in the House—the hats and the cushions look jaded and worn; and the mace is dim, as if time had been allowed for polishing it up.

The Tuesday evenings are, however, still left to private members; and plenty of motions remain which would have excited interest four months before, but are contemplated now with indifference not horror. The possibility of a "no House" is precluded by the fact that the Government has the morning sitting, which is all they want; and the House—adjourning at four, and resuming at six—is constituted, without the necessity of ascertaining the number of members present. There, however, is vested in every Member a power, which, occasionally exercised even early in the session, is now to be expected to be prevalent on Tuesday evenings; and its result is what is called a "count out." If it is found that forty members are not present at any time, a motion may be made that "the House be counted:" strangers are ordered to withdraw; and if the Speaker finds less than forty in the House, an adjournment is the inseparable necessary consequence. If it is wanted to keep a House, a sufficient number of men are hastily caught and brought in before the counting begins; but, as in most cases, the affair is understood, and has even been the subject of pre-arrangement, the motion is usually effectual.

The signs of a "count out" are unmistakeable. The thinness of the benches is palpable; the voice of the member addressing the House, who sees his fate, sounds hollow and hesitating; gradually members listlessly rise from their seats, and lounging towards the Bar and under the Galleries, slink quietly out. The attended mover counts carefully; there are thirty-six present; it would be dangerous to move yet, as three men might come in accidentally before the door were closed. Five minutes more—there are still ty two—nearer, but not near enough; one more count—twenty-seven—a voice is heard muttering something, which causes the member who is speaking to stop suddenly and drop in his seat as if he was shot. Strangers withdraw; the gentlemen of the press grinning delightedly; three minutes more—it's all right, "counted out"—holiday for this evening. This privilege of "counting out" is often the instrument by which Parliamentary "bores" are punished, and is often applied with ruthless severity to the reformation of that unfortunate class. At any rate it is an institution, and a privilege, which is rigidly guarded by members; and complaints to the House and writing to newspapers have little or no influence upon it.

At this period of the session, the House of Lords is vigorously exercising its function as a registry for the bills passed by the Commons, and the business is often interrupted for a few minutes by "a message from the Lords". At some convenient moment the Speaker, who has retired well-wigged, but not enough, the Lords' Messenger, standing under the Gallery calls out "Mr. Serjeant," upon which that functionary comes to the table and states that there is a message from the Lords to be delivered; he seizes the mace, returns to the Bar, places himself on the right side of the Messenger, and they advance, bowing the conventional number of times; the bills and papers are given in, and the Serjeant and his prisoner (for he looks like it) retire backwards.

The Lords will, however, sometimes disagree with the Commons on points of detail in bills; and, if their amendments are not agreed to by the Commons when the bills are sent back, a Conference is desired, and a certain number of members having been appointed to manage it on the part of the House, they go to the Lords' House, sit at the table, and leave the House for the apartment assigned to such meetings. During their absence, all other business is suspended.

About this period, the summonses to hear the Royal Assent given by Commission to bills is issued, and the request [illegible] is accompanied by the Serjeant-at-Arms and other officers, who, [illegible] by "Black Rod," marches stately down the House, [illegible] rank of standing and uncovered members; who, on [illegible] throw themselves in the most graceful attitudes possible, with [illegible] about with their hats on (the custom being for no one ever to [illegible] great without uncovering), and talk loud, and laugh, if they have the [illegible] and spirits, till the potential announcement of "Mr. Speaker!" warns them to "fall in" for the Parliamentary dance.

The month of August has commenced: for the last three weeks there has been speculation and guessing as to what day is fixed for the Prorogation, and bets run high on Tuesdays and Thursdays, according to opinion. The list of "orders of the day" published daily, from a rapidly appalling number of thirty six or thirty seven, first down to reasonable limits, and then gradually diminishes to the vanishing point On a Saturday, the Speaker gives his annual official dinner to the officers of the House, and the Members go down to preside at it to dine on exaggerated whitebait. These signs are conclusive—it must be the next week. On the Monday and Tuesday the House meets in the morning, and the Secretary to the Treasury states, at three o'clock, that he would move the adjournment then, and not give the House the trouble to meet in the evenings; but the Lords have still some amendments to bills, to be considered in Conferences; and, as that body never alters its customs for any reason whatever, and five o'clock is their hour, there must be a House for the transaction of necessary business. On Tuesday evening the House adjourns over till one o'clock on Thursday. On that day fifty or sixty worn and haggard members assemble, to meet the Speaker, who takes the chair in his state-robes of brocade and gold embroidery. The "papers on the table," which, for a long time past, have been a volume, [illegible] a single half-sheet, on which two or three melancholy motions, which have been deserted by their owners, appear. The Ministers come in, one after the other, looking lively and hilarious, positively recovering their health from [illegible] the days' [illegible] Parliamentary labours; that extent of [illegible] enough to revive a regular [illegible] in high [illegible] to contrive him of [illegible] left town a [illegible] [illegible] [illegible]

this sanctum no alien was permitted to penetrate, but there was a very small outer landing-place on the top of the staircase, separated from the coffee-room by a slight partition and open door, where a table was hospitably set for the recreation of strangers (principally reporters, who were no strangers' who chose to pay for it; and the finest cold beef in London was abundantly supplied, together with Bellamy's excellent port,* to brace up nature for the approaching toil of listening to and loading memory with the debate Here a good deal of festivity was always going on—often some rare fun and jokes; and the friendly and social intimacies to which we have alluded were cultivated. We should note historically that there were no male waiters: the attendants were all brightly clean and good-looking handmaidens (and most inveterate flirts in coffee room, staircase, or anywhere.) At one of the coffee-room tables we have witnessed Lord Wellesley, Sir Lytton Bulwer (Lords of Wellington), and Mr Canning, taking their lively chop together; and, at another, perhaps Wyndham, Sheridan, Brougham, and other celebrities of the age. Members would sometimes join the company at the table on the landing-place, where six or eight had room to scramble for their meal; and, latterly, reporters or other visitors were admissible to the coffee-rooms, if introduced by members. And so the etiquette continued till all these things were changed and the establishment broken up.

Close upon the period which we are describing, the band of reporters included several young men, who afterwards raised themselves to high public distinction. Among these, the late James Stephens and Serjeant Spankie, and the present Lord Chief Justice Campbell may be mentioned; and later years have teemed a number of hardly less conspicuous characters, through the same instructive discipline of the mental faculties, to deserved consideration in the superior walks of life. And the miscellany also boasted of its variety of wits and humourists, whose whims and vagaries might fill a volume. The story of Mark Supple (a wag of infinite drollery) waking up, and calling upon the Speaker for a song, when the House was drawling through a committee, is well known. The same worthy got an innocent Quaker taken into custody, and hauled out of the Gallery, for an offence he had himself committed. He was the Yorick of the Gallery, and often kept it in a roar. One of his tricks was played off upon a countryman of his own, who, overcome with fatigue, happened to fall asleep at his task of note-taking, at a late hour of the night On being awoke by a loud "Hear, hear," he discovered that Mr. Wilberforce was speaking, and vehemently applied to Supple to supply the lacuna of his dream-land; on which the remorseless joker pretended to consult his own memoranda, and told his friend that Mr. Wilberforce, in alluding to Ireland, had burst out with a splendid eulogy upon the potato. "Had I," he said (Supple) "been a native of that illustrious country, and fed upon that glorious root, I might, in stature and appearance, have been like the honourable and gallant officer on my right (Gen. Mathews), instead of approaching to the resemblance of the stunted abortion of an angry ape. It was for this noble apostrophe the House cheered him;" and the poor, misdirected Paddy got himself into a sad scrape by carrying this absurd invention home to his journal.

Many typographical errors and other peculiarities which have appeared in the newspaper reports, are amusing and whimsical. On the *Morning Post* were a Dr. Fleming, a fine scholar, and a Mr. Fitzgerald, who went afterwards as Governor to Sierra Leone, and died there When a reporter finishes his manuscript he notes upon it who is his successor, so that the printer may join the copy together correctly; and, in this instance, the Doctor being first, wrote, short—

Fits. follows Flem..

which the careful reader corrected to

Fits follows phlegm—

in which orthography it was published next morning, to the great bewilderment of the readers, who got the paper (as in the foregoing Wilberforce case) before the absurdity was discovered and cancelled. On another occasion, the impetuous Dick Martin, of Galway, came in a passion to the editor, to complain of having been misreported; to which the editor replied that he could hardly think there was any thing wrong, as the reporter was one of the most faithful in the Gallery. "D——," retorted the irate member, "do ye mane to tell me that *I spoke in tinkies?*" To which, as Sancho Panza says, there was no reply. One of Dick's most celebrated speeches (and it was a good one though not exactly to the question During one of his speeches an enormous rat or animals (for his exertions in which humane cause, by-the-by, his name is not enough honoured), there was a particular Parliamentary encouragement which did not please him When he had finished, he walked, Galway fashion, across the floor to the quarter whence the (ironical) cheers had come, and, with immense politeness, inquired what gentleman it was who had cried "*Hare, hare*"? "Oh," replied a member, "it was Alderman ——, who called you on." "Pooh!" quoth the disappointed Dick, "only an Alderman, then there can be no more said about it," and returned quietly to his place; as he confessed to the writer of this notice in an after chat, that if he had gone further, he never could have used another argument against Cruelty to Animals.

On quitting the Gallery the Reporters found egress by one of the passages by which Members left the House; and upon an occasion one of the former was met and accosted by a sedulous country attorney, laden with papers. "May I beg to know if you are a Member?" said he. "Not of that House," was the answer. "Oh, my Lord, I beg your Lordship's pardon," rejoined the obsequious applicant with the lowest of his possible bows. This was a neat example of the faculty for jumping at conclusions

The House and the Gallery—or, rather, certain members pertaining to there divisions—occasionally came into collision, and dire was the strife thereof. Mr. Wyndham, at one time, had a serious dispute, in consequence of an offence given by speaking disrespectfully of reporters. But the most memorable instance of the kind was the quarrel between that body and O'Connell O'Connell's acquaintance with the Gallery was far more intimate than that of any other honourable member. He had recommended several of his clever countrymen to morning papers for employment there; and had even scouts among the number to convey to him the information he sought. By this means he got to know who was the individual who had offended him by a report in a morning paper, and addressed a vehement denunciation against him to the editor. The last to other acts of hostility; and the consequence was (as the public may recollect) the entire Gallery tabooed him, and refused to report his speeches. Against this league the supreme Agitator struggled for a while; but the combination was too strong for him, and the damage at the time to great, to admit of his holding out; and so he cried peccavi, and peace was restored

Within the last three years we have witnessed the phenomenon of members noticing that there were strangers in the gallery, upon which, it is the bounden office of the Speaker to order the "strangers" and the Gallery to be cleared. Upon these occasions very large debates have arisen with closed doors, the particulars of which were generally communicated to the excluded reporters by Mr. Hume and other members, friends to the press, and opposed to this ridiculous exercise of an obsolete privilege—a privilege which the country, now accustomed to a full and accurate account of Parliamentary proceedings, would not endure in the hands of any petulant and senseless legislator. It is probable we shall never hear of it again; especially as in the last instance we believe, the gentleman of the press refused to return to the Gallery, when the messenger announced it was open for them, till there was a distinct vote repudiating such inconvenient and obnoxious usage The next step in the right direction will probably be the passing of the bill of Mr Brotherton, the effect of which will be, that the reporters will remain in the Gallery during the divisions; and thus the whole business of Parliament will be patent to the world, without let or hindrance.

Everything of late has been tending to this desideratum; for it stands to reason that if reporting is allowed to be done at all, it is most expedient that facilities should be afforded for having it done in the best possible manner. Towards this consummation the good sense and the good feeling of the Speaker, who continues to be always accessible to any application from the newspaper press, has largely contributed. In constructing the Gallery and its needful adjuncts in the new Palace, he had the condescension to invite, and consult with, a deputation from the press on the subject, and to direc' every attention to be paid to their suggestions. There are now, accordingly, not only free ingress and egress at all times for reporters, and ready access to their places, but rooms provided with every convenience and comfort are appointed for their use; and refreshments are readily within reach at no other exaction but what depends on the purse. This is as it ought to be, for the respectability of the class demands the treatment due to educated gentlemen—some of whom have distinguished themselves in the Universities, others enjoy high professional degrees, and others, again, have made themselves names in the literature and intellectual pursuits of their country.

It is said, *tempora mutantur et nos mutamur in illis*; and, with the altered customs of the House, there have arisen altered habits among reporters. The present body is very unlike the composition of that which we have described as belonging to the earlier years of the nineteenth century. They are not compelled to lead the miscellaneous life of their predecessors; their work is before them, and they have only to go and do it—with rather more than half hour, instead of an hour and a half, or two hours. There is no hanging on for hours, without knowing what resource can be found to fill the idle waste. This is a great advantage, and tends to confirm the free independence which they are fortunately able, and never slow, to assert. The character of their occupation is also considerably changed. In the olden times, the generality of the debates were given from notes, assisted, perhaps, by a few arbitrary signs, the invention of the writer, and there were very few masters of short-hand, as a science, among the whole corps. Memory and judgment were their most efficient qualifications, and by their aid very admirable reports were furnished. As the system is now carried on, short-hand is almost the only medium, and consequently the style of the reports is different. In the former case they condensed, in the latter they abbreviate by omitting the least valuable parts, whilst they give the very words of the speaker, *ipsissima verba*, for the more important points. It is, therefore more mechanical, with some advantages and some disadvantages, as compared with the best examples of the earlier period. For perfect accuracy, when a whole speech is required, the verbatim powers of the short-hand writer possess, of course, a marked superiority: for condensing the pith and meaning in ordinary cases, the other course is not without its merits, and may often be beneficially adopted.

The reporting staff now engaged on Parliamentary proceedings far exceeds in numbers all preceding establishments. The *Times* employs, perhaps, eighteen: the *Herald* and *Chronicle* each about seventeen; the *Daily News* one or two fewer; and the *Post* and *Advertiser* each about a dozen. We approximate the numbers, and do not vouch for their strict correctness But, some years ago, the *Evening Star* resorted to a new and spirited effort to convey the latest intelligence of the day throughout the country; and, as a portion of its plan, began to report the proceedings of Parliament to the last moment which the Post-office allowed. The system is continued; and, we believe, the *Sun* employs six or seven reporters; whilst the *Globe* and the *Standard*, following the example, for second editions, require the services of two or three for each paper.

Both as regards morning and evening journals, and several of our weekly contemporaries, the opportunities of railroad intercourse are from time to time developing the system of throwing off publication after publication; and, what with electric telegraphs and foreign correspondents, it is not easy to foresee where the limits of reporting and the levy of reporters will end.

When we reflect upon the vast importance of the office, and how much depends on the conscientious discharge of its duties, we think we may, from our knowledge of the general body, as well as of special individuals, safely congratulate the empire on the extent of their abilities, the honour and integrity with which they perform their arduous tasks, and the manly independence with which they assert their eminent position among the practical powers of the grand engine which moves and directs the commonwealth

* Bellamy's port was of the right quality, and a considerable temptation to convivial habits among the Reporters, enforced by the rules of the House to be together, as it were in bondage, for so many weary waiting hours. One select party patronised the cellar, with a taste and blood like there, and a certain bin the produce of which was famed for the *Beeswings* it exhibited in its bright liquid flow—and hence the name of the "Beeswing Club;" of which the writer of this notice is the only member now living. At the period referred to, an amusing anecdote of Sheridan was current, for he, too, was a Beeswing man. One day, as the story goes, he went up to Bellamy and asked, "Bellamy, were you ever astonished in your life?" "Yes, sometimes," answered Bellamy, "but, as far as I can remember, never very much." "Well, then," retorted the wit, "I am going to astonish you very much—I am going to pay your bill!" With which fact, it would be difficult to say, whether the old housekeeper was really most astonished or delighted.

THE NEW HOUSES OF PARLIAMENT.

With our Illustrations of the Opening of the Session of Parliament, we have the gratification to present to our readers a series of Engravings illustrative of the progress of the New Palace at Westminster.

The Norman Porch.—(*See Front Page.*)

The Norman Porch is at the head of the Grand Staircase, and is a most exquisite bit of Gothic architecture; the rich and beautiful grohs of the roof springing from clustered columns, and intersecting each other in delightful variety. The bosses at the intersections of the ribs are of marvellous richness and intricacy of character. Dwarf pedestals are placed at the clustered columns; and statues will, at some future period, add their elegant forms to the decorations of this spot. In the crown of each arched compartment is a circular opening, with a wreathed enrichment round it; and on the side walls, windows, panels, and arches are lavishly introduced; and, when stained glass adds its coloured glories to the profuse architectural embellishments, there are few parts of the New Palace at Westminster which will be more strikingly beautiful than this truly regal landing to the Grand Staircase.

St. Stephen's Porch and Staircase.—(*See page* 105)

One of the leading objects of the distinguished Architect of the New Houses of Parliament has been, in his grand design, to maintain the memory of the patronymic Saint, Stephen, indissolubly associated with the venerable site. Thus, the public approach to the House is by St Stephen's Porch and St. Stephen's Hall: the latter occupying the precise site of the Chapel of St. Stephen

The Porch of St. Stephen is at the south end of Westminster Hall; for which purpose the noble apartment has been altered, so as to form a grand vestibule of approach from the north; while another flight of steps ascends from the south west angle of the building, nearly opposite Henry the Seventh's Chapel.

The entire building, being singular in composition, more varied, and picturesque. It has the proportions and much of the character of the Town-hall of Louvain, supposing the projections of that fabric advanced, and a sort of transept intersecting its centre, and ending on the south side, with the immense window removed from the end of the building to the centre of the window, in the centre of the new transept. This is filled with nine open arches, with Perpendicular tracery. Looking externally, the small turrets contain a series of sculptured figures—viz., that on the left hand, and adjoining the Victoria Tower, are Edward III., Queen Philippa, St. George, and St. Andrew; and a turret on the right, Henry VII., Elizabeth of York, St. Jack, and St. Stephen. The four canopied niches forming the term nation of the pinnacles contain statues of four monarchs, during whose reign the following buildings were erected, namely, William Rufus with his Palace towards Westminster Hall, Edward the Confessor looking towards St. Stephen's and the Cloisters, William IV. facing westward, and looking to the Victoria Tower. The Royal arms, the supporters Lion of England, Ireland, and Scotland, badges, and names form the sculptured adornments of other parts of the building.

The whole composition has a very fine effect from Poet's Corner (the only place whence its entire form can be seen); and its character of decoration combines well with Henry the Seventh's Chapel, and does not suffer by the comparison.

Ascending the noble flight of steps from Westminster Hall to the Porch, the effect of the lofty arches is exceedingly fine; the bold ribs, the groined roof, the Porch, the crown of the vault is filled. The great window, which is about 45 feet high by 25 feet wide, is filled with stained glass, executed in the establishment of Mr Hardman.

The Staircase ascending from the Old Palace Yard entrance, has a flat ceiling, divided into compartments by ribs, and supported on five arches, on each side. The bosses, panels, and decorative work, are of the most exquisite delicacy of expression; and the general effect of the Staircase is very beautiful—simple in its character, yet rich and elaborate in its details. Where a neat pattern paper-hanging now fills up the space on the walls, will at some future period, be frescoes, to add the charm of colour to the charm of fine architectural proportion and outline.

Royal Statues.—(*See page* 113).

In the Centre Hall, and St. Stephen's Hall, is a series of sixty elaborate niches, forming enriched jambs to the main archways. These were designed by the architect to contain the various Sovereigns of England, from the Conquest to the present time; in which it has been the aim of the sculptor, Mr. John Thomas, to produce a series of Royal personages that would be interesting to the historian, antiquary, artist, and to the public. No pains have been spared to collect the best examples for the portraiture and the costume of every minute detail having been carefully studied; and, as far as the confined and narrow niches would allow, the character of each Sovereign is admirably portrayed—the draperies are well cast; and there is a dignity and ease in the pose of each figure. The statues are executed in Caen stone, which has been slightly tinted, to harmonise with architectoral portions of the interior. Amongst the most striking may be mentioned William I., Henry I., Richard I. and his Queen, King John, Eleanor, Queen of Edward I., Edward III and his Queen Philippa, Henry V. and Queen Katherine, Richard III., Henry VII. and his Queen Elizabeth.

During the recess thirty-six of these statues have been fixed in their places, viz:

William I.	Henry III.	Henry V.
His Queen Matilda.	His Queen Eleanor.	His Queen Katherine.
William II.	Edward I.	Henry VI.
Henry I.	His Queen Eleanor.	His Queen Margaret.
His Queen Matilda.	Edward II.	Edward IV.
Stephen.	His Queen Isabella	His Queen Elizabeth.
His Queen Matilda.	Henry IV.	Edward V.
Henry II.	His Queen Joan of Na-	Richard III.
His Queen Eleanor.	varre.	His Queen Anne.
Richard I.	Edward III.	Henry VII.
His Queen Berengaria.	His Queen Philippa.	His Queen Elizabeth.
John.	Richard II.	
His Queen Isabella.	His Queen Anne.	

of which we have engraved, upon the preceding page, twenty-four. Hereafter, we shall engrave the remaining Statues, so as to complete the chronological series.

KEY TO THE LARGE PRINT

PRESENTED WITH THE ILLUSTRATED LONDON NEWS OF FEB. 4, 1854,

ENTITLED THE

MINISTERIAL SIDE OF THE HOUSE OF COMMONS.

This Picture represents that side of the House of Commons occupied by the members of the present Administration and their supporters, and contains portraits of most of the members of the Government, together with those of the principal occupants of those benches, as nearly as possible in the places in which they usually sit; while, in the foreground, a characteristic indication of the front seats of the Opposition is introduced.

In order to avoid the stiffness inseparable from a pictorial representation of a number of persons sitting motionless together, the occasion of a very full House has not been chosen.

This, while it enabled the artist to break the figures into easier groups, has also the advantage of giving a representation of the ordinary aspect of the House; the cases of a crowd, filling every seat, being altogether exceptional.

The moment chosen is that when the Speaker, standing up, refers to the "orders of the day," in the printed paper of the business fixed, and calls on the member whose name stands first on the list to proceed.

At his right hand, on the bench nearest the table, extending to the division, running through the seats about the middle of the House, and called the "Gangway," sit the Ministers; while the corresponding bench on the other side is occupied by the chiefs of the Opposition.

The most prominent figure in this latter bench may, without difficulty, be recognised as Mr. Disraeli. Immediately behind him is Mr. Spooner. On the next bench, a little to the left is a back view, but an unmistakeable likeness, of Colonel Sibthorp; on whose right is Colonel Forrester. Passing to the extreme right of the foreground, the figure standing with a hat on is Sir Frederick Thesiger. Behind him, in the space at the back of the Speaker's chair, is Mr. Hayter, the Secretary to the Treasury, and "whipper-in" of the Government; and the three figures in succession behind him, represent Mr. Frederick Peel, Sir Fitzroy Kelly, and Mr. Cowan, member for Edinburgh. On the treasury bench, next to the Speaker, with his head almost under the paper in the hand of the right hon. gentleman, sits Sir Alexander Cockburn, the Attorney-General; and next to him Sir Richard Bethell, the Solicitor-General. The members of the Cabinet then commence in the person of Sir William Molesworth, followed by Sir Charles Wood, Sir James Graham, Lord John Russell, who is in the seat appropriated to the leader of the House; next to him is Mr. Gladstone, the Chancellor of the Exchequer, on whom the Speaker is apparently calling, judging from his own forward movement, as well as from the motion visible in the countenance of Mr. Disraeli, who as an ex-Chancellor of the Exchequer, is supposed to be always on the alert, whenever his successor is in action. Besides this, Mr. James Wilson, the Financial Secretary to the Treasury, is sitting out of the usual place, and is next to Mr. Gladstone, to whom he acts as a kind of adjutant in matters connected with his department. Beyond Mr. Wilson, with his arms folded, sits Lord Palmerston, on this occasion; though usually he occupies a place next Lord J. Russell; Mr. Cardwell, and Mr. Sidney Herbert, complete the members on the Treasury bench. On the second bench, immediately behind Mr. Cardwell, and with a paper in his hand, is Mr. Hume, in the seat which the prescriptive courtesy of the House has long assigned to him. Next him is Mr. Cobden; beyond whom, on his left, are Mr. Oliveira and Sir James Weir Hogg. On the same bench, nearer the Speaker, and just at the backs of Sir James Graham and Sir Charles Wood, is Mr. Macaulay, whose next neighbour is Mr Bernal Osborne; while Mr. Lowe, the Secretary to the Board of Control, is the last sitter on that form. Behind Mr. Lowe is Sir George Grey; next to him, the figure reading, is Mr. Ewart; just at whose back, on the fourth bench, is Mr. Miall, who may be recognised by wearing spectacles. Next to Mr. Ewart is Mr. Peto; and in succession, on that bench, are Sir James Anderson, Mr. Dunlop, Mr. John M'Gregor (of Glasgow), Lord Seymour, and Mr. William Williams, the member for Lambeth. On the fourth bench, just over Mr. M'Gregor, is Mr. William Arthur Wilkinson, the new member for Lumbeth; and, on his left, is Captain Scobell, member for Bath. On the last seat under the Gallery, next to the fourth pillar, is somewhat dimly indicated representation of Mr. Thomas Duncombe; on whose right is a figure standing, which, by the peculiarity of the fashion of wearing the hair, will be recognised as Mr. W. J. Fox, member for Oldham. In passing on to the back benches, the next figure caught by the personage who is rambling promiscuously in front of him, looking somewhat bald, is Sir John Shelley, member for Westminster. Next but one to him, is Mr. Milner Gibson. Before Sir John Shelley, on the second bench, sits Mr. Craufurd; next to whom, leaning eagerly forward, with his hat on, is Mr. Bright; on whose right is Mr. Blackett, member for Newcastle-on-Tyne. In the corner seat of the bench on the floor, with a paper in his hand, is represented Sir Robert Inglis. That seat has been, by custom and the good feeling of the House, always reserved for one of its oldest and most respected members. In the present session, however, it will be vacant, as one of the first acts of the House on the meeting of Parliament was the moving for a new writ for the University of Oxford, the Honourable Baronet having resigned his seat. The immediate neighbour of Sir Robert Inglis is Mr. Henry Drummond, Member for West Surrey; the next seat is filled by Mr. J. G. Phillimore; and the figure next but one to him, with the hands on the knees, is intended for Mr. Roebuck, one of the members for Bath. The person standing at the bar is Mr. C. Forster, member for Walsall. The remainder of the figures do not possess sufficient individuality to require designation.

It may be added that, as regards the three Clerks at the table, the figure on the right hand of the Speaker, with the head turned away, represents Sir Denis Le Marchant, the Chief Clerk; and the other two are the Messrs. Hand and W. Ley, the Assistant Clerks. All the accessories of the House, as the table, with its load of books and papers, and boxes; the Speaker's chair; the Gallery; and the ornamentation of the House, are given with the strictest accuracy. The painted windows are not seen, as the Sketch is supposed to be taken after the House is lighted, when they are covered by crimson velvet curtains. Their presence, however, is indicated by the partial withdrawal of one of the curtains in the centre of the picture. A specimen of the ornamental trellis work at the back of the two end Galleries is given, at the top of the extreme right of the picture.

The accompanying Picture has been drawn by Mr. George Thomas; the architectural portion being by Mr. T. R. Macquoid, the whole engraved by Mr. William Thomas.

NEW BOOKS, &c.

The Second Volume is now ready, embellished with Nine Portraits, price 7s. 6d. bound, of the

CHEAP EDITION of MISS STRICKLAND'S LIVES of the QUEENS of ENGLAND. To be completed in Eight Monthly Volumes, price 7s. 6d. each, bound, Volume I. embellished with Portraits of every Queen, and including, besides all other late improvements, a Copious Index.

Also, just published, the Fourth and concluding Volume, price 6s. bound, of the

CHEAP RE-ISSUE of EVELYN'S DIARY and CORRESPONDENCE.

"We rejoice to welcome this beautiful and compact edition of Evelyn' one of the most valuable and interesting works in the language, now deservedly regarded as an English classic."—Examiner.

In a few days,

PEPYS' DIARY and CORRESPONDENCE. A New and Improved Library Edition, in 4 vols. demy 8vo, illustrated with Portraits and other Plates, and with numerous additional Notes. Edited by LORD BRAYBROOKE.

Published for Henry Colburn, by his Successors, HURST and BLACKETT, 3, Great Marlborough-street.

Tenth Edition, now ready, with Fifteen Illustrations, 12s. 6d.,

THE CRESCENT and the CROSS. By ELIOT WARBURTON

"A book calculated to prove more practically useful was never penned than 'The Crescent and the Cross' —a work which surpasses all others in its homage for the sublime and its love for the beautiful in those features of existence concealed to everlasting immortality."—Sun

Published for Henry Colburn, by his Successors, HURST and BLACKETT, 13, Great Marlborough-street.

THE NEW NOVELS

Published by HURST and BLACKETT, Successors to Mr. Colburn.

1. REGINALD LYLE. By Miss PARDOE.
2. FLORENCE the BEAUTIFUL. By A. BAILLIE COCHRANE, Esq.
3. HIGH and LOW. By the Hon. HENRY COKE.
4. ALICE WENTWORTH. By the Author of "Emilia Wyndham."
5. THE ROSES. By the Author of "The Flirt."
6. ALLIEFORD. By the Author of "John Drayton."
7. CHARLES AUCHESTER. A Musical Novel.
8. The DAUGHTER of the SOUTH. By Mrs. CLARA WALSEY (late really).

Messrs. Hurst and Blackett are also preparing for publication, New WORKS of FICTION, by the following distinguished writers:—

Miss MITFORD,
Mrs GORE,
Mrs TROLLOPE,
The Author of "Emilia Wyndham,"
The Author of "Margaret Maitland."

13, Great Marlborough-street.

MESSRS. HURST and BLACKETT (Successors to Mr. Colburn) have just published the following New Works:—

1. TRAVELS in BOLIVIA, with a Tour Across the Pampas to Buenos Ayres. By HUGH DE BOSSETT, of her Britannic Majesty's Legation. 2 vols. 21s.
2. A SKETCHER'S TOUR ROUND the WORLD. By ROBERT FORTUNE, Esq. Royal 8vo, with twenty-one Coloured Illustrations from origina. Drawings, 21s. elegantly bound, gilt edges.
3. MEMOIRS and CORRESPONDENCE of MAJOR-GENERAL SIR W. NOTT, Envoy at the Court of Lucknow. 2 vols. 8vo, with Portrait [just ready.
4. FOREST LIFE in CEYLON. By W. KNIGHTON, M.A., formerly Secretary to the Ceylon Branch Royal Asiatic Society. 2 vols. 21s.
5. MEMOIRS of JOHN ABERNETHY, F.R.S. By GEORGE MACILWAIN, F.R.C.S. Second Edition, 2 vols., with Portrait, 21s.
6. The JOURNALS and CORRESPONDENCE of GENERAL SIR HARRY CALVERT, G.C.B., &c. Edited by his Son, Sir HARRY VERNEY, Bart. [Just Ready.
7. The DUKE of BUCKINGHAM'S MEMOIRS of the COURT and CABINETS of GEORGE III.; from Original Family Documents. 2 vols. 8vo, with Portraits, 30s.

THE ILLUSTRATED LONDON NEWS.

No. 668.—VOL. XXIV.] SATURDAY, FEBRUARY 11, 1854. [WITH A SUPPLEMENT, SIXPENCE.

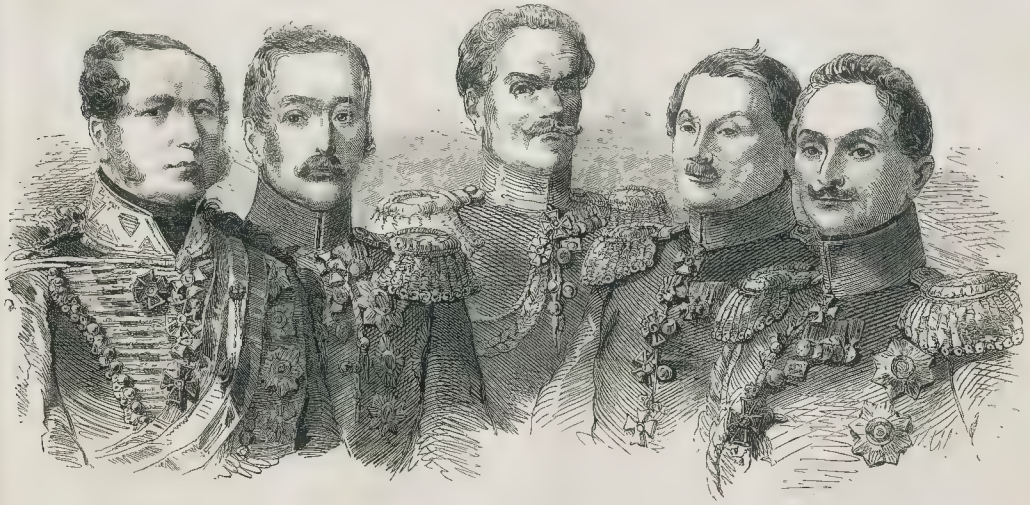
THE WAR AGAINST THE BARBARIANS.

THE opening of Parliament and the publication of the two interesting and important Blue Books, entitled "Correspondence respecting the Rights and Privileges of the Latin and Greek Churches in Turkey," have effectually removed many errors and uncertainties from the public mind. The rise, progress, and present state of the Russian aggression against Turkey have been fully stated. There is no longer any mystery or secrecy about the matter. Englishmen have now no reason to suspect that the Statesmen who have successively administered the affairs of this country from 1850 to the present time ever betrayed the high trust reposed in them. It is proved, at least, that they have never acted with subserviency to the wicked designs of the Emperor of Russia. Their hands are clean; and even party hostility can no longer find a peg to hang an accusation or even an insinuation upon. The correspondence which has been published covers a period of no less than forty-four months, included between the 20th May, 1850, and the 24th January, 1854. The remaining gap will be filled up in a few days—as we learn from a statement made by Lord Clarenden, on Monday night—by the publication of all letters and documents received or despatched between the date last mentioned, and the cessation of diplomatic relations between St. Petersburg and the Courts of London and Paris, on the one hand, and between those Courts and St. Petersburg on the other. More important State Papers were never given to the world. Everything in them is fair and open. From the very first letter—when Sir Stratford Canning (now Lord Stratford de Redcliffe) foresaw (May, 1850) the little cloud of danger, no bigger than a man's hand, to the last despatch, when that little cloud had overspread the whole horizon, and threatened a storm such as the world has seldom witnessed—it is evident that the conduct of the Ministers and diplomatists of England has been prudent yet patriotic. If at any time they may have been liable to reproach, their error has been on the right side. They were slow to believe that a crowned Emperor could say that which was not; and that a man who had given repeated proofs to Europe of sagacity and of moderation, could all at once belie his character, and commence a crusade against Mahomedanism, for the sake of territory, even although the penalty of the act should be a war against all the civilised states of Europe. There was neither necessity nor provocation for such incredible temerity; and wise and honest men may be excused for doubting, as long as doubt was possible. The sequel has proved that their confidence was misplaced; but the day has gone by when it can answer any good purpose to blame them. Their good faith but shows in darker contrast the false devices and shameless ambition of the Czar. Their error, if it be one, has, at all events, placed their opponent so utterly in the wrong as to leave him without the shadow of justification. In every stage of these long negotiations he stands condemned. Wherever such a thing as public opinion exists, public opinion has declared against him. Whatever may be their form of Government, the people of every European State are opposed to ambition so nefarious, and to selfishness so abominable. The instinct as well as the reason of nations is alarmed, and the Czar stands without a friend before the supreme tribunal of mankind.

COSSACK OF THE DON.

There are many names in history that are never mentioned without disfavour and condemnation. In this black list the present Emperor of Russia promises to stand pre-eminent. The memory of the first Napoleon will shine like that of an angel of light in comparison with the blackness of guilt which will enshroud that of Nicholas. The one had many national and high excuses for his ambition, the other has none but the meanest and the most personal. He is the most selfish of war-makers that modern times ever saw. To find his parallel, we must look to the dim traditions of savage ages. Civilised nations show nothing like him.

The question has often been asked, "Is the Emperor Nicholas in his right mind?" If he were a sane man, it is likely that he would yet find means to extricate himself and his country from the perils that a war will bring upon both. The cessation of diplomatic relations between his Court and those of the two great maritime allies would be no impediment in his way, if his counsels were those of reason. Supposing him still to be sane, the failure of Count Orloff's mission, the determination of Austria and Prussia to afford him neither aid nor countenance in his design, and their scarcely-concealed threat that the disapproving neutrality of to-day may be converted into the active hostility of to-morrow, would be sufficient to open his eyes. But a careful retrospect of his actions from a period long anterior to the mission of Prince Menschikoff, leads to the belief that the Emperor, if not actually insane, has reached the dizzy verge where the distinctions between sanity and insanity are too fine and airy to be appreciated. So hopeless is his cause, and so innumerable are the reasons why he should dread a war with such opponents as are now arrayed against him, even were his objects as righteous as they are unjust, that his conduct cannot be explained upon any hypothesis consistent with his sanity. Those who know the Emperor best have no hopes that he will relent. The same faith in Destiny, which sometimes leads good men to distinction, leads bad men to destruction. Every wrong-doer is predestined to be the architect of his own ruin, and every ambitious despot digs the pit for his own downfall. Yet, though it is highly probable that the Em-



RUSSIAN GENERALS.—GENERAL RUDIGER. GENERAL LUDERS. GENERAL PANIUTINE. GENERAL KOUPRIANOFF. GENERAL BEUG.

peror will persevere in his projects, and that the war will be a disastrous one, we cannot imagine that it will be disastrous either to Turkey, or to the Allies who have honestly and fearlessly resolved to fight it out. The Marquis of Clanricarde, having often stood in the dread presence of the Czar, exaggerates the evils which the wrath of that potentate may occasion to humanity. Few people will be found to partake the fears of that noble ex-Ambassador to the Court of St. Petersburg. If the Czar loom large as a demigod in the imagination of those who have enjoyed the high privilege of his smile, or the ineffable discouragement of his frowns, he is a mere man to all others—at least, to all others who are not ignorant Russian serfs. To Russia herself, and to the Emperor more especially, it is likely that the war will be disastrous; and if, by any turn in the wheel of events, Austria should prove false to the rightful cause, which it is so much her interest to aid, the disastrous consequences would most certainly extend to her even more largely than to the original evil-doer. To Great Britain and to France, inconveniences and a few sacrifices are the worst that can result; but nothing that can warrant the name of disaster is to be apprehended for a moment. The Allies take upon themselves the high office of the judges of European law, and the executioners of its justice. In the task thus forced upon them they will be supported, not simply as a cold matter of duty, but with ardour and enthusiasm. It is, therefore, not likely that the war will be a protracted one. Indeed we do not see how it is possible for the Czar to make head against the Allies for three months after the Baltic shall have been cleared of ice. With one of the finest fleets that ever sailed the seas opposed to him in the Euxine, and with another equally splendid and powerful opposed to him in the Baltic, the Czar will speedily find himself without a ship. What the Russians will say to such a catastrophe remains to be seen; but we much miscalculate their temper if their faith in the orthodox Lord-Emperor will not thereby receive a shock which may imperil his crown. The loss of Finland might follow the loss of his Baltic fleet if he still maintained the war; and the loss of the Crimea, and even of Bessarabia and Georgia might not, in the same contingency, be long delayed after the capture of Sebastopol. It must not be forgotten, in the calculation of chances against the Emperor, that the restoration of the ancient kingdom of Poland has long been considered necessary. The dismemberment of that kingdom—a crime in which Prussia and Austria were unwilling agents—has hitherto been all to the advantage of Russia. If Austria and Prussia shared the spoil, they never gained any material benefit which recompensed them, even to the one-hundredth part, for the loss of honour they incurred. To them the acquisition has been nothing but a nuisance and a danger; and it is highly probable that they will be glad to give up their slice of that gigantic plunder (and blunder), if they could thereby be the means of erecting an effectual barrier against their aggressive neighbour.

It is true that it is not so easy to get at the Emperor's armies as at his fleets; but, it should be remembered, that if the armies of the Allies have a difficulty in reaching those of the Czar, the difficulty will be removed as soon as the Russians make the least movement in advance. Neither Great Britain nor France is likely to commit the mistake of Napoleon, and push on to Moscow. The possession of the littoral of the Black Sea, would be quite sufficient for the Allies. We might safely trust the Russians themselves to lend a hand in bringing the war to a conclusion, were our first successes to include even the possession of the Crimea. The lessons of the last ten months have not been thrown away. Both the statesmen and the people of the west of Europe have learned to appreciate the advantages of decision. If Great Britain and France had been as decided in May last as they are now, the growing mischief might have been nipped in the bud. To be energetic and decided at the present time is the only means of making the impending war a short one. To strike rapidly and to strike effectually is alike the policy and the desire of all the friends of European independence. That policy is not only wise, but it is merciful.

It may be urged, that it is possible the Czar will yield at the last moment, and sue for peace on the best conditions he can make. Such a result is possible, but not probable. If the Emperor be so prudent, the prestige of his power will be lost, and Russia will be disgraced in the eyes of a people as proud as they are barbarian. In such a case, Nicholas will never again have it in his power to trouble the peace of the world. A peremptory demand for his abdication would be the least of the perils that would threaten him.

RUSSIAN GENERALS.

GENERAL LUDERS.

THE name of General Lüders has chiefly been known in connection with the Hungarian war, in which he took a most distinguished part. It was on the 27th April, 1849, that Count Nesselrode, in a diplomatic circular, explained to the Powers of Europe the motives that had induced the Emperor to interfere in the contest between Austria and Hungary. A few days after, a Russian army, to the number of 150,000 men, entered Hungary at various points, under the general command of Prince Paskiewitch. The first division, under the command of the Prince himself, went by the way of Gallicia into Northern Hungary. Another, under a general whose name we do not recal, entered by Moravia the north-west of Hungary. The third, which entered Transylvania, was under the command of General Lüders. This consisted of 40,000 men.

It was the good fortune of Lüders that the division he commanded should have been ordered to the scene of the last and decisive conflict of the civil war. Up to this period, the gallantry and military skill of Görgey had carried all before him. He had beat the Austrian General, Wohlgemuth, in several important encounters; and as the arms of Hungary had, of late under Bem, and Dembinski also, been crowned with success, the sanguine patriots indulged in hopes that, notwithstanding the menaced interference of Russia, the cause of the country was not lost.

The advance of the Russian army into Transylvania, however, caused an immediate change in the contest. At the beginning of June not less than 60,000 troops were employed, principally in Transylvania, but also in the Banat, and in Sclavonia. On the 12th July, the Russians joined the Austrians, the latter being under the command of General Lückner. On the 14th these combined forces retook Cronstadt; and on the 16th General Lüders marched to the attack of Hermanstadt, which after a severe battle on his way thither, was taken on the 21st. Clamgallas, the Russian General, beat General Bem, at St. György. The disorganised state of the Magyar army at this moment is attested by the proclamation which Bem, after his defeat, issued at Schaesburg on the 25th:—"At the battle of György," said the General, "the behaviour of the troops did not equal my expectations. I am extremely dissatisfied with the infantry. During the battle the masses got into such disorder that they fired on each other. The confused shouting drowned the voices of the officers. The latter had accustomed their men to silence, this never could have occurred. I therefore prohibit screaming and shouting in the ranks, under pain of death. Every detachment which quits the field of battle without orders shall be decimated. Major Markowsky continually cried 'Forward!' when there was no enemy, and thus, by its disorderly movements, created the greatest confusion. If such things should happen again I will make an example. The roads are covered with stragglers, but I will, in future, bring any man who unnecessarily quits his troop to a drum-head court-martial."

Bem was attacked by General Lüders, at Schassburg, on the 31st, and his forces completely routed. The Hungarian General was wounded by the lance of a Cossack, whilst the Russians were in pursuit, and very narrowly escaped being taken prisoner. In Bem's travelling carriage were found several letters from Kossuth, the publication of which had no doubt considerable influence on the termination of the war. Disclosing the utter bankruptcy into which the Hungarian finances had been plunged, these letters were an offence to General Görgey, who then openly began to swerve from his duty. Bem retreated towards Medüsel, after his defeat at Schassburg. He resolved that place on the 3rd August, at the head of not more than 9000 or 10,000 men. He was joined by about 5000 more, and marched upon Hermanstadt, which place had been left in charge of General Hassford. Bem obtained a victory over the enemy in the streets of the city, and Hassford retreated to Talmatsch, on the borders of Wallachia. General Lüders had made a strong effort to save General Hassford the issue of a battle, but arrived too late. As soon as he came up, however, the Russian General attacked the Hungarians, and completely defeated them. General Lüders afterwards assisted General Rüdiger in driving Görgey into the surrender which soon afterwards closed the war.

When the occupation of the Principalities was resolved on, General Lüders was thought of (as also was General Rüdiger) for the chief command. But the superior claims of Prince Gortschakoff prevailed, and General Lüders was left in command of his corps (the fifth). He is an Aide-de-Camp General.

GENERAL COUNT RUDIGER.

Except that the family of General Rüdiger is of German origin, we are unable to afford any of those personal particulars regarding him which are interesting in a biographical notice, but which are perhaps less necessary in the case of a soldier than of a civilian, because the advancement of the former, especially in Russia, depends more upon his own talents than on family interest or connections.

As a military man, General Rüdiger has, for more than a quarter of a century, held a prominent place among the notabilities of his country. He took an active part in the war of 1828 between the Russians and the Turks in the Danubian Principalities. The corps he commanded was employed in a task of no ordinary difficulty—that of opening the way for the Imperial army to Constantinople; and, in the meantime, of intercepting the Turkish communications. On the 31st of July of this year, Rüdiger, after many ineffectual efforts, succeeded—but not till after much resistance on the part of the Turks—in establishing himself at Eski Stamboul, a position on the road to Constantinople, behind Shumla, where he was able to prevent the arrival of convoys and reinforcements from the capital. This was a service requiring an officer of no ordinary capacity and resources; and, although Rüdiger was not always so fortunate, he, on this occasion, completely succeeded. His position so hampered the Turks, that Hussein Pacha resolved on dislodging him, although the forces of Rüdiger had been strengthened from the main army. Hussein Pacha, on the night of the 26th of August, commenced an assault simultaneously at three points of the Russian army; two of them, however, being only feints to cover the third, which was to dislodge Rüdiger. This last was successful; and Rüdiger, after a severe fight, was compelled to abandon his position, and obliged to re-unite himself to the main body of the Russian army by a circuitous route. In the end, the object of the Turks was fully attained, as the communication between Shumla and Constantinople was not again attempted to be disturbed. These operations were terminated by the surrender of Yussef Pacha, which the enemies of Russia have attributed to treachery and corruption.

In the following year, the war having been renewed, General Rüdiger was actively engaged. When Count Diebitsch re-dived on the march to Adrianople, the right column of the two into which the Russian army was divided for the purpose of crossing the Balkan, was under the command of General Rüdiger. It consisted of fourteen battalions and two regiments of Cossacks, and it took the direction of Kiupriköi. In order to deceive the Turks, these corps had to steal away from before Shumla, their places being supplied by others. The movement succeeded, and General Rüdiger was able to cross the river. As he drew near Kiupriköi, however, he learned that the Turks had collected a body of 8000 men, which must not be dislodged without great exertion. He, accordingly, resolved to turn their position himself, at the head of the main army, while two battalions and a regiment of Cossacks should attack the Turks in front. This operation was perfectly successful. Appearing before Gralova on the 17th July, he surprised 1000 Turks, who dispersed without the slightest show of resistance. In the course of the night he crossed the river, over which he had thrown a bridge, and on the 18th marched against Kiupriköi. The Pacha who commanded at that place endeavoured to check the further progress of Rüdiger; but the Turkish troops, after being drawn up in order of battle, quitted the field without firing a shot. The left column of the Russian army was equally successful in crossing at another point; and, on the 21st General Rüdiger reached Ertekia, General Roth at the same time pushing his advanced guard to Pallabano. Thus General Rüdiger retrieved his past ill-success almost on the very scene of his disasters.

In the war between Russia and Poland in 1831, General Rudiger took a very active part, and, with General Kreuz, was instrumental in checking the successful advances made by the Polish army during the earlier portion of the hostilities. The point at which these generals were enabled to render the most effectual service after the victories gained by the Poles over the Russians in the month of March, 1831. On the 30th of the month the Polish Commander, availing himself of the inactivity of the Russian troops, which followed the retirement of Prince Radzivil as Commander-in-Chief of the Russian forces, commenced active operations against the enemy. From Warsaw he led 25,000 men through Praga, to attack General Geismar at Wawer. Favoured by the facilities of the road and the darkness of the night, he advanced without the knowledge of his opponents. The Polish advanced guard, under the command of Geismar, and consisting of ten thousand men, was surprised at Wawer, the entrenchments of which were stormed, and it was forced to fall back by a precipitate retreat, on the stronger force of General Rosen, posted at Dembe-Wielkie. The Poles improved the occasion, attacked the enemy again, and, after a struggle of many hours, compelled General Rosen to abandon his position, and fall back upon the reserve; the Poles moving northwards after this, and throwing bodies of their troops across the Bug, approaching the position of Marshal Diebitsch himself. These successes on the part of the Poles were accompanied by a partial insurrection in Lithuania, and more especially in the Government of Wilna. This movement was joined by some of the Polish nobility; but the Russian troops were so strong in the disaffected provinces, that a general rising would have been speedily quelled. It was at this crisis that Generals Rüdiger and Kreuz retrieved the reverses of the Russians. After the 31st of March, the Polish General Serawski had been despatched to aid Dwernicki in the south, in raising an insurrection in Volhynia. In the first instance their operations were successful; they cleared the right bank of the Vistula of enemy, and Dwernicki even crossed the Bug. But they advanced too imprudently, and acted too far asunder. The fate of Dwernicki was determined by General Rüdiger in an action fought on the 20th April. The Russian General, having brought the enemy to action, compelled them to retrograde towards Lublin. While the nearly contemporaneous defeat of Serawski, by General Kreuz, set free the troops of the latter, and cut off the retreating army from the Vistula and Warsaw. Rüdiger followed the Polish General in his retreat towards Pulaski, and gradually closed in upon him as he neared the Austrian frontiers. On the 29th April the Russian Generals were prepared to attack him at all points; but Serawski declined the risk of an unequal engagement, and sought refuge in the Austrian territory, where his troops were disarmed.

After the defeat of Dwernicki, in Volhynia, Gen. Rüdiger had again approached the Vistula. A strong corps was detached against him under the command of the Polish general Janowek, while Chrzanowski, proceeding from Zamosa, was to throw himself in his rear. The Russian General would thus be surrounded by troops greatly superior, and the Poles counted on the annihilation of his army. Rüdiger, however, instead of waiting the united attack, suddenly made his appearance before Janowski, attacked him, and compelled him to retreat with the loss of some prisoners and artillery. He then marched to Lublin, which Chrzanowski had reached in the exercise of his part of the design, recovered the town, and compelled the Polish General to return to the left bank of the Vistula. Gen. Rüdiger continued to be actively employed up to the period of the Poles laying down their arms. Just as the war was about to close, the corps of Gen. Rüdiger, now left unmolested by the Polish forces which had watched him at Volhynia, crossed the Vistula above Warsaw, and moved round to the south-west to join the main army. The Polish army had taken up its position a few leagues to the westward of the capital, between Kolo and Lowez, but were driven from it by Gen. Rüdiger without much serious fighting.

The reputation acquired by General Rüdiger in the foregoing operations, led to his taking a prominent share in the war in Hungary. The corps under his command formed part of the army of Prince Paskiewitsch, sent by the Emperor Nicholas to assist Austria in putting down the insurrection in that country. Here he earned fresh laurels by defeating Görgey in a pitched battle at Waitzen, which ultimately led to the final surrender of that General. Rüdiger followed up his enemy towards Lugos, and co-operated with General Lüders in the subsequent movements. Görgey had been appointed Military Dictator; and, in the exercise of his discretion (whether as a traitor or as a sound patriot, it must remain for posterity to decide), he resolved on capitulating. It was General Rüdiger who had the honour of receiving the submission of the distinguished chief whom he had so recently and so signally defeated in the field. It was to him that Görgey, on the 30th August, 1849, surrendered at Villagosh with 30,000 men and 144 pieces of artillery; and thus to General Rüdiger fell the additional honour of having terminated the civil war.

It is said, that the Emperor's satisfaction with his services was so great, that when a war with the Turks, preceded by a seizure of the Danubian provinces of Turkey, was resolved on, he desired to have placed Rüdiger at the head of his armies. But the pretexts of the war being closely mixed up with nationality and religion, a general of purely Russian origin and reputation was preferred. Hence the choice of Prince Gortschakoff (who is of better descent than even the Emperor himself) although he is regarded as being a far inferior general to Rüdiger, who is an Aide-de-Camp General, and General of Cavalry. He is also a member of the Council for the Administration of the Affairs of Poland, of which Prince Paskiewitsch is President.

The five preceding Portraits are from prints recently published at St. Petersburg. Of Generals Lüders and Rüdiger we have given copious memoirs. Of Paniutine, Kouprianoff, and Berg, comparatively little is known; but, as they are Generals of Division, in all probability, should the war proceed, they will hereafter be heard of.

THE "BLUE-BOOKS" ON THE TURKISH QUESTION.

THE two Parliamentary "Blue-Books," entitled "Correspondence respecting the Rights and Privileges of the Latin and Greek Churches in Turkey," which were published at the close of last week, will remove a whole host of misconception with reference to the Eastern Question and to the part which has been played in it by the British Ministry. The two volumes contain nearly 800 folio pages, and include no less than 738 letters, notes, and despatches between the British Government and its diplomatic agents at Constantinople, St. Petersburg, Vienna, Berlin, and Paris. The first letter, from Sir Stratford Canning to Lord Palmerston, is dated from Constantinople, as far back as the 20th of May, 1850; and the last, from the Earl of Clarendon to Sir G. H. Seymour, is dated the 24th of January, 1854. The correspondence thus extends over a period of no less than three years and eight months. The great interest attaching to these documents, and their important bearing on the still pending question of peace or war, induce us to endeavour to present a fair epitome of their contents in as short a compass as is consistent with lucidity. We propose to trace the story from the commencement, when the first symptoms of danger were detected in the East by Sir Stratford Canning. His letter is so remarkable, not only for the announcement of a fact, but for the sagacity of the prediction based upon it, that we reproduce it without abridgment. It is the key that unlocks the whole mystery. It will be seen that an unlucky desire on the part of Louis Napoleon—at that time seeking to place his position on a condition of hereditary Presidency of the French Republic to the more brilliant position of hereditary Emperor—led him to make great exertions to strengthen his cause by the support of the French priesthood. It suited his purpose to ally himself to all the spiritual objects of the Papacy, and to emulate, in this respect, the ancient pretensions of Louis XIV. and the older Bourbons, who always styled themselves "Most Christian Kings." Louis Napoleon was not aware what mischief he was thus the instrument of producing. He discovered his error before it was too late, and has nobly made amends for his mistake by his cordial co-operation with this country in protecting the rights of the Sultan, and in confronting the common enemy of Europe. Sir Stratford Canning (now Lord Stratford de Redcliffe) thus sounded the first note of alarm, on the 20th of May, 1850:—

SIR STRATFORD CANNING TO VISCOUNT PALMERSTON.

Constantinople, May 20, 1850.

My Lord,—A question, likely to be attended with much discussion and excitement, is on the point of being raised between the conflicting interests of the Latin and Greek Churches in this country. The immediate point of difference is the right of possession in certain portions of the Church of the Holy Sepulchre at Jerusalem. The Greeks are accused of having usurped property which belongs of right to the Roman Catholics, and of having purposely allowed the church, and particularly the monuments of Godefroi de Bouillon, and of Guy de Lusignan, to go into decay. The French Legation at this Court considers itself entitled by treaty (the treaty, I believe, of 1740—I take the date from memory) to the alleged rights of the Latin Church. The French Consul at Jerusalem, M. Botta, has been recently here, and returns by-and-by to assist the cause; and General Aupick, who has received instructions from Paris, and to whom I am indebted for a conversational overture on this subject, has applied for a conference, with the probable intention of bringing his case at once under the notice of the Turkish Government. It appears that the Pope has been moved to exert his influence in furtherance of the views adopted by France; and that all the Catholic powers will be engaged by his Holiness to co-operate for the same purpose.

General Aupick has assured me that the matter in dispute is a mere question of property, and of express treaty of stipulation. But it is difficult to separate any such question from political considerations; and a struggle of general influence—especially if Russia, as may be expected, should interfere in behalf of the Greek Church—will, probably, grow out of the pending discussion.

The Porte, I conceive, will do well to abstain from committing itself to either side without the maturest deliberation.

I have, &c.,

(Signed) STRATFORD CANNING.

Fifteen days after writing this despatch, Sir Stratford informed Lord Palmerston (June 5th) that the Spanish, Sardinian, and Neapolitan Ambassadors at Constantinople, had severally sent in notes to the Porte, in support of the French demand, and stating that they had acted by the express command of their respective Governments. His Excellency also announced that the Greek Church was preparing for a vigorous resistance, and the probability that they would be strongly supported by Russian influence. The progress of the negotiations thus commenced by France, does not appear either to have been rapid or satisfactory. In a letter, addressed by General Aupick to all Pachas, on the 23rd February, 1851—nine months after the commencement of these semi-religious, semi-political controversies—the French Government actually threatened war if its demands were not complied with.

France (says General Aupick) desires to know, in plain terms, whether the Porte considers itself still bound to her by the capitulations of 1740, it being perfectly established that no act in which France has taken part has ever annulled their force. The Minister of Foreign Affairs adds, therefore, that he is consequently instructed to press the Ottoman Government to be good enough to explain itself categorically upon this point. If the reply is satisfactory, the Minister of Foreign Affairs adds, there will be no obstacle to the opening of a negotiation in which the French Government will assuredly not refuse to agree to any alterations which may be consistent with its just rights, and with the essential interests of a cause which it is defending on behalf of Catholicism at large. It, on the contrary, the reply should be in the negative, or, what would amount to the same thing, if the Ottoman Government should continue to entrench itself behind

contradictory statements, the Porte will understand that the result can only be a serious prejudice to its relations with France.

But, if negotiations were slow, events were rapidly leading to complications; and, on the 6th of March Sir Stratford Canning officially informed Lord Palmerston that a second Great Power of Europe had set upon the unhappy Sultan, and that Austria had pretended to a right of protection over the interests of the Roman Catholics, similar, in some degree, to that which had been asserted by France. The Porte does not seem to have been inclined to favour any of these demands, probably considering them as impertinent as Great Britain would consider a demand on the part of France, Austria, and the Pope, to exercise protection over the Roman Catholics in Ireland. Sir Stratford Canning, watching events, but in no respect interfering, notified the British Government on the 17th September, that the negotiations respecting the Holy Buildings at Jerusalem had begun to assume a more serious aspect, and that the Russian Government had manifested, of late, an increased interest in the maintenance of the Greek pretensions. The claims of Russia to dictate to Turkey being menaced by so many competitors, Russia thought it high time to interfere, and to prove to the Porte that she was as strong and as insolent as ever, and that she was not going to allow France and Austria to assert claims of interference that might prove fatal to the supremacy which for upwards of a century she had been striving to establish for herself. The state of affairs in November, 1851, twenty months after the Government of Louis Napoleon had first started the question, was described to Sir Stratford Canning by M. de Lavalette, who had in the interval succeeded General Aupick as French Ambassador at Constantinople. Sir Stratford thus reports to Lord Palmerston (Nov. 6) a conversation with M. de Lavalette, in which the views of the French Government and the then state of the controversy were stated with fulness and precision. It will be seen that at that time the aspect of affairs had become somewhat perilous:—

France (says M. de Lavalette) is entitled, by its treaty of 1740 with the Porte, to vindicate the right of the Latins to an exclusive occupation of all the sanctuaries which they possessed at that time. The conferences lately opened here have remained in a clear establishment of that right as applied to the holy buildings—ten, I believe, in number—most of which are now possessed jointly by the two communions, and some exclusively by the Greeks. M. de Lavalette, instead of pushing his right to an extreme, took upon himself the responsibility of declaring his readiness to extend the principle of joint possession to the whole number. In so doing, he would have anticipated the instructions of his Government, and exposed himself to the animadversion of Rome, and of certain parties in France. An arrangement to this effect was unofficially agreed upon between Ali Pacha and himself, when he learnt that the Russian Envoy had sent in a letter from the Emperor Nicholas to the Sultan, which immediately altered the intentions of the Porte, and left him no choice but that of either accepting an inadmissible proposal or appealing to his Government. The proposal, which he thought impossible to accept, was that of including in the principle of joint possession all the sanctuaries now possessed exclusively by the Latins. This proposal was represented to me by the Turkish Ministers as embracing all the principal sects of Christianity; but, whichever may be the correct version, it appears that M. de Titoff was as much opposed to it as M. de Lavalette. The former declared to the Turkish Minister that he and his Legation would immediately quit Constantinople if the rights of the sanctuaries were in any degree unsettled. The Porte has, in consequence, substituted another proposal, namely, that it would reserve its final decision until after a full investigation of the quarrel on which the several conflicting pretensions, including those of the Greeks, of the Latins, and of Russia, are respectively founded. This proposal is scarcely less distasteful to M. de Lavalette than the preceding one. He has acted with moderation throughout: he has been careful not to commit his Government: he has made no written communication except his opening note, and such documents as were necessary for establishing the joint commission of inquiry: and he is anxious to act with moderation to the last; but, at the same time, he thinks it impossible to submit with honour to the present plan of proceedings: his Government, having embarked in the question, cannot, with any degree of credit or consistency, stop short under the dictation of Russia. The national party in France, the Catholic party there and elsewhere, will press for the maintenance of the rights of the Latins, and Louis Napoleon will retire rather than be made the instrument—as he conceives he would be, in the supposed case—of his country's humiliation; nay, more, if it depended on him, he would not hesitate to make use of the great naval force now possessed by France in the Mediterranean; and, by blockading the Dardanelles, bring the question in debate forthwith to a satisfactory issue.

On the day following that on which Sir Stratford Canning wrote in these terms to Lord Palmerston, his Excellency thought it incumbent upon him again to communicate with his Government. Sir Stratford, in consequence of M. de Lavalette's representations, sought and obtained an interview with the Turkish Minister for Foreign Affairs; and learned that the Porte thought favourably of the French claim, without admitting it to its full extent, but considered that Russia had no right to interfere. While affairs were in this ominous condition, M. Reculot, the Secretary of the French Legation in Constantinople, arrived in Paris, having ridden express, to detail the circumstances to M. Turgot, at that time (Nov. 20) French Minister for Foreign Affairs. Lord Normanby expressed to M. Turgot his earnest hope that the question would not be pressed at that moment to an extent likely to lead to a diplomatic rupture. Lord Palmerston coincided in this opinion, and wrote to Lord Normanby that it would indeed be lamentable if a serious difference were to arise between France on the one hand, and Russia and Turkey on the other, "upon a matter so unimportant." The Porte, beset by two such powerful enemies, endeavoured to temporise; but no compromise at that time suggested, appeared likely to give satisfaction to either party. On the 17th January, Sir Stratford Canning wrote to Earl Granville (who had succeeded Lord Palmerston as Foreign Secretary) his belief that, although no decision had been officially announced to M. de Lavalette, an arrangement of the question was in preparation, the terms of which would be, a concession to the Roman Catholics of the right of officiating in the Shrine of the Virgin, near Jerusalem, together with keys to the Church of the Nativity, at Bethlehem. This was a concession which, in the opinion of Sir Stratford, Russia, on behalf of the Greek Church, was not likely to tolerate; and he was informed that an equivalent was to be given to the Czar, in the shape of an admission of priests of the Greek ritual to the right of officiating on certain occasions in the Mosque of Mount Olivet. But the Russian Ambassador was not satisfied with this project, and seeking an interview with Ali Pacha on the 11th February, expressed himself with unusual vehemence and no small degree of irritation against any such arrangement. Throughout these transactions the Ministers of the Sultan appear to have conducted themselves in the most courteous and conciliatory manner. They may possibly have wished a "plague upon both churches"—but they took care to give no just ground of offence to either. All this time, M. de Lavalette vied with M. Titoff in violence and unreasonableness; while the Divan was fairly puzzled how to act. Relieved for a moment from the importunities of M. de Lavalette, it sided with M. Titoff; and as soon as M. de Lavalette suspected any advantage had accrued or was likely to accrue to his rival, he was "down" again upon the Divan with renewed demands. A firman, however, was ultimately published, which appeared to satisfy the French Ambassador; and shortly afterwards he quitted Constantinople and returned to Paris, leaving a Chargé d'Affaires to act for him in his absence. From March to August, there is a blank in the history; and Sir Stratford Canning, believing apparently that the affair was settled, left Constantinople for awhile. Colonel Rose remaining as British Chargé d'Affaires.

But the discussions had been highly injurious to the tranquility of the Sultan and his Ministers. Russian intrigue was busily at work, and a new Minister of Foreign Affairs was appointed, and supposed to be more favourable to Russian supremacy. The Russian Ambassador did not leave Constantinople. He had work to accomplish, and speedily obtained a counter firman, more favourable to the Greek Christians than was consistent with the high and almost exclusive rights which had been assumed and conceded to France on behalf of the Latins, or Roman Catholics. M. de Lavalette, as soon as these facts became known in Paris, was sent back to Constantinople with all speed, and returned in a somewhat menacing manner in the *Charlemagne*, a 90-gun ship, in defiance of the provisions of the convention of the Dardanelles. This was in the month of August. Colonel Rose, writing to Lord Malmesbury on the 14th of that month, stated that M. de Lavalette complained of bad faith on the part of the Turkish Government: that he had accepted, in February, the tenth part only of the sanctuaries to which France had a positive right by the treaty of 1740; that he was obliged, at the same time, to give in a nominal protest in favour of that treaty, but he assured the Porte that all appeal to it should be waived for five or ten years, perhaps for ever; but that the Porte, on the very day after he left Constantinople on leave, gave a firman to the Greeks, which made out the treaty of 1740 to be valueless. With the question of the Holy Places was mixed up that of the Turkish Loan, and the combined effects of both were near upon producing a revolution in Turkey, and the deposition of the Sultan in favour of a younger brother. Little of these things was known to the public in London and Paris. The information received from Constantinople was scanty and contradictory; though it was generally surmised that danger to the peace of Europe was involved in the events of that capital. The French Government was loudly blamed as the facts of the case became better understood; and the French Emperor was warned by many public writers in this country, and by this Journal among the number, of the impolicy of doing any thing to weaken the Sultan, when Russia was awaiting the opportunity to profit by the occasion, and carry a step nearer to completion her long-cherished projects of dismembering the Turkish Empire. The French Government seems to have been ultimately convinced of the truth of this reasoning, and of such allegations against its policy; and M. Drouyn de l'Huys, in September, expressed to Lord Cowley his wish that the question should be settled honourably for France without embarrassing the Porte. Hitherto, Sir Stratford Canning and Colonel Rose had been mere spectators of events, and had simply kept the British Government informed of all that was passing. In that capacity, Colonel Rose, under date of the 20th of November, thus stated to Lord Malmesbury the condition in which the Sultan was placed:—

The Porte's position is most disadvantageous. Against all her wishes and interests she has been made to negotiate a most dangerous and difficult dispute between the great Powers, who found their respective claims on contradictory documents, which date from remote and dark ages. The Porte, a Mahometan power, is called on to decide a quarrel which involves, ostensibly, sectarian Christian religious feeling, but which, in reality, is a vital struggle between France and Russia for political influence at the Porte's cost, in her dominions. The Sultan is required to be a judge, and to decide this dispute; but, so far from having judicial independence and immunity, his Majesty is coerced and humiliated before his subjects by menaces, forced to give contradictory and dishonouring decisions, and then accused of perfidy by those who have driven him into it.

The trumpery nature of the differences at this time, when the peace of the world was seemingly threatened by them, appears in a ludicrous but painful light, from another passage in the same letter. Fuad Effendi having asked Colonel Rose to avail himself of his good relations with M. de Lavalette and M. d'Ozeroff (the Russian Chargé d'Affaires), and see if there was a possibility of a reconciliation:—

With the view, therefore, of obtaining exact information on this point, I visited these two gentlemen, discussing into part of a mediator, and only taking the unofficial one of a mutual friend, anxious to explain possible misapprehensions as to details, trifling in themselves, but involving the most important interests. And the mode of proceeding was the more advantageous, because M. de Lavalette and M. d'Ozeroff see each other but seldom, and when they do, never mention the Holy Places. They both received me in the best spirit; and, although I effected no reconciliation, I at least removed two causes of misapprehension. M. d'Ozeroff said that he had not considered the great door of the Church of Bethlehem as so serious a cause of difference as M. de Lavette had represented, adding, that that matter might have been arranged, if M. de Lavalette had not opposed the reading of the firman at Jerusalem.

On the other hand, M. d'Ozeroff thought that M. de Lavalette had supported the claim of the Latins to have a cupboard and a lamp in the Tomb of the Virgin. I assured him that he, on the contrary, had disallowed it. M. d'Ozeroff said that he could not deviate in the slightest degree from the positive orders of the Emperor; that Russia would not go to war; she would only, should the Porte not fulfil her engagements as to the Holy Places, withdraw her Legation from Constantinople; that there are other Courts at which Russia had no representative.

M. de Lavalette said that he could not deviate in the slightest degree from the note of the 5th of February last, but that he was perfectly ready to re-open the examination of France's rights as to the Holy Places, taking as the basis of them the treaty of 1740; that the Latins would seldom pass through the great door—perhaps, for what he knew, never at all.

I said all that I thought most likely to produce a good effect on the French and Russian representatives, and concluded by assuring them that, having visited the Holy Places, and made myself thoroughly acquainted with all the bearings of that matter, I should always be happy to remove, as I had done in the present instance, misapprehensions which might prevent a favourable solution of this unfortunate difference.

Lord Malmesbury highly approved of the efforts made by Colonel Rose in this conversation; but instructed him (Dec. 14) "to abstain from any direct or official interference in a question with which, in itself, her Majesty's Government had nothing to do." This was the first error of judgment which appears to have been committed by the British Government. It is clear, however, that Lord Aberdeen had nothing to do with it.

(*To be continued.*)

THE LAYARD BOX.

AT a Court of Common Council, holden in the Guildhall of the city of London, on the 3rd of March, 1853, it was proposed by Mr. Deputy Bennoch, seconded by Mr. Deputy Lott, and resolved unanimously:—

That the Freedom of this City, in a silver-gilt Box of the value of fifty guineas, be presented to Austen Henry Layard, Esq., D.C.L., M.P., &c., as a testimonial of his persevering and zealous exertions in the discovery of the long lost remains of Eastern antiquity, and for securing them in so perfect a state as to demonstrate the accuracy of Sacred History, and illustrate the early habits of the human race; and for his intelligence, labour and skill, by which this country has been enabled to place such valuable memorials of ancient grandeur amongst the collections of the British Museum.

The superintendence of the Box was delegated by the late Lord Mayor (Mr. Alderman Challis), to his deputy, Mr. Bennoch; who, assisted by Mr. Scott, of the Chamberlain's Office, made certain suggestions, and confided the execution of the design and work to Mr. Alfred Brown, the sculptor, whose brother, Mr. James Brown, made the drawing from which our illustration is engraved.

The design is composed of copies from the Nimroud Marbles, grouped so as to form the decoration of the Box, and also to illustrate the manners and customs of the ancient Assyrians. At each angle of the Box is placed the human-headed Bull and Lion, so peculiar to Eastern art. Between the angles are reliefs of the Lion Hunt, as exhibiting their sports and pastimes; the Assyrian Horsemen chasing and overcoming the Arabs, as indicative of military prowess; the King in his chariot, led through the city with pomp and ceremony, showing something of municipal parade in those early times; and the Wing Reliefs, or Priests, kneeling before the Sacred Roll, as descriptive of their religious faith and practice.

The mouldings forming the ribs have been selected from the mutilated remains of tiles and bricks preserved in the British Museum. On the lid, in an attitude of benediction, is represented the deity of the Assyrians. Inside the lid is engraved the arms of Dr. Layard and those of the City of London, connected by a scroll; and the inscription, which is a copy of the resolution, given above.

This is, we believe, the first practical use that has been made of the Layard sculptures in connection with art. It was a happy thought to take advantage of the result of the labours of Layard, and make them thus contribute to his honour. The effect is excellent, and we shall be greatly mistaken if advantage is not taken of the present work for the introduction of a new style in the designs for gold and silver.

The freedom was duly presented to Mr. Layard at a very full meeting of the Common Council, on Thursday, when the customary oaths were administered by the Chamberlain, Sir John Key, who, in an address of much eloquence, welcomed the Eastern traveller, and admitted him a citizen of London. When the cheering had subsided, Mr. Layard, addressing the members of the Corporation, gave some interesting particulars of his work, and incidentally referred to what is passing in the east of Europe. Our limited space prevents our giving the address at length; but as this is probably the last time that such an honour will be conferred under the present constitution of the Corporation, we sincerely trust that whatever changes may take place in the constitution of the great municipality, they will still retain the privilege of thus acknowledging the services of distinguished men.

BARON BRUNNOW.

THIS old and distinguished servant of the Imperial Court of Russia left London for Darmstadt, on Thursday (last week), having previously had an interview with Lord Clarendon at the Foreign-office; and on the same day he took leave of Count Walewski, as the representative for this purpose of the diplomatic body.

Darmstadt has been chosen as a temporary resting-place, from the connection which exists between the reigning Sovereign of that territory and the Imperial family of Russia, a sister of the Grand Duke having married the Crown Prince

Baron Brunnow has passed more than thirty years of his life in diplomatic employments under the present Emperor and his predecessor. His Excellency is a German by birth, and his connection with the Russian Court was originally formed at the period of the Congress of Aix-la-Chapelle, in 1818. He was subsequently for ten years attached to the Foreign-office at St. Petersburg, as Counsellor, and at the expiration of that period was appointed Minister at the Grand Ducal Court which he now proposes to visit. In August, 1839, Baron Brunnow arrived in London on a special mission relative to the contest which was then raging between the Sultan and his Egyptian subjects. After fulfilling the duties of his mission in a manner most satisfactory to the Court which he represented, Baron Brunnow was despatched to Stuttgardt as the Imperial representative at the Court of Wurtemberg; but, in the course of a few weeks, it was found expedient to establish him permanently as Russian Ambassador in London; and for more than fourteen years he has discharged in a manner worthy of the highest praise the duties of his high position. During five different Administrations, the statesmen of every party, while they have respected Baron Brunnow as a faithful and able servant of his Sovereign, enjoyed his friendship. With the late Duke of Wellington his Excellency was for many years on terms of close intimacy, and he was a guest at Walmer only ten days before the death of our great Captain.

His residence in this country is intimately connected with the history of European diplomacy. In 1840 and 1841 Baron Brunnow signed, with Viscount Palmerston, treaties relative to the affairs of the East; in the following year he signed, with the Earl of Aberdeen, a Treaty for the Suppression of the African Slave-Trade; in 1850 he signed, with Lord Malmesbury, a Treaty of Succession to the Crown of Denmark; and in the same year a Treaty of Succession to the Crown of Greece.

The late Sir Robert Peel, in a speech delivered after a dinner given by the Russian Company on the 2nd of March, 1844, alluding to the pacific relations which at the time existed between the two countries, spoke in the following terms of high encomium:—

This friendly feeling in favour of amicable relations between Great Britain and Russia stands, too, I trust, on a footing too well secured to be dependent upon any accidental circumstance, or upon the personal character of any man intrusted with high office or authority. But this I may be bold to say, so far as the exercise in any one man, or the agency of any single individual, can contribute to the promotion of this good understanding, the two countries are under the deepest obligations to that distinguished nobleman who is present here this day as the representative of the Russian Empire at the Court of Great Britain. There may have been diplomatists occupying higher diplomatic station, but there never was a man entrusted with the confidence of the Crown who discharged the duties connected with his office in a more honourable or exemplary manner than those duties have been performed by Baron Brunnow. I can undertake to say that there never has been a Minister more zealous for the promotion of the interests of his own country, or more unwilling to make any compromise of its honour, or of anything that could justly the obligations of which over the interests of which he is the representative; but, rising above all the petty arts of intrigue, and by the steadily and simplicity of his own conduct, his Excellency has gained the confidence of every Minister with whom he has been called upon to act, and, without sacrificing the interests of his own country, has secured the personal good-will and esteem of all those with whom it has been his duty to act.

Almost all the members of the Imperial family have visited this country during Baron Brunnow's residence in London. The Grand Duke Michael, brother of the reigning Emperor, paid us a visit in 1844, and the Emperor himself arrived in the course of the next year. The Grand Duke Constantine stayed here for a time in 1846; and in the course of the past summer both the daughters of the Czar, and his niece, the Grand Duchess Catherine, have been our guests. The urbanity of the Russian representative, and his thorough familiarity with English life, may probably have conduced in no small degree to create the favourable impression with which, as is well known, our Imperial visitors have left the British shores.

His Excellency Baron de Brunnow finally left the residence of the Embassy, in Chesham-place, on Wednesday, at half past three o'clock, and departed by the 4.30 p.m. express train on the South Eastern Railway for Dover, *en route* to Calais. The authorities of the railway, having become acquainted with the proposed departure of the Baron, made arrangements to receive him with becoming respect. A carriage was set apart for his accommodation, and when the Baron arrived at the station, Captain Barlow, the superintendent of the railway, and Mr. Herbert, the secretary, were in attendance to receive him. The Baron was accompanied from the Embassy by the Baroness and Mdlle. Helen de Brunnow. The secretaries and attachés of the Embassy were also in attendance. Pending the departure of the train, the Baron and the members of his suite were accommodated in the board-room. As he proceeded along the platform, he was received with the respectful salutations of the few persons assembled. The Baroness Brunnow and Mdlle. de Brunnow took leave of his Excellency just before the train started, and returned to the Embassy, whence they proceed early in the ensuing week to join his Excellency at Darmstadt.

On reaching Dover the Baron proceeded direct to Birmingham's Royal Ship Hotel, where he intended to pass the night.

The scene of his Excellency's departure is engraved in the Supplement published with the present Number.

PARLIAMENTARY PORTRAITS.

THE EARL OF CARNARVON.

IT is remarkable that, within less than fifty years, four Earls of Carnarvon, in lineal succession, have taken a distinguished part in the debates of the House of Lords.

The present titles of the Carnarvon family are of comparatively recent date. In 1793 its then representative was created Baron Porchester, and the Earldom was granted in 1793. But the family is a branch of the ancient and noble house of Herbert, the Earls of Pembroke and Montgomery; and it immediately springs from Major-General Herbert, the fifth son of the eighth of those Earls. The first Earl of Carnarvon (Baron Porchester) was a man of high patriotic spirit, and uncommon energy and capacity: the second Earl distinguished himself, as a Commoner, in the debates on the Walcheren Expedition, and on other party questions; and, later in life, in the House of Lords, he strenuously opposed the Reform Bill. The late Earl of Carnarvon, the present Earl's father, held a more than respectable place among the authors of his country. His poems, chiefly on Oriental themes, still have their place in libraries, and there are allusions to him in Byron's writings, as well as in some of the diaries that have been published within the last twenty or five-and-twenty years.

Henry Howard Molyneux Herbert, the fourth Earl of Carnarvon, is the son of the third Earl, by the eldest daughter of the late Lord Henry Howard. She was born in the year 1804, and is now the Dowager Countess. She was also the niece of the twelfth Duke of Norfolk. The subject of this memoir was born at 42, Grosvenor-square, on the 24th of June, 1831. He was educated at Eton, and from that ancient and undecaying seat of learning, carried away, like others of his family, numerous and signal distinctions, and a character not only spotless, but bright with still higher moral and intellectual promise. From Eton he went to Christ Church College, Oxford, where he distinguished himself, and, as we have stated, to Sir [illegible] in classics in the year 1852 himself, Lord Wodehouse, the present Foreign Under Secretary; and the present Marquis of Lothian, being, it is believed, the only years who, after accession to their titles, have ever obtained such an honour. Having closed his academical career with a reputation no less conspicuous for moral excellence than for high attainments, he made an Assyrian and Eastern tour in 1853, with his friend

and fellow-collegian, Viscount Sandon, a young nobleman of kindred virtues and accomplishments. Having previously borne the honorary title of Baron Forchester, on the death of his father, in the year 1849, he succeeded to the family titles and estates as Earl of Carnarvon.

The noble Earl's speech, in proposing the Address to Her Majesty in the House of Lords, on Tuesday week, was, as a maiden effort, of more than usual promise. He spoke with self-possession and sufficient

THE EARL OF CARNARVON.—FROM A PHOTOGRAPH BY BEARD.

fluency; but without that precocious self-confidence which sometimes promises much more than is borne out by subsequent performance. In the arrangement of his topics, and his mode of treating them, he exhibited a comprehensiveness, clearness, and grasp of mind indicative of natural powers, fitting him for future distinction in the arena which birth has opened to him; and those who remember his late father, detected much in his speech that reminded them of the elevated, philosophic, and eloquent character of his oratory. We anticipate much public usefulness from the noble Earl, if, as is probable, he shall hereafter follow the example of so many of our young nobles, of all parties, who have qualified themselves for political life and public service, upon their own personal merits, and irrespective of the aid and influence derived by them from their possession of birth, title, and that greatest gift of all, a favourable *entrée* on the political arena.

Lord Carnarvon is remarkable for self-command, reflection, judgment, and other statesmanlike qualities, that usually belong to a later period of life. Sincere and refined in manners, domestic in habits, courageous in spirit, firm in friendship, and alive to responsibilities of property and station; he is a favourable specimen of a large class which, happily for England, is annually growing larger.

The Earl of Carnarvon is unmarried, and in his twenty-third year. The heir-presumptive to the title is his brother, the Hon. Alan Percy Herbert, who was born in 1836. His aunt, Lady Emily Herbert, is the wife of Mr. Philip Pusey.

His Lordship is a Deputy-Lieutenant and J.P. for the county of Hants, and Captain of the Highclere Troop of Yeomanry, in the well-disciplined North Hants Cavalry regiment commanded by Mr. Lefevre, the Speaker—as efficient in the saddle as in the chair. His principal residence is Highclere, near Newbury, though situate in Hampshire—a domain of the greatest beauty, and in the midst of which the Castle, entirely altered by Sir Charles Barry, records the genius of the architect, as well as the taste and labours of the late lamented Earl. It is of this park that even Cobbett could say, in his "Rural Rides:"—"This is, according to my fancy, the prettiest park that I have ever seen." " " "I like this place better than Fonthill, Blenheim, Stowe, or any other gentleman's grounds that I have seen."

Through his mother (as above referred to), the heiress of the Nottingham Baronet-family of Molyneux, and a daughter of the late Lord Henry Howard, and first cousin of the present Duke of Norfolk, he derives a portion of that immemorial and scarcely-equalled lineage, thus combining the blood of the Howards with the old historic renown and hereditary genius of the Herberts. Amongst his modern female ancestry he can also enumerate the names of Sawyer (Margaret Sawyer, wife of

BARON BRUNNOW.—(SEE PRECEDING PAGE.)

the fifth Earl of Pembroke, and sole heiress of Sir Robert Sawyer, the Crown Lawyer, and disinterested advocate of the Seven Bishops), Wyndham (Lady Elizabeth, daughter of the second Earl of Egremont), and Acland (daughter of Lady Harriet Acland, so remarkable for her conjugal devotion in the American war).

In his public opinions, Lord Carnarvon is represented to be Liberal Conservative and comprehensive. Sincerely attached to the political, ecclesiastical, and academical institutions of his country, he desires to extend their usefulness by reforms in accordance with the ends for which they were designed, and by enlargements and gradual reconstructions which shall not impair their foundations, nor divest them of their time-honoured characteristics.

GIGANTIC TREE IN CALIFORNIA.

The discovery of this majestic tree is believed to have been made by the unfortunate Douglas, who, when last in California, wrote thus, in a letter to Sir William Hooker, of a coniferous tree inhabiting that country:—"The great beauty of Californian vegetation is a species of Taxodium, which gives the mountains a most peculiar, I was almost going to say awful, appearance—something which pitifully tells us we are not in Europe. I have repeatedly measured this tree: 270 feet high, and 32 feet round at three feet from the ground. Some *few* I saw upwards of 300 feet high, but none in which the thickness was greater than those I have instanced." "What was that tree?" asks the Editor of the *Gardener's Chronicle*. "No seeds or specimens ever reached Europe, although it appears that he (Douglas) possessed both."

The question, however, appears to have been most satisfactorily answered by Messrs. Veitch, of the Exotic Nursery, Chelsea, and of Exeter, who, about six weeks since, received from their excellent collector, Mr. Lobb, seeds and a living specimen of a most remarkable coniferous tree, also Californian; and of which Mr. Lobb furnishes the following account:—

This magnificent evergreen tree from its extraordinary height and large dimensions, may be termed the monarch of the Californian forest. It inhabits a solitary district on the elevated slopes of the Sierra Nevada, near the head waters of the Stanislau and San Antonio rivers, in lat. 38° N., long. 120° 10 W., at an elevation of 5000 feet from the level of the sea. From 60 to 90 trees exist, all within the circuit of a mile, and these varying from 250 feet to 320 feet in height and from 10 to 20 feet in diameter. Their manner of growth is much like Sequoia (Taxodium) sempervirens. Some are solitary, some are in pairs; while some, and not unfrequently, stand three and four together. A tree recently felled, measured about 300 feet in length, with a diameter, including bark, 20 feet 2 inches, at 5 feet from the ground; at 18 feet from the ground it was 14 feet 6 inches through; at 100 feet from the ground, 14 feet; and at 200 feet from the ground, 5 feet 5 inches. The bark is of a pale cinnamon brown, and from 12 to 15 inches in thickness. The branchlets are round, somewhat pendent, and resembling a cypress or juniper. The leaves are pale grass-green; those of the young trees are spreading, with a sharp acuminate point. The cones are about 2½ inches long, and 2 inches across at the thickest part. The trunk of the tree in question was perfectly solid, from the sapwood to the centre; and, judging from the number of concentric rings, its age has been estimated at 3000 years. The wood is light, soft, and of a reddish colour, like redwood or Taxodium sempervirens. Of this vegetable monster, 21 feet of the bark, from the lower part of the trunk, have been put in the natural form in San Francisco for exhibition; it there forms a spacious carpeted room, and contains a piano, with seats for forty persons. On one occasion 140 children were admitted without inconvenience.

GIGANTIC TREE (WELLINGTONIA GIGANTEA), IN CALIFORNIA.

The Editor of the *Gardener's Chronicle* then illustrates the almost fabulous antiquity of this tree:—

They say that the specimen felled at the junction of the Stanislau and San Antonio was above 3000 years old; that is to say, it must have been a little plant when Sampson was slaying the Philistines, or Paris running away with Helen, or Æneas carrying off good *pater Anchises* upon his filial shoulders. And this may very well be true if it does not grow above two inches in diameter in twenty years, which we believe to be the fact.

The Editor infers the plants of Lobb and Douglas to be identical:—

Douglas reached lat. 39° 45' N., and therefore was within the geographical range of Lobb's discovery. But it is quite as possible that he meant some other tree, also of gigantic dimensions; and it is hardly to be imagined that so experienced a traveller would have mistaken a tree with the foliage of a cypress and the cones of a pine for a Taxodium, and still less for the species Sempervirens. Besides, the slenderness of the specimens he saw is greatly at variance with the colossal proportions of the plant before us. That, at all events, the latter cannot be regarded as a Sequoia we have explained in another column; and we think that no one will differ from us in feeling that the most appropriate name to be proposed for the most gigantic tree which has been revealed to us by modern discovery is that of the greatest of modern heroes. Wellington stands as high above his contemporaries as the Californian tree above all the surrounding foresters. Let it, then, bear henceforward the name of Wellingtonia gigantea. Emperors and Kings and Princes have their plants, and we must not forget to place in the highest rank among them our own great warrior.

In another column of the *Gardener's Chronicle*, we find the vast Tree thus described:—

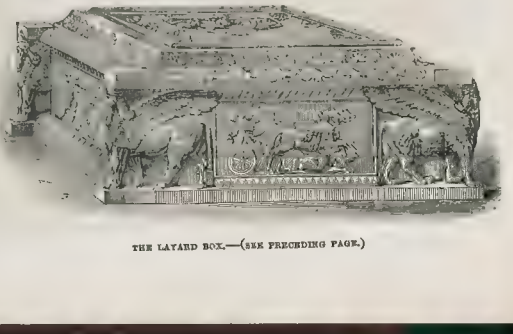
Wellingtonia gigantea.—Gen. Char.: *Strobilus* oblongus, ligneus; squamis numerosis, cuneatis, truncatis, per apophysin transversè (ob bracteam æquilongam omninò adnatam) sulcatis, mucrone in medio. *Semina* 7-cuneque squamæ, supra medium pendula, compressa, utrinque alata. Folia *alterna, juniperina*.

Wellingtonia is a tree with the imbricated scale-like leaves of some Junipers, attached to the branch by a broad base; and when, as happens in the more vigorous shoots, the leaves acquire unusual development, they still are sessile bodies with a triangular section, and no tendency whatever to form a flat lamina. But they are alternate, not opposite. In Sequoia and Sciadopitys, genera also having alternate leaves, the leaves acquire the expansion of a Taxus or Podocarp.

The cones are like those of Sciadopitys in size and form but the bracts, instead of being half free, are so completely consolidated with the strobilar scales as to form but one body, the double nature of which is only discoverable by a transverse furrow along the middle of the truncated terminations, by a mucro, evidently belonging to a bract, situate in the centre of the furrow, and by the double plate of woody matter of which each scale is found to consist when divided longitudinally. In this respect, indeed, Wellingtonia corresponds with Sequoia; but the strobilar scales in the latter are few, unguiculate, almost peltate, and attached slightly to a weak axis; whereas, in Wellingtonia the scales are more wedges, whose double woody interior communicates with an axis so hard and stout, that a sharp chisel and a forcible blow are necessary to separate them.

The seeds of Wellingtonia correspond with Zuccarini's figure and description of those of Sciadopitys, both in form, number, and place of insertion upon the scales. Sequoia is different, having seeds far less thin, with a corky rather than a membranous wing, fewer in number, and originating just within the edge of the unguiculate scales.

These considerations seem to leave no room for doubt that Wellingtonia is an entirely new coniferous form; and, possibly, when its male flowers shall have been seen, still further distinguished by the structure of those parts. In a horticultural point of view, it is impossible to over-estimate the value to Great Britain of such a tree. A lithograph of this tree, executed by Messrs. Day and Son (from which our Engraving is copied), will shortly appear; the original drawing was from nature by Mr. J. M. Lapham.



THE LAYARD BOX.—(SEE PRECEDING PAGE.)

THE BURWOOD COPPER-SMELTING WORKS.

THE BURWOOD COPPER-WORKS.

These extensive works adjoin the property of the Australian Agricultural Company, and are situated 65 miles north of Sydney, Port Jackson, and three miles south of Newcastle.

The accompanying Illustrations represent the general situation of the works. Surrounded by hills which shut out every view but that of the ocean, the buildings and grounds comprise one hundred acres of land, and form an amphitheatre that entirely prevents the approach of the vapour evolved by the furnaces to the populous town of Newcastle.

The system of smelting is the same as that pursued at Swansea, except, that from the favourable peculiarities of Australian ore, three processes, instead of eight or ten, produce copper, and that of the purest quality. Some of this copper may be seen at Messrs. Gore and Co.'s Counting-house, London. As the furnace stands within 250 yards of the eastern shore of the Pacific, the proprietors of the works, instead of being incumbered with slag, are enabled to deposit it, without expense, in the ocean; and they contemplate, in process of time, the extension of the tip or bark (as this deposit is called) into a quay, that will enable them to receive and discharge cargoes at the works, without entering the port of Newcastle, to and from which the ore and copper are at this time conveyed in drays.

Not the least singular feature in this property is, that the hills which surround the works contain the richest seams of coal—in some instances eleven feet in thickness, and generally lying somewhat above the level of Newcastle and of the low country. There is already a tunnel, 280 yards long, large enough for the passage of a horse and cart through one of the hills; and the owners of the Copper-Works are driving another tunnel through a seam of coals on the level of their works, which will enable them to convey their produce to and from Newcastle by tram.

Copper mines of extraordinary richness are worked in many parts of the colony, and may be said to abound on the southern and western shores of New South Wales, and throughout the colonies of South Australia and New Zealand. The ores from the latter places, though difficult to smelt by themselves, are admirably suited for reduction when mixed together; and, as coal has not hitherto been found in the places where they are dug, a very large part of the ore must, at no distant date, be forwarded to Newcastle by ships, which could there receive return cargoes of coal.

Owing to the situation of the Burwood Copper-Works, sand and clay to an unlimited extent are found on the spot; and nothing is wanted to make the work one of the most complete and flourishing manufactories, and to enable the proprietors to keep pace with the increasing demands of the colonists, but the erection of rolling mills for converting the copper into sheathing and bolts for ship-building, and the various purposes for which copper is used in the Australian colonies.

The works have been for some time in active operation, and produce from twenty to thirty tons of refined copper weekly; and when the mania for the precarious labours of the gold fields shall have given place to more rational occupations, or an industrious population shall have found in the Australian colonies a refuge from the pressure under which they have been reared, the Burwood Copper-Works cannot fail to become an object of national interest.

"THE PARIS AND LONDON" STEAMER.

This handsome vessel has been constructed for conveying merchandise directly between the capitals of France and England. She was built at Nantes; works by sails, or steam, or both combined; has an engine of 80-horse power, with screw machinery; is 100 feet in length, and of 150 tons burden. By lowering the masts she passes with facility under bridges. She came from Rouen up to Paris, against the current, in twenty-nine hours, stopping at Meulan, at Poissy, and at Neuilly. The commander is Captain Napoleon Briand, with a crew of nine men.

The Paris and London steamed up the Seine, passed the Quai d'Orsay in fine style. When she came within view of the flag on the Tuileries she fired a salute of 21 cannons. Shortly afterwards she passed under the Pont-Royal, and the Bridge of the Carrousel, and cast anchor at the Quay of Saint Nicholas du Louvre.

FOREIGN AND COLONIAL NEWS.

THE WAR.

COUNT ORLOFF'S MISSION—THE RUSSIAN PROJECT.

Count Orloff, the Russian Envoy-Extraordinary, has met with an extremely kind reception from the Emperor of Austria, to whom he presented an autograph letter from his Sovereign on the 23th ult. On the same day he dined with the Imperial family, although he was still suffering from a swollen foot, as a consequence of his long and fatiguing journey. The Envoy, who may be about sixty-four or sixty five, is a favourable specimen of Russian nobility, being tall, powerfully built, and of a "majestic presence."

The terms of the Russian project, or rather counter project, brought by Count Orloff, are said to have been:—First, that a Turkish plenipotentiary should be sent either to the head quarters of the army of occupation, or to St. Petersburg, to treat directly with Russia, but to be free to see and advise with the Ministers of the Four Powers. Secondly, free to see and advise with the Ministers of the Four Powers. Secondly, the former treaties between Russia and the Porte to be renewed. Thirdly, Turkey to enter into an engagement with respect to political refuges—to the effect, it is supposed, that they should not henceforth be harboured in the Ottoman dominions. And lastly, a declaration from the Porte, couched in similar terms to the Menschikoff ultimatum, with reference to the protection of the Greek Christians.

According to another statement, the Count demanded that Austria should pledge herself to remain neutral, under any circumstances that might arise. The Emperor is said to have met this demand by asking for a pledge on the part of Russia with respect to the evacuation of the Principalities, and also for a promise that the Czar would not cross the Danube, nor seek any increase of territory at the expense of Turkey. Count Orloff was unable to give any such undertaking; and the Emperor, therefore, reserved to himself full liberty to act as circumstances might dictate, with due regard to the interest and dignity of Austria. The Russian Envoy Extraordinary did not, however, think fit to quit Vienna even after this rebuff, and in the presence of a trifling indisposition, he delayed his departure for a few days. It was inferred from the circumstance that Count Orloff's first proposal was not his last, that he was still trifling with the representatives of the four Courts, and that he might possibly have discretionary powers to treat on a wider basis The latest reports would give no countenance to this supposition Finding that he could make no impression on the Emperor, or his Ministers, it was said that Count Orloff would leave for St. Petersburg on Wednesday or Thursday.

It was supposed at one time that he would have paid a visit to Berlin; but it turns out that the Russian proposal to that Court was made by M. de Budberg, the Russian Minister at Berlin. It was nothing less than a demand that Prussia should conclude an alliance of the most intimate character with the Emperor Nicholas, who offered to protect Prussia from the consequences of such an engagement by sea and by land. To this insolent proposition M. de Manteuffel replied with becoming dignity, that Prussia stood in no need of foreign protection, and would enter into no alliances on such terms; but that, under any circumstances, Russia would not be capable of affording protection to her coasts and ports against the fleets of England, or to the Rhenish provinces against the armies of France.

THE WAR ON THE DANUBE

Accounts received at Vienna on Tuesday, state that a sanguinary action had taken place near Giurgevo, with a great loss on both sides. Three thousand Turks crossed the Danube, drove in the Russian advanced posts, attacked the town, and then retired.

Since the arrival of General Schilder in Wallachia a retrograde movement of the Russian forces has been observed. Preparations have been made to transfer the head quarters from Radovan to Slatina, and engineers have appeared at the latter place to mark out a new camp. Since the battle of Citate the Turks seem inclined to take up the offensive upon all fortified points of the Danube; whilst the Russians, probably awaiting fresh reinforcements, have taken up a rather defensive position. It is reported that 50 000 Turks crossed the Danube near Radowa, but Russian reinforcements having arrived, they returned to their former position. The order to advance however, as mentioned, had not as yet been issued to the Russian troops, as the condition of the soil at the present season of the year is such as to offer almost insuperable obstacles to active operation.

The Russian authorities are said to have ordered the formation of a Greco-Sclavonian Legion, which is to enter Turkey, to excite the Christian population of the empire to revolt. Four offices have been opened at Bucharest to receive enlistments. The advantages offered to volunteers are calculated to allure many foreigners residing in the country where they lead a wretched existence, to take service in the Greco-Sclavonian Legion; but it is questionable whether they can be relied upon when the tug of war comes. Colonels are promised 5 ducats per day; majors, 4 ducats; captains, 2½ soldiers, officers, 2 and sold ers, 2 swanzigs The arms are to be supplied by Russia. At the suggestion of the Muscovite authorities, lists of subscriptions are to be received and the nobility, merchants, and bourgeois will be invited to assist the defenders of the country.

The last letter from the Kalafat correspondent of the *Lloyd* is couched in extremely warlike language. The army of occupation, already reinforced by the corps of General Ostem-Sacken, and expecting the arrival of that under General Teh odoieff, will soon assume the offensive. A part of the 6th corps—General Tschodaieff's—has already reached the Dnieper, and three regiments coming from Moscow have passed the frontiers of Little Russia (including the Governments of Kiew, Tchernigoff Poltowa, Podolia, and Volhynia). The reserve troops are also taking the same road As soon as these forces have reached the frontiers of Bessarabia, the remainder of Osten Sacken's corps will advance to the south, "and it does not admit of a doubt that when the weather be comes milder the Danube will be crossed at two points."

The Russian army in the Principalities and in Bessarabia, is said to consist of a total force of 156,328 men, and 520 cannon, of which 72 are large calibre.

SEBASTOPOL AND ODESSA.

News from Sebastopol, *viâ* Bucharest, to the 20th ult, has been received at Vienna Up to that day the notification on the part of the protecting squadrons, that they had received orders to enjoin every Russian cruiser to return to Sebastopol, had not been officially received. The Admiralty had been informed of it, however, in a private manner, and had instantly sent off couriers to St. Petersburg with a request for further orders

The son of Count Nesselrode, who is Prince Menschikoff's Attaché, has arrived at Odessa. The forts of Sebastopol are being provided with more ordnance. Osman Pacha, the prisoner of war, is now out of danger, but can never hope to be fully reinstated in health. Russian steamers, which, at the beginning of February, transported heavy ordnance from Odessa to Bessarabia for the Danubian army, have since returned, their passage there and back not having been attended with the least risk.

RETURN OF THE FLEETS TO BEICOS.

Letters from Constantinople to the 25th ult., inform us that the fleets were still at anchor at Beicos. Her Majesty's ship *Fury* had just returned from the direction of Odessa, whither she had been despatched to look after British interests, but the ice prevented her from approaching the place.

A memorial, signed by twenty-three British merchant captains, had been presented to Lord Stratford de Redcliffe by two of their number, showing that the present uncertain state of affairs was very detrimental to their employers, and asking whether there was any sufficient reason why they should not proceed to their different destinations in the Black Sea. The substance of the answer was that there was no reason why they should not do so at the moment; but that it was impossible to foretell what casualties might bring forth.

The return of the combined fleets to Beicos, from their cruise in the Black Sea, though contemporaneous with the departure from the shores of a Turkish flotilla for Anatolia, does not seem to have been merely brought about for the purpose of conveying the flotilla, although it is likely that the escort will be offered and accepted. It appears that the Admirals consider that their duty of protection can be discharged at Beicos as well as at Sinope. On Monday, the 16th ult., the *Caton* arrived at Constantinople from the Black Sea, with despatches for Lord Redcliffe and M. Baraguay d'Hilliers, announcing the intention of the Admirals to return with their fleets to Beicos. The Ambassadors met in conference next day in consequence of this information, and the *Samson* started on the 18th ult. for the Black Sea, with their reply to the Admirals, which is said to have been as follows:—

The Ambassadors express surprise at the sudden resolution of the Admirals, more particularly at the present moment, when a Turkish steam flotilla is on the point of starting with ammunition and other stores for the army of Anatolia. The orders of the French and British Governments, which reach d this by the *Caton*, about ten days ago, were formal and precise, respecting the protection to be afforded by the combined fleets to the Ottoman flag and territory, and the attention of both Admirals is again called to the stringent nature of these instructions, which had been duly notified to them. The Admirals, it would appear, consider that the measures suggested to their execution may be equally well effected, while her the force under their command be stationed at Beicos or Sinope. This is a matter which must entirely depend on their own judgment, and on them the responsibility will rest. If the Ambassadors do not interfere in all matters connected with naval experience, and confine themselves merely to those within the sphere of their political department.

According to all accounts the combined squadrons did not encounter bad weather during their stay in the Black Sea, nor did they suffer in any way. The reinforcements preparing at Constantinople amounts to 30,000 men, who will be sent in different detachments, escorted by divisions of the combined fleets (French, English, and Ottoman.

The *Presse*, of Vienna, quoting from *L'Ami du Soldat*, says:—

The consequences of the entrance of the combined fleets into the Black Sea are already showing themselves. Fourteen thousand men have been landed at Hollburgaz, under Varna, from on board transports, which had previously been carefully watched by the Russians; now, the Turks are completely at liberty in the Euxine. These 14,000 men are to move upon Varna, and reinforcements from Constantinople and Adrianople are to take the same direction. The Ottoman forces, from Pregons to Nicopolis amount to 18,000 men, over and above a reserve of 36,000 at Sophia.

MILITARY PREPARATIONS IN FRANCE.

The military preparations in France are being pushed on with great energy. Decrees are expected, calling out the remaining moiety of the contingents of 1849 and 1850, and the whole of the contingent of 1853—a total of 160,000 men; so that in a short time the army will be raised to 550,000 effective men. One manufacturing establishment in Paris has received an order for the supply of 150,000 haversacs, and another for 26,000 shirts, and other minor establishments have similar orders in proportion. An order has been given to an extensive ironmaster in the department of the Pas de Calais for 3,000,000 cannon-balls, of various dimensions

Large orders have also been given for an immense supply of harness and similar equipments for the artillery. Letters from the department announce that the young soldiers are already *en route* for their destination. In some branches of the military service the Emperor does not allow of repose either by night or day General Pelissier has returned to Africa to organise a body of from 20,000 to 25,000 men—the flower of the army of Africa; and a superior officer has asserted that in eight days divisions of the army in France as well as Africa would be ready for embarkation. The exact amount of the force to be sent on that service is not stated; but, in the opinion of persons competent to judge, not less than 70,000 or 80,000 Anglo-French troops would suffice, with the cooperation of the Turkish army to do the work effectively. Caudia has been already spoken of for a depôt; but this island is considered as rather too distant from Turkey, and Mitylene is more likely to be thought suitable.

The French Atlantic squadron, which is stationed at Brest, has received orders to put to sea immediately. The order was received at Brest on the 3rd instant. It is confidently stated that this squadron is to proceed to Toulon, to Algiers, and to Civita Vecchia, for the purpose of embarking the troops which are to form the expeditionary column about to proceed to Constantinople. The provisions for the expedition have already been contracted for.

DEPARTURE OF M. DE KISSELEFF.

M de Kisseleff left his hotel for the station of the Northern Railroad on Monday, and went by the mail train to Brussels. It is said that his absence is not likely to be of very long duration, as he took with him only a small portion of his personal effects; the other part was sent to the house of a friend in the Rue de Suresnes.

Although all diplomatic relations with the French Government are said to be at an end, the Russian Consul General remains at Paris to take charge of certain business, and communications with the subjects of Russia who remain there, but who are not very numerous A few have been recalled by special order of the Emperor of Russia, but no general order has been given. It was stated by one of the papers on Sunday before leaving Paris, M. de Kisseleff addressed a circular to the Russians residing in the capital, requiring them, in the name of the Czar's Government, to leave France within the next month and return to Russia, on pain of imperial displeasure; but this has been contradicted.

A RUSSIAN CONSPIRACY IN TURKEY.

In consequence of the arrest of Father Anastasius, a Greek priest at Widdin, a conspiracy has been discovered, in which Greek and Russian agents are mixed up. It appears that this Father Anastasius disclosed the secrets of the conspiracy He is a man who has travelled through almost every part of the Turkish Empire Bulgaria, Montenegro, and Bessarabia; having also been frequently in Russia, and of late having visited Athens. His capture led to the arrest of Baron Oelsner, a Russian officer, once the aide-de-camp of General Lüders. The Ottoman police are very active in making every research. The object of the conspiracy was to stir up the Greek populations of the empire to revolt, their chief places for meeting being Athens, Constantinople, and Bucharest.

RUSSIAN INTRIGUE IN SERVIA.

The intelligence from Servia declares that the Russians were exerting themselves to prevent the publication of the Imperial firman which Ethem Pacha had carried there. Prince Alexander is made to observe, by the Russian agents, that this confirmation of the privileges of Servia is a dangerous gift, in this respect, that at a later period the Porte could avail itself of this right of confirmation to pretend to that of revocation. News from Belgrade confirm this statement, and state that Prince Alexander had made his reserves in the sense just mentioned. The condition of the Principalities is said to be deplorable, the exactions of the Russians being something worse than those heard of before from these invaders. The inhabitants have neglected to prepare for the sowing of their corn, and see their cattle carried from their farms every day.

RENEWED ATTEMPTS AT NEGOTIATION.

The *New Prussian Gazette* asserts that, notwithstanding all that has passed, and in view of the non-acceptance of the second Vienna project, France and England have made another peace proposal to St. Petersburg. According to the dates given by the paper quoted, the messenger should have reached the Russian capital at the commencement of this week. It is certain, however (says the *Gazette*), that the Emperor has declared, by Count Orloff, that he will insist on the acceptance, by Turkey, of the engagements inscribed in the first Vienna note.

A rumour is revived of an attempted offer at mediation being made by King Leopold, founded on a declaration, attributed to Count Orloff, that his Imperial master would listen to overtures, but upon what basis is not stated.

THE CZAR GIVING WAY.

The *National Gazette* of Berlin, publishes a letter from St. Petersburg, of the 20th ult., in which the writer states that the war party was losing ground, and that Count de Nesselrode has resumed his former influence. He mentions a rumour that the Emperor of Russia has sent an autograph letter to the Queen of England full of professions of a desire for peace He adds that the Emperor has written to General Werewkin, ordering him, as a means of preventing an attack on Hirlis by Schamyl, to march against the Tschetschens. The last advices from St. Petersburg affirm that the Czar is suffering from erysipelas; and that, whether the illness was real or feigned, he had not been seen visible for ten days. With every document of consequence, it was matter of special deliberation whether it should be laid before him or no.

TURKEY

The *Preussische Correspondenz* furnishes some news from Beyrout up to 7th January. At that date it was known there that political events in Persia had taken a very unexpected turn. As soon as the intention of the Persian Government to promote the views of Russia against Turkey became known, the people made its aversion to an alliance against their old allies known in such an unmistakeable manner that the Shah's counsellors, intimidated by the storm, and fearing an insurrection, required further assurances from the Russian Envoy; he was called upon to give the same assurances in writing as he had already given orally. As he was either unable or unwilling to comply with this demand, the Court of Teheran had resumed its diplomatic relations with the English and Turkish Ministers, who had already made preparations for departure. The state of Syria was perfectly peaceable. The regular and irregular troops were on their march to the eastern frontier, with the exception of the Druses' contingent of infantry, which was not yet ready to start. Five hundred men of the sole battalion of infantry now in Damascus, had proffered a written petition, praying to be sent to the seat of war, and a number of young men in Beyrout have, without waiting for their parents' leave, left their homes and followed the troops.

DANGEROUS CONDITION OF ITALY.

The more the probabilities of war increase, the greater is the fermentation throughout the whole of the Italian peninsula. At Naples, the party who desire a change of dynasty, no matter what, provided the Bourbons are overthrown, are in movement, and their emissaries endeavour to gain over the army. The agitation observable in the Romagna and the Marches has prevented the concentration of the Austrian troops. In the towns from which they had retired—such as Ravenna, for instance—disorders immediately occurred. The local authorities have been under the necessity of requesting that the foreign troops shall not quit their garrisons, and the Austrians still occupy the whole of the line from Bologna to Ancona. In the same proportion as the public mind grows excited by the rumours and probabilities of a European war, the governments of Italy become alarmed. The King of Naples, who is body and soul devoted to Russia, ardently desires the triumph of the Czar; for on the success of Russia lies his hope of the restoration of his French cousins, the Bourbons. The Grand Duke of Tuscany, and the Dukes of Parma and Modena, tremble at the name of war; for they have neither moral nor material force to defend themselves. The Court of Rome is divided on the great question of the day. The Pope and several of the Cardinals apprehend the aggrandisement of Russia, because it would be the triumph of the Greek Church—of a schismatic religion, which would aim at the overthrow of Catholicism; while Cardinal Antonelli, the Secretary of State, and all the members of the Pontifical Government who are only interested in the political question, hold good for Russia. The whole of these Governments are indebted for their existence to foreign bayonets; yet if a general war should follow the actual crisis, even foreign occupation would fail to prevent a movement in Italy, and above all in Lombardy and the Romagna.

FRANCE.

(From our own Correspondent.)

PARIS, Thur-day.

The departure of M. de Kisseleff has, of course, marked the certainty of the approaching rupture yet more decidedly than any of the preceding symptoms. M. de Kisseleff's preparations were all made to leave Paris, on Friday last, when, a few hours before that settled for his departure, he received a summons to the Tuileries. He there had a private interview with the Emperor of some length—the fact, though not the substance, of which becoming known at the Bourse, caused a temporary rise. We are informed, on what we have reason to believe to be excellent authority, that this interview was almost entirely one of a personal nature; that as little as possible of the question causing the rupture between France and Russia was entered upon, and that both parties expressed their mutual personal good-will, and their regret at the necessity of M. de Kisseleff's departure. This circumstance caused the delay in the Russian Ambassador's quitting Paris, which was a subject of much comment and speculation, though only deferred from Friday morning till Saturday night. It is said that, previous to his departure, M. de Kisseleff despatched circulars to his compatriots residing in Paris, intimating the necessity of their return to Russia, but without fixing any precise period for the fulfilment of the injunction.

It was reported that there was some probability of the Prince Napoleon continuing his journey from Belgium into Sweden: this rumour, which, however, did not receive much credence, is now set at rest by his return to Paris. The probability of his visit to the King of the Belgians being averted by the Duke and Duchess de Brabant, is a good deal talked of here.

Much excitement has been caused here by the false version of the Queen's Speech, published by the *Times*, and translated from thence into nearly all the Continental journals. The phrase of marching against the "common enemy," had already, before the appearance of the real Speech, been the subject of much surprise, almost amounting to doubt, thus employed before any actual rupture or declaration of war had taken place; and yet, notwithstanding this, there were some who asserted that the phrase had been employed, and that the paragraph which contained it had been suppressed by order in the translation published in France.

Of or no war, however, the Court seems resolved to do its best to make up for the general stagnation of society in the way of fêtes and receptions, and ball succeeds ball in rapid succession. The approaching grand *bal costumé* is the subject of much preparation and expectation. Among other quadrilles is one to be led by the Princesse Mathilde—an "Olympic Quadrille," in which, however, the rôle of Venus is to be "left out by particular desire," no lady having been found willing to undertake a part so trying and equivocal. We have heard it whispered—and we pass the whisper on to you, dear reader—that the *Chef de l'Etat* was extremely desirous that an English lady, much admired at the Court, should accept it; but that this desire was overruled by considerations which it is not our province to enter upon. The Princesse Mathilde is to appear as Juno. Another quadrille at this ball—to which dominos are to be admitted, but no other exception whatever to the rule, those who do not choose to appear in costume being at liberty to decline the invitation—is to represent the "Seasons," an easier and more *convenable* style of attire, for a Court ball.

A commission has been formed for the erection of a monument to M. Visconti.

A plan is, it is reported, decided upon for the establishment of a night guard in Paris, on the system of the London watchmen. Why adopt an institution that the advance of improvement has exploded, instead of accepting the substitute that that advance has furnished—the present system of police as established in England? Some such arrangement is much required, and would be found to add much to the convenience and security of the public.

Preparations are being made here, as at Rome, for fêtes for the beatification of the Polish Jesuit Bobola, murdered by the Cossacks, to be held at the houses of the order to which he belonged. Various discourses will be pronounced on these occasions; principally recitals of, and discussions on, schismatic persecutions, which will excite much bitterness, and do, as it appears to us, little good.

The celebrated preacher, the *père* Ravignan, had an interview some time since with Louis Napoleon, the substance of which has but lately transpired. The reverend father, it appears, came to protest against the suppression of the College of St. Michel, closed on accusation of holding Socialist principles. The Emperor received M. Ravignan with extreme courtesy, and is even said to have promised to use the utmost circumspection in the use of such measures in future. He, at the same time, complained much of the existence of such tendencies in various Jesuit colleges, especially in the south, and declared the necessity of the adoption of some mode of repression to the discourses of certain of the preachers.

A plan proposed some time since, is, it is said, shortly to be carried out, for the erection of a new theatre in the Rue de Rivoli, entitled Le Théâtre du Peuple. At this theatre are to be performed only pieces of the most unquestionable morality, and such as are calculated to raise the taste and morals of the public, to excite an admiration for virtue, duty, and true heroism, and to counteract, as far as possible, the vicious tendencies of but too many of the dramatic works of the day. It appears that even the Archbishop of Paris and the high clergy has

warmly interested themselves in the affair, and are endeavouring to obtain the privilege for the theatre, and to find the necessary capital for its erection and support. Already several persons of weight and note are interesting themselves in the matter; and it is expected that in about seven months the building will be constructed. The project is certainly one deserving of all praise and encouragement; but we fear that the vitiated taste of the day, accustomed to highly-seasoned viands, will with difficulty accommodate itself to the purer, plainer, and more wholesome food thus offered it; and that much time, pains, patience, and money must be spent ere the theatre can be made in any degree to attain its object.

The new piece of Madame de Girardin, "La Joie fait Peur," is in active rehearsal at the Théâtre Français, and is expected to appear on Saturday next. The Gymnase having found a *remplaçant* for Bressant (engaged at the Français) in M. Berton, lately arrived from Russia, the representations of "Dans de Lys," have not been interrupted. Berton is an actor of great taste, talent, and spirit, and no mean substitute for his predecessor in the *rôle*. The Opéra Comique is preparing for the representation of the opera of Meyerbeer, "l'Etoile du Nord," of which great things are anticipated.

Two volumes—one original, the other a reprint—from the pen of one of the finest observers of modern manners, and most brilliant of modern writers and conversationalists, Madame Emile de Girardin, have just made their appearance. The former, "Le Marquis de Fontanges," is a fable, a critique on the society of the day, written with all the verve, the finesse, and the purity of style which distinguish the pen of this highly gifted woman. The other, "Le Vicomte de Launay," is a collection of those brilliant and sparkling *Courriers de Paris*, published some few years since under that signature, and which never failed to excite the utmost interest.

The prevailing impression in Paris is, that, in case of such an emergency as the Russians threatening to extend their operations by land against Turkey, England and France will send a force to her assistance. The next question is as to the mode of conveying that force, or the route it would take. The plan suggested by the Emperor, which is said to have been approved of by the military authority, and not rejected by the English Government, is, that the division to be sent to the East shall consist of from 70,000 to 80,000 men; 50,000 or 60 000 to be furnished by France, 15,000 or 20,000 by England. Of the French contingent, 25,000 or 30,000 men, indigenous troops, or of men well hardened to the climate, are to proceed from Africa; the remainder from the army in France. The body thus composed will be transported to Civita Vecchia, and march overland to Ancona. If Austria permit them to land in one of her ports in the Adriatic, so much the better; if not, they will disembark in a Turkish port lower down, then march to Servia, and then to wherever their services may be required, or would be most available. With the Austrians in Italy, where so much fermentation exists at this moment, with Hungary discontented on one hand and Lombardy on the other, the political consequences of such a move would, undoubtedly, be very great.

Prince Napoleon's mission to Brussels is described as having been very successful. In the course of his interview with the King of the Belgians, the Prince expressed the satisfaction of his cousin, the Emperor of the French, that a more friendly feeling had lately grown up between the Belgian and French Governments. He is said to have added that, as hostilities were probable between France and Russia, the Emperor Napoleon wished to be assured of the attitude which Belgium would assume in such an emergency; that his Belgian Majesty had at his disposal 100,000 troops, and in the event (improbable though it be) of Prussia taking part with Russia, 50,000 Belgians might be sent to the Prussian frontier; that the Emperor did not wish any force to be sent to the French frontier, but that the force in question should guard the Prussian. To that proposition it is added that the King assented. With respect to the fortresses along the French line, the wish was expressed that they should be in part reduced; and to that also his Majesty is said to have assented. The Prince suggested that, as King Leopold was a constitutional King, it would be necessary to have the sanction of the Minister for Foreign Affairs to the arrangement. The Minister was sent for, and his approval was given to the proposed arrangement. Such, it is stated, was the object and result of Prince Napoleon's mission.

GERMANY.

In connection with the collective declaration of neutrality to be made by the German Bund, which Russia has so unsuccessfully striven to bring to maturity through the agency, first of Austria and then of Bavaria and the lesser States, attention has been called to Herr von der Pfordten's recent receipt of the Grand Cross of the Holy Alexander Newski Order from the Emperor of Russia, and to the fact that the same honour has also been conferred on Herr von Beust, the Premier of Saxony, who had co-operated with Herr von der Pfordten in the strictly anti-national Russian policy in Germany. This order is the highest but one in the Russian Empire, and is usually conferred only on crowned heads, Sovereign Princes, or the Prime Ministers of the great Powers. Its bestowal on the two above named diplomatists, taken in connection with the recently published work of Herr von Gretsch, throws a light on the present policy of Russia towards Germany. This work, entitled the "European Pentarchy," represents it as the end and aim of Russia's policy to consolidate the interests of the minor States of central Germany, so as to obtain a counterpoise to Austria and Prussia.

SWEDEN

A Russian courier arrived at Stockholm on the 2nd inst., with important despatches to the Russian Embassy on the neutrality question; and the Minister of the Czar (Dascokoff) has had an audience of King Oscar on the subject. The details have not transpired.

DENMARK.

It is announced by the Danish papers that an order has been given to fit out three frigates, three corvettes, three brigs, and five steamers, and that inquiries have been instituted by the Minister of War as to the possibility of providing quarters for a certain number of troops. The Swedish Government have, it is said, in contemplation to send 15,000 men into Gothland, and to establish an army on the western coast.

AMERICA.

Letters and papers from New York to the 25th ult. have been received by the *Europa*, which arrived at Liverpool on Monday. From Washington we learn that Senator Douglas's new Nebraska bill had thrown a large number of Congress men into the greatest state of excitement. Several caucuses had been held, but no definite line of action had been determined upon till the generality of the northern and western members had ascertained the views of their constituents. In the Executive Session of the Senate, the International Copyright Treaty was reported from the Committee on Foreign Relations, without any recommendation, but with an amendment, providing that the protection afforded to foreign authors, shall apply only to their books reprinted in America.

A terrible tornado swept over the state of Ohio on the 20th ult. Its track was about half a mile in width, and it demolished almost everything it encountered. The town of Brandon was almost entirely destroyed. The gale was accompanied by terrific lightning and heavy rain, and followed by such a rapid rising of the streams of water, that the town of Mount Vernon was partly inundated, and several persons lost their lives.

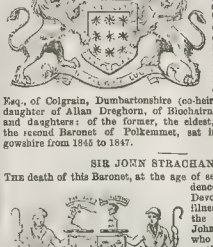
Judah Touro, estimated to have been worth from a million to a million and a half of dollars, died lately at New Orleans. The bulk of his property is reported to have been left to different charitable institutions in that city.

The *San Francisco Herald* of the 31st December, states the registered shipments of gold last year from California to have been 54,906,987 dols., against 45,778,000 dols. in 1852, and 34,492,000 dols. in 1851, showing an annual increase of about 10,000,000 dols; but a great deal is taken away unrecorded by passengers, for the quantity of Californian gold coined at the United States Mint was nearly 36,000,000 dols. in 1851, 54,000 000 dols. in 1852, and nearly 40,000,000 dols. in the first seven months of last year to July 30. Great numbers of Chinamen had gone to Shasta, and the miners there were talking of rising to expel them. There was a growing feeling that some legislation would be necessary to define more clearly the rights of miners and mining companies. The population of California was computed on the 30th of December at 215,000 Americans, 35,000 Germans, 25,000 French, 17,000 Chinamen, 20,000 of Spanish blood, 5000 miscellaneous foreigners, 20,000 Indians, and 3500 negroes. Of these about 65,000 are women, and, perhaps, 90,000 children.

OBITUARY OF EMINENT PERSONS.

SIR WILLIAM BAILLIE, BART., OF POLKEMMET.

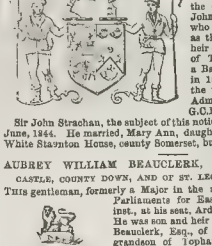
THE decease of this Baronet occurred on the 28th ult., at Perth.



Sir William, the eldest son of the late William Baillie, Esq., an eminent Advocate (afterwards a Lord of Session as Lord Polkemmet), by Margaret, his wife, daughter of Sir James Colquhoun, Bart., of Luss, was born in 1784, and became a Baronet by creation in 1823. He married 25th April, 1815, Mary-Lyon, youngest daughter of J. Dennistoun, Esq., of Colgrain, Dumbartonshire (co-heir of her mother Margaret, daughter of Allan Dreghorn, of Biochairn), and leaves several sons and daughters: of the former, the eldest, now Sir William Baillie, the second Baronet of Polkemmet, sat in Parliament for Linlithgowshire from 1845 to 1847.

SIR JOHN STRACHAN, BART.

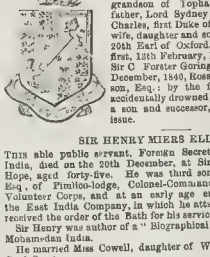
THE death of this Baronet, at the age of seventy, occurred at his residence, Cliffden, Teignmouth, Devon, after a long and painful illness, on the 28th ult. He was the eldest son of the late Sir John Strachan, of Thornton, who succeeded to the baronetcy as the nearest and lawful male heir of Sir Alexander Strachan, of Thornton, who was created a Baronet by King Charles I., in 1625. The sixth inheritor of the title was the distinguished Admiral, Sir Richard Strachan, G.C.B.



Sir John Strachan, the subject of this notice succeeded his father, 9th June, 1844. He married, Mary Ann, daughter of Isaac Elton, Esq., of White Staunton House, county Somerset, but had no issue.

AUBREY WILLIAM BEAUCLERK, ESQ., OF ARDGLASS CASTLE, COUNTY DOWN, AND OF ST. LEONARD'S FOREST, SUSSEX.

THIS gentleman, formerly a Major in the army, and member in two Parliaments for East Surrey, died on the 1st inst., at his seat, Ardglass Castle, aged fifty-four. He was son and heir of the late Charles George Beauclerk, Esq., of St Leonard's Forest, and grandson of Topham Beauclerk, Esq., whose father, Lord Sydney Beauclerk, was fifth son of Charles, first Duke of St. Albans, by Diana, his wife, daughter and sole heir of Aubrey de Vere, 20th Earl of Oxford. Major Beauclerk married, first, 12th February, 1824, Ida, third daughter of Sir C. Forster Goring, Bart.; and, secondly, 7th December, 1840, Ross, daughter of Joshua Robinson, Esq.; by the former of whom he was (accidentally drowned April 23rd, 1838) he leaves a son and successor, Aubrey de Vere, and other issue.



SIR HENRY MIERS ELLIOT, K.C.B.

THIS able public servant, Foreign Secretary to the Government of India, died on the 20th December, at Simon's Town, Cape of Good Hope, aged forty-five. He was third son of the late John Elliot, Esq., of Pimlico-lodge, Colonel-Commandant of the Westminster Volunteer Corps, and at an early age entered the Civil Service of the East India Company, in which he attained to great eminence, and received the order of the Bath for his services during the Sikh war.

Sir Henry was author of a "Biographical Index to the Histories of Mohammedan India."

He married Miss Cowell, daughter of William Cowell, Esq., E.I.C. Civil Service.

SILVIO PELLICO.

SILVIO PELLICO, an able Italian poet, whom a memorable imprisonment has made everywhere a theme of pity, came of a poetic race. His father, Honorato Pellico, who held a situation in the Piedmontese Post-office, had courted the Muses with some success; and Silvio Pellico, Luigi Pellico, rose to note as a popular writer of comic dramas in verse. Silvio Pellico was born in Piedmont in 1789, at Saluces, where his father's appointment was. From his earliest boyhood, Silvio evinced a taste and talent for tragic composition; and he and his brother, when youths, used to recite their effusions on a little stage, which they had constructed in their father's house. Honorato Pellico was removed to the post-office at Turin: here his sons also resided with him—for his was a family bound together by the closest ties of sympathy and affection. After accompanying his mother on a visit to a cousin in France, Silvio Pellico left his home to settle at Milan, where his brilliant verse soon established his reputation. In 1819, he published his magnificent tragedy of "Francesca de Rimini;" and in the same year he translated his friend Lord Byron's "Manfred." He now took rank among the highest dramatic poets of his day, when, unfortunately, not content with the honours of a bard, he engaged in politics as well as verse—a dangerous venture under the Austrian rule that weighs upon Italy. The Imperial Government forbade the representation of Pellico's tragedy of "Eufemio di Messina;" and, moved by this, Pellico set up a Liberal journal, entitled the *Conciliator*, in which, aided by other literary free spirits, he sought to rouse Italy to her regeneration. The Government soon suppressed the paper; and then Pellico undoubtedly became a party to a deep-laid and formidable conspiracy against the Emperor. He was arrested, and was then confined under the leads of the Ducal Palace at Venice; he was afterwards tried, convicted, and condemned to fifteen years' imprisonment in *carcere duro*, at Spielburg. A gaol is ever a terrible place; but, in Austria, it is, of necessity, more terrible than elsewhere. Austria has no penal settlements, like Australia, to export to; its Imperial Government avoids, as much as possible, inflicting the punishment of death, and, consequently, with part of its population ever about to be insurgent, it is obliged to increase the pains and terrors of incarceration. Pellico was a lamentable victim of the system; his long seclusion and sufferings within the dread walls of Spielburg, away from his parents, and brothers and sisters, whom he loved so dearly, would, in any account, have excited feelings of the deepest commiseration; but his own narrative, his beautifully-written "Mie Prigioni," has proclaimed his protracted agony to the world with appalling and undying effect. "Mie Prigioni" has been translated into every language of Europe; it is, therefore, needless here to do more than refer to it for the full account of what Pellico endured in mind and body at Spielburg. Suffice it to say, that Pellico regained his freedom in the August of 1830, and returned, in a month afterwards, to his parental home at Turin. He has since resided in that city in comparative seclusion, and there his death has recently occurred. Of genius the most highly gifted, of disposition gentle and benevolent in the extreme, affable, virtuous, and honourable, Silvio Pellico was the delight and charm of all who knew him. Sad it is to think that such a man should have been the subject of such sufferings and sorrow.

PROBATE of the Will of the Right Hon. William Legge, Earl of Dartmouth, Viscount Lewisham and Baron Dartmouth, D.C.L., F.R.S., F.A.S., who died at Patshall, Staffordshire, on 25th November last, was granted, on the 2nd instant, to the Right Hon. William Heskett Viscount Barrington, the brother-in-law. The Right Hon. William Walter Earl of Dartmouth (heretofore Viscount Lewisham), the son, and the Hon. and Rev. Henry Legge, the brother, are the executors named in the will, bearing date the 5th of November, 1840. It was his Lordship's expressed wish in his will that no batchment should be put up at any of his residences. His mansion at Blackheath he has left for the enjoyment of his three sisters during their respective lives. He leaves to his son, the present Earl, his plate, linen, and jewels; but such of the plate not having the Earl coronet or Viscounts, may be used by his daughters—and from the linen, excepts the table cloth with armorial bearings upon it, which was given to him by the late Earl of Talbot. There are between £6000 and £7000 in pecuniary bequests. Leaves the residue of his property, carriages, and horses, and an estates, collieries, and mines, and all other estates, real and personal, over which he had a testamentary disposition, in trust for all and every his children (not being the eldest, or holding the family title and estates). The personalty was sworn under £180,000.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

WIDDIN, Jan. 14, 1854.

I FANCY there can be no greater contrast in the world than that of the old Turkish armies and the forces which are now assembled together to resist the aggression of Russia. Mr. X. Marmier, in his book on Russia, describes the tent of Kara Mustapha, the General of the Turks, which Sobieski brought from Vienna after his victory. It stands even now with its draperies of purple, its Eastern arabesques and silken curtains, a trophy in the old palace of its captor—Wilanow, near Warsaw. Irving, in his "Conquest of the Moors of Spain," does not tire of repeating how gorgeous were the tents, the arms, and accoutrements of the Moslems who held Granada. One seeks in vain for a trace of Oriental magnificence in the modern armies of the Sultan. Their Generals wear thefez, and for the rest are dressed like London inspectors of police; their soldiers have many of them accoutrements such as are described to be those of Bonaparte's first army of Italy; their habitations are holes in the earth, covered over with mats; turbans, jewelled scymitars, damask tents, and gorgeous arms are reminiscences of the past. But the Turks have preserved one of the great qualities which made them conquerors; they still possess that brilliant courage which often got the better of served ranks and European discipline. Nor, indeed, is the organisation of the Turks as soldiers so backward before the breaking out of the present war as may have been supposed. Since the foundation of the military schools of Constantinople and Egypt, the Turkish force is commanded by numerous officers who have studied military tactics; and, although too many of those who at present head the companies are illiterate, and sign their names with a seal because they are unable to write, there is a marked decrease in their numbers as compared with those of former armies. Another great advantage which they possess, is that of being regular and orderly in their dealings with the people of the provinces. This description of the Turks will do as much for them here as the cruel conduct of the Russians has done them harm. "The Muscovites," says Voltaire (if I recollect right), "have always treated the Wallachians badly, and both they and the Moldavians have always shown more affection for the Turks than for the Czar." "The domination of the Turks," he adds, in some other place, "is only fatal to the great, and is extremely mild towards tributary nations." So it is in the Danubian Provinces, where the nobles are the only partisans of Russia, whilst the people fear its inhumanity. It appears that since the appearance of Mr. Von Budberg—who, with his coadjutor, the late Consul, Hatchinsky, now rules Wallachia and Moldavia—the villages which are known to have taken part in the Liberal movement of 1848 have been visited with heavy punishment. The Russians have shot the peasants, or forced them to work with their carts and oxen, without remuneration. The Boyards, at the head of their partisans, have gone round and plundered the men who, in their eyes, are guilty of being revolutionary, and thus endeavoured to retrieve the losses which they have themselves suffered from the rapacity of the army of occupation. The Boyards are generally supported in these exactions by the Wallachian and Moldavian clergy, who foresee their death-blow in a Turkish victory. This clergy is known to possess, in land and serfs, more than a third of the entire Principalities; and the Liberals of 1848 did not conceal their intention of depriving these over-swollen despots of a portion of these lands. By making them the property of the State, they intended to enrich the public treasury, and give a proportionate blow to the Russian tendencies of the priests. In the dominions of the Czar the clergy are not so rich as in the Principalities. A few large convents, like Troitza, have money and lands; but the rest are poor, and influence is denied them. Do the wealthy clergy of the Principalities think that they would be long allowed to obey their own Patriarch, and govern their own fat prebendaries, if the Czar once had them fairly in his grasp? Is it not better for them to give up some of their overgrown properties, and remain independent, whilst their country, for the time, pays tribute to the Moslem than that they should fall to the lowest rank of Russian *Popes* and Bishops? But the clergy of the Principalities only see what appears to them instantly *in prospectu*—namely, a diminution of their revenues, they fail to observe, at a greater distance, the far worse consequences of succumbing to Russian influence. They, therefore, join in the cry set up by the Boyards, and exert their utmost influence against the Turks. But in order to do this they must use some other motive power than that which acts upon themselves, and this they find in the fanaticism of the Turks. There is no concealing that in their contests with the Russians the forces of the Sublime Porte are animated less by a feeling of the unjust aggression of the Czar than by the old and time-honoured notion that the Crescent is to triumph over the Cross. The battle-cry at Citate was "Down with the Giaours," "Long live the Sultan!" and this ignorant peasant, who is called by the same name which he drives his bullocks, is slow to comprehend that this fanaticism is directed against the Russians only, and not against all Christians. For this reason, I very much doubt whether the Porte could raise in the whole of Bulgaria—or that part of it, at least, on this side of Schumla—a Christian force on which it could really count for the purpose of opposing Russia; and for the same reason the success of an attempt to raise a regiment of Wallachian volunteers to fight against Russia may be also doubted; but it is possible, on the other hand, that the wrongs which the peasantry have suffered, may overcome all other scruples, and that, from hatred of an oppression to which the Turks have certainly not accustomed them, they may be induced to take up arms in favour of the Porte.

The position of the Christian principalities which have conquered their independence in so far that they are permitted to make their own law, and their own administration is widely different from that of a province like Bulgaria, which still remains a pachalic, and its Christian people rayahs. Under the rule of a good Pacha, Bulgaria has been generally quiet. The peasant holds of the Crown, on condition of paying to the Sultan, through his representatives, the tenth of everything that he produces. In the lambing season—when the vintage time has come—when the fruit is ripening in the orchards—when the maize is yellow in the fields, the tax-gatherer appears, and takes the tenth part of all he finds. The rayah, besides this, pays a capitation tax of 20 to 25 piasters every year; and 5 piasters he voluntarily gives for the support of his clergy. When he is constrained to serve with his cart and oxen, as in time of war, he receives payment—sometimes in money, oftener in bonds upon the tribute of his village, payable in a year or less. His daily pay is 5 piasters for himself, his cart and oxen. This, no doubt, is a small sum, 5 piasters being little more than 9d. sterling. No doubt, also, injustice is frequently committed. If the rayah has a grievance, and goes before the Cadi, he finds a tribunal consisting of six assessors, one only of whom is a Christian: the consequence is that, if he has no Musulman witnesses, he has no chance of justice. His only plan, therefore, is to suborn poor Musulmans, who, for 20 piasters, will give evidence, and swear to everything by the Koran, Mahomet, and Allah. In a case tried here, I am told, not long since, an action was brought before the local tribunal of Widdin for the recovery of a sum of money leat to a Turk by a Christian. The Turk was highly confident of success before his partial judges; but the Christian had brought two swarthy Turks to testify in his favour, and, although the Cadi asserted that these self-same swarthy Turks had but lately arrived from Asia, to doubt the word of a follower of the Crescent, when giving evidence in the case of a Christian, would have

THE WAR ON THE DANUBE.

DISTRIBUTION OF THE MEDJIDIE, AFTER THE BATTLE OF CITATE.

been too bad, and the Christian, consequently, got his money. It is evident that gross abuses exist in the administration of justice, and this denial of it to the Christians of European Turkey, in the provinces still subject to the immediate yoke of the Crown, is one of those grievances which cry aloud for redress—one, indeed, which it was said had met with attention from the Porte at the time when she invoked the aid of England, and one which, I am sorry to find, still remains in full force at this very moment in Bulgaria. I have said, that so long as the rayahs had a good Pacha, they were quiet; they are, in truth, quite content to pay their tenths and capitation-tax; for every necessary of life is cheap—salt untaxed, and no foreign produce subject to exorbitant Customs' duties; but when, in addition to all that the peasant pays the Crown, there comes a Pacha who fleeces him of another tenth, then is there discontent, and disaffection takes a rampant form. It is now scarcely three years since the Bulgarians rose in arms against their governors, for some such cause as this; and they are treated, generally, with extreme distrust. In the fortress at Widdin there are about 8000 Turkish inhabitants; and, although the Christians are permitted to trade therein the day-time, they are prohibited from living within the walls. The consequence is that the suburbs are a far more important part of the town than the fortress, and that 8000 Christians carry on various trades there. Even the Jews are better treated in this respect than the rayahs, for they are tolerated amongst the Musulmans, and live, to the number of nearly 2000, within the walls of Widdin. But although this city is situated on the Danube, and in a splendid natural position, its trade is, on the whole, extremely slight. It is difficult to get anything in the poverty-stricken shops, except the common necessaries of sugar, coffee, salt, tobacco, and meat; butter there is not; milk is to be had with difficulty; and as for luxuries, they are unknown. Every species of manufactured article is of the rudest kind. But what trade, after all, can a city boast of which has only 6000 Turks to satisfy, and a Christian population around enormous in number, but debarred by poverty from possessing aught but the merest necessaries—a hut underground, into which he throws himself, for protection in the summer from heat, in the winter from cold? There is much to be done for those Christian populations. Their country is one of the most fertile and beautiful under the sun; but their social state is most abject and miserable. Mr. Marmier has said, "There are two crimes which call for redress, and those are the oppression of Ireland and the partition of Poland." Let that gentleman visit the Christians of these provinces, and he will find some other grievances to redress, some other members of the human race to improve and care for.

DISTANT VIEW OF PAYANA—ROADSIDE FOUNTAINS.

KALAFAT, Jan. 22, 1854.

THE portion of Lesser Wallachia which is at present open to the Turks is by no means a picturesque one. The Danube takes a sudden bend to the west above Kalafat—another turn, equally sudden to the east, below that village—and encloses, as it were, within an arc of which the Russian positions are the cord, a flat and sandy tract of country, intersected by deeply-rutted roads, and ornamented by nothing save the long, gaunt limb of a swing-beam fountain, or little hillocks and mounds of sand of most exiguous dimensions. Upon the undulating surface of these plains the stacks of maize and straw, which form the outward sign of a Wallachian village, loom in the distance—their apparent size increased by mists, or by the absence of other objects of comparison. Not a tree meets the sight—not a bush is visible; nothing but the rotten stalks of maize, or the stubble of the hay-fields, through which the Wallach

WALLACH GUIDES.

clothed in sheep-skins, treads and tends his flock. Large herds of ponies, wild and shaggy, are gathered here and there—sometimes peaceful round a fountain, sometimes scattered and grazing; but

ARABA OF LITTLE WALLACHIA.

flying at the approach of men, and throwing up behind them heaps of sand and mud.

Through the middle of this wild and melancholy country travelling is easy and rapid, either on horseback or in the native *araba*. The Boyards of Wallachia, when they travel, use their own carriages, to which they yoke as many as ten pair of horses. With a postilion to every fourth horse, they start amidst the huzzas of the surrounding crowd and the yells of the riders, at a speed which is not known in any other country. The araba has none of the comforts of the sumptuous vehicles of the Boyards, but it equals them in speed. I travelled in one of them to Payana, on a visit to Skender Bey, commander of the Turkish outposts. A basket large enough to contain one person comfortably, and two with a squeeze, is placed upon four wheels, and four ponies are harnessed to the vehicle. The postilion, with a thong like a boa-constrictor, bestrides one of the beasts, and frightens the team into a gallop by shouts which rise from bass to high falsetto, and drop again, with wild and inharmonious modulations; the mud which covers the road is whirled in clods upon the occupant of the araba; and so one passes over hillocks, into ruts; and jolting, bumping, but going fast, the araba and horses "devour space."

Payana is a large straggling village, about a mile in length, which boasts of three or four houses above ground, and a church with a tin roof and steeple. The sun shining upon the latter, makes it visible at an immense distance, and a nearer approach brings into view a wilderness of maize-stacks and hay-ricks, surrounded by palisades; in the midst of which are the *semluks*, or underground houses, in which the Wallachs now divide the space with some regiments of cavalry and irregulars. The village is the property of Miloesh Obranowitch, the deposed Prince of Servia, who also owns the neighbouring places of Chuperichin and Dessa. The summer residence of the Prince (of which I send you a Sketch) is the head-quarters of Skender Bey. It is surrounded by a court, at present deep in mud, in which stray soldiers and Wallach guides may be seen patiently waiting for orders. A pathway of planks enables one to reach the house without sinking in the surrounding bog.

Skender Bey is the most amiable of commanders, and the kindest and most hospitable of gentlemen. He gave me permission to join a small reconnaissance in front of the Russian outposts; and the day after my arrival I started with a squadron of most warlike Bashi-bozouks. As they gathered themselves together in the court-yard, they sat their horses with martial carelessness, smoking their chibouks, and joking amongst themselves. Some were armed with thongless lances, made of timber and long bamboos: a brazen ball prevents the lance from penetrating further than a foot. With these the soldiers rush at the enemy, and cast them from them, I am told, with unerring aim, at a distance of twenty feet, against their enemy. Others have long Albanian rifles, or small short muskets, after the Anatolian fashion. All have pistols and cangears in their shawls, and stick their crooked swords under their left leg to ride.

The position of the Turks in Little Wallachia, since their victory at Citate, has not been changed; and, should they continue to act on the offensive, they must still pass over the bodies of at least 20,000 or 25,000 Russians before they can reach Krajova. The troops of the Czar appear in no hurry to commence operations against the trenches and redoubts of Kalafat; but, warned by their late disaster, they appear determined to do no more for the present than oppose a fortified front to the attacks of the enemy, should he try to advance into the interior. They have not appeared in Citate once since their defeat; but they have made Motzatze, or Meczetzoi of the maps, the extreme point of their line on their right, and Ballecshti, or Boleschti, the extreme point on their left. Their out-posts are at Rast and at Piski. The Turkish out-posts, composed exclusively of lancer regiments and irregular cavalry, extend in a direct line fronting those of the Russians, from Gunia to Maglavit and Payana. Motzatze has been surrounded by a trench and inner parapet of waggons covered with earth; and the position thus made is considered a very strong one. Ballecshti is defended by a line of the same *en demi lune*, fronting the enemy. The reconnoissance, on the present occasion, was in the direction of Piski; but, after two hours' ride, not a sign of the Russians was visible. From the ground we passed on this occasion, it is evident that Payana was once on the very banks of the Danube. The sandy soil upon its right rises into mounds and hillocks, on which are to be found no traces of vegetation. It gains a certain elevation, and then falls precipitously to the marshy plain left behind it by the Danube, as it stood up that portion of its course. Payana, however, is much nearer the Danube than the maps now place it; indeed, nothing can be more imperfect than the geography of the country.

ACHMET PACHA FERIK, COMMANDER AT KALAFAT.

Leaving the escort, two officers in company with me scoured the sandy grounds for about half an hour. With a telescope, the distant hills were clearly visible; but no traces of the enemy could be seen; and, the object of the reconnoissance being gained, we returned to head-quarters.

On the following day a similar operation, on a larger scale, was resolved on, ostensibly for the purpose of indulging the curiosity of your Correspondent, and satisfying his desire to see the battle-field of Citate; but, perhaps, more probably with the view of ascertaining whether the Russians had extended their line further to the westward than Motzatze. The danger of the operation consisted less in the forward march than in the return, for the road between Payana and Citate can be cut off easily by a force from Motzatze. The troops—which started long before daylight—consisted of 120 Bashi-bozouks, under the command of Yscoub-Aga, an experienced cavalry officer, of European birth. At Maglavitz, which was reached in two hours and a half; a second squadron of Bashi bozouks joined company, with which we started to Citate; whilst the communication was obligingly kept open, during the day, by five squadrons of Lancers under the command of Suleiman Bey.

From Payana to Maglavitz was a cross-road on the flat undulating plain which I have described. On the distant hills might be seen the Cossack videttes cantering off to give notice of our approach; and the sun being overcast did not make the landscape bear a joyful aspect. The Bashi-bozouks, however, seemed in high spirit, breaking out of their long straggling line, and bursting into gallops, brandishing their rifles and lances with shouts, and then returning to the road where the rest were going at the more regular pace of marching cavalry. In front were carried the green and white flags of the irregulars, already ren-

TURKISH ARABA.

in various places by encounters with the enemy. These flags, and two small kettle-drums, are the rallying signs of the Bashi-bozouks, their mode of fighting being the dashing, uncertain one of the old Parthians.

At Maglavitz we entered the road by which the Turks advanced on Citate, and between that and Gunia the ground consists of sand-hills whose precipitous sides descend to the plain and marshes of the river. All the villages—Maglavitz, Unis, Fantina-Banaki, and Citate—are on the crest of these precipitous sand-hills; which attain at the latter place a culminating height of two or three hundred feet above the level of the river. Outside Unis, a splendid landscape burst into view. The course of the Danube was marked for miles by its white and glistening stream, far away to the left the Bulgarian and Servian hills were visible whilst to the right the precipitous heights of sand, cut with deep and dangerous ravines from passing torrents, were crowned by the tin-roofed church of Citate. A ride of an hour took us to the entrance of Fantina-Banaki, which, as I discovered, was but an offshoot or continuation of the larger village. There the Turks first encountered the Russians. The latter were advantageously placed on the brow, and behind a mound, on which were some houses and maize-lofts; their right defended by the precipice towards the Danube, their left by a ditch and parapet. The Turks opened the fire of a battery upon this position, and carried it with the bayonet, after a struggle of half an hour; the Russians retiring up the village with their artillery. The main street, following the crest of the precipice, avoids two or three tremendous gullies of great depth, and gradually rises past the church to an apex, on which was the main defence of the Russians. There are certainly not more than half-a-dozen built houses, besides the church, in the place. The enemy fired at the advancing Turks from behind the maize-lofts and hay-ricks, and from the sides of the gullies; but failed to oppose their advance. It was by the side of the church that the second murderous stand was made. The guns of the Turkish cavalry firing from the side opposed to the Danube mowed down the enemy, whilst the advancing chasseurs and infantry added to the slaughter. Upwards of 400 Russians fell upon that spot; and as they lay—many of them quite dead, but more of them alive, though wounded—whole herds of swine rushed on, heedless of the raging balls and musketry, and devoured the blood and entrails of the living. It is a fearful thing on the field of battle to hear the wounded shrieking when trampled by rushing cavalry, but how much more frightful and terrific to see wounded and helpless men endeavouring to frighten away the swine who already seek to devour them. Numerous officers who can confirm the whole of the details I now give you, have told me that they had been in many battle-fields, where the vulture attacks the wounded, and where the tramp of advancing soldiers produces shrieks from the dying; but such scenes as were visible that day they never beheld. "Verily (said a Turk), was not the Prophet right when he forbade us to eat the flesh of swine?"

At the head of the village, and about 100 yards beyond the last semliks, were the remains of the Russian entrenchment. Half a dozen Bashi-bozouks were turning up remains of half-burnt hay, in which were mingled the torn remnants of Russian caftans and knapsacks. The ground was strewed with the carcases of dead horses, partially flayed and eaten into by swine. Many of the latter were still at their horrid feast. They had even succeeded in violating the graves of the dead, many of whom lay there uncovered and grim in aspect. One poor horse, with a leg shot off, was still limping along the ground, without a charitable person near him to end his suffering with a ball or a knife. Here, from the number of helmets and remains of uniforms, many Russians must have perished. The ground was literally strewed with them, but there was scarcely a trace remaining of the position. The entrenchment was not one of earth and fascines, according to the rules of art, but was rather a sort of natural defence made stronger by a few judicious arrangements. The crest of the sand-hill on which the Russians were posted was the summit of the sand-hill on which is situated the village of Citate. The precipice on the left formed one defence, and was as the side of a triangle, of which the other side was a ditch and a parapet. Within the space was a yard, in which were nine ricks of hay. The Russians took each from a portion of each of them, and formed an inner parapet with the hay. They then dug a trench around, and threw up the earth upon the parapet. By this means they had a defence of tolerable strength. Six gun-being placed at intervals between the hay-ricks. The great fault of the Turks was their suffering the Russians to retain that point to the last. I have no doubt that had they made an attack upon it at the latest moment the place would have been carried; for it was not such a spot as could be defended for any length of time. The non-capture of this redoubt enabled the Russians to retire with their guns, and the two which they had taken from the Turks. This they did on the evening of the engagement—from 600 to 800 only, according to the accounts of the peasantry, remaining of the number who had occupied Citate in the morning. Amongst the dead were found many Russian Mussulmans: a curious commentary this on a battle where ostensibly the Crescent and the Cross were in deadly hostility. These no doubt were officers of Tartar origin—either Musselmans, Poles, or Caucasians. Men of this faith, I learn, are enabled to reach the rank of Colonel in the Russian service; but higher they may not rise unless they become Christians. Amongst the officers lost by the enemy was Colonel Baumgartner.

After examining for a short time the burning remains of the aisles, which had formed the Russian defence, and the remnants of caques and uniforms, which so short a time before had been the ornaments and badge of living men, I turned my horse's head in the direction of the village, and soon cantered into an open space where Yacoub Aga had assembled all that remained of the Citate villagers. The unfortunate devils looked obsequiously on the conductor of some of those intervals had been the subject of judicial report, and four or five were signalled out and placed amongst a band of Bashi-bozouks to be escorted safely to Payana. The latter, with the unerradicable tendency to plunder which characterises them, had scattered themselves amongst the houses, and were robbing the poor people of their geese and ducks for the purpose of an evening feast.

The homeward march then commenced; and leaving on one side the ground on which Achmet Pacha had so signally defeated the Russian reinforcement, we straggled out of Citate, glad enough to escape the stench, and recover from the varied emotions caused by scenes so painful and sights so terrible as those we had encountered. Those Bashi-bozouks who had been plundering the villagers were marching triumphantly with a couple of geese each tied on their saddles. Presently one of them met with a proper reward for his conduct. His geese began to struggle and cackle lustily. The horse, unaccustomed to the noise, shied, and turned with such rapidity that the Bashi-bozouk fell heavily to the ground, and off flew the birds, with a scream of joy, amidst the laughter of his comrades, who, fearful of a similar fate, were soon to be seen decapitating their prey, for fear of accidents. Their plunder was destined, however, not to be of any comfort to them, for Yacoub-Aga, seeing the birds on all sides swinging to the saddles, gave the word of command, on which the whole troop stopped. An orderly went round, and in a polite manner deprived each man of his booty; and the captain having then delivered a little oration in favour of order and discretion, the troop again moved on, the deprived plunderers looking extremely sheepish and disgusted.

We had hardly proceeded a hundred yards from Citate, when a lancer captain rushed up, and gave the chance of the Russian approach; and soon, surely enough, we discovered a squadron of Paskievitch hussars, and a battalion of infantry, about half a mile on our right, crossing the hills in front of Motuzitze. It was soon evident that they were only a reconnoitring party, and passed unmolested by them to Unis and Maglavitz, from whence we returned to Payana the same night, after a hard ride during the day of fourteen hours.

Yesterday and the day before yesterday were full of rejoicing at Kalafat. The guns of the trenches were firing salves all Friday in honour of the victory at Oltenitza; and yesterday the decorations for warded by Omer Pacha as a recompense for the battle of Citate were distributed. The three feriks, Achmet Pacha, Ismail Pacha, and Mahmoud Pacha, had the Medjidié of the second order, together with [illegible] of honour; and the lesser officers received the Medjidié of the fifth order.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—Monday.

IRREGULARITY OF THE MAILS.

In reply to Lord Vivian, Lord Canning said that no person could be more sensible than he was of the inconvenience and danger arising to the public from the irregularity of the mail-trains; but the powers given to the Postmaster-General were of little or no avail in respect to checking those irregularities. He had endeavoured, in communication with several of the principal railway companies, to have some regulations established, whereby every fine should be levied upon those railway companies under which such irregularities took place. If this system had not the desired effect, he would feel it his duty to apply to Parliament for further power.

PAUPER SCHOOLS.

In reply to a question by Lord Lyttelton, Earl Granville said he hoped that the Government would be able, in the course of the session, to introduce a measure for the establishment of pauper schools that would give general satisfaction.

DIPLOMATIC RELATIONS WITH RUSSIA.

The Marquis of Clanricarde, in respect to the notice he had given that he would call attention to some passages in recent despatches from St. Petersburgh, in order to ascertain whether this country was at peace or war, said that since he had given such notice, he ascertained that there was still going on some semblance of negotiation in respect to the war in the East, which he should be sorry by any motion of his to impede in any degree. He would, therefore, content himself by asking Lord Clarendon whether any answer had been received from the Emperor of Russia to those proposals that had been recently made to him? He wished also to know what was the present state of our diplomatic relations with the Court of St. Petersburg?

The Earl of Clarendon was much obliged to the noble Marquis for the consideration he had shown in postponing a discussion at the present moment, which might to some—though, perhaps, only to a slight extent—prejudice the chance which still remained of arriving at a peaceful solution of the difficulties of the Eastern question. Her Majesty's Government had expected on Friday last to receive officially the reply of the Emperor of Russia; but it was only that afternoon that he had received the official statement. That answer had not as yet been seen by his colleagues, with the exception of the Earl of Aberdeen. Under such circumstances, he would much prefer at that moment not to enter into any details. He might, however, say, that the reply of the Emperor of Russia was unacceptable, and was of a character which would not justify her Majesty's Government to send it to Constantinople.

With respect to my noble friend's second question (said his Lordship), I have to say that, on Saturday evening, Baron Brunnow called upon me at the Foreign office, and placed in my hands a note in which he announced that the answer he had received from me, on behalf of her Majesty's Government, to the inquiry which he had submitted, was not of such a kind as to permit of his continuing any longer diplomatic relations with this country; and that, therefore, the diplomatic relations between the Russian Government and this country must be for a time suspended (his Excellency took care of me on Saturday evening, not to late an hour to permit of his leaving London on that night, but I understood that he would depart early this morning. My Lords, I may observe that it is the earnest desire of her Majesty's Government to give your Lordships the earliest and fullest information upon this and all other important points relating to this question, which is exciting so much anxiety throughout the whole of this country. My Lords, I shall, in the course of this week, endeavour to lay upon the table of your Lordships' house the note which has been addressed to my answer to the last despatch to St. Petersburg (Hear, hear).

The Earl of Ellenborough had never thought that this affair would terminate in anything but a great war; and he hoped her Majesty's Government would not relax their preparations for it.

Earl Fitzwilliam expressed the same opinion, and added that never had any Government entered upon war with more unanimous support on the part of the people.

Lord Beaumont asked whether instructions had been sent to St. Petersburg for our Minister there to withdraw.

The Earl of Clarendon said that both the French and English Governments had sent orders to their respective Ambassadors at St. Petersburg to place themselves on the same footing exactly as the Russian Ambassadors in Paris and London had done.

HOUSE OF COMMONS.—Monday.

THE MILITIA LAW.

In reply to various questions, Lord Palmerston stated, it was his intention to bring in a bill to consolidate the Militia laws, and also that England, Ireland, and Scotland would be placed on the same footing as regards the Militia.

THE OATHS BILL.

Lord J. Russell, in moving that the House should resolve itself into Committee on the Parliamentary Oaths, laid down the principle that all affirmations required upon such solemn occasions as that of a member taking his seat, or a functionary assuming office, should be imbued with a serious purpose and possess some obvious relevancy to the present state of things. Otherwise, he contended, the ceremony was nothing but a profanation. Declaring that the oath of allegiance as now taken was fit and necessary, he inferred that it was almost, if not altogether, sufficient for all purposes. Passing on to the other two oaths, those of supremacy and abjuration, the noble Lord dissected their respective meanings, recapitulated the well-known historical origin of every separate clause, and pointed out the special danger which they were intended to repel. These dangers, he urged, were now extinct or obsolete. No one now believed that the Pope had authority to depose the English Sovereign; that the interests of the Roman Catholic Church justified rebellion, or could take up arms on behalf of the Pretender's family, whose last scion had died many years since. He called on the House, therefore, to imitate the common-sense proceedings exhibited in the conduct of ordinary life, and abandon practices which the world had ceased. Presenting a single form of oath, which he read to the House, and proposed to substitute for the triple series of affirmations now required, Lord J. Russell proceeded to defend two characteristics in this suggested form of words which it would remain. He had eliminated from it the religious element, believing that the time was come when such simplification was desirable, and urging that the introduction of religious opinions into a Parliamentary or official oath was simply disguising the consciences of some, while it availed nothing to protect the faith of others. He had also omitted the words, "on the true faith of a Christian." That phrase had no other effect than to prevent a Jew from sitting in Parliament. If the legislature desired such a prohibition, let them formally insist on the introduction of the sentence, and then express their intention in an unmistakable manner. If, however, they chose to arrive at the same result in a less direct mode by rejecting his proposal, and retaining his old form, he could not allow the opportunity to pass without warning the House of the importance of the question which was about to be submitted to their consideration. The present were not times when he could feel satisfied to dispense altogether with the oath of supremacy. The honourable and learned gentleman proceeded to contend that the proposition of the noble Lord would invade one of the securities of the Protestant religion, because it tended to weaken the Queen's supremacy, which was one of the keystones of the Protestant religion. He would most certainly not allow the course of the noble Lord on the second reading, and would do all in his power to prevent its passing into law.

The House then went into committee, and a resolution was agreed to on which to found a bill for the alteration of those oaths.

The House having resumed, the bill was brought in, read a first time, and ordered to be read a second time that day three weeks.

SLIGO ELECTION.

[illegible] Mr. [illegible] seconded by Mr. Sadleir, a committee was appointed to investigate the allegations contained in the petition of John Patrick Somers, in reference to the Sligo borough election.

HOUSE OF LORDS.—Tuesday.

RAILWAY ACCIDENTS.

Lord Monteagle complained that the law relating to railway accidents was not on a right footing, and that too long a period was allowed to elapse after a railway accident, before a return was made to the House.

Earl Fitzwilliam said he understood that a bill was about to be brought forward by Government, in the other House, to remedy the evil. He thought it would be better if legislation on such a matter were to begin in that House.

Lord Stanley of Alderley said the President of the Board of Trade would soon introduce a measure which would have the effect of mitigating the evil.

Earl Grey was persuaded that if the applications of railway companies for additional powers were refused by their Lordships in every case where due arrangements were not made for public safety, the effect would be beneficial.

Lord Campbell thought that further legislation was indispensable. He hoped a bill would be introduced and passed which would do justice to the people of this country.

THE NAVY LIST.

The Earl of Hardwicke moved for a committee to examine into the state of the Navy List. He complained of the existing system by which promotions and retirements in the upper ranks of the service were regulated. With reference to the active Admirals, he found that they were twenty-two in number. He had taken the date of the commission of those Admirals when they were made Post Captains, and supposed their age at that time to be twenty-five years, and to that he had added the period which had since elapsed. By this rule he found that the youngest officer amongst them was seventy-five years of age (Hear). On the Vice Admiral's list, it appeared by the same test, that the youngest officer was sixty-nine years of age. Then came the list of Rear-Admirals, and in that list would be found many officers who were capable of taking charge of a squadron and doing service to the country. Captains were now conspicuously placed on the retired list of Admirals, although still young and physically capable of active service, merely because they had not held commands afloat for the prescribed term. The efficency of the navy was thus seriously diminished.

The Earl of Aberdeen saw no reason to change the present regulations, which had been approved by every successive Board of Admiralty since 1827. He doubted whether any system could be devised better calculated than the present one to provide for the efficiency of the service by ensuring the due degree of qualification in the officers entrusted with high command.

After some remarks by Lord Colchester and the Earl of Ellenborough, the motion was withdrawn.

HOUSE OF COMMONS.—Tuesday.

EDUCATION.

Lord J. Russell (in answer to Mr. Adderley) said it was not his intention to re-introduce the bill of last session in the shape in which it was then before the House. As regards future legislation, it was the intention of the Government to wait and see the fate of the bill to be introduced by the Lord Advocate relative to education in Scotland. When the opinion of the House had been declared on that bill, they would further consider the propriety of proceeding with a general measure of education for England. With regard to pauper schools, that subject was still under the consideration of the Government.

CHURCH RATES.

Lord Palmerston, in answer to a question regarding Church-rates, said he hoped to be able to bring forward a measure on the subject this session.

LIMITED LIABILITY.

Mr Collier asked leave to bring in a bill to extend the jurisdiction of the Stannaries Court to Devonshire, to define and regulate the cost-book system of mining, and to limit, in some degree, the liability of partners in cost-book mines.

Sir J. Cockburn said he would not object to the motion. The question of limited liability was of vast importance; and, in reference to it there was the greatest variety of opinion. The introduction of the bill must not be held as committing the Government either way.

Mr Lowe hoped that, upon so important a question as that of limited liability, the Government would not keep the country much longer in suspense. When the Commission on the subject had closed its inquiry, he hoped no time would be lost in laying the evidence before the House. Until lately he had always been opposed to the principle of liability; but facts which had come to his knowledge had made him a convert; and he now thought it would benefit both the lower and the middle classes.

Mr. Moffatt said the extension of the jurisdiction of the Stannaries Court would be hailed in Cornwall with great satisfaction. The question deserved special attention on account of the vast increase of mining speculations which had taken place within the last century. In 1739 the produce of copper alone in Devon and Cornwall was estimated at £20,000; in the first year of the present century it was £600,000; in the last year it was £1,211,000. All these mining operations were conducted on an uncertain system, and this was one of the evils which the bill was intended to remove. As regarded limited liability, he believed the inhabitants of the west of England were decidedly in favour of the application of that principle to mining operations.

Mr. W. A. Wilkinson had for twelve years been connected with an association in Lambeth, whose object was to improve the dwellings of the humbler classes, and though they had a charter, they had the greatest difficulties for want of the principle of limited liability. The adoption of that principle would set free a large amount of capital, and thereby increase the demand for labour.

Mr. W. Brown was no convert to the principle of limited liability. He was quite convinced that this country owed much of its prosperity to the credit and honour of the British merchant, and he thought its credit would be greatly impaired if it were placed in the same position as France with regard to limited liability. Persons who enjoyed the profits of trade in times of prosperity should be willing to contribute something to make up the losses incurred in times of adversity; and there could be no doubt that in periods of commercial distress, if limited liability had been the law of the land, many would have shielded themselves under it, and the creditor would have suffered. He was willing to admit that in the case of mining concerns, railroads, and other large undertakings, it might be expedient for the Government to grant limited liability; but he would always leave it to the Board of Trade to determine whether or not the principle should be enjoyed in any particular case.

Mr. Vivian thought it highly undesirable to introduce the principle of limited liability generally into our commercial system. There were certain cases to which it might safely be applied, and among these was the case of mining operations.

Lord Godrich said the law of partnership was in a position in which it could not be allowed long to remain. The power now vested in the Board of Trade of granting at its pleasure charters by which special privileges were conferred on some bodies, while they were denied to others whose object was similar, was virtually the power of granting monopolies (Hear, hear). This objection would be removed if limited liability were granted to all who were prepared to submit to stringent regulations. If it were right to suspend the law in favour of large undertakings, how could it be just to enforce it against those who were engaged in undertakings which required a small amount of capital? The present law often operated with very great injustice. There was the case of a man who had made a valuable discovery. This man wanted capital to carry out his discovery. He went into the market to raise it, but could not be met by the law of partnership, and he could not obtain the money which he wanted, because the capitalist would not be satisfied with the legal rate of interest. It was, however, chiefly on account of the hardships of the working classes that he advocated the principle of limited liability. By the alteration of the law which he sought to effect, they would do something towards putting an end to the disputes between capital and labour, which must have engaged the attention of every member of that House (Hear, hear). A law which would enable the master to share a small portion of his profits with those whom he employed, would tend more to bind together the interests of the two class than any other measure that could be passed. And if workmen found it to their interest to combine together to carry on manufacturing operations, whatever might be the opinion of the House as to the result, they ought not to be denied the opportunity of making the experiment.

Mr. Cardwell reminded the House that the question of limited liability was undergoing the consideration of a commission, and stipulated that permission to read the bill a first time must not be construed into an opinion upon the great question of limited and unlimited liability.

Leave was then given to introduce the bill.

DESPATCH OF PUBLIC BUSINESS.

SIR JOHN PARINGTON moved the appointment of a select committee to consider how far, by any alteration in the forms and proceedings of the House, the despatch of public business could be more effectually promoted. He suggested several ways in which the business might be facilitated. One was the shortening of speeches. Last session, fifteen hours and a half were taken up in the delivery of three speeches (the speakers being the ex Chancellor of the Exchequer, the present Chancellor of the Exchequer, and the President of the Board of Control). The two former ran what might be called a dead heat—five hours each—but the President of the Board of Control beat them both. Sir John would not undertake to say which of the speeches of these distinguished persons was best worth the time; but this he could say—and he was confident the House would go along with him in the opinion—that the speeches of all three would have been greatly improved had they been a good deal shorter.

SIR GEORGE GREY cautioned the House against expecting any great result from the proposed inquiry. It was the pressure of private business which caused the difficulty. The best cure would be found in the good sense of members themselves limiting their speeches to matter which bore strictly upon the question at issue.

The motion having been agreed to,

The SPEAKER handed in a manual of Parliamentary practice which he had prepared, and which he thought might be useful to the committee.

THE PRACTICE OF MEDICINE.

MR. BRADY obtained leave to introduce a Bill for the Registration of Qualified Practitioners, and for amending the law relating to the practice of medicine in Great Britain and Ireland.

FRIENDLY SOCIETIES.

MR. SOTHERON obtained leave to bring in a Bill to Regulate Friendly Societies.

IRISH BRIBERY.

MR ISAAC BUTT brought under notice an article in the *Times* of Monday last, which he deemed a breach of privilege. The charges made reflected not only upon individual members, but upon the character of the House itself. It was certainly insulting to the Irish representatives. The foundation of the article was thus explained. At a dinner, given at Tuam to celebrate the principle of tenant right, it was stated in the presence of several members of Parliament, that two Irish members had sold for money the patronage which Ministers had put at their disposal in return for their votes. These offices consisted of paid guardianships and stipendiary magistracies. The authorities were Dr. Gray, of the *Freeman's Journal*, and Mr. Kelly. He demanded leave ignition in the name of the Irish members, who had all been included in the sweeping calumny; in the name of the Irish gentry, who had been superseded by paid guardians on the ground that they could not be trusted; and in the name of the stipendiary magistracy. He had a precedent in the affair which occurred in 1834, in which Mr. Shiel was involved. The inquiry instituted in that case arose out of an assertion made at a dinner in the north of England, to the effect that an Irish member, who spoke and voted against the Coercion Bill, had advised the Government to push the measure to completion. Mr. Shiel was the member alluded to, and he was acquitted. Mr. Butt would move that the article in the *Times* be read at the table; and that done, he would move that the charges be investigated by a select committee. He did not mean to proceed in any way against the newspaper.

The article was accordingly read by the Clerk. Founding upon the Tuam declarations, the *Times* spoke of the Irish members as needy persons seeking only for place and position

Mr. BUTT having moved the appointment of a Select Committee to investigate,

Mr. J. O'CONNELL seconded the motion, and expressed a hope that the English members would not oppose the inquiry

Lord J. RUSSELL deemed the inquiry inevitable. The honour of Parliament, the honour of the Government, and the honour of the Irish members, were all involved

Mr. LUCAS mentioned that he was present at the Tuam banquet, and heard the statements referred to. These charges were not new to him, and did not, consequently, surprise him. Such charges circulated freely in Ireland, and Mr. Lucas believed them. He went at great length into the case, and detailed cases of foul play which he had received under the seal of secrecy, and which rendered it impossible for him to give the name of his informant. He thought the inquiry ought to extend beyond the cases instanced by Dr. Gray and Mr. Kelly, so as to lead to the detection of the means by which Ministers have kept themselves in power through the instrumentality of the Irish members. Understanding that the question of inquiry was to be brought on by Mr Butt, Mr. Lucas thought it as well to communicate by telegraph with Dr. Gray, and he had received a message in return, in these words—"I am ready to attend at the bar.'

Mr. THOMAS DUNCOMBE hoped that Mr. Lucas, who knew so much of the matter, would give the committee the benefit of his extensive knowledge. Inquiry however, must not be limited to the Irish members. Something affecting English members has come out recently, in connection with the affairs of the hon. member for Sunderland (Mr Hudson). In the accounts presented to the Court of Chancery, a sum of £3300 is put down as having been distributed in shares to landowners and members of Parliament, to secure their good services. Would Lord John Russell shrink from sanctioning that inquiry? He had given notice that, on Friday, he would ask leave to bring in two bills to prevent bribery and corruption amongst poor electors No doubt those bills would confirm the law which punished a poor man for taking a pot of beer or £3 or £4 for his vote; but, if his vote was criminal, how much more so was that of the man who corrupted the members of the House?

The motion was agreed to.

HOUSE OF COMMONS.—WEDNESDAY.

MR. HUDSON.

MR. HUDSON complained of the allusions made with respect to him last night by Mr. Duncombe, and particularly because no notice had been given to him of the intention of making such allusions. He had never tampered with any member of the House, and on his honour he denied the charge. He was charged with disgorging, but that was merely by a legal construction. His position was not morally right, but legally wrong; and he defied anyone to show anything against him, from his cradle to the present hour. He had enjoyed the confidence of the world, but he now experienced the bitterness of the reverse. He was ready to unravel everything, and he courted inquiry. The press was against him; he had been the subject of vituperation; but he had the consolation to know that all the works which he had projected or promoted were success ful, and he would leave to posterity to do him justice. If money had been his sole object, he could, with the power he which he had, have accumulated money to any amount. The honourable member was deeply affected

The House adjourned at five minutes to one o'clock.

(*Continued on page* 133.)

THE MACE OF THE HOUSE OF COMMONS.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

In your able and interesting article in the last ILLUSTRATED LONDON NEWS on the House of Commons incidental mention is made of the Mace as to it so unceremoniously treated by Oliver Cromwell. Allow me to rectify this error. The present Mace of the House of Commons is not the "bauble" of Cromwell. That was a very plain-looking affair, the House having resolved to have a new Mace to replace the late Royal Mace ornamented merely with flowers, instead of the cross and ball on the top and the arms of the late King.

In West's famous picture of the "Dissolution of the Long Parliament by Cromwell," the "bauble" is represented as being very plain—that agreeing with the above description

On the Restoration, the House of Commons expressly ordered "That two new Maces to be forthwith provided—one for this House, and the other for the Council of State with the Cross and King's Majesty's Arms, and such other ornaments as were formerly used."

The Mace now used in the House of Commons is thus one of these new Royal Maces and agrees precisely with the foregoing description

In my "History of the Royal Society" I have entered at length into the history of the "Bauble" Mace, which was long supposed to have been in the possession of the Royal Society, and I would beg to refer any of your readers who may be interested in the details to that work.

I am, sir, your humble servant,

Somerset House, Jan. 6, 1854. C. R. WELD.

STATUE OF LIVERPOOL.—Mr. Spence has completed the model of a colossal figure, intended for the Sydenham Palace, representing his native city of Liverpool. The figure is dignified, and grandly draped, and will be easily distinguished from her companions in the row of cities, by the commercial emblems and the legendary bird, the Liver, which was the origin of her name.

THE CORPORATION OF LONDON KILLED BY ITS FRIENDS.

A PARALYZED giant, a helpless and withered beauty, or a broken-down merchant, invariably excites pity; but no sympathy exists for those whose reverse has come through a long course of riotous living, selfish indulgence, or the extravagance of vulgar parade. Fortunately, for every class in England there is an asylum in which the unfortunate or the deserved may receive some shelter for their weary heads—some consolation in their hours of fading life, and at last a decent burial. No such consolation, however, is accorded to corrupt and dying Corporations. How humiliating is the present condition of the Corporation of London! Rejected, scorned, spurned, helpless and friendless, it awaits its dissolution, not with becoming fortitude and resignation, but in the spirit of the gambler who ever hopes that some turn of the wheel of fortune may overcome his difficulty, and restore him to happiness and wealth.

With an air of candour, the Consolidated Committee advised that all books, officers, and facts of every description should be at the service of the Commissioners. Nothing should be withheld—they had nothing to conceal. The more the officers of the Corporation were investigated, the higher they would stand in public estimation. Certain grave charges were made by accusing witnesses in reference to the press having been tampered with or bribed—that articles were written to order, money paid for their being inserted, and then the paper purchased and distributed among its members to prove how public opinion was turning in favour of the retention of Smithfield Market in the centre of the metropolis. The uninitiated believed such matters as impossible as they seemed incredible. Mr. Scott, however, in a manner that did him infinite honour, related every circumstance, and proved the truthfulness of the charge. Yet the Chairman of the Consolidated Committee, with an effrontery difficult to characterise, with Mr. Scott's evidences in print before him, had the assurance to declare in his evidence that, although authorised to spend £20 a week in the manner referred to, their expenditure had never exceeded £170 or £180 per annum. Yet Mr. Scott had testified that more than £500 had been wasted in the vain attempt to establish a trashy paper called the *Citizen*; and Mr. Scott's evidence was confirmed by the Remembrancer. Mr. Wood then asserted that the Committee, as a committee, knew nothing of such proceedings; but it was delegated to a few gentlemen of the Committee to treat with the press. Mr. Wood knows, or ought to know, that every member of the Committee suspected the truth, though they would not divulge the secrets of the prison house. Does Mr. Wood suppose that his paltry excuses will screen the members of that Committee from the charge of having wastefully and wilfully expended large sums of money for the purpose of polluting the springs of public opinion, and, through them, corrupting public taste by the foulest misrepresentations? But take Mr. Wood on his own ground, and to what conclusion are we driven?

Allowing the Corporation to be purity itself, allowing that Mr. Wood's version of the story is the true one, and that Mr Scott and Mr. Tyrell have been guilty of the grossest perjury, it comes to this: The Corporation delegate to a committee certain powers. The committee chooses from among themselves certain *discreet* members to do that which, as a committee, they are ashamed to acknowledge—large sums of money are paid without proper voucher or proper entry in the books. Yet, it is unblushingly declared, that no such things were done, although moneys were absolutely paid by order of the committee; and thousands of pounds were distributed to agents, canvassers, literary men, and lawyers.

Some people are said to live from hand to mouth. The Corporation can hardly be said to live from day to day. The independence of one of their members was enough to make him detested by the general body. Straightforward sturdy pluck was denounced as treachery. He was accused of intentionally speaking what he knew to be untrue. He wisely washed his hands of the whole body, and what has been the result? That he is now proved, in evidence given by members of the Corporation, that, instead of overstating the case, it has been greatly understated. The grave charges referred to last week were to be controverted; yet they have been either passed over, admitted, or confirmed. The officers of the Corporation, who live by the Corporation, and, of course, can see no harm in it, persuaded the Consolidated Committee to leave the defence to them. The Consolidated Committee concurred. Who, in his senses, would leave his defence solely to his lawyer? What confidence can the public repose in such defence? If accused of impropriety of conduct, the lawyer who is engaged to conduct the case is not the person to whom should be committed the sole duty of giving evidence. In a criminal court such a proceeding would never obtain a verdict from a British jury; yet such is the frail reliance on which the Corporation of London depend for their exculpation. The written defence was to annihilate those who had presumed to touch with their unholy hands the sacred vestments of the Corporation. Yet they survive! The evidence in support of the defence was to convince all persons of the hollowness and presumption of those who had the temerity to expose the presumed misdeeds Yet nothing is disproved.

Then they were to have the last word of evidence; and thus, under the smoke of their own fire, leave the people bewildered, and retire with honour. Mr. Labouchere cut this pedestal of hope from under them. Now it appears that the previous Committee had concocted another scheme, by which they intended to hoodwink the Commissioners, and bamboozle the public. Determined to have the last word, they conceived the plausible no ion of drawing up a scheme of reform based on all the evidence given, which they trusted would receive the approbation of the Commissioners, and be acceptable to the public. Such were the plans adopted at a secret meeting, to which, it is said, all were pledged to adhere. It was to come on the Commissioners like a thunder peal, and astonish the world. Beaten from every rallying point, without support and without credit for common honesty, they yet cherished the idea of suggesting some alterations, calculated, in their judgment, to meet the case; and, by assuming a virtue of which they knew themselves destitute, they concluded that, worn out by the tediousness of the defence, the Commissioners might, in a moment of fatigue, adopt their plan. Then what a flourish of trumpets! "Wrongfully accused, we have voluntarily submitted to dissection. We have been cuffed, kicked, and spat upon; yet, phœnix like, we rise from the ashes of our corruption, proclaim a principle, and prove to the world that we are full of vitality, and stand before the universal public the only instance of a self-reformed corporation."

"Whom the Gods wish to punish, they first make mad." The friends and upholders of the Corporation are blind to the danger that awaits them. They seem to have no conception that the gentlemen who are inquiring into, and will report upon, all their proceedings are three of the clearest heads in England. Can the Corporation conceive it possible that a few picked men of their body will be looked upon as a fair sample of the body corporate? No. The Commissioners will have before them some of those ill-used gentlemen who, as chairmen, have been denounced as incapables, while brother members have given it as their profound opinion that the wisest and fittest are always appointed to the chairs of the several committees. We shall see.

All this private scheming and concocting has been divulged by the Right Hon. the Lord Mayor. Opposing, as he did, several of the suggestions that had been made, he, nevertheless, confessed that much was wrong. Looking forward to an election for the City at no distant date, he shrewdly endeavoured to win the support of the Reformers by proposing a plan of reform, which only differed in degree, and not in kind, from that proposed by the ablest witnesses previously examined. He courted the support of the flagrantly corrupt, by desiring to leave the "Livery" untouched, to exercise all their offensive and absurd privileges as at present. This spoiled the whole; but, the exposure of the secret conclave excited great surprise. Alderman Farebrother rushed to the rescue, denounced the opinions of the Lord Mayor as indiscreet and, although he might entertain them as a private individual, they were not those of the Court of Aldermen, neither were they the sentiments of the committee to which had been entrusted the management of the Corporation defence. The squabble was a very pretty one, and well calculated to destroy any little prestige that might still have attached to the character of the Corporation.

The announcement that the Court of Aldermen represented a mass of private wealth equal to £4,000,000 sterling will surprise many; but mere money-grubbing or money-loving is no evidence of the possession of qualification for the performance of high magisterial duties. Besides, that is not the point at issue. It is not a question of poverty or riches, but, whether the Aldermen should continue to have any independent power over the City's cash, whether they should be elected for life, and whether they ought to be reduced in number? Mr. Bennoch considers they ought not to possess any independent control over the cash; that they should not be elected for life; and that they ought to be reduced from 26 to 12, and the Common Council from 206 to 72. The Lord Mayor adopts a similar view. He considers that their control over the funds ought to be limited; that the number of Aldermen should be reduced from 26 to 18, and the Common Council from 206 to 96; but, as is quite natural for an Alderman, he thinks that they ought to be elected for life. We have no desire to depreciate the character of the Court of Aldermen. As a body they are infinitely superior to the Court of Common Council, and on this very question of Reform have been singularly unanimous. Had the other branch of the Corporation been equally faithful to their trust, they, as a body might have been spared the pain of the investigation by which so much discreditable conduct is brought to light. Whatever is the result of this inquiry we sincerely trust in the Commissioners doing their duty faithfully, and we have no fear of their being diverted from the right course by any plausible pretence of the Corporation, or any awakened zeal for Reform as indicated by any scheme they can propose.

FIRE AND GREAT LOSS OF LIFE.

About half-past five on Tuesday morning, as a policeman was passing the house numbered 19, Frances-street, St. Ann's, Soho, he was told by a female, whom he saw at the window in her night dress, that the house was on fire. The constable instantly sounded his rattle, other policemen came, and some of them were sent off for the engines and fire-escape. At Golden-square, where one of the escapes is stationed, the man in charge was absent, so that considerable time was lost; and the result was the loss of several lives.

The shop and parlour were occupied by a man named Reeve, a print and bookseller; in the first floor resided the ostensible landlord, James Jackson, a painter and glazier, with his family; the second floor was rented by an interpreter, named Puzzi, who with his wife and four young children occupied the two small rooms of which it consisted; and in the front and back attics, respectively, an aged female whose name is unknown, and a journeyman tailor of the name of Adams, with his wife.

During the time lost in getting the escapes to the spot a number of the unfortunate occupants made their appearance at the casements, and begged it of those below to procure ladders to rescue them, as they were unable to live in the room heat any longer. The screams of several other persons in the upper rooms became at this conjuncture painfully intense. The inmates of one of the adjoining houses, on looking out of one of the attic windows, perceived the aged widow, and Mr. and Mrs. Adams at the third floor back window, calling loudly for help until the flames entered the room, and completely prostrated the three. Mr. Puzzi also attempted to get his wife and four children out of the second floor front, but the fire became so fierce that they one by one fell to the floor; and at length the fire completely encircled Mr. Puzzi, leaving his wife and children no other means of escape than the last expedient, he jumped out of the window, alighted upon a wooden projection over the shop, but rebounding, fell upon his head on the stone flags beneath. He was forthwith removed to Charing-cross Hospital, and paced under the care of the house-surgeon, but such is the extensive character of the injuries received by the fall and the burns, that not the least hopes can be entertained of his recovery.

The two females, the mother and her daughter, who, it appears, first discovered the fire, as well as Reeves and his family, fortunately escaped, as did Mr. and Mrs. Jackson and child. In spite of the exertions of the firemen every upper room was consumed, the roof was burnt off, and the furniture of the different inmates reduced to ashes.

ALLEGED ATTEMPT TO BREAK INTO WINDSOR CASTLE.—When the south-Western station was erected, some three years ago, a private carriage-road was made at the foot of the Slopes to the Castle. This road is used only by members of the Royal family, and by gentlemen attached to the Royal household. On leaving the train last Monday night, Colonel Hood, Clerk-Marshal to his Royal Highness Prince Albert, proceeded up the Slopes, as the nearest way to the Castle, and was not a little surprised to encounter in his walk seven or eight men, with their faces blackened, and their feet muffled, if he might judge by the noiseless character of their movements. The ruffians fled at the approach of the hon. and gallant gentleman, and have not since been heard of. On inquiry it appeared that the suspected burglars were observed by the sentinel on duty at the corner of the Prince of Wales' Tower (on the basement of which is the guard pantry), and then the man at once, looking down from the terrace, threatened to fire at them. To this they replied that if he so much as fired, or give the alarm, they would blow out his brains. The hostile parley had proceeded thus far when Colonel Hood met by the Lodge gate in Datchet-lane, and the burglars doubtless supposed that he was at the head of a party sent to capture them. This will account for the precipitate flight and subsequent escape. On the arrival of Colonel Hood at the Castle the police were ordered to patrol the Slopes for the remainder of the night, but they could detect nothing likely to excite suspicion, or serve as a clue to the apprehension of the evil-disposed parties. The affair has created a great sensation in Windsor, and will cause the Palace to be guarded more strictly than ever, especially after nightfall.

MORMON EMIGRANTS.—Last week nearly three hundred Mormonites met in Newport, from various parts of the Isle, with the view of starting together for the Great Salt Lake. A meeting of the intending emigrants took place in the long room, at the Sunderland House, Lymington-street, the same evening; and next morning, the eager enthusiasts left the town per the Newport and Here ord Railway for Liverpool—the latter port being the spot at which they intended—with others who would join them on the route—to embark.

THE LAWS OF ENGLAND AND SCOTLAND.—The London committee of merchants and others, associated for the assimilation of the commercial and bankruptcy laws of the United Kingdom, are now in communication with the commercial societies of Liverpool with the view of promoting this important movement. The first great step towards its accomplishment is the bill which was introduced by Lord Brougham last session of Parliament and read a second time, having for its object the assimilation of the bankruptcy system of England and Scotland. Another great step in the direction of assimilation is a bill about to be introduced into Parliament, for the extension to England of the Scottish system of recovering by summary procedure on bills of exchange, by that cheap and speedy method of recovering payment, the holder is enabled, without bringing an action, to sign judgment when the bill is dishonoured, and after six days' notice to issue execution. Nor can the debtor allowed to elapse the bill until he finds two sufficient sureties for debt and costs; and even then, under certain circumstances, a Judge at the outset that he has *primâ facie* reasonable and honest grounds for refusing payment.

AN EXTRAORDINARY FEAT was successfully performed on Monday, January the 30th, at Eastbourne Sussex, by Edward Curtis Grahame, esq., of the Elms, an undergraduate of Trinity College, Cambridge. The undertaking was to perform a walk of eighty miles within the twenty-four hours. The ground chosen was a measured hail-mile on the road which passes the Coastguard place. Mr. Graham started at a quarter past one a.m., and walked the first half of his journey straight off, stopping to breakfast at half-past ten. After an hour and a half of rest, he started afresh, and concluded the fifty-ninth mile, when he stopped again from half-past four till a quarter to six. From that hour he continued his task uninterruptedly to the end, coming in without any sign of distress at twenty-five minutes after midnight. Great interest was excited in the match, and pop ar feeling was strongly in favour of the walker, who was loudly cheered. It may easily be conceived that the office of the umpires and time-keepers was no light one during the darkness of a great part of two consecutive, windy, and sometimes drizzling, nights, especially the first night, when each arbiter sat "alone in his glory," for it had not been made known that the feat was to take place.

RESTORATION OF THE BEAUCHAMP TOWER.

INSCRIPTION OF THOMAS ABEL.

HERE are few places in this country so eminently connected with historical events of the greatest importance as the Tower of London; yet, not many other have been less cared for and more mutilated. The repairs made from time to time have been executed without consideration of the ancient style and features of the architecture, and additions made which offended the improved taste of the present day. The White Tower has been cased and disguised by windows of about the time of James I.; and in later years the beautiful Norman chapel, the details of which are almost as fresh as if built yesterday, has been railed off, like the drying-shop of a glue manufacturer; and the records of the country been kept for years in a place liable to fire, from the introduction of so much wood, and dangerous from being in the near neighbourhood of a mine of gunpowder. It is, however, satisfactory to know that these valuable Records will in a short time be removed, when, no doubt, the interior of the Great Keep of the Tower will be thrown open to the public. Before concluding our short chapter of complaints, we must say a word or two respecting the present condition of the Traitor's Gate—the water entrance to the Tower—and through which so many have passed never to return. Here the Princess Elizabeth sat on the steps in the midst of rain and storm, declaring that she was no traitor. Scores of pages of history and events affording materials for both the poet and the painter come into the memory at the mention of the name of this gloomy portal. We must not, however, be drawn off by these particulars. Many of our readers will remember, when visiting the Tower, looking with intense feeling through the chequers of the door into this archway at the rushing tide, and being led back according

THE BEAUCHAMP TOWER RESTORED.—EAST FRONT.

brother to Lord Guildford. This consists of a shield containing the well known armorial bearings—the bear and ragged staff. The shield is surrounded by flowers, well-designed and cut, and which are probably intended to allude to the names of his four brothers—viz., the roses for the R in Robert; the honeysuckles for the H in Henry; the acorns on the oak sprig from the A in Ambrose; and the plant which resembles a geranium, for the G in Guildford. The inscription at the bottom of the device is as follows:—

You that these beasts do not be behold and see,
May deem with ease wherefore here made they be;
With borders eke within *there may be found*,
Four brothers' names, who list to search the ground

The words printed in italics are unfinished on the

INSCRIPTION OF LADY JANE GREY.

stone, and are added as above by Bayley, the historian of the Tower:—

A reference to Sir Walter Scott's novels of the "Fortunes of Nigel" and "Peveril of the Peak," shows that their distinguished author had made himself acquainted with the various portions of the Tower. The lower right-hand inscription is one of several bearing the name of Peveril. The wheatsheaves are the armorial bearings of the Peverils of Derbyshire. It is by no means unlikely that, on the sight of these stones, Sir Walter Scott formed the plan of his novel. The room, above the entrance of the Bloody Tower, in which the young Princes are said to have been murdered by Richard III., agrees with the account of the place of meeting between Georgina Harriet, his god-daughter, and Nigel. There is here a secret closet near the roof, of no seeming

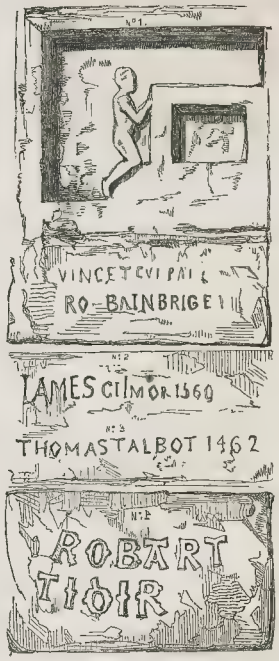
PARAPET WHERE THE PRINCESS ELIZABETH WALKED.

champ Tower was used as a mess-room by the officers of the garrison. many of the inscriptions on the walls were covered with paneling, and the others thickly coated with paint; the windows were disfigured, and the lower room converted into a kitchen. Subsequently a grant of money was obtained from Parliament, and the tower placed in the hands of Mr. Salvin, the architect, for its complete restoration.

The whole of the interior and exterior have been cased, and the inscriptions cleansed by an ingenious chemical process from dirt and paint. During this operation many new names have been brought to light which have been for long hidden from plaster, &c. Amongst these is the first engraved rebus, on the upper left hand. Thomas Abel was educated at Oxford, where he completed his degrees in arts in the year 1516, and became a Doctor of Divinity; he was a man of learning, a great master of instrumental music, and well skilled in modern languages. These qualifications introduced him at Court, and he became domestic chaplain to Queen Catherine of Arragon, wife of Henry VIII., and served her Majesty in the above-mentioned capacity. When the validity of the marriage of the Queen and Henry VIII. became a question, the affection which Dr. Abel bore towards his mistress, led him into the controversy to which it gave rise, and he opposed the divorce both by words and writings. By giving in to the delusion of the "Holy Maid of Kent" he incurred a misprison, and was afterwards condemned and executed in Smithfield, together with others, for denying the King's supremacy, and affirming his marriage with Queen Catherine to be good.

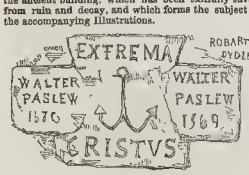
The second of the inscriptions engraved in the right-hand column, is by Robert Bainbridge, who was imprisoned for writing a letter offensive to Queen Elizabeth; James Gilmor, 1560; Thomas Talbot, 1462. This is the oldest inscription which has been found in the prison: this gentleman was in 1464, and kept Henry VI. prisoner at Waddington-hall, in Lancashire. Robert Tidir: no date; nor can we give any information respecting his history. Jane: cut in letters of the Elizabethan style, attracts more attention than those of more elaborate design and execution, in consequence of its associations with the unfortunate Lady Jane Grey. These names are supposed to have been cut by Lord Guildford when confined in a separate prison from the Lady Jane.

Another beautifully-executed carving is the work of John Dudley,



INSCRIPTIONS IN THE BEAUCHAMP TOWER.

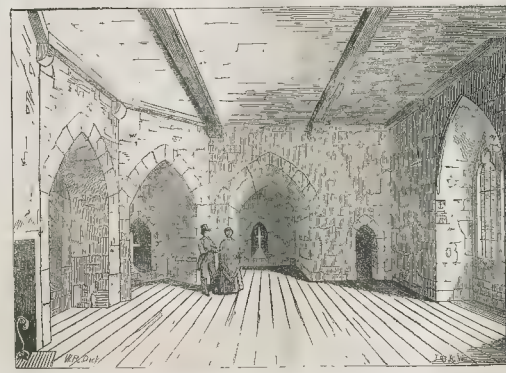
to their information and taste to former times. The apertures of the Traitor's Gate have now for many years been hidden from the public by thick planks of wood. The object in doing so was said to form a bath for the soldiers in the garrison; it has, however, for years not been used for this purpose, and many persons are thus prevented from having the opportunity of inspecting the place, and at the same time it is closed without use or benefit. Trusting that the authorities of the Tower will remedy this, we gladly pass to another part of the ancient building, which has been skilfully saved from ruin and decay, and which forms the subject of the accompanying illustrations.



INSCRIPTIONS OF WALTER PASLEW AND ROBART DYDLEY.

The Beauchamp Tower derived its name from Thomas de Beauchamp, Earl of Warwick, who was imprisoned there in 1397. It consists of three apartments, one above the other, besides a few small passages and cells. The lower room is partly below the ground, and must have been a dismal place of imprisonment. A circular staircase leads to the other apartments, in which have been confined so many eminent individuals. Many of these have here endeavoured to shorten the tedious hours by records on the stone walls of their names and sentiments; and hard must be the heart which could look unmoved at many of the inscriptions. Until a short time since the Beauuse, except to conceal an observer from the prisoners, which may have afforded the idea of the "lug" in which James I. ensconced himself.

Many other sad histories might be given of those whose hands cut the markings on the walls of the Beauchamp Tower, which have been made to look almost as perfect as when first executed: even the chisel-marks in the sunk parts are distinctly visible.



STATE PRISON-ROOM IN THE BEAUCHAMP TOWER.

INSCRIPTION OF THOMAS FEVERIL.

Our space, however, prevents us from doing more than to recommend a visit to the place, which will, we believe, be soon open to the public; and, in the meantime, refer them to Bayley's History of the Tower; and to a work containing careful copies of all the carvings and other particulars, just published by Mr Dick, the gentleman who has so ably superintended the work of restoration. The Beauchamp Tower has been used as a prison for male offenders only. A short time since, a door of ancient oak, knotted with iron, was below the plaster: this door opened to the

THE INDIAN LIONS, IN THE ZOOLOGICAL GARDENS, REGENT'S-PARK.

terrace shown in the Engraving, leading to the Bell Tower, in which the Princess Elizabeth, Lady Jane Grey, and other distinguished prisoners were confined. But little change has taken place in so much of the scene as is presented to our readers since that time—when, probably, it was used as a promenade by those celebrated individuals—except that the walls are more begrimed by the smoke of "sea-coal" fires, and that the bustle of the Thames is increased in a wonderful degree. We may mention, in conclusion, that the place pointed to by the figures in the exterior View of the Beauchamp Tower is the spot on which the scaffold was placed for the execution of Anne Boleyn, Lady Jane Grey, and others.

We have omitted to mention the inscriptions engraved at the foot of the left-hand column: and on the left-hand side as you enter the Beauchamp Tower, on the ground-floor. These are, first, an inscription by "Walter Paslew," dated "1569" and "1570:" "Extrema Christus" (my hope is in Christ). "No authentic account," says Mr. Dick, "is given of this person." In 1537, we read of a John Paslew, Abbot of Whalley, in Lancashire, being apprehended for his part in the rebellion called the Pilgrimage of Grace, and executed March 12, 1537. Near to the device of "Paslew," we find "Robart Dvdley." This nobleman was the third son of John Dudley, Duke of Northumberland, who was arraigned for high treason in 1553, was condemned, and beheaded on Tower-hill. At his death, his sons were still left in confinement; and Robert was, in 1554, arraigned at Guildhall, on the plea of high treason, and condemned to be hanged, drawn, and quartered. He lay under this sentence until the following year, when he and his two brothers, Ambrose and Henry, were liberated by command of Queen Mary, and afterwards rose into high favour at the Courts of Mary and Elizabeth.

The historical notices in Mr. Dick's work have been collected with much care from State papers, records, and other authentic sources; and the devices and inscriptions are very neatly lithographed from Mr. Dick's drawings; rendering the publication highly acceptable to archæologists and lovers of historic relics.

THE INDIAN LIONS, AT THE ZOOLOGICAL GARDENS IN THE REGENT'S-PARK.

Lions were formerly abundant throughout Northern India, but the hunting exploits of the English during the last fifty years have so reduced their numbers, that they now only exist in two or three districts, and even there they are found but rarely.

The Indian Lion is, therefore, one of those animals whose extinction will probably happen in our own time—just as wolves have ceased to live in the British Islands, as the moa has disappeared in New Zealand, and the dodo in Mauritius. Although this destruction of a certain number of the inferior animals seems to be the inevitable result of the extension of human civilisation, we cannot but look with intense interest and some regret upon the creatures which are thus passing, or have passed, out of the catalogue of animated nature.

The Indian or Asiatic Lion has been supposed by naturalists to constitute a distinct and separate species from those which abound in Africa. But as the Asiatic Lions differ among themselves in appearance, quite as much as the different local races in Africa, that question is one which admits of considerable doubt.

The Goojerat race of Lions, to which the present specimens belong is remarkable for the comparative scantiness and erect direction of the mane, the peculiar carriage of the tail, and the large size of the tail-tuft. They are unusually fine specimens, the male being three feet four inches in height at the shoulder; and they are unquestionably a most valuable and interesting addition to the magnificent series of carnivorous animals which have long made so effective a feature in the Zoological Society's collection.

The actual rarity of Lions in India has hitherto interposed insuperable difficulties in the way of obtaining any from that country, although the supposed difference of species rendered the acquisition of living specimens extremely desirable in a scientific as well as in a popular point of view. But difficulties have of late years ceased to interrupt the progress of the Zoological Society; and at last we have a pair of Asiatic Lions, in full health, and in the flower of their age—they being now, according to the account of the voluble old Mussulman who has accompanied them throughout the Overland journey, about four years old. They are perfectly under the control of this man, who exercises an influence over them by no means less remarkable than that which Van Amburgh, Carter, Charles, and the other disciples of Morok used to exhibit to the wondering town. It is probable, however, that the ascendancy of Ferid Khan was obtained in a very different way, for his is simply that of benevolence. At the hunt, in which the mother of these animals was killed, one of the beaters found them in her lair, apparently about three days old. They were there and then placed in charge of Ferid Khan, and he never allowed any other hand than his own to feed them up to the time of their arrival in England.

For this noble acquisition, the Society is indebted to the liberality of Sir Erskine Perry, formerly Chief Justice of Bombay, through whose influence they were obtained from the native Prince who captured them, and at whose expense the animals were brought down some 350 miles from the interior to Bombay.

THE ALLIGATORS IN THE GARDENS OF THE ZOOLOGICAL SOCIETY, REGENT'S-PARK.

There is now an admirable opportunity of seeing the large Alligators belonging to the Zoological Society, which have recently been placed in a spacious tank, prepared for their winter quarters, in the Aquavivarium. During the summer and autumn the Alligators were so frequently under water in the pond which they inhabited, that scarcely one in a thousand of the visitors was fortunate enough to catch a glimpse of them.

The Alligators, represented in our Illustration, are both of the North American species, and were captured in Carolina. Their natural habit is to bury themselves in mud at the beginning of winter, and there to remain in a torpid state until the approach of spring, when they emerge in an emaciated condition to recommence their life of rapine in the rivers and swamps, where they occasionally swarm in almost incredible numbers. In accordance with this impulse of nature, the Society's Alligators, at the present moment, are almost devoid of active motion; and although respiration is certainly not suspended, it goes on but languidly and at prolonged intervals.

It will be extremely interesting to watch the return of vigour to these huge reptiles as the spring sun begins to exercise its influence upon them. Their plump sides speak satisfactorily of the effect of the good cheer which they enjoyed in the autumn; and, as there is now every probability of their surviving the winter, we may hope to see them make rapid advances in size. They are already, by far, the largest which have been seen alive in this country—the oldest of the two already measuring about ten feet in length, and promising, before long, to be at least equal in dimensions to that specimen so "famed in story," on which Mr. Waterton performed his equestrian feat on the Essequibo, and which still adorns, with crowning interest, the admirably-prepared Museum at Walton Hall.

ALLIGATORS, IN THE ZOOLOGICAL SOCIETY'S MENAGERIE.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

The Commissioners of Emigration have given notice that they require three vessels to be ready to carry passengers to Sydney on the 21st, Hobart Town on the 24th, and Adelaide on the 28th March next.

The Royal Commissioners appointed to inquire into the cause of the late outbreak of cholera at Newcastle-on-Tyne will resume the inquiry about the middle of this month.

In its sitting of the 31st ult., the Piedmontese Chamber of Deputies passed the bill for the abolition of the lottery, by a majority of 98 votes to 6.

The shipwrecks that occurred during the last month were greater in number than have been known to have happened in so short a period for the last 18 years. Upwards of 300 losses were announced in Lloyd's book, with the sacrifice of 700 lives.

The Speaker has appointed the following members of the House of Commons to serve on the General Committee of Elections:—Sir G Grey, Mr. Walpole, Mr. J. W. Patten, Mr. R. Palmer, Sir R. Ferguson, and Mr. Bramston.

Sir Massch Lopes, the son of the deceased Baronet, is to marry the daughter of Sir John Buller, as soon as the time for mourning shall have passed away.—*Western Times.*

It is said that the Infante Don Enrique has received permission to return to Spain, and will take up his residence at Valencia.

Mr. Thomas Bazley, the late President of the Manchester Chamber of Commerce, having been prevailed on to withdraw his resignation, has been unanimously elected by the new Board.

The night force of the Glasgow police are about to apply to the Police Committee for permission to wear the moustache. During the late inclement weather the men who were least accustomed to exposure to the night air were much affected with colds and ailments of the throat, and it was with difficulty suitable substitutes could be procured.

It is said there are 21,487 blind persons in the whole of Great Britain.

No fewer than 153 coal-laden vessels were entered on Saturday at the Custom house, with cargoes amounting, in the aggregate, to 8600 tons of coals for household consumption. It is said this will cause a reduction of 4s. per ton.

The silk trade is in a flourishing condition at St. Etienne, in France. In 1853 the quantity of silk used was 632,000 kilogrammes, being 20,060 kilogrammes more than in 1852, and 184,000 kilogrammes more than in 1846.

An American dealer in ready-made linen advertises his shirts and chemi ettes under the delicate appellation of "male and female envelopes."

Baron Pennefather is not sufficiently recovered from his late indisposition to go the Irish spring circuit. His place will be filled by Mr. Serjeant O'Brien.

Mr. Goalen, the principal of the audit department of the London and North-Western Railway Company, has been given into custody on a charge of extensive frauds amounting to £6000 or £7000.

A most seasonable relief has been afforded to the poor, by the arrival of a great number of colliers at Portsmouth, as well as a multitude of fishing craft. Coals are now only 20s. per ton, and mackerel are twelve a shilling.

It is now necessary that travellers to France should be provided with passports, verified by the agents of France in England.

M'Kay, the Royal piper, and Smith, the Royal policeman, who both sat mad on Friday week last, are pronounced incurable. The one is sent to Bedlam, and the other to St. Luke's.

The promoters of the Institution of the Guild of Literature and Art have made an application to Parliament for leave to deposit a petition for an act.

The lambing season in the southern division of Wilts has proved, we are sorry to say, in the generality of instances, one of the most unfruitful on record—a result attributed to the badness of the hay, and a variety of other causes.—*Wiltshire Independent.*

A Chinese, by name Aileine Kimeyang, who served in his native dress in a tea-dealer's shop in Leeds, has been committed for trial for stealing £120 from his master, Mr. Richardson.

The national balance-sheet for 1853 has been issued. The income of the year amounted to £54,430,344, the expenditure to £51,174,839; showing a surplus of £3,255,505.

The telegraphic lines between Turin and Lombardy were to be opened to private correspondence on the 10th instant.

The petition from the citizens of London to the Corporation for the removal of temple bar, which was numerously signed, was presented at the Court of Common Council on Thursday last.

The *Limerick Chronicle* says that the family and friends of William Smith O'Brien entertain a well-grounded hope of his free pardon before the end of the present year.

The Municipal Council of Paris have voted the erection of an hospice for young girls in the Faubourg St. Antoine, which is to be under the patronage of the Empress Eugénie.

A refiner in Greenock recently boiled up fifty tons of brown West India sugar, from which he extracted three tons of clay!

There are at this moment in the French navy 2 admirals, 11 vice-admirals, 20 rear admirals, 36 captains of the first class 74 captains of the second class, and 227 captains of frigates in all, 370 superior officers.

Sir George Rose, the Master charged with the winding-up of the affairs of the Marylebone Banking Company, has ordered a call of £8 per share, payable on the 15th of March.

Tapner, the Guernsey murderer, has given the clergyman a paper, stating that he alone was guilty of the crime for which he was condemned.

It is reported that some important alterations are to be made with respect to the admissions to Winchester School. Stricter examinations are to be made, and wealth and power will cease to have such influence in admissions as hitherto.

A recent return to Parliament shows that, from the 1st January, 1848, to the 31st December last, the coinage at the Mint amounted to £32,201,386 1s. 4d. The gold coinage in the six years was £31,216,384 12s. 8d.; the silver coinage, £1,263,139 12s. 10d.; and the copper coinage, £21,351 16s.

The *Piedmontese Gazette* publishes a series of very severe regulations concerning masquerades during the Carnival. No one is to be allowed to walk in the street with a mask, or in masquerade dress without a special license.

The importance of the Australian trade is such, that no less than 1200 vessels, or more, sailed from England and Ireland, averaging 372,000 tons, which probably carried out upwards of 700,000 tons of goods, during the past year.

The grand eight-oared match between the two Universities will take place in the Easter vacation, at Putney. The Oxford crew is partly selected, and some of them have already commenced active training.

Among the recent new patents is one to A. T. Wagner, of Berlin, professor of music, for the invention of "a psychograph, or apparatus for indicating persons' thoughts by the agency of nervous electricity."

The director of police at Milan has issued a notice, dated the 1st, in which, after stating that the enemies of order are again spreading false news, he warns such persons that they are liable to be tried by court-martial.

The heavy contract for rum, just announced by the Admiralty, has sent up the price again. The last contract only sought 10,000 gallons, whilst 30,000 gallons were taken; and now 80,000 gallons are to be tendered for, and probably much more may be taken.

The Baroness of Thomond has recently presented to her Majesty for the Admiralty-house at Portsmouth, three full-length valuable portraits, by Sir Joshua Reynolds, of King George III., King William IV., and one of his late R.H. the Duke of York.

Letters from Madrid state that the young Princess of Asturias, the only surviving child of the Queen of Spain, is dangerously ill. Her death would again open the succession to the Duchess of Montpensier.

It is understood that the large game preservers in the neighbourhood of Maidstone are about to discharge their keepers, and give up the occupation of preserving.

The corporation of Gravesend have purchased a fire-engine, of the same powerful construction as those of London which will be transmitted to the market-place, where already two others are stationed.

Early on Friday week, Mr. R. Leycester, of Cambridge-villas, Cheltenham, while attending the Bachelors' ball, at the Assembly-rooms, was suddenly seized with a fit, and died in about ten minutes.

The Duke of Newcastle is giving employment to a large number of persons, in building cottages for the labouring poor on his estates, and in draining and fencing.

The Edinburgh opera season came to a termination on Saturday, after a most successful campaign

The Darlington Local Board of Health has adopted a memorial to the Earl of Aberdeen, praying that Darlington may be one of the newly-created boroughs under the Reform Bill.

The *Norma*, a Russian vessel, from Lisbon to Ollenburg, with a valuable cargo, was wrecked on the Goodwin Sands on Tuesday.

A measure for the registration of births, marriages, and deaths in Scotland is said to be in course of preparation.

VALENTINE'S DAY.

A POET'S VALENTINE.

BY MRS. T. K. HERVEY.

I have not wooed thee as the many woo;
I have not cast my heart beneath thy feet:
I loved thee with a spirit proud and true,
And if my words have seemed nor smooth, nor sweet,
It is that these poor pulses stay their beat
To pause upon the music of thy tongue!
Silence and Truth, dear love! do oft-times meet:
Even Hope, scarce quickened, falters and dies young,
As chords will sang asunder when a lyre is newly strung.

But hold me in thy patience yet awhile:
The heavens do hear me oft when thou art far—
If far thou canst be where my heavens smile.
I never likened thee unto a star,
O cold thee thou wert what the angels are;—
Angels are pitiful, and thou art not:
The whiteness of thy soul thou wouldst not mar,
And on its stainless mirror 'twere a blot
If love's most noble claim to love, in pity, were forgot.

True souls do ask no guerdon save the bliss
Of purely loving that which is most pure;
It is the virgin's robe whose hem we kiss,
Not the stage mantle, worn but to allure:
And thou in thy heart's singleness art sure
The joy of loving thee may well atone
For all thy coldness calls me to endure.
Right-seated love is likest on its throne
To souls enshrined upon dead lips—that smile, but make no moan.

Freed from its once apparel of the clay,
The wakened soul stands beautiful and mute,
Like to a sun new-risen to the day,
Whose glorious orb puts off night's mourning suit.
The worn husk droppeth from the ripened fruit.
Scant is the earth where mountain pines abound;
So love is best, though starving at the root,
Whose higher life is by the sunbeams crowned:
So larks sing sweet in upper air, though mute on grassy ground.

When, one by one, the silent moonbeams climb
Those airy heights which only lovers know,
And, fainting on the barren steps of Time,
The beggared heart can see to count its woe,
Comfort falls soft as footsteps on the snow!
Then to my side thy spirit steals unsought;
And, heedless how the night-tides ebb and flow,
We two, love-armed, do set the hours at nought,
Watching the quiet stars die out with a most raptured thought.

Thou canst not see me with thine earthly eyes,
Thou canst not feel my hand upon thy brow;
Yet, nestling on my heart thy beauty lies,
More real far than I behold thee now.
My waking life is one unanswered vow;
But in deep dreams, my sweet! this is not so:
My spirit-kiss thy spirit doth allow.
Thou see'st my joy, as those who Northward go
See waters rise among the wolds, yet know not whence they flow.

And thou dost marvel at the quiet thought
Which makes a greenness wheresoe'er I tread:
The summer garlands into beauty wrought,
Do babble not of where their bloom was fed.
Blessèd the dews that are in silence shed!
The flower wherein the wild bee dives at noon,
Will drop its petals when its sweets are fled:
My years would drop so withered and so soon;
The life that lacked love's secret sweet were but a thankless boon.

And now when Love stands crowned among the saints,
For this one day my heart is fain to speak,
Though the pulse trembles and the spirit faints,
To fee how breath is frail and words are weak,
To sum the measure of the wealth I seek!
If I do wrong, O, tenderest soul! forbear
To chide me with the glow upon thy cheek.
I would not owe thy love to my despair:
Love's seed doth root and flourish best sown by the random air.

Go! fling thy tresses on the winds of morn,
And let the stars be mirrored in thine eye;
Better I died, heart-blinded by thy scorn,
Than thou shouldst live the slave unto a sigh!
Like those untrammeled flowers that round thee lie,
Free in their inmost breath, shouldst thou be free:
So, till thy soul to Love's fair shore draws nigh,
True as a billow of the unlashed sea,
No craven wish of mine shall stand 'twixt thy sweet will and thee.

EDUCATIONAL EXHIBITION.—The Council of the Society of Arts have determined to hold an educational exhibition in the month of June of the present year, when the conference of the representatives of its various affiliated societies, now amounting to 326 in number, will take place. The council have already sought the aid of her Majesty's Secretary of State for Foreign Affairs for the Colonies, with the view of obtaining models of the schools of primary instruction approved by the Departments of Public Instruction in France, Holland, Prussia, Switzerland, Denmark, Sweden, Canada, and at Washington, New York, or Massachusetts; and specimens of every article manufactured to be used in the different classes of schools recognised by each State; as well as of the writing, drawing, needlework, printed examination papers, &c., done in the schools. The council have also asked to be furnished with copies of the codes of public instruction in force in each country, and they promise to publish, at the time of the exhibition, an English synopsis of the whole. Letters have also been addressed to the large educational bodies and Government departments dealing with this subject in this country, claiming their co-operation in the undertaking.

POST-OFFICE LETTERS.—The great increase in the last fourteen years in chargeable letters delivered in the United Kingdom is shown by a return issued on Saturday. In 1840 the number delivered was 347,000,000, being an increase on the previous year of 9,500,000. In 1851 the number was 360,800,000; increase, 13,800,000. In 1852 the number was 379,800 000; increase, 19,000,000. And last year 411,000,000 letters were delivered; being an increase of 31,500,000.

ROMAN REMAINS IN THE CITY.—The workmen at the Old Excise-office, Broad-street, came upon a piece of tesselated pavement remaining *in situ* the other day, and, in consequence of the precautions suggested, they were enabled to remove the ruins and rubbish without injury. This pavement has been subsequently cleared out to some extent, and has disclosed work of considerable beauty. It was found about thirteen feet below the surface, and at least eighteen inches below the lowest foundations of the Excise office—one of the very heaviest walls having been built across it. The piece at present cleared out is the centre of the border of a large pavement belonging to an apartment probably thirty feet square. The pattern is a bold representation of leaves and flowers in their natural colours, executed in the usual way.

Since the establishment of the life-boat system in Jutland and Bornholm, a year ago 116 lives have been saved—72 by the help of the rocket; and, so far as is known, not a soul has been lost among the Danish shores.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

THE great grandson of the illustrious author of "Robinson Crusoe" is alive, and in great poverty—in poverty arising from no misconduct of his own, but from misfortune and its unwelcome ally, old age. It is enough, one would think, to mention the circumstance—and to obtain for him with ease that bare sufficiency which he seeks. He is in his seventy-seventh year, and is the De Foe, of Hungerford-market, mentioned by Wilson, in his painstaking life of the great novelist. His case has been inquired into by Mr. Charles Knight, and a sum of money has been raised by him, chiefly among literary men, that will, with a little more assistance, be sufficient to provide for his very moderate wishes and wants. The great grandson of the man who has given so much to all ages of Englishmen is content and happy at Kennington, with a relief of £2 a month. Mr. Charles Dickens has been (as might be expected) amongst the most liberal subscribers to the little fund. If everybody who has derived delight from the perusal of "Robinson Crusoe" would but contribute a single farthing to his descendant, that descendant would become a wealthy man. When Mr. De Foe was asked, the other day, what he knew of his great ancestor's writings, he answered to the point, and observed (without any intentional comment on the reputation of the great novelist), that in his happier days he had several of De Foe's works; but that he never could keep a copy of "Robinson Crusoe;" "there were so many borrowers of the book in Hungerford market alone."

The gold coin of Mithridates, for which the late Mr. Edmonds gave £115, as we chronicled in a column a few weeks back, was sold at Sotheby's the other day, to General Fox, for £60. The General was a competitor for the coin when bought in 1838 by Mr. Edmonds. A little competition at a sale often carries an article to more perhaps than it ought to bring.

The printed correspondence between Mr. Croker and Lord John Russell has assumed a private character, and has run into some three or four brief paper pellets, in which there is some sharp firing. The paper war, however, is not likely to take a martial turn; nor is the correspondence (from what we have heard) likely to appear for the present in print. Both parties insist on occupying the ground they originally took.

The leading dignitaries of the law have taken an unusual turn of late to notice Mr. Dickens in their speeches. Vice-Chancellor Sir Page Wood, in an after-dinner speech at the Mansion-house, during the late Mayoralty, thought proper to defend the Court of Chancery from the Jarndyce attack in "Bleak House;" and Lord Campbell, in court, the other day (and with his wig on) expressed his regret that Mr. Dickens had not attended to his summons on a special jury. Having finished his Chancery suit, his Lordship observed, Mr. Dickens, by attending, might have added to his knowledge of a suit at common law. The Lord Chief Justice seemed unwilling to fine the distinguished novelist for his non-attendance.

Two sales are about to take place, at which collectors, who *will* possess, will be obliged to bid liberally. The choice collection of old china, of the late Mr. Bidwell, is advertised for sale; and the highly-interesting private library of Mr. Pickering, the eminent bookseller, will be among the scatterments of March. Mr. Pickering's library is especially rich in its illustrations of Walton and Cotton's Angler. Our piscatorial friends must be alive and liberal if they wish to book the choicer articles.

The committee appointed to decide on the pedestal for the Peel Statue to be erected in the city of London, met last week to consider the design which Mr. Behnes, the sculptor, had made and had erected, of the size intended, in the City Green-yard, in Whitecross street. It is no easy task to make a fine statue, and scarcely less easy is it to design an appropriate pedestal. We have very few fine pedestals in London—none, indeed, even ordinarily good, excepting the Charles I at Charing-cross, and the Pitt, in Hanover-square. The committee suggested several alterations, and there will be a temporary trial of the proposed pedestal on the site selected for the statue. This, we think, a wise precaution.

Authors of eminence, in the hurry of writing, or rather, perhaps, in the ardour of composition, often fall into strange errors. Mr. Macaulay, in two editions of his History, placed the execution of Lord Russell on Tower-hill; whereas, it took place in Lincoln's Inn Fields. Sir Archibald Alison, in the volume just published of his "History," talks of the children of Catherine of Arragon, and gravely informs his readers that Locke was expelled from Cambridge; whereas, if there is any one fact about the University of Oxford better known than another, it is Locke's expulsion from Oxford. We will not lay any great stress on these slips of Sir Archibald; but surely they should suggest to these authors some little indulgence to the slips of others.

We have seen some of the recent discoveries about Grinling Gibbons to which we called attention a few weeks back. Two are especially curious. The altar in the Chapel at Hampton Court was the altar of King James's Catholic Chapel, at Whitehall: the "Works Accounts," containing a payment to Gibbons of £130, "for taking down the marble altar-piece, with the columns, ornaments, and figures thereto belonging, in the late King James the Second's Chapel, at Whitehall; and loading the same into barges, and delivering thereof at Hampton Court, according to contract." This discovery will invest the Hampton Court altar-piece with historical interest. Not less curious is the discovery of a payment to Gibbons by Charles II., of £150, "for an extraordinary piece of carved work, made and carved by him for his Majesty, and sent by his Majesty as a present to the Duke of Florence." What was the carving, and where is it now?

The act for the abolition of the present Will-offices throughout the three kingdoms might be made of the utmost service to literature, by the insertion of a clause directing the removal of every will to the London office of the Registrar-General. Our Will-offices abound in matter of great biographical importance, illustrative of the lives of eminent men, of the descent of property, and of the manners and customs of by-gone times. But they are far from accessible, and are hedged in with restraints and fees that render them comparatively useless. Some one called (not unhappily) the Wills preserved in the Prerogative Court of Canterbury "our best "Biographia Britannica." Give the charge of all our Wills to Major Graham, our present able Registrar-General, and they will soon be in order, and accessible to all.

DEPUTATIONS TO MINISTERS.—A deputation from the Protestant Dissenting Deputies of the Three Denominations had an interview with Viscount Palmerston on Tuesday, on the abolition of church rates, the Dissenters' Marriage Acts Amendment Bill, and the Places of Religious Worship Registration Bill. On the same day the Home Secretary gave an interview to a deputation from the Military Knights of Windsor, touching certain claims now awaiting the decision of Parliament; to a deputation from the Philanthropic Society for the Reformation of Juvenile Offenders; and to a deputation on the subject of the Militia.

THE COTTON COMMERCE.—Last year the United States of America took an increase of 11½ per cent; Germany, Russia, and Holland, an increase of 7½ per cent, and an increase of 31 per cent went to the shores of the Mediterranean. On the other hand to Great Britain there was a decrease of 1½ per cent, a decrease to France of 2½ per cent, to Spain a decrease of 4½ per cent, and to countries bordering on the Adriatic a decrease of 18 per cent.

RECIPE FOR MAKING CHEAP FUEL.—Get half a peck of clay or stiff loam; make it soft with water; then put one pack of small coal to it, and mix them well together, until you can roll it into several parcels, like pieces of charcoal or long eggs. Any other combustible may be added, and mixed up with the above, such as sawdust, tanners' waste bark, carriers' shavings, &c. As much can be made in an hour as would last several days.—*Chemical Essays.*

MUSIC.

MR. STERNDALE BENNETT has, for the last ten years, given an annual series of concerts of classical pianoforte music, which have been attended by great and yearly increasing numbers of the most distinguished amateurs, of both sexes, in London. They have not only been beneficial to an estimable and virtuous artist, but have been of the utmost advantage to the art itself, by presenting to the public, in the most attractive form, the most pure and masterly compositions for this fashionable instrument. Our amateurs are thus taught to appreciate and enjoy the beautiful works of the great masters, and to estimate at their real worth the glittering frivolities which have so long been in vogue, but which, we are happy to believe, are now yielding to the influence of a better taste. Mr. Bennett's first concert was on Tuesday evening, at the Hanover-square Rooms. An enumeration of its contents will be quite sufficient to give a unusual reader an idea of its nature and quality. It began with Dussek's Quintet in F minor, for the pianoforte, violin, tenor, violoncello and double-bass, performed by Messrs. Bennett, Blagrove, Dando, Piatti, and Reynolds. Then Mr. Bennett played two preludes and fugues—the one by Handel, the other by Mendelssohn. Next he performed, along with Piatti, Beethoven's Sonata in F, for piano and violoncello. These pieces, with Winter's air, "O Glove Omnipotente," sung by Mrs. Lockey, made up the first part of the concert. In the second, Mr. Bennett played, first, some of his own preludes and lessons, composed for the use of Queen's College; next, with Mr. Blagrove, Mozart's Sonata in A, for the piano and violin; and, lastly, Beethoven's Sonata, No. 7, of Op. 27, for the pianoforte solo. Mrs. Lockey, sang two of Mr. Bennett's own vocal pieces, "Dawn, gentle flower," and "Musing on the roaring ocean." Mr. Bennett's attachment to the highest and purest forms of his art is apparent from this selection. He showed admirable taste and judgment in bringing forward Dussek's quintet—one of the finest works of a great master of the last century, whose charming music has long been too much neglected for the ephemeral things of the day; and also in producing Mozart's beautiful Sonata for the piano and violin. Neither of these pieces had been heard in public for very many years; and it was evident, from the demonstrations of pleasure with which they were listened to, that they had all the charm of novelty. Mr. Bennett's own short pieces, composed for the use of his pupils at Queen's College, are truly, little gems, equally delightful to the ear and improving to the taste of the young performer. Of Mr. Bennett's qualities as a performer—his style, expression, and execution—it would be superfluous to speak; and such artists as Blagrove and Piatti stand as little in need of eulogy.

This week's WEDNESDAY CONCERT had one great attraction, the appearance of Miss Louisa Pyne, the most pleasing and popular of all our English singers. Her presence had an evident effect on the aspect of the hall, which was much better filled than it has been at these Concerts for a considerable time. Miss Pyne sang with even more than her usual brilliancy. Her performance of the bravura air, "Ah, je veux briser ma chaine," in Auber's "Diamans de la Couronne," was a marvellous display of voice and execution: and nothing could be sweeter than her warbling of the famous polacca in the "Puritani." Her reception, of course, was enthusiastic. The concert, in other respects, was of a very ordinary kind, without a single remarkable feature.

EXPECTATIONS of an English Opera in London this season have revived; not, however, at Drury lane, but at the Lyceum, for which theatre Mr. Case, it is said, has entered into an engagement with Mr. Allcroft; whilst he is, at the same time, proceeding against the lessee of Drury-lane for breach of the previous engagement for that theatre. On the faith of the treaty with Mr. Smith, we know for certain that Mr. and Mrs. Sims Reeves, Madame Clara Novello, and Miss Louisa Pyne, were all engaged as members of the proposed Drury-lane company.

THE Concerts of the New Philharmonic Society are to be given this season at St. Martin's Hall, instead of Exeter Hall, where they have been hitherto held. Herr Lindpaintner is again engaged as the conductor.

HARMONIC UNION.—EXETER-HALL.—Handel's "Acis and Galatea" is announced for performance next Monday, when Mozart's accompaniments to this favourite cantata are to be heard for the first time in this country. A novelty of great interest.

MADAME GOLDSCHMIDT (Jenny Lind) is not coming to England this season, after all. The reason assigned is the prospect of war, but how this prospect should deter an artist from visiting England just now, we confess ourselves unable to understand.

MDLLE. WAGNER has been appointed Royal "chamber-singer" to the King of Prussia.

A POOR, uninstructed youth, a sand-hawker on the river Arno, is now making a great sensation at Florence. Rossini has heard him sing, and declares that he is the finest baritone he ever heard.

THE THEATRES.

MARYLEBONE.

On Monday evening this theatre, for the first time under its present excellent management, produced a revival, with full accessories—including entirely new scenery and costumes—by way of example of the manner in which it is purposed that the legitimate drama at this theatre shall be produced. In the present instance whether we revert to the getting up, or the acting—we have but to make a report of singular excellence, and a completeness in all points, deserving of general admiration. Mrs Wallack performed *Ion*, as we understood for the first time, and displayed, in the impersonation, a perfect sympathy, both with the poetry of the part and of the dialogue. Voice, action, attitude, were all expressly suited to the character and situation, and presented an embodiment of transcendant beauty. The Temple you'h, with his gloss fancies, and ideal aspirations after liberty; with his love for *Clemanthe*, hatred of tyranny, and pity for the tyrant—all these promptings and imagings of a true and loving spirit—had, in this charming actress, the liveliest expression. All was at once tender and classical: the statue glowed in the sunlight, and filled the air with influence. Mr. Wallack performed *Adrastus*—a part which affords opportunity to a picturesque actor for many effects. Its present representative availed himself of more than the usual number, and frequently with the happiest results. The story of his destiny was greatly told—the assuming of his Royal dignity; his disdainful wrath, on the receipt of the oracle; and the heroic *abandon* with which he submits to destiny, were all amply interpreted and profusely illustrated by the actor. The glir of wild recognition with which he learns that the hand so lately pointed against him is that of his long-lost son, was finely assumed. Altogether, it was felt that this revival of *Ion* is a managerial triumph, and well calculated to advance the reputation of the theatre. It was well and fashionably attended.

HAYMARKET.

Miss Cushman performed *Meg Merrilies* on Monday, with all her usual power and success. The supremacy of the actress in the part has long been acknowledged; and it is one which may be fairly considered as one she has made her own. Miss Cushman has, indeed, to be fairly accredited with the idea, as well as with its interpretation; for the text of the character in the play is not at all suggestive of the peculiar being which Miss Cushman has created for the scene. Wordless and terrible, the inspiring us first with awe, and afterwards causing the heart to thrill with human emotion in the presence of the domestic affections, true to the last, tried by the fiercest ordeal, and suffering death on account of an unbending fidelity—Miss Cushman's *Meg Merrilies* is at once an ideality and a reality, for which she will continue to receive high praise. An ordinary melodramatic character has been elevated to a lofty tragic impersonation by the sole genius of the histrionic artist. Double-less, thereby, the dramatic art receives some gain, and we can but wish that the poet had also been called into requisition. For this, however, the actress is not responsible; but that just system of stage management which encouraged the production of pieces with popular titles, but of no intrinsic merit. We have but to add that Miss Julia Bennett engaged for the part of *Lucy Bertram*, and sang with her usual science and taste.

MR. W. S. WOODIN'S "CARL-BAG AND SKETCH-BOOK."—Mr. Woodin has at length returned to the metropolis, after a successful provincial career, and may now be found delighting his admirers at the Regent Gallery, 69, Quadrant (where we had, some weeks ago, announced he would be). He has added to his entertainment some new hits, some new songs, and some new characters; omitting some old and outworn ones; and, in other respects, has accomplished several improvements. He has also learned to manage more quickly his changes of costume, and has become easier in his assumptions. A new introductory song was much applauded. Among the additional characters are *Professor Foggo*, *Miss Flora Faddleton*, and *Mr. Silberry Brown*. There is also a story of an Irishman at a money order office, which is exceedingly laughable, and which, we believe, is new. With so many fresh claims on public approbation, Mr. Woodin is likely, we think, to renew his lease of popularity, and to retain it for some lengthened period.
